The Nation

VOL. LVI—NO. 1436. THURSDAY, JANUARY 5, 1893. PRICE 10 CENTS.

MACMILLAN & COMPANY'S

NOTABLE BOOKS OF THE YEAR 1892.

By C. F. Bastable.

Public Finance.

By C. F. BASTABLE, LL.D., Professor of Political Economy in the University of Dublin. 8vo, $4.00.

"His treatise on Finance is exhaustive and far-reaching. . . . As a thorough statement of the theories of the English school of finance, there has been no manual recently published that approaches Dr. Bastable's in precision of definition or order of arrangement."—*Commercial Bulletin.*

By Canon Bernard.

The Central Teaching of Christ.

Being a Study and Exposition of St. John, Chapters XIII. to XVII. inclusive. By T. D. BERNARD, Canon of Wells, author of "The Progress of Doctrine in the New Testament." 12mo, $1.50.

By Rev. Stopford A. Brooke.

The History of Early English Literature.

By the Rev. STOPFORD A. BROOKE. Uniform with Bryce's 'American Commonwealth.' 12mo, cloth, $2.50.

"In Mr. Stopford Brooke's monumental work he strives with rare skill and insight to present our earliest national poetry as a living literature, and not as mere material for research."—*London Times.*

By F. Marion Crawford.

Don Orsino.

A sequel to 'Saracinesca' and 'Sant' Ilario.' By F. MARION CRAWFORD, Author of 'The Three Fates,' etc. Uniform with the new collected edition of Mr. Crawford's Works. 12mo, cloth, $1.00.

"We are inclined to regard the book as the most ingenious of all Mr. Crawford's fictions."—*Evening Bulletin.*

By Rev. Dr. DuBose.

The Soteriology of the New Testament.

By Wm. Porcher DuBose, M.A., S.T.D., Professor of Exegesis in the University of the South. 12mo, $1.50.

". . . The Church owes a deep debt of gratitude to Dr. DuBose for bringing out into clear light the New Testament meaning of the word [salvation]. Its devout spiritual tone and earnestness will lead many readers to more honest and real thoughts of the meaning of salvation, whilst its original and fresh treatment of certain aspects of great theological mysteries will stimulate thought. The style and expression also are alike admirable."—*Churchman.*

By E. A. Freeman.

A History of Sicily from the Earliest Times.

VOL. III. THE ATHENIAN AND CARTHAGINIAN EXPEDITIONS. 8vo, $6.00.

By Philip Gilbert Hamerton

Man in Art.

By PHILIP GILBERT HAMERTON, author of "Etching and Etchers," "The Graphic Arts," "Landscape," "The Present State of the Fine Arts in France." Editor of "The Portfolio."

Illustrated by Etchings and Photogravures from pictures by representative artists. Printed on hand-made paper, large 8vo, $30.00.

***Also Edition de Luxe (limited to 125 copies for England and 50 for America, only 10 of which remain for sale; the English copies have all been sold before the day of publication), printed on John Dickinson & Co.'s hand-made paper, and the illustrations on Japanese vellum. Price on application.

By the Very Rev. Dean Hole.

The Memories of Dean Hole.

Including Archers, Artists, Authors, Cricketers, Ecclesiastics, Gamblers, Gardeners, Hunters and Shooters, Oxonians, Preachers, and Workingmen. With Illustrations from original sketches by LEECH and THACKERAY. 8vo, $4.00.

"Dean Hole is clearly an anecdotist ready made. . . . He is not only the famous rose-growing parson, but a hunting parson, a cricketing parson, a shooting parson, and a playgoing parson, but at the same time one who never forgets that he is parson and a Christian."—*Daily News.*

By Henry Jephson.

The Platform—Its Rise and Progress.

By HENRY JEPHSON. Two volumes. Large Crown 8vo, $4.00.

"Dr. Henry Jephson has struck a new vein in political history, and has worked it certainly with diligence, and we think his readers will say with success. He claims that among the great political agencies the Platform has hitherto been overlooked. His remarks have an interest for all communities under parliamentary or elective government. . . . A very useful as well as a very interesting addition to political literature."—*Washington Post.*

By Dr. S. H. Kellogg.

The Genesis and Growth of Religion.

Being a Course of Lectures delivered before the Theological Seminary, Princeton, New Jersey. By the Rev. S. H. KELLOGG, D.D., of Toronto, Canada, Author of "The Light of Asia and the Light of the World." 12mo. Cloth.

By Rudyard Kipling.

Ballads and Barrack-Room Ballads.

12mo, Cloth Extra, $1.25.

"Mr. Kipling is seen at his best in this latest collection of ballads."—*Philadelphia Bulletin.*

By Dr. S. S. Laurie.

The Institutes of Education.

Comprising a Rational Introduction to Psychology. By Dr. S. S. LAURIE, author of "Occasional Addresses on Educational Subjects." 16mo. $1.00.

By A. Sheridan Lea.

Foster's Text-Book of Physiology.

Part V. Appendix. The Chemical Basis of the Animal Body. By A. SHERIDAN LEA, M.A., Sc.D., F.R.S., Fellow and Lecturer in Physiology of Caius College, Cambridge, and University Lecturer in Physiology. 8vo. With Illustrations. $1.75.

By Sir John Lubbock.

The Beauties of Nature

AND THE WONDERS OF THE WORLD WE LIVE IN. By the Right Hon. Sir JOHN LUBBOCK, M.P., F.R.S., LL.D., author of "The Pleasures of Life." With numerous Illustrations and many full-page Plates. 12mo, cloth, $1.50.

"He writes charmingly, even poetically at times. The beauties of nature that he finds are often strange phenomena. But he makes them intelligible and agreeable reading for the unscientific."—*Evening Bulletin.*

"In this pleasant volume Sir John Lubbock talks in a familiar yet always accurate manner of the wonders of animal life, of plant life, and of the woods and fields, telling not merely the dry scientific facts, but the poetic associations and suggestions that surround them. Many illustrations adorn the volume, which make it as attractive as it is useful."—*Philadelphia Times.*

By Edward John Payne.

History of the New World Called America.

By EDWARD JOHN PAYNE, Fellow of University College, Oxford.

"This work will remain one of the most important, if not the most important, on the history of the New World yet published. . . . It will delight all those who take an interest in the origins of history and of civilization; it cannot be neglected by any student of American history. It is eminently a book worth reading."—*Academy.*

"Leads the student in a novel direction. . . . The elucidation of the subject surpasses in thoroughness and clearness anything of the kind we have ever read before."—*N. Y. Times.*

By Professor Jowett.

The Dialogues of Plato.

Translated into English, with Analyses and Introductions. By B. JOWETT, M.A., Master of Balliol College, Regius Professor of Greek in the University of Oxford, Doctor of Theology of the University of Leyden, LL.D. of the Universities of Edinburgh and Cambridge. In five volumes. Revised and Corrected Throughout. With Marginal Analyses and other additions, and an Index of Subjects and Proper Names. Third Edition. 8vo, cloth, gilt top, $20.00.

By Alfred Lord Tennyson.

The Death of Œnone, Akbar's Dream.

And other Poems. Uniform with 'The Foresters, Robin Hood and Maid Marian.' 16mo, cloth, $1.25.

Also a large-paper limited edition on hand-made paper, $3.00.

The Foresters, Robin Hood and Maid Marian.

16mo, cloth, $1.25.

"Lord Tennyson has touched the myth and tradition of Robin Hood with the magic hand of his genius and made them glow with the fire and semblance of reality."—*N. Y. Sun.*

By Mrs. Humphry Ward.

The History of David Grieve.

By MRS. HUMPHRY WARD, author of "Robert Elsmere," etc., etc. Fourth edition. In one volume, 12mo, Cloth, extra, $1.00; also in two volumes, cloth, $3.00.

"What sorrow, what repentances, sufferings, sins, heart-searchings, and brain-cudgelings David passes through we leave to our readers to find out for themselves. They will find more than this. They will find thoughts which stimulate and passages which burn. . . . They will find a fearless grappling with the things that are, treated as only a woman, high-minded and sincere, can treat these things."—*Saturday Review.*

By William Winter.

Shadows of the Stage.

18mo, cloth gilt, 75 cents.

"Into a very pretty little volume, Mr. Winter has gathered a score or more of his minor theatrical articles, written from day to day as occasion served and as the passing show gave opportunity, and yet written always with abundant literary art and with the constant desire to pay due meed of praise to those features of the contemporary stage which were best worth commemoration. . . . Perhaps the best paper of all is the first, on 'The Good Old Times,' in which Mr. Winter, out of the fulness of his knowledge, answers those who bemoan the decadence of the art of acting and ignorantly sacrifice the present to the past."—*The Nation.*

Old Shrines and Ivy.

18mo, cloth gilt, 75 cents.

"Whatever William Winter writes is marked by felicity of diction and by refinement of style, as well as by the evidence of culture and wide reading. 'Old Shrines and Ivy' is an excellent example of the charm of his work."—*Boston Courier.*

Some Recent Publications.

ANCIENT LANGUAGES.

BENNETT. *Xenophon's Hellenica, Books V.-VII.* Edited on the basis of the edition of Büchsenschütz by CHARLES E. BENNETT, Professor of Classical Philology in Brown University. Square 8vo. 240 pages. Cloth, $1.50; Paper, $1.20. *Text Edition.* 128 pages. Paper, 45 cents.

In the *College Series of Greek Authors.* Important additions have been made in this edition to the notes of Büchsenschütz, especially in the way of material from Breitenbach, Kurz, and Grosser.

GOODWIN. *A Greek Grammar.* Revised and enlarged by the author, Professor W. W. GOODWIN of Harvard University. 12mo, half morocco. xxxvi-451 pages. $1.65.

The Grammar has been revised throughout and in many parts rewritten; and it is hoped that in many important particulars it will be found still more satisfactory than the former editions as a class-room text-book and a work of reference.

GREENOUGH. *Eutropius' Historiae Romanae.* Edited by Professor J. B. GREENOUGH of Harvard University. The first of a series of pamphlets for sight reading. Paper. viii-41 pages. 25 cents.

GUDEMAN. *Syllabus on the History of Classical Philology.* By Dr. ALFRED GUDEMAN, Johns Hopkins University. 8vo. Paper. vi-50 pages. 55 cents.

Harvard Studies in Classical Philology. (Volume III., 1892.) 8vo. Boards. vi-203 pages. $1.50.

JACKSON. *An Avesta Grammar in Comparison with SANSKRIT.* By Professor A. V. WILLIAMS JACKSON of Columbia College. Part I.:—Phonology, Inflection, Word-Formation. With an introduction on the Avesta. 8vo. Cloth. xlviii-273 pages. $2.20.
Part II.—Syntax, and Part III.—Texts for reading will soon be issued.

WHITE. *The Beginner's Greek Book.* By JOHN WILLIAMS WHITE, Professor of Greek in Harvard University. 12mo. Cloth. xv-498 pages. $1.60.

The Beginner's Greek Book is complete in itself, presenting forms and elementary syntax directly and not by reference to grammars. It consists of carefully graded lessons, selections for reading and full vocabularies, and is designed to completely cover the ground of the first year's work in Greek.

WHITE AND MORGAN. *Anabasis Dictionary.* An Illustrated Dictionary to Xenophon's *Anabasis*, with groups of words etymologically related. By JOHN WILLIAMS WHITE, Professor of Greek, and MORRIS H. MORGAN, Assistant Professor of Greek and Latin, in Harvard University. 12mo. Cloth. $1.35. Also bound with Goodwin and White's *Anabasis.* $1.65.

MODERN LANGUAGES.

Harvard Studies and Notes in Philology and Literature. Vol. I. Published under the direction of the Modern Language Departments of Harvard University. 12mo. Paper. 128 pages. Mailing price, $1.10; retail price, $1.00.
In the *International Modern Language Series.*

BOIELLE. *Quatrevingt-Treize.* Par VICTOR HUGO. Adapted for use in schools by JAMES BOIELLE, B.A. (Univ. Gall.), Senior French Master in Dulwich College, England. Revised for use in American Schools. 12mo. Cloth. viii-216 pages. 70 cents.

BULTMANN. *Soll und Haben.* Novelle von GUSTAV FREYTAG. Edited and Annotated by IDA W. BULTMANN, Teacher of German in the Free Academy, Norwich, Conn. 12mo. Cloth. vi-220 pages. 70 cents.

GRUENER. *Dietegen.* Novelle von Gottfried Keller. With Introduction and notes by GUSTAV GRUENER, Assistant Professor of German in Yale University. 12mo. Cloth. vi-75 pages. 40 cents.

PARIS. *Extraits de la Chanson de Roland*, avec une Introduction Littéraire, des Observations Grammaticales, des Notes, et un Glossaire Complet. Par GASTON PARIS, Membre de l'Institut. Revue et Corrigée par l'Auteur. 12mo. Cloth. xxiv-160 pages. 70 cents.

VAN DAELL. *La Cigale chez les Fourmis.* Comedie en un acte. Par MM. ERNEST LEGOUVE et EUGENE LABICHE. With English notes by ALPHONSE N. VAN DAELL, Professor of Modern Languages in the Mass. Inst. of Technology. 12mo. Paper. 37 pages. 25 cents.

The Poet at the age of 70. Etched from life by Rajon. The head in profile, half life size.

Of this Portrait F. G. Stephens, in his biography of Rajon, says: "It is simply one of the finest specimens of modern draughtsmanship."

Unsigned artists' proofs, $18.00. A few early signed proofs on Japan paper, $60.00; on vellum, $75.00. Special illustrated prospectus free by mail. Also, Catalogue No. 9 of high-class Modern Etchings, for holiday presents, with 50 illustrations, mailed on receipt of ten cents in stamps.

FREDERICK KEPPEL & CO.,
Paris, Chicago, and 20 East 16th St., New York.

STANDARD
Works of Reference.

The New Chambers's Encyclopædia.

Twenty years later than any other Encyclopædia in the market. Thoroughly rewritten and revised, it contains a large number of articles that are not to be found in any work of a similar character. It is illustrated by more than three thousand five hundred wood engravings and nearly a hundred colored maps.

One thousand contributors, including many of the most eminent authorities in every department of knowledge, have assisted in the preparation of the work. Complete in ten volumes.

"It is strictly a cyclopædia. A high order of scholarship has evidently been employed in its preparation, as among the list of contributors are noticed many distinguished names. The handiwork of specialists is evident on every page. Certainly it is a most attractive work. Chambers's Encyclopædia has always had a host of friends, and in this new edition they will be multiplied."—*Boston Literary World.*

"In the matter of maps, in which line we have examined the volumes with special care, we believe that no finer were ever published in a work of similar grade."—*Pittsburgh Christian Advocate.*

"Thoroughness and conscientiousness, indeed, characterize the work in every department and detail."—*N. Y. Tribune.*

"Very recent facts are incorporated. The encyclopædia remains the best adjusted, most comprehensive, and most to the point that we have."—*Atlantic Monthly.*

"It is more entertaining in its matter than any other great encyclopædia."—*Cincinnati Commercial Gazette.*

Price of complete sets: Cloth, $30.00; cloth, uncut, $30.00; sheep, $40.00; half morocco, $45.00.

Allibone's Dictionary and Supplement.

Complete in five volumes. The entire work containing the names and history of over 83,000 authors. From the London *Saturday Review*: "We have no hesitation in declaring our conviction that it is by far the most satisfactory work of the kind with which we are acquainted. It is ample in its information; it is accurate to a degree very rarely attained; it is catholic as to the persons included, and it is, with all this, eminently readable." Cloth, $37.50; sheep, $42.50; half Russia, $50.00; half calf, $55.00; half morocco, $55.00.

Handy-Book of Literary Curiosities.

By WILLIAM S. WALSH, author of "Faust: The Poem and the Legend," "Paradoxes of a Philistine," etc. Crown 8vo. Uniform with volumes of Reader's Reference Library. Half morocco, $3.50; three-quarters calf, $5.00.

"We have here plenty of instruction, for Mr. Walsh has explored all the odd nooks and corners of literature, and it is mingled with an abundance of amusing anecdotes and queer sayings. It is a book for the general public, not as profound as Disraeli's 'Curiosities of Literature,' but a vast deal more popular. It will grace the shelves of the scholar as a book of reference, and the library of the business man to entice him from his cares and anxieties and afford him a very gracious opportunity to pass many leisure hours pleasantly and profitably, for Mr. Walsh's essays range 'from grave to gay, from lively to severe.'"—*N. Y. Herald.*

Half-Hour Series.

Selected and arranged by CHARLES MORRIS. Uniform in style, size, and binding.

Half-Hours with the Best Humorous Authors. The choicest writings of the best American, English, and foreign humorists. In four volumes. Crown 8vo, Cloth, gilt top, $6.00; half calf, $10.00; three-quarters calf, $13.00.

Half-Hours with American History. Equally valuable to those who wish to refresh their recollections of American history as a whole, and to those who desire to read up on particular subjects. Two volumes. Crown 8vo. Cloth, $3.00; half calf, $5.00; three-quarters calf, $6.50.

Half-Hours with the Best American Authors. Containing the best samples from every American author of note in history, poetry, art, fiction, and philosophy. Complete in four volumes. Crown 8vo. Cloth, $6.00; half calf, $10.00; three-quarters calf, $13.00. 8vo size. Four volumes, half cloth, $16.00.

Half-Hours with the Best Foreign Authors. The only collection affording a general survey of representative foreign works. Four volumes, crown 8vo. Cloth, gilt top, $6.00; half calf, $10.00; three-quarters calf, $13.00. The above works also bound in half vellum cloth, gilt top, $2.00 per volume.

*** For sale by all Booksellers, or will be sent by the Publishers, free of expense, on receipt of the price.

J. B. LIPPINCOTT CO.,

715 and 717 Market St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, JANUARY 5, 1893.

The Week.

MR. CLEVELAND makes an important addition to his long list of public services in his frank and dignified utterance against the candidacy of Edward Murphy for the Senate. He says, with characteristic courage, what everybody knows to be the simple truth in the matter. No advocate of Mr. Murphy has been able to give any reason for sending him to the Senate other than that he is the "choice of the organization." How he comes to be that choice is not dwelt upon, but everybody familiar with Machine political methods knows that Mr. Murphy himself brought it about by going down into the primaries which nominated candidates for the Legislature and "fixing the thing" there long before the people had given the subject any thought. From that moment to the present time the people have had no voice in the selection, neither have Mr. Murphy's qualifications for the position played any part in it. He simply decided that he would like to have the "place," and he set his machine in motion to secure it for himself. There was only one contingency in which Mr. Murphy would have been in any sense a fit candidate for the Senate. Had Mr. Hill been nominated and elected President, and had the Government of the United States been thus turned over to the spoilsmen for their private advantage, then Mr. Murphy, as distributor of patronage for New York State, would have been an eminently suitable person to sit in the Senate as the New York representative and the exponent of the President's policy.

The kind of Senator that New York State needs at this time is well defined by Mr. Cleveland:

> "It must not be forgotten, however, that the party has a very hard task to perform if we expect to keep the word that we have passed to the people of the country. They have given us a phenomenal majority—one showing that they expect us to do much. In doing this, a great deal depends upon the State of New York and its great metropolis. The interests of the State and of the party demand, it seems to me, the selection of a Senator who can not only defend the principles of our party, but who can originate and promote policies that may be presented for consideration in the Senate. In order to insure this, the Senator from New York should be a man not only experienced in public affairs, but who has a clear conception of the vital issues with which he must deal during the next few years."

There is no lack of Democrats of that type in the State.

Gov. Flower, we judge, is not quite easy in his mind touching the appointment of Maynard to be a judge of the Court of Appeals. He publishes eight letters which he has received from different parts of the State commending Maynard as an honest man and shining light in the legal profession. The writers of these letters are mostly persons unknown to fame. They are all quite sure that the Bar Association of New York is unqualified to pass judgment upon Mr. Maynard, and they go much beyond Mr. Flower himself in their endorsement of Maynard. Mr. Flower, it will be recalled, said that since Maynard had been on the bench he had been a very proper man. These eight endorsers consider him a proper man before as well as after he became a member of the highest judicial tribunal. Upon this point Gov. Flower has not yet committed himself. If the Democratic Machine wishes to know what the people of New York really think of Maynard, it can find out by nominating him in the regular way for the office he now holds. An opportunity will be presented in the coming autumn. Gov. Flower, too, if he should happen to be nominated again for an elective office, will find out how many people have "sized him up" by his action in the Maynard case.

One of these letters, as might be expected—and it is the longest of all—comes from Judge Maynard's pastor, and closely resembles all similar pastoral letters, by totally evading the real issue. Judge Maynard has been convicted on the clearest evidence—documentary mostly—of having committed a specific offence against the law and against the peace and dignity of the good people of the State, which offence proves his unfitness as to character for a judicial office. Moreover, the charge has been made and driven home by a body of lawyers such as, for character and learning, we have never had on any bench in this State. Now mark how Pastor Richards meets this:

> "I wish to state to your Excellency that I have known Judge J. H. Maynard during the past twenty-five years, and most of the time most intimately; that he is my neighbor; that he is a member of the Presbyterian Church of Stamford of which I have the honor to be the pastor, and that he is universally respected and esteemed as a man, and unquestioned as to his legal ability in the community where he is most intimately known. While no one more than myself would deprecate the placing of a man in high office, or keeping him there, who was morally unfit for the office, or who was guilty in any way of tampering with the sacred rights of the people as voters, I do not for a moment believe that Judge Maynard would wilfully, or maliciously, or even for partisan purposes, or for the hope of emolument or office, do anything or connive at anything that would deprive any of the citizens of his State of their sacred political right to vote and to have their votes fairly counted. He may have made a mistake in the matter of the Dutchess County returns (of this I am not competent to judge), but that he knowingly made a mistake or connived at any such crime as the Bar Association intimate, I have the utmost confidence in saying is impossible for a man such as I believe Judge Maynard to be."

In other words, he admits, with pastoral simplicity, that he knows nothing of the matter in hand, and would not be "a competent judge" of it even if the facts were before him, but nevertheless declares as a pastor, "with the utmost confidence," that it was "impossible" that Judge Maynard could have committed the offence which nine of the most eminent men of the New York bar (nearly all belonging to his own party) say, after full examination, that he did commit, and—this is enough to make one laugh out in meeting—*Judge Maynard has never denied.* This pastor, too, it must be remembered, is a professional moralist, and is supposed to be competent to direct the consciences of a large body of people in the conduct of life.

That "scholar in politics," Henry Cabot Lodge, is introducing into Massachusetts the methods with which the Hill Machine has made New Yorkers familiar. Having induced the Republican party to disregard all its traditions and adopt the caucus system for the selection of a United States Senator, he has now followed "Dave" Hill's example of last year by calling a "snap" caucus to meet on the day the Legislature assembles, instead of waiting until the time for electing a Senator a fortnight later, according to the invariable custom in States which hold such caucuses. Lodge's motive now is exactly the same as Hill's was last February—a fear of submitting his case to the deliberate judgment of the public, and a resolution to seize by force what he fears would not be awarded him voluntarily. Of course, Lodge will succeed, as Hill succeeded last February, but when he resorts to such disreputable methods, he writes himself down in the same class to which Hill belongs. There are public men in Massachusetts who would prefer private life to a Senatorship won at such cost.

The controversy over the Wyoming Legislature has been finally decided in favor of the Democrats. Moreover, the decision is one of which the Republicans cannot complain, since it is made by the Supreme Court of the State, which is composed of members of their party. There seems to be no question that this is a just settlement of the dispute. The question turned upon the result in one precinct of a county electing two members, the returns from which were alleged to contain some technical errors. If this precinct were thrown out, the Republicans would secure control of the Legislature; if its votes were counted, the Democrats would be in the majority. The Republican Supreme Court rightly holds that, as the will of the voters is plain, technical irregularities should not be allowed to de-

feat that will. It thus appears that the result of the Wyoming election was the choice of a Legislature Democratic by 25 to 24, a Democratic Governor by a majority of 1,781, and a Democratic Congressman by a majority of 461, while there was a plurality of 953 for Harrison. This shows a great deal of independent voting, the credit for which must be divided between the men and women, as the defeat of the Republican candidate for Governor is ascribed directly to the attitude of the latter. The Democrats are claiming that the final settlement reached insures their control of the State for many years to come, but it would be foolish for any party to suppose that it has a mortgage upon a commonwealth whose voters on the same day declare for a Republican President and a Democratic Governor and Legislature.

The Wyoming settlement assures the Democrats the gain of three seats in the Senate, the other two being from New York and Wisconsin. One more would give them just half of the 88 members, and assure their control of the upper branch of Congress, by the casting vote of Vice-President Stevenson, against the combined vote of the Republicans and Populists. There are three Legislatures any one of which seems likely to elect a Democratic Senator—in California, Montana, and Kansas—and it hardly seems possible that the party can fail to secure at least one. In any event, the Republicans cannot possibly obtain a majority except by the help of the Populists, and there is not one of that party who is likely to help them out. Indeed, there is one of their own number whom they can no longer count upon, as Mr. Stewart of Nevada, who has hitherto been a Republican, opposed that party in the recent canvass, and will be returned as the representative of the Populists. It is consequently certain that the Republicans cannot prevent the carrying through Congress of any Democratic measure; which is as it should be.

The *Tribune* argues that Mr. Cleveland cannot reverse President Harrison's proclamation putting extra taxes on imports from Venezuela, Colombia, and Hayti, because the act of Congress is "mandatory," and "under the Reciprocity Amendment he will be compelled to close the free market here as long as the conditions of equitable reciprocal trade are withheld." But who is to determine those "conditions"? The law says the President. It refers the whole matter to him, and he shall "deem" what is reciprocally unequal. Therefore, if Mr. Cleveland's judgment in the matter shall be the opposite of President Harrison's, it will be his duty to recall the latter's proclamation, and that precisely because the act is "mandatory." While on this subject, we should like the *Tribune's* opinion on Harrison's course in dealing with Argentine trade. He informed the Argentine Government that he "deemed" their tariff "reciprocally unequal," and said that if no changes were made in it in our favor, he would proclaim a tax on their exports to our country. Then why did he not do it? Was not the act "mandatory" in that case as well as the others?

The financial eccentricities of the Hon. Charles Foster are so numerous that a new one scarcely challenges attention. Yet when the Secretary of the Treasury commends the present Silver Law because, as he says, our purchases of silver have added $120,000,000 to the currency of the country, and then asks how the banks could have got on without that currency, we thank heaven that his stay in office is short. What would have happened, indeed? Why, we should have had all the gold we wanted, because gold value will always bring gold, strange as that may seem to Mr. Foster. Then if the banks had wanted this in the form of paper, they could have had it by asking the Treasury for gold certificates. This is the answer to Mr. Charles Foster's innocent query. After giving his nugget of wisdom to the newspapers, Mr. Foster said that he intended to make his home in Fostoria, O., after his retirement, although he had been offered a lucrative salary by "a number of concerns," on condition that he would lend his name to them. We can understand this if he was only to lend his name, but not if he was to lend his ideas also.

The Quarantine Bill which has been agreed upon by the sub-committee of the House Committee on Commerce is so obviously inadequate that we do not believe it will be accepted as satisfactory by the full Committee. It provides for a mixture of national and State quarantine, under the supervision of the Treasury Department, which would be certain to lead to conflict and failure in practice. It decrees that "wherever State quarantine regulations exist, the Hospital Service of the Revenue Marine, under the direction of the Treasury Department, shall have the power to enforce the laws and regulations of the different States"; and that "where there are no State quarantine regulations" the Treasury Department, acting through the Hospital Service, shall establish them in case of necessity. This simply perpetuates existing State quarantine establishments and puts over them the Secretary of the Treasury as a supervising officer. The first and inevitable effect of this arrangement would be to precipitate a conflict between the State and national authorities as soon as an emergency arose. Instead of having the wisest and promptest action possible, we should have a "row," like that of last autumn in the lower bay, between the local Health Officer and the medical authorities of the Government service, in which the health and comfort of incoming travellers of all kinds would be sacrificed. Then, too, we should not command at all ports a uniform service, in charge of the highest expert ability, and all under control of an expert head, with complete authority and undivided responsibility. Any State is at liberty under the bill to establish its own regulations, and, in case of failure to enforce these to the satisfaction of the Treasury Department, the President may detail officers for the purpose of enforcing them. The President is also given power to suspend immigration indefinitely whenever he may think the public health requires it.

The sentiment in favor of stopping immigration diminishes steadily as one leaves the Atlantic Coast and crosses the continent. By the time he reaches the Mississippi Valley he is quite as likely as not to find the preponderance of expression against any severe measure of restriction. For example, we find in the Milwaukee *Journal* an earnest protest against Senator Chandler's proposition for the suspension of all immigration during 1893. "We need and want," says the *Journal*, "all the good citizens that Europe can send us. There is room for millions more of them without crowding. To close our ports against them would be contrary to public policy. It would deprive this country of the element of population which we absolutely need, and it would be unjust to those people of the Old World who desire to better their condition by coming here, and who would become intelligent, prosperous, and valuable citizens." In the same vein is an article in the Kansas City *Times* which speaks of the prohibitive scheme as "a growing menace to Western development." The *Times* says further: "The great, solemn fact for the West is, that its growth has been a result of immigration. We need not stop there. The progress of the whole United States has had many causes in conjunctive operation, but the fulcrum of every single cause has been the labor of immigrants. The West needs immigrants. It needs thorough organization for the transportation and settlement of new colonies more than it needs a crusade against immigration." The New York *Press* last week quoted Senator Hansbrough of North Dakota as expressing similar views: "He thinks the suspension of immigration would hurt the West and Northwest, which afford a wide field for the use of Germans and Scandinavians." As the Milwaukee *Journal* and Kansas City *Times* are Democratic, while Senator Hansbrough is a Republican, it will be seen that these views do not express the sentiments of one party only.

Michigan is to have a constitutional convention, and under circumstances so extraordinary that the decision seems al-

most farcical. The present Constitution was adopted in 1850, and contains a provision that propositions for the holding of a constitutional convention must be submitted to the people at intervals of sixteen years, and may be submitted at more frequent intervals, at the option of the Legislature. Under this provision the question was first submitted in 1866, when a majority voted in favor of a convention, but its work was decisively rejected at the polls. In 1882 the question was again submitted, and the decision was against a convention. The same thing happened in 1880, the majority against a convention being over 9,000. But somebody persuaded the next L gislature to resubmit the proposition, and it was carried at the recent election by the narrow majority of 703. The most remarkable feature of the matter is, that only 33,193 men expressed their opinion on the question either way, although the vote for President aggregated 465,653. That is to say, only one voter in fourteen cared enough about the question of a new Constitution to say either yes or no, and only a bare majority of this fourteenth favored the idea.

The acquittal of Prof. Briggs by a majority, even on the one crucial charge, larger than the closest observers of his trial had thought possible, is at once a great personal triumph for him and, all things considered, an astonishing display of open-mindedness on the part of the Presbytery. The result justifies the Professor's aggressive bearing and shows that he knew his jury well. An evening paper announced that his fate was sealed by his disrespect for the prosecuting committee, whom he accused of dwelling among bats and owls, but even this assertion has now been decided to be orthodox. There appears to be no doubt that the case will be appealed, and it is within the power of the prosecution to get a decision from the highest court of the denomination next May, which, in the present temper of the Presbyterian Church in the country at large, would certainly be adverse to Prof. Briggs. Yet his opponents will think twice before pushing things with a firm hand. If all the parties to the trial, and the public, are made so utterly weary by the preliminary battle before a jury of 130 members, what would be the result of bringing on a more extensive engagement before a jury of 600? Could all hope to come off alive? Moreover, it is as certain as any future event can be that the case, if fought out, will lead to a split in the Church. The peace-at-any-price men will have the floor during the next four months, and their arguments will have great weight with those who do not love a theological shindy. But, whatever the final outcome, the present decision will be generally and rightly taken as a victory for scholarship over an obsolescent theology, and a distinct setback for the owls and the bats. We say this without expressing any judgment on the technical question whether Prof. Briggs has a legal right to hold the views he does under the terms of Presbyterian subscription.

Mr. Gladstone reached his eighty-third birthday on Thursday, in good health and spirits, and is overwhelmed by the congratulations of his friends of all classes, from the Queen down. The tone in which the Tory press, too, has been speaking of him of late has changed greatly since 1886, notably in the case of the London *Times*, which loaded him with coarse abuse after his last defeat, but recently, apropos of his Liverpool address, covered him with respectful homage. The old villain who was trying to ruin his country eight years ago in combination with a band of Irish assassins, has become one of the glories of England—the last and by no means the least of a grand generation of statesmen and scholars. The truth is that the old gentleman, by surviving to this great age in full possession of his faculties, and with a mental activity and a capacity for affairs such as have rarely, if ever, been seen at that age, has touched the national pride, even among the regular Gladstone-haters of the upper ten thousand.

In this chorus of compliments the fact that Mr. Gladstone has, by merely living so long, achieved one of his greatest political triumphs, is likely to be overlooked, but a fact it is. There never was any concealment that one of the chief objects of Lord Salisbury's postponement of the general election to the latest possible date was to give Gladstone time to die or break down. There was no good Conservative who, in 1886, was not confident that by the next election Gladstone would certainly be out of the field. He frequently referred on the stump to this expectation of theirs as an explanation of their reluctance "to go to the country." "They were playing," he said, "against the life of an old man." He must, therefore, as the years ran by, have often chuckled over his own continued health and strength. As he runs about the country now, climbs mountains, chops down trees, and delivers courses of college lectures, besides bearing the chief burden of a great government, he must feel that he "has got the laugh" on his enemies as probably no octogenarian has ever got it before. They have cut down his majority, no doubt, but then even forty is a tremendous majority for a man who, they said, would certainly be dead when the election took place. It is pleasant to find that his continued existence is received with something like graceful resignation in circles in which he was once a shape of dread. The old lady who said she looked in the paper every morning eagerly for the news of his death, and the old lady who said she would gladly pay for a rope to hang him, and the other old lady who, hearing he was coming to a funeral at which she was present, exclaimed in terror, "Oh, dear, I hope he won't make a disturbance," are doubtless all reconciled more or less to him as the last relic of a great generation of statesmen and soldiers who carried England, both in field and forum, through some of the most serious crises in her history.

The Home-Rule Bill which Mr. Gladstone has more than once announced as now his chief concern, is being drafted by a committee of the Cabinet of which Mr. James Bryce is the leading member. In giving him the Chancellorship of the Duchy of Lancaster, an office which is almost a sinecure, it was, we believe, Mr. Gladstone's desire to secure his time and attention for this work principally. How far the bill has got towards completion no outsider knows for certain, but Mr. Morley, in his recent speech to his constituents at Newcastle, intimated pretty clearly that it had virtually reached its final shape, and was a scheme which England "would" and Ireland "ought" to accept as a final settlement. But it must be admitted that the English public interest in it is more or less diminished by the expectation that the Lords will throw it out, and that their resistance, if ever overcome, would be overcome only after a struggle which Mr. Gladstone can hardly be expected to bring to a final close. Even if he resorted to the desperate measure of creating enough new Peers to swamp the Opposition, he could hardly create enough to overcome a majority of four hundred. Mr. Goldwin Smith compares the Lords to our Senate, which blocks legislation sent up from the House without the smallest danger to its existence or integrity; but he forgets to mention that the American Senate is an elected body, and that changes in its composition are, though slowly, effected by change in popular sentiment, while the House of Lords is a "close corporation," in which the majority always belongs to one party and can in no way be directly affected by any change in public opinion. This anomaly becomes every year more obnoxious, and the only way of curing it, while preserving the hereditary principle, would be the creation at each change of administration of as many new Peers as would suffice to bring the majority in the upper house into harmony with the majority in the House of Commons. But this would, of course, soon wreck the peerage as a branch of the Government. A compromise by which enough Peers of the majority stay away to let the minority work its will, was successfully tried in the passage of the Reform Bill and in that of the Irish Church Disestablishment Bill; but this must, of course, be a mere makeshift which cannot be often resorted to.

THE RIGHT TO LABOR.

THE American people have always been disposed to listen to appeals for the oppressed, being, as Mr. Bryce said in his book upon us, a people of kindly nature. Hence, when the trade-unions and labor organizations started up, some years ago, with their outcry against the tyranny of capital and their promises of better pay to workmen, they met with a great deal of sympathy. Most people were ignorant of the history of the trade-guilds of the middle ages, and had forgotten that the first reform of the French Revolution was the abolition of these corporations by Turgot. They good naturedly welcomed this movement, in short, as they welcome any movement claiming to be benevolent, without at first scrutinizing its motives or criticising its methods; and while the people were in this mood, those who undertook to speak in behalf of "labor" succeeded in getting a good deal of "labor" legislation into our statute books. It is scarcely necessary to say that by this time the people have taken the measure of this whole labor movement. Its jealous and monopolistic spirit has betrayed it, and it is now pretty generally understood that any advantages in wages gained by trade-unions are at the expense of the great body of laborers who are not members of these organizations. Perhaps it is not too much to say that the conviction is becoming general that wages cannot be increased, nor any great improvement in the condition of the poor be effected, by legislation, except in so far as legislation increases industry by removing its shackles. Probably we may hope for a diminution of "labor" legislation in the future, but it will take a long time to undo the mischief already done.

It is gratifying, therefore, to see evidences of a disposition on the part of the courts to exercise their constitutional function of protecting the fundamental liberties guaranteed by our bills of rights to all men. It is not surprising that there should be a disposition among our judges to go to great lengths in sustaining the constitutionality of statutes. The Legislature is a body presumptively representing the people and holding its mandate directly from them. In a State constituted like ours of several coördinate powers, it is the part of wisdom to avoid the appearance of conflicting jurisdictions and of undue extension of functions. But, after all, it is in our constitutions that the matured will of the people is expressed, and the highest trust committed to our courts is that of preserving intact those rights which have received constitutional guarantee.

Whatever timidity may have been observed in the defence of this trust by some of our courts, certain recent decisions by the Supreme Court of Illinois indicate a wholesome sense of responsibility on its part. A number of statutes have been passed in that State, at the demand of the labor organizations, prohibiting and enjoining various acts and agreements in connection with the relation of employer and employed, especially in mining and manufacturing occupations. One of these statutes made it unlawful for any person or corporation to sell anything to any employee, and others provided that coal-miners should regulate wages according to certain methods of weighing coal at the pits, no matter what the wishes or interests of the parties might be—the transactions to be recorded, and the records to be open to the inspection of numerous private individuals and public functionaries. All these statutes have been condemned by the court.

As to the first of them, it was held that such a statute "was a prohibition, not only upon the employer engaged in mining or manufacturing, but also upon his employees, and took from both the right and liberty belonging to all other members of the community to enter into such contracts, not contrary to public policy, as they may see fit; that the Legislature had no power to deprive one class of persons of privileges allowed to other persons under like conditions; that the privilege of contracting is both a liberty and a property right, protected by that provision of the Constitution which guarantees that no person shall be deprived of his liberty or property without due process of law; and that if one person is denied the right to contract and acquire property in the manner which he has hitherto enjoyed under the law, and which is still allowed to other members of the community, he is deprived of both liberty and property to the extent that he is thus deprived of the right of contract." The other statutes were held unconstitutional upon the same ground, and for the kindred reason that men engaged in mining coal were especially discriminated against.

These decisions seem to us to be of the most enlightened character, and to be of the greatest value as securing the most important of all rights, the right of every man to the free disposal of his labor. As the protectionists have labored under the delusion that when a tax is imposed upon the products of foreign countries imported in exchange for our own, "the foreigner pays the tax," so the "labor" representatives have assumed that diminishing the profits of employers has no tendency to lessen the wages of their workmen. Doubtless many employers are disposed to be oppressive, but there is abundant evidence that this evil is not cured by imposing vexatious restraints upon all employers, good or bad. Nothing is better understood in the modern world, and especially in this country, than that it does not pay to starve either beasts or men if it is desired to get effective service from them; and it is almost self-evident that the employer who does not understand this is likely to meet with chastisement more effective than can be applied by the machinery of legislation.

Upon this subject a distinction has been taken by the Supreme Court of Rhode Island which, if generally followed, would be subversive of the right to contract as recognized in Illinois. The Rhode Island court denies that such a right can be regarded as the property of any corporation created by the State, and maintains that a statute prescribing the terms upon which corporations and their employees may contract is not unconstitutional, because it does not impair the rights of employees to contract with "any person or body, natural or artificial, that is authorized to contract with them." There is undoubtedly much strength in this position, but in these days of enormous corporate activity the application of such doctrine might be practically destructive of the right to labor. We can only say by way of criticism at this time that there is nothing in the fiction of corporate entities that makes the nature of the contract for service different from what it is in the case of any large employer of labor, and that legislation which would be unconstitutional if directed against natural persons is not very likely to promote justice simply because it can be constitutionally applied in the case of persons invested by law with an artificial existence.

THE ENGLISH FARMER'S PLIGHT.

THE English Agricultural Conference which met three weeks ago in London to consider the deplorable condition of British agriculture was one of the most interesting meetings called forth by the present crisis in trade and finance, because it brought to light the real feelings of probably the most silent portion of the discontented classes. The English farmer has been going steadily down hill almost ever since 1873, but nobody has until now heard a word of complaint from him. The landlords have complained a great deal of the falling off of their rents, but the farmer has said nothing. This is, in part, due to the fact that farming is, and has been since 1815, more of a trade in England than in any other country, in which men invest capital as they would in manufacturing, and out of which they go quietly when they find it does not pay any longer. In most other European countries, farming is for the farmer simply a means of subsistence, and the only one open to him; and he clings to the soil whether times be bad or good.

But the English farmer's dumbness is also due to his extraordinary phlegm and the smallness of his vocabulary. He is probably the least vocal of civilized men, and one has to know him to know what amount of culture it has taken to get English literature and eloquence out of the original Anglo-Saxon stock. Tennyson's "Northern Farmer, Old and New Style," contains probably the whole of the farmer's politics and political economy since the beginning of the present century, and nothing can well be simpler and more direct. Fidelity to the Squire, to the "Constitution

in Church and State," and a stern determination to keep the laborer in his place, have included almost his whole philosophy of life. His long support of the Corn Laws—which were enacted in 1815, nominally for his benefit, but out of which he got little or nothing—until he was beaten by the manufacturers and the professors and "bookmen" in 1846, was the most curious episode in his career. Thorold Rogers makes it clear that the cultivator of the soil made little or no profit out of the enormous prices for grain which he obtained during the thirty years of high protection. The profit was all absorbed by the landlords, in raised rents, but the farmer stood by them stoutly in the desperate resistance they offered to Cobden and the League.

Cobden was just as odious to them in the ten years before 1846 as his memory is now to the American manufacturer; and Peel, when he became a free trader, was as great an object of opprobrium in English country houses as Gladstone has been since he became a convert to Irish home rule. In fact, the very name of "free-trader" was as great a term of reproach at a "farmers' ordinary" in the wheat-growing counties in England during the Anti-Corn Law agitation as it has been during the past ten years here at the dinners of a "Home-Market Club," or a "Business Men's Protective Association," or as "Abolitionist" was at the South for twenty years before the war. Anthropologists might find much entertainment in comparing the political abuse of these three periods and places. Nothing brings out the wonderful homogeneousness of human nature under different skies and differing governments more clearly than an attack on the pocket of the individual man, such as is necessarily made in all attempts to abolish protective duties. The fury of a woman scorned or of a tigress in defence of her cubs is often almost equalled by the rage of the possessor of an infant industry, whose 50 or 60 per cent. of state nourishment is threatened by a malignant theorist.

The English farmer has, however, at last appeared on the platform, as a class apart from the landlords, to say his say about the agricultural crisis through which England is slowly passing. When a man who has long been famous for his silence asks for a hearing, he is apt to command general attention, and when the farmer took the floor, England became all ears. It was generally expected that he would demand, in thunder tones, some or all of the now familiar remedies of the Irish farmer—judicial rents, fixity of tenure, compensation for improvements, and the abolition of the power of distress for rent—and that he would, perhaps, blow a blast against the game laws. But, to the astonishment of the public, about none of these things did he seem to care. In fact, the delegates seemed to have no grievance against the landlords at all. They acknowledged that the rents, except in two or three counties, had been reduced as much as could be expected, and that other grievances did not exist—one of the most striking proofs we have had for a long time of the healthiness of the relations between landlord and tenant in England. What the farmers asked for, and voted for, and refused to hear opposed, was, to the public amazement, a restoration of the duties on farm produce, more especially wheat. As this would mean, of course, dearer food for the laborers in all callings, there is about as much chance of their getting it as of restoring the Heptarchy, but they gave every possible proof of their faith in it as the only remedy worth talking about, and they roared down all opponents of it, and broke up amid the laughter and jeers of the manufacturing districts and "the professors."

A touch of the humorous was given to the close of the proceedings by the appearance on the scene of Mr. Chaplin, the late Minister of Agriculture, and the finest specimen perhaps in England of the old-fashioned Tory Squire, as the advocate of bimetallism. With silver restored to its ancient and rightful place in the currency, he holds that the ills of the farmer as well as those of the artisan and the merchant would vanish; American competition would somehow subside, incomes would increase, and prices remain steady. He became so excited over his theme that he went so far as to embrace that just now Tory abomination, Archbishop Walsh of Dublin, who, too, has come out for bimetallism; for it would appear that in spite of differences of race, religion, birth, and calling, all bimetallists are brethren. In fact, there are numerous signs that all people who are "hard up," or are bothered by their creditors, tend naturally either to plain silver or to a bimetallic compound, as the true money of the poor and unfortunate, the weary and heavy-laden. The Irish and English farmer, the embarrassed trader, self-supporting women, widows, orphans, shipwrecked sailors, clergymen on small salaries—in fact, everybody but millionaires—would, it appears, be the better of the bimetallic tonic. It seems such a simple remedy that the reluctance of the nations to try it somewhat resembles the aberrations of the Israelites in the wilderness.

THE FRENCH NEW YEAR.

THE new year opens with a good deal of perplexity for all the civilized nations, but probably for none with so much tribulation as for the French. The Panama Canal scandal has brought to light a good many weak places in the framework of their Government, more particularly the overwhelming predominance of the Chamber over the Senate and the President. No sooner does a great strain come on the Republican Constitution than it plainly appears that neither the President nor the Senate counts for much, that the seat of sovereignty is in the Chamber of Deputies, and, what is still worse, that the Deputies themselves perceive this, and in trying times have to exercise some self-restraint in not converting themselves into a Committee of Public Safety and throwing the Constitution overboard. The other branches of the Government have plainly but little public sentiment behind them In times of excitement it seems to be as much as they can do to hold their own. Far from exercising any controlling influence, or even moderate influence, on the crisis, they are content if they are not accused or can escape notice. There were signs of this when President Grévy was driven into resignation by the simple refusal of the Chamber to form a ministry for him. This is the all but inevitable consequence of the election of the President by the Parliament. What creates can generally destroy. The American President, on the other hand, being elected by the popular vote, has deeper roots in the popular will than either Senate or House, and could probably defy Congress, even if he were obliged, as is the President in France, to make up his Cabinet from among members of Congress.

But the danger to which this rule exposes a removable Executive has been thoroughly revealed in recent French experience. The expulsion of President Grévy from office by simply refusing to serve under him was a precedent which clearly has not been forgotten in the present crisis. It showed the Chamber the full extent of its powers, and probably prepared the way for the Panama explosion, by which both President and Senate have been completely pushed aside. Not only this, but criminal jurisdiction has been wrested from the ordinary tribunals and turned over to a committee of the Chamber charged with all the furious passions of the hour. If we can imagine the Poland Committee in 1872 not only armed with the power of sending for persons and papers for purposes of investigation, but overriding the courts of law in the District of Columbia, and arresting and keeping in prison everybody, whether members of the House or not, suspected of connection with the Crédit-Mobilier scandal, and pursuing them with processes unknown to the law, we shall have some idea of the very slight hold which the constitutional division of powers has just now on the French mind. The Senate is all the while shaking in its boots, and President Carnot is probably only too thankful when the day closes without a formal declaration that he is the worst of the lot, and ought to "go."

The second, and possibly more alarming, revelation made by the crisis is the boldness of the Anarchists with their new weapon—dynamite. The knowledge of the power of terrorizing the community which this has given them, has increased their insolence to a degree not heretofore witnessed. Their temper, too, is one which makes all conciliation and compromise seem as impossible with them

as with wild beasts. Their sole programme is to "wring the necks" of people who own any property, and, in fact, bring about a general dissolution of the social bond. The Socialists proper do not go quite as far as this, but they go a good way with the Anarchists. In some of the smaller towns, such as Montluçon and Roubaix, having elected the Mayor and got hold of the local government, almost their first act has been the dismissal and disorganization of the police, so as to render them powerless for the protection of persons and property against mob violence. In fact, if they were paid to prepare the French republic for "the Man on Horseback" or "the Saviour of Society," they could not go to work more effectively or systematically. Their numbers and audacity are in truth leading large numbers of people in France, as well as elsewhere, to the conclusion that a revolution, or attempt at revolution, once in twenty years, is one of the necessities of French society, in order to make a clearance in the capital of the dangerous class which springs up with each new generation.

Under the first Empire the ruthless demands, ruthlessly enforced, of the army, converted all the malcontents of the capital into food for cannon. In 1849 and 1851, risings against the Republic and the Empire respectively led to their slaughter or deportation in immense numbers. In 1870 their temporary success as "the Commune" caused their destruction on a greater scale than ever before. In 1890 another crop of them had sprung up, which, were there a monarch now on the throne, would have again attempted to try conclusions with the troops in the streets, in the hope of meeting with only a half-hearted resistance; for the one thing no modern monarch, except, perhaps, that of Russia, can afford to do, is to treat his own capital as a city taken by assault, and sweep the streets with grape. If there were now either a Bonapartist or an Orleanist on the French throne, he would think many times before ordering the troops to do their worst on his beloved subjects; and the enemies of order would know his weakness and count on it. The Republic has no need of any such tenderness. It has no family interests behind it to be taken care of, and if Gen. Saussier, the commander of the Paris garrison, had now to try conclusions with an armed insurrection, he would assuredly put it down with as unflinching a hand as Gen. Gallifet in 1871. Such portions of the flower of anarchy as escaped from the barricades would meet their fates, as their predecessors did, with their backs to some barrack wall at the hands of firing parties, and for twenty years more there would be peace in the land.

The malcontents of our day know all this well, and will probably not give the troops a chance to try the new Lebel rifle on them, or in any manner show themselves in the open. But this at present almost increases the embarrassment of the Government, as the struggle with concealed Anarchists, whose ranks have not undergone the usual thinning, and who have since 1870 come into possession of a real, formidable, and cheap weapon, is likely to be protracted and ineffective. Anarchism is probably an old disease, but the earlier ages disposed of it by summary and savage methods which are not open to modern Governments. We are fighting it with schools and philanthropy, but neither of these seems as yet to contain the proper cure. The schools teach the Anarchist to read Karl Marx and learn that the well-to-do are robbers, and that philanthropy is for the most part a feeble and impudent attempt at partial restitution.

PRESIDENT LOW ON UNIVERSITY EDUCATION.

In the January number of the *Educational Review* the President of Columbia College gives his impressions of the condition and tendencies of the "higher education" in the United States. He modestly disclaims expert authority, and undertakes only to state "the impressions of one coming from without into the educational field." But whatever Dr. Low may have been in 1890, he is no longer an outsider in educational matters. He has been for three years the head of a great and growing university, and the period of his Presidency has been one of especially rapid development. The University has been transformed from a collection of unrelated fragments into an organic whole, and its consolidation has not only checked a considerable waste of educational energy, but has given a wise direction to the forces thus set free. It is not probable that all this progress is due solely to the wisdom of the President. Every revolution has its antecedent history, and it may be assumed that the changes made at Columbia during the past three years had long been preparing; but the speed and smoothness with which they were realized after Dr. Low's accession to office show a greater degree of insight into educational matters than his disclaimer would indicate.

In surveying the development of the higher education during the past quarter of a century, Dr. Low distinguishes two currents. One of these he terms the "world current" and ascribes to "the demand which has been felt everywhere for the recognition of new studies as of equal intrinsic value, in these days, with the old humanities. This pressure has come especially from two directions: from the modern languages and from the many new developments of science. No country has been exempt from this pressure." The result in this country has been a widening of the field of college instruction, partly by the establishment of "parallel curricula," partly by the introduction of the elective system.

The other current he terms "national"; and this, in his analysis, is substantially university development as distinguished from the mere broadening of the college course. Its most important results are the incorporation of the professional schools into the scheme of the university, the development of non-professional graduate courses, and the correlation of the professional courses with the courses of research. Above the "higher education," in the old sense of the term, has appeared "this new thing, the university"; and "the college . . . is no longer and never can become again . . . the top of the educational system of the United States." "The college aims, or should aim, to lay the broad foundation upon which the university must build."

With this general statement of the tendencies of the highest education in the United States no one can well quarrel, but issue may be taken with Dr. Low's use of terms. Is the university movement in any true sense a "national" as distinguished from a "world current"? The whole movement, as he recognizes, is largely due to men educated abroad and familiar with the great European universities; and in our organization of the American university we are steadily approaching the Continental model. We think that the future historian of education in the United States will describe this movement in the midst of which we stand to-day as "the reception of the German university system." Of course we are not borrowing that system in all its details, and of course much that we have borrowed is becoming modified by American conditions; but we are debtors to Germany for the main principles of the new organization.

From the point of broadest view it seems to us that Dr. Low's two currents are identical in source, and that the only distinction is in the channels into which the stream has poured. A generation ago a great body of new learning was striving to force its way into our educational system. Not merely were the modern languages and the natural sciences inadequately housed in our schools and colleges, but philology, philosophy, the historical and political sciences, and the higher and more complex branches of inductive natural science were without academic shelter of any sort. The establishment of "parallel courses" (which term, we suppose, includes the scientific schools) and the introduction of the elective system could only partly meet the necessities of the situation. For advanced work in all these neglected subjects, the preliminary training of the college (or something equivalent to that training) was absolutely required. Some attempt was made, indeed, to crowd advanced courses into the already overcrowded college curriculum, but the results were far from satisfactory. The proper place for such work was in graduate courses; and with the establishment of graduate courses coördinated with the professional courses, these studies have begun to thrive and bear fruit. What is more, they have begun to broaden the

work of the professional schools and to inspire them with the true university spirit—to which, as Schiller said long ago, Isis is "the high and heavenly goddess," and not merely "the excellent cow that supplies its devotees with butter."

Much of this Dr. Low himself recognizes. He says in terms that the introduction of the elective system into our colleges was largely due to the university movement. What he does not say, unless between the lines, but what we believe to be true, is that in so far as true university work, especially work of research, has been crowded into the college course, the experiment has been unsuccessful. The attempt to provide in this way for the highest education has been a failure. The stream has forced its way into the wrong channel.

It is a natural corollary of Dr. Low's view of the relation of the college and the university that he should look forward to a time when the college training shall be made a prerequisite for university education in theology, law, and medicine.

"The prophetic eye," he says, "can even now discern the day when a college education will be a condition precedent for entrance into the professional schools of the American university. This will not mean that only college-trained men will make good practitioners in law or medicine, for example, nor that only college-trained men are entitled to a professional education. It will rather mean, I think, that the university will then have fully realized its own obligation to the country to send forth into professional life, in all parts of the land, men of a thorough and wide equipment. . . . I am not anticipating this result in the immediate future; but that this is the end towards which things are tending, seems to me hardly open to dispute."

Perhaps, when the universities of the country have taken this position, the people of the country may say that no man shall be permitted to practise law or medicine without college and university training. That is the position which republican France and democratic Germany—socially democratic under its monarchic forms of government—have already taken, refusing to put up with professional service that is in any way short of the best that their educational institutions can provide.

THE PANAMA QUESTION.

PARIS, December 15, 1892.

ONE of the principal newspapers of Paris asserted recently, in somewhat melancholy tone, that the entire Republic of France seemed to have suspended its activity, and that both Government and country appeared to exist for but a single thing. The assertion is true enough. For some little time now nothing else has been discussed but the Panama question. It supplies the matter for every conversation, the theme of every newspaper article. It has brought about the fall of a Ministry, and the succeeding Cabinet has been constituted not on its own political programme, but on its views in reference to this subject. In the importance that has thus been assigned to the Panama scandal, there is, however, some allowance to be made for exaggeration. In order to pass a sound judgment, one needs to try and rearrange the perspective. When this is done, and one has eliminated personalities and considerations of merely secondary import, one is able to perceive that the gravity of the facts, from a general point of view, is in no wise proportionate to the ado made about them, and that what is really most worthy of attention is things that have been considered accessory, and have thus been little noticed.

The events which have brought about the present crisis are too well known to need more than a brief reference to them. In consequence of the success of the Suez Canal, M. Lesseps enjoyed throughout France a popularity that one may characterize as prodigious. By means of it he was admitted a member of the Academy. He became the "Grand Français." And so, when he placed himself at the head of a new enterprise, having as its object another isthmus to be pierced, the scheme appeared excellent in the eyes of the public at large, and subscriptions flowed in. This money, however, be it noted, came almost all of it from the pockets of the lower middle classes. The accredited capitalists of the country held aloof, either because they questioned the enthusiastic statements of M. Lesseps, and were the better able to realize the enormous material difficulties of the enterprise, or because they remembered certain details in the history of the Suez Canal which the final success of the enterprise had caused to be forgotten. At the end of a relatively short time, the Panama Company found itself involved in the greatest embarrassment. The financial management was deplorable; the works made hardly any progress; and in spite of the credit of M. Lesseps, in spite of the fallacious accounts that were published in profusion, public confidence was shaken. In order to obtain more money, the Company conceived the plan of issuing shares with lottery prizes attached to them. For this plan to be authorized an act of Parliament was necessary. A bill was brought in by the Government giving the requisite authorization, and, in spite of opposition from a section of the Chamber, the law was voted in the spring of 1888. The emission of these new shares was a complete failure, and in December of the same year the Company was obliged to suspend payment. The Government made a last attempt to save an enterprise that had swallowed up a milliard and a half of French capital. It proposed a bill to suspend for three months all the liabilities of the Panama Company. This extraordinary measure was rejected by the Chamber, and the Company was forced into liquidation. At the same time the affair was brought under the cognizance of the tribunals. Certain acts of the directors were found to have been irregular and an inquiry was instituted.

After a certain lapse of time, however, the matter was hushed up. The inquiry was said to be proceeding, but as no one saw any result, the public began to think that the Government feared the scandal of a public trial in which M. Lesseps would be implicated, and that, consequently, it sought to procrastinate, in the hope that the death of this octogenarian might occur to free the situation. In fact, people considered the affair as definitively dead and buried. Such was not the case. The Government, it is true, knowing better than anybody else the secrets of the affair, would have been only too willing to do nothing at all in the matter. But this attitude of indifference it was not allowed to maintain. A few weeks ago the papers announced that proceedings had been ordered against the directors of the Company, and that the Government was to be interpellated in reference to the question.

There is scarcely any need to recall the events that succeeded. Every one knows how a member of the Chamber declared from the tribune that a large number of Deputies had been bribed by the Panama Company to vote for the bill authorizing the issue of lottery shares, and how a parliamentary committee of inquiry was chosen to investigate facts of this nature. The Committee set to work at once, summoned witnesses, discovered a certain number of facts seeming to justify the action of the Deputy who had made the accusations, but soon came into conflict with the magistrates, who refused to communicate the papers which were in the possession of the courts, and which, by the letter of the law, should be kept rigorously secret. At the same time the Loubet Cabinet, which only sought a pretext for resigning, allowed itself to be overthrown apropos of an incident without importance and almost ridiculous in its nature. But after a crisis of some days' duration, since no one was willing to accept power until all these thorny questions should be settled, the spectacle was presented of the Government's coming back to office with almost all of its former members, under the Presidency of M. Ribot.

The events I have thus rapidly recapitulated—the labors of the Committee of Inquiry, the conflict between this committee and the magistracy, the fall and reconstitution of the Ministry—all centre in a single fact, viz., the bringing to light of certain reprehensible acts perpetrated in the affair of the Panama Canal, with which have been mixed up a number of individuals belonging to the political world. These revelations have made a great noise throughout the country. The newspapers have filled their columns with daily accounts of the scandal; and such as flourish chiefly by the publication of sensational articles, have multiplied their editions in which the ordinary facts of the case have been dressed up in the most fanciful manner. To judge from all this agitation, it would seem that these sorry events are of a nature to revolutionize the whole State; and yet, if one rightly considers the matter, the sensation produced throughout the country is not in reality so great as one may be tempted to believe. And first of all, for many people there were no discoveries to be made. It had long been known that dishonest acts had been perpetrated. The incidents of the last few days have done no more than confirm what had before been pretty well understood, and the individuals accused were just those in reference to whose honesty or dishonesty no mistake was possible. And so, for those who had any knowledge at all of these things, saddened as they might be by the sight of so much mud stirred up, and regretting on political grounds the glare of publicity thus thrown upon it, these revelations were no revelations at all.

The country at large, it is true, was not in the same position. The vast majority of electors knew nothing of what existed under outside appearances. One may nevertheless question whether the revelations now made are of a nature to make a lasting impression upon them, capable, at least, of affecting their votes sufficiently to bring about a modification in the politics of the country. In general, such a belief does not prevail. As a matter of fact, the electoral committee which has nominated a Deputy deeply compromised in the Panama scandal, will not on this account necessarily withdraw its confidence from him. Ten to one, the committee will not be able to see clearly into the matter. They will probably accept as current coin the explanations given; they will not be able to understand the fictitious operations that have served to conceal the acts

of bribery, and they will end by accepting, as being lawful, transactions which in reality were nothing better than swindles in the eyes of people more experienced. If anything be needed to prove that this is so, we have at hand the quite recent case of M. Wilson. The acts of which he had been guilty, and which, it will be remembered, caused the resignation of his father-in-law, M. Grévy, were far more openly dishonest than those of the Deputies implicated in the Panama affair; and yet he passes in his constituency for a victim, and has been reëlected County Councillor.

From a more general point of view, the Panama revelations are not sufficient in themselves to discredit the Government in power and to cause a reaction against it. For one thing, the members compromised are not confined to the majority; and, in addition to this, it would need an organized Opposition to be able to take advantage of the situation. But, as I have several times had occasion to show, the Opposition at the present time is completely disorganized.

In the occurrences of the last few weeks, however, attention has been drawn to a certain number of what we may call characteristic facts. Defects little suspected have suddenly been revealed in our constitutional organization. The French Constitution naturally comprises several pieces of machinery of different structure—executive power, Senate, Chamber of Deputies—designed to be complementary to each other, and, by balancing each other, to prevent any surprise. Now, in the incidents we have just passed through, it is the Chamber of Deputies alone that has manifested its existence. The Senate, as may be supposed, has not been involved, and the executive power is itself eclipsed in presence of the all-powerful Deputies. One newspaper declared that it was the President of the Commission, M. Brisson, who was sole governor of France, and the assertion was not far short of the truth. The Committee of Inquiry has arrogated to itself every power, and has imposed upon the Chamber all its wishes. The magistracy, as we remarked above, tried to resist, but the Government has removed a recalcitrant magistrate from his post, and the resistance has been broken. This omnipotence of the Chamber, this inability of any part of the Government whatsoever to resist its wishes and even its caprices, is somewhat alarming, for at whatever date the Chamber might be pleased to reassume the rôle played by its predecessor in 1792, it is difficult to see what there would be to prevent it. At the same time we may remark that the peculiar situation which the Panama scandal has thus thrown into relief has no real connection with it; whence we may conclude, speaking politically and not morally, that the importance of recent events is not so great as the newspapers would have us believe.

In a word, a disinterested person, that is, a person who is neither Deputy, journalist, nor shareholder in the Panama scheme, if he would sum up the impression produced by the events of the last week or two—of which the end is not yet—might exclaim, not, "Much ado about nothing," for the present spectacle is really full of interest, but, "Much cry and little wool." S.

THE GALILEO FESTIVAL AT PADUA.

FLORENCE, December 12, 1892.

WHEN, as a tourist, at the close of October, I spent three days at Padua, not dreaming that I should so soon be summoned there again, I thought that I had never seen a more picturesque, but also rarely a more dead or dormant, place. Under the mellow autumn haze the great ramparts looked sleepily at the Euganean Mountains across the fertile Lombardo-Venetian plain, with its little polled willows and mulberry trees everlastingly festooned with vines. The slender branches of the river wound lazily in their course through every quarter of the town, washing old fretted house-foundations or crannied garden-walls of brick, and spanned by single-arched bridges of masonry about whose feet the weeds and wild flowers grew. The massive little houses, hoary or black from the weather of centuries, dozed behind their iron-barred or heavy wooden-shuttered windows; the churches were empty; and beneath the low and sombre arcades the dull-eyed women all seemed poor, while the men went slowly and looked lank and concave under their faded brown or olive cloaks. The narrow streets rattled to the sound of no carriage-wheels, and showed no soil of horses; for the only vehicles one ever met were a couple of superannuated cabs, a rare donkey-cart with vegetables, or some wagon with gray oxen heavily drawing a cask of wine—the slowly gathering evening of a town whose morning had been strong and sweet, one felt, but which was doomed at last to the black ruin under whose curse sad Venice could be seen visibly rotting under one's eyes only a few miles away.

Such is the shallow sort of impression to which we Americans, wandering in search of picturesque effect, and never getting a peep at the inner life of the places we visit, abandon ourselves without hesitation. How different, we love to say, from our bright and cosey wooden homes, with their new paint and their morally enlightened interiors, are these moribund abodes, with their feet resting on stone arches, their fireless chambers, and their sunless courts. The weather has gnawed the plaster of their upper stories, and on their basements the street inflicts with impunity every excoriation and obscene affront. Their very walls seem soaked with wickedness. In the corners of their dwelling-rooms darkness and ancient guilt must mantle; and the souls of the people who are born there must grow up with something gloomy and, so to speak, cavernous about them—something like a ghostly blight from their consanguinity with all that sinful past. To romantic reveries of this sort I had let my imagination drift at Padua hardly less than at other places in Italy. And yet the tramway to the station, the large and handsome café in the centre of the town, a certain air of solidity about the houses in spite of the surface-decay of so many, and above all the admirable paving of the streets, ought to have put me on a truer track. Italian cities in general, however, are paved with a perfection undreamed of in America, where we too have ruins and antiquities, only we keep them horizontal. But the plain fact is that Padua was empty when I was there. The University was closed, many of the rich citizens were in the country still; and in a town of 50,000 people that makes a great difference. But, apart from that, the picturesque impression of life which an American gets in these old cities is purely subjective and false. It is a case of the "pathetic fallacy." We think that these people themselves feel as a lot of kiln-dried Americans would feel if suddenly made to sleep in their mildewed abodes. But no generation of men ever themselves feel mildewed, however they may strike an ignorant spectator—even the Venetians being hearty and hopeful and happy in their unspeakable decay. To the solid flesh of youth, in whatever antique surroundings born and bred, the world and life ever did and ever will seem fresh and young; and it was the young and jolly side of old Padua which revealed itself this week upon my second visit to the town.

On the 7th of December three hundred years ago, Galileo, who, though but twenty-eight years old, had already discovered the laws of falling bodies, was installed as professor of mathematics in the Paduan University, which, that year, numbered in round terms 1,000 officers and students divided into their respective nations. He stayed there eighteen years, the most peaceful of his life, and in them made his astronomical discoveries and wrote his best-known works. The present University accordingly has celebrated by a great festival, in which the city joined, the tercentenary anniversary of the great Pisan's advent, sending, as is usual, invitations to learned bodies all over the world. The Italians manage festivals well, with a light but at the same time careful touch, which provides plenty to see and hear and eat and drink, but of nothing too heavily or too long. The student's revelries lasted the whole week, and drew great crowds from other places. The official exercises lasted but three days, and were an excellent pattern of what such things may be in a place with the proper conformation and resources.

On the first day a general but informal social reception, a visit in carriages to all the monuments and art-treasures of Padua, and a ball; on the second day the great commemorative solemnity in the "Aula Magna" of the University, a banquet, and a gala representation at the opera; on the third day a procession on foot through the city to lay wreaths and make speeches at Galileo's statue; and finally another banquet. Besides this, there were shooting and sword-play by the students, and elaborate ceremonies under their direction in the noble and enormous "Salone," or great civic hall. As if by enchantment, Padua had thrown off the mask of sleepiness and decay; the streets were filled with barouches with liveried servants—where they sprang from I don't know, but I now know that Padua has more millionaires for her population than any town in Italy—put at the disposition of the guests. Windows were draped and festooned, hotels were swarming, streets were illuminated—in short, the real life was revealed. The two dinners in particular were an instructive surprise. One was for 125, the other for 160, guests; and if any public dinner as large was ever more charmingly and successfully served in any American city, however big and proud of its powers of display, I should like to have proof of the fact. Neither dinner lasted more than two hours and a half; and the speeches at the end, marvellous to relate, averaged only three minutes long! The impatient Italian audience began to stir and grow inattentive the moment an orator transgressed. Twice we were received in opulent clubhouses, the inner decoration of one of which, in the classic style of the beginning of the century, was memorable for purity of design and harmony of tone. The opera, an immense theatre, was filled with a splendid audience of handsome men and women, bright-eyed with excitement, all in full evening dress, who had the pleasure, at the end, of seeing *Hamlet* kill the wicked king.

But the principal event was, of course, the commemorative service in the University's great hall. Imagine a lofty room, nearly a hundred and twenty feet square, with a heavi-

ly panelled ceiling golden-brown in tone, lit by high windows on a single side, and filled to its last inch with sitting and standing human beings. The walls, of a glowing bronze-colored groundwork, are almost covered with the armorial 'scutcheons which students for generation upon generation have left there to perpetuate their memory. Most of these 'scutcheons are small and uniform in size, and arranged with regularity so as to form a sort of coat of mail for the mural surface which they cover. At irregular intervals this monotony is broken by larger armorial devices and by gaps. The tone of the walls, thus bedecked, is indescribably rich and splendid, as the light pours over them, catching the edge of the countless gilded bosses and scrolls, and mingling the bright heraldic colors into a deeper bloom. The same light, streaming through the windows, makes the very air of the room visible as a faint bluish vapor floating over the heads of the multitude; which heads, in turn (as one surveys their number), mass themselves into a monotonously patterned background, against which single groups and files of individuals stand out, by the accident of their position, in bold relief. All the heads repeat, with every degree of softening by distance, the same decorative effect, of one side black in shadow and the other edged with ghostly white; for, whatever the individual human face may be, the aggregate tone of a "sea of human faces" is anything but what is known as "flesh-color." Round the high-canopied pulpit, against a wall at right angles to the windows, are ranged the Rector and Council of the University, the Minister of Public Instruction, and the professors of other universities, in all their diversity of academic costume. The rector, Professor Ferraris (most wonderful of men for instantaneously knowing what to do and how to do it, what to say and how to say it in half-a-dozen different tongues), makes his speech at the desk below the pulpit; Professor Favaro, a well-known Galileo specialist, ascends, delivers his long discourse upon that hero—a discourse so good that when he comes down to the floor again, his Paduan colleagues of the Council, in their gowns of black and ermine, and with their silver hair and moustaches, hug him to their bosoms and kiss him on both cheeks, while the audience roars its approval. Italian cheers, by the way, are real cheers, and not like the hideous staccato yelp which prevails at American universities. Then, after a few impressive words, in a deep bass voice and modest manner, from Signor Martini, the Minister, the delegates from foreign parts come up to the desk with the salutations of the bodies to which they belong. Their order has been decided by lot, and Great Britain is called first. Sir Thomas Fayrer, from the Royal Society, and Prof. George Darwin, from Cambridge, each in a splendid scarlet broadcloth robe, lay down their scrolls of parchment and utter brief speeches of greeting in the Italian tongue. They are much appreciated by the audience: "Parla bene!" "Pronunzia bene!" one hears murmured in tones not devoid of surprise. Then follow for an hour or more other delegates in every tongue and in every garb. But *the* orator of the occasion was Prof. Schmurlo of Dorpat in Russia. The type of the lonely and ungainly scholar in appearance, he nevertheless spoke a few phrases so ultra-Italian in the ingenious gracefulness of their turn that the audience went fairly wild with delight. Then honorary degrees were rapidly distributed, and the great concourse slowly worked its way out.

The main effect of such a festival is to make one feel that the differences between nations, which we commonly take so much account of, are very superficial. At bottom our sentiments, impulses, and ways of taking pleasure are the same. In particular are the great men of different countries made of one human stuff. In the rolls of the University of Padua for 1592 (published afresh, among other things, for this occasion), we find in the list of lecturers the following entry:

Ad Mathematicam Exs. D. Gallileus de Gallileis Florentinus noviter conductus } *leget ad libitum hora 23.*

Nothing distinguishes outwardly this unobtrusive passage from the rest of the book, yet it announces no less a fact than the first teaching of modern science. Galileo's conceptions are now to our beliefs about nature what the heart is to our bodily life. Could either be annihilated, remediless collapse would result. The more natural is it, therefore, in reading in Galileo's works, to note how little of a foreigner the man seems. He has the same indescribable mixture of homeliness with his subtlety that make our own Locke, Faraday, and Darwin seem so little remote from our bosoms. Few of us realize, either, how recent his activity was, or what a mushroom growth is this stupendous scientific edifice of which we are so proud. Five successive human lives measure the whole span of it. Five men, Galileo being the first of them, who should each in old age impart the discoveries of his generation to a youth who, when grown old in turn, should do the same, would bring the whole history and tradition of natural science down to 1892. It is sometimes well to remember this when we hear people assuming that all the great scientific discoveries are already made, and that the future industry of the human race will be limited to filling in the canvas with detail.

W. J.

MEMOIRS OF COUNT CHEVERNY.—II.

PARIS, December 23, 1892.

CHEVERNY gives curious details on the *convulsionnaires* who for a time were the great sensation of Paris. A certain Father La Barre directed these manifestations, which were witnessed by all the ladies of the court. Cheverny's account reminded me of some representations given by the Aissouas during one of the last Expositions. Cheverny saw a poor woman crucified by Father La Barre; he would see no more, "having," he says, "a great aversion to the sight of any pain."

He was beginning to be tired of his function, and bought the estate of Cheverny, as well as the office of "Lieutenant-General of Blaisois." On this occasion the King made him Count of Cheverny (his family name, as I have said, being Dufort). He began a new life, embellished his house, and made the acquaintance of all his neighbors, whom he describes with minute detail. His account of life in the châteaux of Orléanais in the eighteenth century has a real interest. Cheverny was very sociable; he was fond of theatrical representations, and entertained his neighbors constantly; he spent some time in Paris every year and kept up all his old acquaintances there.

He had remained greatly attached to the Duc de Choiseul, and, when the Duke was exiled at Chanteloup, he became one of his faithful visitors. The distance from Cheverny to Chanteloup is only ten leagues. Our Count was in Paris at the time of the death of Louis XV.; he had kept his *entrées*, and as soon as he heard of the King's illness he started for Versailles. Mme. du Barry had already been ordered to leave the castle by the Dauphin. The King was in the hands of the doctors. La Borde, his valet de chambre, was the only person to whom he spoke.

"La Borde told me that one morning the King called him with a firm voice, looked to see if they were quite alone, and said to him: 'And Mme. du Barry, where is she?' La Borde answered without hesitating: 'Sire, she went away this morning.' Then the King said: 'What! already!' La Borde saw two great tears roll down his cheeks, and then he sank on his bed, without speaking any more."

Speaking of the new King, Louis XVI., Cheverny says: "He was the best of men; afraid of the weight of his crown, he did not know in whom to confide, as he trusted none of the people who were around him. The King, with much nobility and elevation of mind, had only the tastes of a pretty woman." It was almost accidentally that the King chose Maurepas for his Prime Minister. "He became Prime Minister for the misfortune of France, as it was he who, by his carelessness, prepared the great events which destroyed this august monarchy."

In his visits to the capital Cheverny saw chiefly his friend Sedaine, to whom he was much attached and who made him acquainted with Dorat, Diderot, and others. This is his description of Diderot: "Diderot, fat and stout, full of fire, letting himself out with the greatest confidence in the world, discussing, even disputing, was not imposing, notwithstanding his reputation, because of his frank *bonhomie*. He was inexhaustible, and, as he liked conversation, was a dazzling firework. . . . He was the best man in the world." Cheverny was curious about everything and everybody. He would see Mesmer and his famous experiments, which he tried in vain to repeat at home. He was dying to know the famous Mme. du Barry, and one of his friends arranged an interview.

"She was living then at her fine house at Luciennes, which Louis XV. had given to her, and which Louis XVI. had left her in. It was freezing; she arrived in a carriage with six horses and entered the room with a noble ease. She was tall, extremely well made, and was a *jolie femme* in every way. After a quarter of an hour she was quite at ease with us. My wife was the only woman there; all the attentions of Madame du Barry were for her and for the master of the house, and she showed herself affable towards everybody. President Salabarry, Chevalier de Pontgibaud, and a few others were there. She kept the conversation going. She spoke first of Luciennes, and asked us to go there and dine with her. We accepted, but indefinitely. Her pretty face was a little heated; she told us she took a cold bath every day. She showed us that under a long pelisse she wore only a shirt and a thin *manteau de lit*; everything was of the greatest magnificence; I had never seen a finer *batiste*. The dinner was charming."

The Chevalier de Pontgibaud wore the cross of Cincinnatus. Mme. du Barry, seeing it, said that while she was at Versailles she had six footmen, the finest that could be found, but very undisciplined. She was obliged to dismiss one, who left for America at the beginning of the war. She gave him a purse well filled with gold. He came afterwards to see her and presented himself with the cross of Cincinnatus. "This story made everybody laugh, with the exception of the Chevalier de Pontgibaud."

When the first provincial assemblies were convoked, Cheverny was made a member of the Assembly of his province; afterwards came the elections to the States-General. In entering on this new period, so different from the first, he tells us:

"I witnessed the general breaking up of French society, the disappearance of a royal

family worthy of the respect and devotion of all Frenchmen. I will retrace only what was personal to myself. Retired on my estate, I will . . . prove that, notwithstanding all human prudence, you can escape danger only through a Providence which directs and conducts events. I will show what privations were suffered by persons who could enjoy society, the fine arts, and the sciences, and who saw the century plunge into the most horrible barbarisms. In the whole course of my life I had tried to secure friends for my old age. The Revolution defeated all my calculations."

If anybody was ill prepared for the French Revolution, it was Cheverny, a wealthy, amiable, sociable man, kindly, full of common sense and good feeling, but without any general ideas, accustomed to the old social hierarchy. The part of the memoirs which relates to the troubled years of the Revolution is perhaps all the more interesting as it is purely anecdotical. We are rather tired of generalities on this subject; we have had also descriptions enough of the great men of that period—Danton, Robespierre, and others. In Cheverny, who lived chiefly in his province, we find also the meanest actors in the terrible drama. The accumulation of the small facts which you will meet with in the memoirs produces a little the effect on the mind which is made by Taine's chapters on the subject of the Revolution. In fact, Taine had the manuscript of the memoirs in his hands before they were printed. He found many documents in them, especially for that curious chapter which is headed "L'Anarchie spontanée." You see in it how an old and apparently well-organized country can in a few months fall back into a state of disorganization, just as a body full of life gives after death all its organs and molecules to the earth. The French Revolution was the most extraordinary commotion of this sort; if the country had been invaded by another race, as Great Britain was invaded by William the Conqueror, it could not have looked more different in 1793 or 1800 from what it was in 1780. New fortunes, new names sprang from the ruins of old fortunes and old names; new ideas, new formulas, new modes of thinking, entered the social as well as the political domain.

Cheverny, like so many others, became a sort of stranger in his own country. He was happier than many others: he lost his fortune, but he kept his head. His estate was sold in 1801 to Germain, a banker of Paris. It belongs now to the family of the Marquis de Vibraye. Dufort de Cheverny died at Blois the 28th of February, 1802, at the age of seventy-one years. He did not live long enough to see the Revolution crowned and consolidating all its political and social conquests in the person of Bonaparte. I have searched in his memoirs for the passages which relate to Bonaparte and his family. They are very curious. On the 10th of August, 1796, he writes: "The Directory have confided to Robbé de Lagrange Madame Bonaparte, *ci-devant* Beauharnais, to conduct her to her husband, who is with the Army of Italy." "Madame de Beauharnais," he writes in September, 1796, "was separated for ever from her husband by the guillotine. She was not long, people say, in captivating Barras, one of the five kings. Barras was intimately connected with Bonaparte, and wished to make his fortune. After a year of mourning he made her marry Bonaparte, notwithstanding their difference in age. Bonaparte was only twenty-seven and she nearly thirty-three years old." At Lyons, at Turin, Madame Bonaparte was received with the greatest honors. "The Queen could not have been better received: deputations, troops, a numerous court." "Bonaparte waited for Madame Bonaparte, and received her at the head of his staff. 'Madame,' said he, 'I am very sensible of the goodness you have shown in coming to me and making such a fatiguing journey. Ask now for whatever you please, and I will make it my duty to give it to you.' 'Sir,' said she, 'I ask that your hostages be set free.' [These hostages were Piedmontese gentlemen who guaranteed some conditions of a military arrangement made with the King of Piedmont.] Bonaparte at once gave the order." In August, 1798, Cheverny writes that Bonaparte frightens the Directory "by his head, his audacity, and his exploits"; that he was much neglected in Paris, where he played a more than secondary part. "Secretly jealous, despotic, with the dryest and most republican forms," the Government was making some project of an expedition so as to get rid of him. Bonaparte had had various plans of expeditions placed before him; he had studied them in all their details, and had chosen Egypt as his new field of battle. On the 1st of September, 1800, we read:

"Bonaparte, having happily placed himself at the head of the Government, has advanced the Revolution by more than fifty years. The cup of crime was full and running over. In a short time we shall know if we are destined to be tricolor or unicolor. Bonaparte did in twenty-four hours at Saint Cloud what all the *émigrés*, the King, the Prince de Condé, could not have accomplished with 40,000 men. He cut off the 750 heads of the hydra and concentrated the power in his own head. . . . All is so changed at the moment I write, that it seems as if the revolutionary event must have taken place more than twenty years ago. . . . The First Consul is more King than ever was Louis XIV. . . . If Bonaparte is not stopped by unforeseen events, people will be able to say of him what Bussy-Rabutin said of Marshal Turenne: 'He can rise to such a degree of glory that the glory of others will not trouble him.'"

Correspondence.

THE SEAT OF POWER.

To the Editor of The Nation:

Sir: The Sherman Act of 1890, under which the United States Treasury is purchasing four millions of ounces of silver per month, seems likely to furnish a curious illustration of where the centre of power under our Government really lies. So far as my observation goes, there is not a single financier or man of business of any standing in the whole country who is not opposed to it in the most unqualified manner. There is a sort of vague talk that the South and West demand it, as they are said to demand free silver; but the man, outside of a certain circle, who stands up and defends it on its own merits may be said to be an unknown quantity. All Europe is looking on in amazement that we should persist in such not, perhaps, suicidal, but at any rate absurd and injurious, folly. It is perfectly evident what persons do wish for the continuance of the Silver Act. They are the group of silver-mine owners and the other private interests who wish to keep up the price of silver, ruling members of Congress more powerfully than do either their constituents or the mass of public opinion.

If the Sherman Act remains unrepealed during this session, will it not show conclusively that the real enemy to be encountered is not silver but the lobby, and—of which there is abundant other evidence—that the question which for the future overshadows all others is whether in this great democracy the Government is to express the will of the people or of the lobby?

In this connection it may be remarked that the chief source of information as to the condition of the national finances open to the public is the discussion in the newspapers as to the private conversations of Secretary Foster, whether in Washington or New York. Is not that a pretty business for the Secretary of the Treasury of the United States—to be running round Wall Street gossiping? And is a place where that is the only way of making his voice heard likely to command the services of great men? G. B.

Boston, December 30, 1892.

THE MASSACHUSETTS GOVERNORSHIP.

To the Editor of The Nation:

Sir: In your issue of December 22, commenting on the Panama scandal, you say: "The non-payment of members [of the English House of Commons] is one of the chief defences" against such a state of things as exists in France to-day, and you might have added, as existed here in Crédit-Mobilier, Pacific Railroad, and "Burn this" times. If I understand you, the inference is that since members of the Commons are not paid, the natural selection is of men who have private means enough to put them above the temptation of a "slice of a good thing." This granted, why is it not a good plan to have the Governor of Massachusetts, by law, possessed of some private means? If good for the purity of English politics, why not good for Massachusetts?

One of the 68,045 who voted "No."

Framingham, Mass., December 30, 1892.

[The inference is not sound without making allowance for English aristocratic traditions and American democratic conditions. As we have before pointed out, the fathers who framed our Constitution were disposed to affix a property qualification to Senatorships. We cannot say how this would have worked, but, begun at that early day, it might have borne as good fruit in respect to incorruptibility as the English practice. In the course of time the Senate has become the goal of extremely rich men, who desire either the dignity of the place or the opportunity it affords of furthering their pecuniary interests; and their seats are substantially bought of their respective legislatures through the operation of the Machine. As a check, it would be useless to deprive them of their salaries; and it is not less futile, in our opinion, to exact a property qualification of a candidate for Governor, especially since by nominal transfers of real estate a law like that of Massachusetts can be so easily evaded.—Ed. Nation.]

LIBERAL AMERICAN METHODISTS.

To the Editor of The Nation:

Sir: In commenting upon the case of Prof. Davison, who has seemed to some good people to be a dangerous heretic, you remark, apropos of the report of the Committee sustaining him: "Liberality like this would clearly be out of the question in any Methodist body in this

country, and is sufficiently striking even for England."

Now, exactly what the elastic phrase "any Methodist body" may mean, I shall not undertake to say. But I venture to think that you underestimate the liberality of a large number of representative American Methodists. You may remember that Prof. Davison addressed the Methodist Œcumenical Conference in Washington with commendable freedom, and that he afterwards, by special request, gave an exposition of his views before the most representative Methodist college in the country. I venture to believe that Prof. Davison's views are shared by a rapidly increasing proportion of Methodists in this country, and that the liberality displayed by their English brethren will appear to them the most natural thing in the world.

Very truly yours, A METHODIST.

DECEMBER 30, 1892.

TINTORETTO'S ST. MARK.

TO THE EDITOR OF THE NATION:

SIR: A correspondent, "B. B.," writing in correction of the statement in one of my articles in the *Century*, says that "there is no such picture in S. Maria dei Angeli [at Murano] as the 'Finding of the Body of St. Mark,' described by Mr. Stillman. That canvas, forming part of a series with the ones now in the Royal Palace at Venice, has been, ever since the days of the Napoleonic kingdom of Italy, in Milan."

I have delayed replying to "B. B.," hoping to get to Venice to examine personally the matter ere this, but have been prevented from doing so. I have finally written to a Venetian friend, whose acquaintance with the works of art there is greatly superior to my own. My mistake was in confounding, from some cause which I cannot now trace, as I unfortunately did not preserve my notes and references, the works of Domenico Tintoretto with those of Jacopo. The picture alluded to is by the former. It is noted by Boschini as one of the series, executed in part by Jacopo and in part by Domenico, of the incidents of the transfer of the body of St. Mark to Venice and disposal at the church. It is called there "The Apparition of St. Mark in the Church of St. Mark," and, my friend writes me, is there at present writing. He continues:

"In the archives I found that on the 4th of January, 1818, were consigned to the Patriarch for the Seminary 27 pictures, among which—

Tintoretto, Apparitione di S. Marco (School of S. Mark.)
" L'Arrivo " "
" Sogno " "

(with three others by Tintoretto having no relation to S. Mark). Ridolfi ('Le Meraviglie') describes the pictures by Jacopo Tintoretto in the School of St. Mark. . . . None of these is at the Brera, none in the Royal Palace here."

The picture at the Brera, of which I have no recollection, has clearly nothing to do with those now (or at any time) at Murano, and the correction by "B. B." of my mistake in ascribing the picture of the younger to the elder Tintoretto gives place to a blunder much greater, unless my friend and myself are still more widely astray.

The finding of the body of St. Mark was the same subject as his apparition in the church, as the legend says that, the body having been enclosed for the greater secrecy in one of the pilasters of the church, the locality of it was forgotten, and long after was made known by a manifestation of the Saint in the church itself, indicating the spot in the pilaster where the body was deposited.—Yours truly,

W. J. STILLMAN.

FLORENCE, December 14, 1892.

COUSIN AND NIECE.

TO THE EDITOR OF THE NATION:

SIR: The word *cousin* was still used as synonymous with *niece* in the slashes of Hanover County, Virginia, and within two miles of Jericho Mills, on the Carolina side of the North Anna River, when Hancock's Corps crossed on the march from Spottsylvania C. H. to the second Cold Harbor fight in 1864, by two first cousins *proper* of my father. I saw the slashes kinsman last in 1870, and he died, I think, a little short of 1880. The Jericho Mills kinsman I saw last in 1864; he died between that date and 1870. I am getting old myself, and a little behind time, even in reading the *Nation* of the 15th inst.; still, I do my best to give your Talladega correspondent a Roland for his Oliver. C. J. HARRIS.

LEXINGTON, VA., December 25, 1892.

Notes.

HARPER & BROS. have nearly ready Bishop Hurst's 'Short History of the Christian Church,' and 'Katharine North,' a new novel by Maria Louise Pool.

Pierre Loti's 'Pêcheur d'Islande' has been adapted and annotated as an advanced text in French, and is on the point of being published by D. C. Heath & Co., Boston.

Dodd, Mead & Co. are about to issue an authorized version of Charles Wagner's 'La Jeunesse,' under the title 'Youth.' They have just brought out 'The Cloister and the Hearth' of Charles Reade in a handy four-volume edition, each volume adorned with three or four attractive photogravures of churches, portraits, and scenery. The typographical part has been well looked after, except in the matter of providing it with a fit quality of paper; and more thought and taste, too, might have gone into the manufacture of the binding. The 'Universal Atlas' of the same firm will be most prized for its series of maps of the several States of our Union, which have the scale of a single or double octavo page, with the advantage on the side of the smaller States. These exhibit the county boundaries and the railroads, and the county census of 1890. There are no indexes, but a statistical appendix gathers many details of the population, immigration, religion, rainfall, mortality, etc., of the United States and of some foreign countries.

G. P. Putnam's Sons send us the fourth series of their 'Best Reading,' a priced English and American bibliography for the five years ending December 1, 1891. The selection is of the more important works, and further discrimination is not attempted. This manual has a clear field of usefulness in the public library and in the household, and has been well maintained by the editor, Mr. Lynds E. Jones (since the first series).

Columbus, with portrait and Mr. Woodberry's sonnet to it, opens the bound volume xliv. of the *Century Magazine*; and the subject is caught up again in Mr. Van Brunt's articles on Architecture at the Columbian Exposition. To Mr. Woodberry also falls the task of saying the fitting word, in prose, about Shelley, whose centenary he has meanwhile honored in a lasting way. Besides these features we have the conclusion of the Cole-Stillman Old Masters. The chief serial stories have been the not too fortunate "Naulahka," the "Chatelaine of La Trinité," and "The Chosen Valley." Nor should mention be omitted of the portrait of Roswell Smith, and accompanying tributes from his colleagues of the Century Company and in philanthropic endeavor—a man with a Columbian largeness of mind, courage in straits, and tenacity of purpose.

The local color of the Pacific Coast from Alaska southward tinges the whole of volume xx. of the *Overland Monthly* (San Francisco), as does the use of "process" engraving in place of woodcuts. There are papers on yachting and on the fisheries, on logging and hunting and staging and mountaineering, on the University of California; with a spice of fiction, verse, book-reviewing, and an occasional political article.

The bound volumes of *St. Nicholas* for 1892 impress us anew with the high ideals and attainment of a juvenile periodical which some adults that we know of are not ashamed to be caught reading. Its reduction of mere frivolity to the minimum, and its admirable withstanding of passing fashions and crazes, combine with its always unobjectionable letter-press and excellent illustrations to make it a genuine parents' aid.

Mr. F. F. Murdock of the Bridgewater (Mass.) Normal School has lately issued an 'Outline of Geography' for the special use of his pupils. It consists of a series of outline chapters on forms of land and water, weather and climate, plants, animals, population, and so on, with frequent abbreviated references to various text-books, as if slightly expanded from lecture notes. The abstracts have proved of value to teachers, although the order of subjects is open to criticism. The absence of a table of contents makes the use of the book somewhat inconvenient. As is usual in the current methods of teaching, an explanation of processes is attempted in the chapters on meteorology, but it is omitted from the chapters on the forms of the land. The correction of this inconsistency will mark a decided advance in the study of geography.

A fourth number is lately issued in the series of picturesque Geographical Readers (Lee & Shepard), by Charles F. King of the Dearborn Grammar-school, Boston, well known to teachers as the author of 'Methods and Aids in Geography.' The little book deserves high praise as a successful effort to interest and instruct children in one of the more difficult studies in our common schools. Mr. King is an expert in his method of making geography a live subject, and his books carry much of his spirit with them. The present volume, 'The World We Live In,' part 2, fully maintains the freshness and variety of its predecessors; and its illustrations, mostly from photographs, are remarkably good, considering the size and price of the book. The whole series deserves extended use as readers at school and at home—but in a plain, not a rhetorical, way.

An immense amount of authentic technical information is embraced in the volume of 'Notes on the Year's Naval Progress (Information from Abroad),' just issued from the Office of Naval Intelligence of the Navy Department. The several sections deal with ships and torpedo boats, machinery, ordnance, naval administration and personnel, electricity, naval manœuvres of 1891, armor in 1892, and bibliography. An index is supplied, and there are maps, diagrams, and other illustrations in profusion.

Kentucky claimed its share of the centennial

year, having been admitted to the Union on June 1, 1792. The Filson Club of Louisville could not be lacking in its duty, and its proceedings have been published in its generous style in a large quarto of 200 pages. President Durrett's address supplied the history of the State, and was worth being read as well as listened to. He shows that Chenoa might have been adopted from the Indians as the name of the colony, though it was passed by for Transylvania and afterwards for Kentucky (Iroquois *kentake*, prairie or meadowland, and not the proverbial "dark and bloody ground," though "it is difficult to fix a time when the Indians were not hostile to the whites in Kentucky"—and let us say, *vice versa!*) On pp. 58 and 59 are ominous lists of the members of the Constitutional Convention who voted for and against striking out the pro-slavery clause—the six clergymen all in the minority. The vote of Richard Taylor, father of Zachary Taylor, was unrecorded.

Economic periodicals have so multiplied of recent years that it is impossible to extend an altogether cordial welcome to any addition to their number, but it is no more than just to say that the *Journal of Political Economy*, which makes its first appearance this month from the press of the University of Chicago, takes rank at once with the best of the existing reviews. The leading article, by the editor, Prof. Laughlin, is entitled "The Study of Political Economy in the United States," and recalls the notable article by Prof. Dunbar which appeared, we believe, in the first number of the *Quarterly Journal of Economics*. Prof. Laughlin considers that a certain improvement has taken place in the tone of economic thought and discussion since that period, indicated, among other things, by the passing of the American Economic Association from the control of the Socialistic element. It must be said, however, that he does not express any very sanguine hopes as to the future of applied economics in this country, nor do we observe that he comments upon any achievements by American economists possessing marked originality. His article is therefore cautious and subdued in tone, but highly discriminating and judicious. An article upon the recent commercial policy of France contains much that is instructive, and another upon the price of wheat since 1867 appears to be exhaustive. There is a department of notes, containing, among other matter, a rather striking communication from Mr. Edward Atkinson, showing how he "braced up" President Grant to his veto of the Inflation Bill of 1874. The book-reviews show painstaking, but are rather mediocre. Among the appendices a table is given of the courses of study in political economy in nearly all the colleges and universities of this country. The *Journal* is to appear quarterly at $3 a year, and subscriptions may be sent to the University Press, University of Chicago.

One class of the community is in no danger of being neglected—we mean the mothers. No. 1 of *Motherhood*, a monthly magazine devoted to their interests, has just reached our table. It is published at 150 Nassau Street in this city.

Petermann's Mitteilungen for November contains an account of several explorations by German missionaries in the region to the north of Lake Nyassa, and a paper on the language of Schleswig, with maps showing the extent to which the Frisian language is spoken in the German Empire. There is also a brief sketch of the Danish expedition which passed last winter on the coast of East Greenland in latitude 70 degrees. The lowest temperature noted during the nine months from September, 1891, to May, 1892, was in March, when the thermometer fell to 50 degrees below zero, and the mean temperature for the month was 13 degrees below zero. Very singularly, the highest temperature, with the exception of some days in May, was in February. A supplemental number contains the scientific history of Dr. Nansen's Greenland expedition. The results of the astronomical and meteorological observations are given by Prof. Mohn, while Dr. Nansen treats of the topography of the east coast, and the extent, form, structure, movement, and thickness of the inland ice, the icebergs, and the Polar current. No especial observations were made of the Northern Lights, but they were seen nearly every clear night. "A crackling noise was never heard, and in no case was the light seen between the clouds and the observer."

In the December Proceedings of the Royal Geographical Society, it is announced that with the January number the title of this publication will be changed to the *Geographical Journal*. At the same time it will be increased a third in size, so as to cover more completely the whole field of geography. Both maps and illustrations will form a more prominent feature than in the past. The present number opens with a paper by Capt. Lugard on his African travels, differing but little from that published in the *Scottish Geographical Magazine*. In it he dwells upon the great possibilities of the Mau plateau, not far from the eastern shore of the Victoria Nyanza, for European colonization. This consists mainly of well-watered grass lands, admirably adapted to stock-raising operations, and, though situated upon the equator, inasmuch as it is at an altitude of 7,000 or 8,000 feet it has cold winds and a bracing atmosphere. He also discusses the interesting problem of the water supply of Lake Victoria, the few small streams flowing into it being seemingly insufficient to supply the waste from the Somerset Nile, a deep broad river, and from the evaporation over a superficial area of some 27,000 square miles.

A series of annual reports on the climate of Belgium has been issued for some years by Mr. A. Lancaster of the Royal Observatory at Brussels. The latest number, dealing with 1891, gives an interesting résumé of the conditions which determined the peculiarly cold winter at the beginning of that year—namely, a persistence of high atmospheric pressure over northern and central Europe, allowing a local cooling of the land and causing a prevalence of easterly winds, which are for Belgium what the west winds of winter are for us. The close of the cold period was marked by the falling off of the high pressure and the entrance of mild westerly winds from the Atlantic.

Largely through the exertions of Prof. A. Penck of Vienna, the Geographical Congress held at Berne last summer recommended the preparation of a uniform map of the world, on a scale of 1:1,000,000, and appointed an international commission to formulate a plan of publication. The intention of this undertaking is to present the results of exploration and surveys from all available sources on a uniform scale and in a systematic manner. Although involving great expense, the map would be of peculiar value as a standard of reference and comparison for the coming century at least.

The two latest sheets in Dr. Vogel's Map of the German Empire (Gotha: Perthes; New York: Westermann) depict the Schwerin and Posen districts; the first forming part of Prussia's belt of small lakes, and the latter being adjacent to Poland, of which rather more is shown than of Prussia. From the same source comes a 'Pocket-Atlas of the Ancient World,' edited by the late Dr. A. van Kampen and by Dr. Max Schneider. In addition to the usual plates there is a reduced copy of the Tabula Peutingeriana of the thirteenth century, now preserved, minus the first of the twelve sheets, in the Imperial Library at Vienna. The rather fine lettering of some of these maps is atoned for by a copious index.

The pretty and sensible device of a fan calendar comes to us from Fr. Jac. Andres, Boston, and may be recommended for any lady's writing-table.

The Bibliographical Society held its preliminary meeting in London on July 15, 1892, and its members in November numbered 157, six only of them being Americans and one French. The names already enrolled are of sufficient reputation in the science of books to insure stability to the society, which is started none too soon for the credit of English and American bibliography. The main objects set forth are investigations by Committees on Early Printed Books, Current Literature, General Literature, Special Bibliographies, and Book Production and Publication. The annual fee is one guinea until a membership of 200 is reached, when an entrance fee of one guinea will be asked; twelve guineas constitute a life membership.

A well-informed correspondent writes to us that the two Washington letters printed in Mr. M. D. Conway's communication in our last issue were produced in *Notes and Queries* for June 1, 1878. Copies of them were at that time given to Gen. Grant.

—The growth of legends is well exemplified in the October number of the *New England Historical and Genealogical Register* in Mr. John Ward Dean's account of the original "Gerrymander." He shows that the figure of the "political dragon" carved out of Essex County, Mass., in 1812, to insure a Democratic majority in the State Senate, has been attributed to Elkanah Tisdale, a miniature-painter of the time, and to Gilbert Stuart; while the notion that the "shoe-string" district (as they say in Mississippi) resembled a salamander is credited to a company at Col. Israel Thorndike's in Boston, to Washington Allston in the *Centinel* office, and to G. Stuart; and, finally, the name Gerrymander is said to have been proposed by a Mr. Alsop, Mr. James Ogilvie, and Maj. Benjamin Russell This is certainly a wide field to choose from. Mr. Dean gives facsimiles of Nathan Hale's map of the county from the Boston *Weekly Messenger*, the winged gerrymander figure from the Boston *Gazette*, and a skeleton gerrymander *in articulo mortis* from the Salem *Gazette* of April 6, 1813. His brief bibliography of the subject does not include the article on the Hare system contributed by Mr. William R. Ware to the *American Law Review* some fifteen year ago. It is noticeable that, though Gov. Elbridge Gerry has acquired a proverbial notoriety as the author of the partisan device of manipulating districts, even this distinction has been awarded to Samuel Dana, the President of his Senate, and Joseph Story, Speaker of his House till just before the measure was introduced in both houses. Mr. Dean firmly insists on the hard *g* in gerrymander as in Gerry; and in the same number of the *Register* Mr. Henry F. Waters likewise protests against jerrymander, "as our English friends call it." The pedigrees of Elbridges and also incidentally of Gearinges, Geries, and Gerys, are illustrated in Mr. Waters's "Genealogical Gleanings," of which the chief interest, however, centres in his

ample development of the John Harvard connection, and in his demonstration that there was a colony of families from Stratford-on-Avon settled in Southwark, so that "it is not at all improbable that Shakspere was a frequent visitor at the house of John Harvard's mother" in that dramatic quarter of London. He gives the wills of John Hall of Stratford and of his daughter, Elizabeth Barnard, who was Shakspere's granddaughter. A glimpse of Milton's connection is shown in the will of Francis Spencer. Rhode Island families rather seldom occur in the Gleanings, but there are several in this instalment.

—The last week of the year 1892 was a memorable one in the annals of educational benefactions. First came the announcement of a present of yet another $1,000,000 for the University of Chicago, then of a legacy of $185,000 for Dartmouth College from an almost forgotten alumnus, and, last but by no means least in educational value, a woman's gift of $306,977 for the Medical School of the Johns Hopkins University. This final donation of Miss Garrett caps appropriately the movement begun by a committee of women in the spring of 1890 for the endowment of a great post-graduate Medical School, open "on the same terms" to properly qualified men and women. It moreover raises the Medical School Fund to the minimum endowment ($500,000) named by the trustees as, in their judgment, necessary for the opening of a medical department of the University, and makes possible in February the announcement for October, 1893, of the terms of admission to, and courses in, a school which "will afford to the women and men of this country whose acquirements and training may enable them to enter upon its course of instruction, unsurpassed opportunities for the scientific study of medicine." The conditions attached to this latest contribution to the Johns Hopkins Medical Fund are mainly those of the original gift of $111,300 by the Women's Committee, and of the conditional offer of $100,000 mentioned in these columns on May 7, 1891. It is now, however, also agreed, first, that not more than $50,000 of the $500,000 endowment shall be put into a building or buildings, and that the chief building of the Medical School shall be known as the Women's Fund Memorial Building; second, that the school shall be exclusively "a graduate school," the donor being "entirely unwilling to contribute at any time to the maintenance of an undergraduate or partly undergraduate school"; third, that the terms of this gift, and the resolutions of October, 1890, in which the trustees accepted the Women's Medical School Fund, shall be printed each year in the calendars announcing the courses in the Medical School; and, finally, that there shall be a committee of six women (the members to hold office for life and to fill vacancies in their number), "to whom the women studying in the Medical School may apply for advice concerning lodging and other practical matters, and that all questions concerning the personal character of women applying for admission to the School, and all non-academic questions of discipline affecting the women medical students, shall be referred to this committee, and by them be in writing reported for action to the authorities of the University." This last proviso suggests the query whether women after all will be admitted on precisely the same terms as men, in view of the fact that the latter will hardly be asked to come before a tribunal other than the academic authorities.

—Mr. George W. Vanderbilt well deserved the ringing cheers with which the announcement of his princely gift to the American Fine Arts Society was received on Friday night at the dinner of the Architectural League. His original subscription of $5,000 to the Gift Fund of the Society would have been considered by most men a sufficient piece of generosity. Not content with that, however, he bought the lots at the back of the Society's property and built the large gallery upon them, giving the Society the option of buying it at any time for its cost price, plus interest and taxes. This amount is at present $100,000, and on Friday Mr. Vanderbilt completed the transaction by handing his check for that sum to the trustees of the Gift Fund, and with the money the Society has purchased the gallery. It thus becomes the absolute property of the Society by the best of all titles, that of cash purchase. It is only fitting that the gallery should be known for ever as the Vanderbilt Gallery, after its donor. Such discriminating munificence in the use of wealth is the best defence of property against Socialism. Few will be likely to begrudge his wealth to a man who knows so well how to use it, and none who know the work that the three societies composing the Fine Arts Society have been doing and are doing for art in this country, will envy them their splendid Christmas present.

—The annual general meeting of the Society of Authors in London is usually so uneventful and unimportant that it is scarce worth noting. But this year the fact that Mr. Besant resigned his Chairmanship and took advantage of the occasion to read a paper on the Society's career during its nine years' existence, gave the meeting unlooked-for interest. Naturally much regret has been expressed upon the retirement of Mr. Besant from the post he has held so long, but he considers it his duty, since outsiders, he thinks, have persisted in identifying him too closely with every action of the Society. He has always worked in its interest with such enthusiasm that it seems a hard thing to say that his resignation promises to prove a gain rather than a loss. Mr. Besant is nothing if not an optimistic sentimentalist, and unfortunately sentiment is not the soundest basis for a business organization. He looks upon literature as a sort of fairyland, in which he, as the good fairy, with a wave of his wand would make every book published an inexhaustible gold mine. There are to-day, he says, 200,000,000 English-speaking people; in fifty years there will be 400,000,000, all wanting to read, and, moreover, all wanting to read only good literature. The people, he declares, care only for what is good; for an example of the truth of this, look at the unprecedented (in England) success of the *Strand Magazine*. Now, this is a publication which has sent up its circulation chiefly by publishing portraits at all ages of the notorieties of the day, and articles on the Queen's dolls or pages from her journal written in her own royal Hindustani—the devices of the cheapest journalism. When a man seriously points to such a periodical as a proof of the people's literary instincts, there is absolutely nothing to be said. In the meantime, what Mr. Besant hopes may be brought about by the Society is (1) its enlargement to ten times its present numbers, as though there were not enough indifferent or worse writers already flooding the world with trash; (2) an institute or headquarters for authors; (3) a pension fund from which every one would receive a pension of right, not of charity; and (4) an Academy of Letters. Mr. Besant also had something to say about the Authors' Conference to be held in Chicago during the Exposition. It is his opinion that by it the future interests of English authors may be largely influenced. But Americans should realize that Mr. Besant, despite his boundless enthusiasm, can hardly be said to represent the most intelligent ideas and opinions of the English literary world; nor is Mrs. Walford, who seems to be accepted as an authority, a better qualified representative.

—"Bodley's librarian" can hardly feel a purer professional delight than in editing the facsimile reprints from "the very rarest and most interesting volumes, documents, and prints in the Bodleian library, Oxford." These reproductions are not for the rich, but are put within reach of the slenderest purse, ranging (so far) from sixpence to one shilling and sixpence apiece. Mr. Nicholson will gladly perpetuate the series not only so long as there is a moderate profit, but so long as both ends meet. He first published last year the unique copy of the 'Ars Moriendi,' printed about 1491 from Caxton's types, and either by that craftsman or his successor, Wynken de Worde; and the very rare two-leaved pamphlet describing the solemnities ordered at Rome in 1572, by Gregory XIII., on learning "the blessed news of the destruction of the Huguenot sect" in France by the St. Bartholomew massacre. This year he gives Caxton's brief advertisement (1477) of pyes, or rules for the concurrence and occurrence of festivals according to "Salisburi use"—from one of two copies of this earliest known English broadside; and Columbus's 'Epistola de insulis noviter repertis,' from Archbishop Laud's copy of Guyot Marchand's Paris edition of 1493. This last affords an instructive comparison with the more pictorial edition lately reproduced by the Lenox Library, both as to text and as to typography. Marchand's has a larger form and indulges more freely in abbreviations, and is compressed into half as many pages. It is the third emanating from this establishment in Mr. Eames's list in his introduction to the Lenox facsimile; and he mentions only two known copies—one at Göttingen; whereas the Bodleian has two, and Mr. Nicholson speaks of three others, unless he confounds the three Marchands. It remains to state that while Mr. Nicholson does not annotate his texts, his bibliographical introductions approach annotation; and that his most commendable series may be had of Bernard Quaritch, No. 15 Piccadilly, London.

—One of the most interesting literary *trouvailles* of 1892 was the discovery, by M. Octave Uzanne, of a hitherto completely unknown manuscript journal of the early years of Victor Hugo's exile, covering the period from 1852 to 1856. M. Uzanne came upon this journal among the stock of a seller of autographs in London, and published extracts from it, with some account of its curious history, under the title of 'Journal de l'exil de Victor Hugo.' This publication naturally made a good deal of stir in the newspapers and reviews, and everybody accepted M. Uzanne's theory that the handwriting of the manuscript was that of M. François-Victor Hugo, the poet's son, and that the annotations were by the poet himself. So the matter stood till December 6, when M. Auguste Vacquerie, Hugo's literary executor, came out with a brusque article in the *Rappel*, declaring that the manuscript was not Victor Hugo's, nor Victor Hugo's son's, and that not

even the annotations were Hugo's. These statements prove to be exactly true, although they cannot be called entirely frank and candid, for M. Uzanne published in the *Rappel* of the next morning a letter in which he showed that the journal was the work of Mlle. Adèle Hugo, the poet's daughter, and that the annotations, if not by Victor Hugo, were by no less a person than M. Auguste Vacquerie himself, whose handwriting is with difficulty to be distinguished from that of the author of the 'Châtiments.' "The mistake that I made at first," M. Uzanne says, "is natural enough, if one remembers that Mlle. Adèle Hugo was only nineteen years old at the time when the journal was written. The conversations recorded in it treat for the most part subjects which are beyond the average intelligence of a girl. But, however that may be, the question is definitely settled; my conferences with MM. Vacquerie and Meurice leave no doubt that the 'Journal de l'exil' was put on paper by Mlle. Adèle Hugo."

THE STANFORD DICTIONARY.

The Stanford Dictionary of Anglicised Words and Phrases. Edited for the Syndics of the University Press by C. A. M. Fennell, D.Litt. Cambridge: University Press; New York: Macmillan. 1892.

Ten years ago Mr. J. F. Stanford bequeathed to the University of Cambridge the sum of £5,000 to defray the expense of "producing a dictionary of Anglicised words and phrases," for which he had begun to gather material. The fruits of this legacy are now before us in the 800 attractively "open" pages of the 'Stanford Dictionary'—an exceedingly handsome volume, which shows that the Cambridge University Press is not disposed to lag behind its rival at Oxford in beauty of lexicographical printing. We have never seen a dictionary page that offered its contents more readily and pleasantly to the sweep of the eye.

The plan of the work, drawn up by a committee of eminent scholars—among them Prof. Skeat and Dr. Aldis Wright—was virtually determined by the nature of Mr. Stanford's collections. The vocabulary was to embrace: (*a*) "all words and phrases of non-European origin found in English literature, if borrowed directly from non-European languages"; (*b*) "all Latin and Greek words which retain their original forms, and all Latin and Greek phrases in use in English literature"; (*c*) "all words and phrases borrowed directly from modern European languages excepting French"; (*d*) "all words and phrases borrowed from the French which retain the French pronunciation"; (*e*) "all words borrowed from French, Latin, and Greek, since the introduction of printing, whether now altered or but imperfectly naturalized and now obsolete." Clearly no two persons, working with this scheme in mind, would select the same words and phrases from the same books. Criticism of the contents of the vocabulary, therefore, must be largely a matter of personal opinion, and, even when indubitably sound, is perhaps rather criticism of the plan, for which the editor, Dr. Fennell, is not responsible, than of the execution, for which he of course must answer. Still, if such criticism, in dealing with omissions, bases its judgment of what the editor meant to include on an observation of what he actually did include, it will probably be proceeding on reasonable grounds.

We may fairly inquire, then, why the dictionary admits into its pages *corpus Domini* but not *corpus Christi*, *in principio* but not *qui cum patre*, *docent* and *privat-docent* but not *ordinarius* or *ausserordentlicher*, *ver* and *hiems* but not *æstas* and *autumnus*, *vena cava* but not *vena porta*, *dirige* but not *threnos*, *ex converso* but not *ex obliquo*, *philautia* but not *philanthropia*, *Æolus* but not *Hippotades*, *ab intestato* but not *a notioribus*, *caput mortuum* but not *grossum caput*, *quo jure* but not *quæstio quid juris*, *Mus. Bac.* but not *Mus. Doc.*, *melius esse* but not *melior natura*, *senarius* but not *septenarius*, *comedy* but not *tragedy*, *Chanticleer* and *Bruin* and *Reynard*, but neither *Partlet* (*Pertelote*) nor *Tybalt* (*Tybert*), *extra modum* but not *extra metrum*, *portico* but not *parvis*, *dahlia* but not *tulippa*, *Judas* and *Sinon* but not *Ganelon*, *negatur* but not *nego argumentum*, *ignaro* but not *ignoto*, *fabliau* but not *lai*, *polysyndeton* but not *constructio ad sensum*, *par excellence* but not *paraventure*, *Saint Anthony* (for his *fire*) but neither *Saint Julian* (for his *hospitality*) nor *St. Vitus* (for his *dance*), *mutato nomine* but not *de te fabula*, *exegi monumentum ære perennius* but not *volito vivo per ora virum*. Many other examples of partiality might be given, but we must content ourselves with two: *Thais* is admitted to a vocabulary which excludes *Lucretia*, and *in nocte consilium* has to make room for *in vino veritas*.

Nevertheless, the 'Stanford Dictionary' contains a vast deal of material, and will surprisingly seldom disappoint consultation. The articles are of all lengths, of course, and all degrees of interest. The quotations, which give the book its chief value, are at times wonderfully abundant and to the point. The references are usually exact, but now and then one finds a bare "Gower, *Confessio Amantis*" (as if that poem were not 30,000 lines long!), or a citation of "Hudibras" by book, canto, and *page* (edition not named). Specimens of the dictionary at its best may be seen under *mufti*, *paternoster*, *periwig*, *seraglio*, *strappado*, *supernaculum*, *tea*, *tobacco*, *umbrella;* but there are many other articles as good. Indeed, one can spend an hour far less agreeably than in merely turning over the pages and reading the illustrative passages.

In the Middle-English period, however, Dr. Fennell and his assistants appear not to have been at home. At any rate, Chaucer cannot have been among the "several hundred carefully selected works read for the purpose of collecting the literary materials upon which the best part of the work is based." This accounts not only for the loose way in which he is sometimes cited (after Richardson, indebtedness to whom is duly acknowledged), but for his not being cited at all in many pertinent places. Some slight acquaintance with his writings would have afforded earlier quotations than 1667 for *Jove*, 1588 for *Hymenæus*, 1618 for *Penelope*, 1573 for *Mercury*, 1590 for *Janus*, and so on. Among the many articles that a reading of Chaucer would have improved, we may mention *aloe*, *Argus*, *Ariete* (no quotation), *asinus ad lyram*, *causa causans*, *Clio*, *comedy*, *demoiselle*, *Elysian*, *Erinnys*, *faun*, *Helicon*, *ignotum per ignotius*, *Ixion*, *Juno*, *Jupiter*, *Lachesis* (no quotation), *l'envoi*, *Manes*, *palais*, *palladium*, *Pallas*, *Parcæ*, *Phaeton*, *Pluto*, *prima facie*, *primum mobile*, *Procne* (no quotation), *Sinon*, *Styx*, *Titan*, *Trojan*, *vulture*.

"Anglo-Indian" words are of course well looked after. "American" words, however, are not handled with the same discrimination. The local *sabe*, in the sense of 'knowledge,' 'capacity,' is gravely tagged "U. S. Eng.," as if its use were national. *Corral* is poorly defined, but excellently illustrated by quotations. *Peon* is wrongly restricted to the meaning 'a laborer or a serf bound to work for a creditor in Spanish America' (if we understand the definition). The suggestion of a native etymology for *bayou* is not very happy. The use of *alcalde* for 'justice of the peace' deserved notice. There is some confusion under *adobe*, but this may be due merely to a want of *netteté* in defining, a fault rather common in the book. The description of a *ranche* as 'a small farm or cattle run' will cause some amusement in this country.

In etymological matters the editor was bound by the decree of the syndics of the University Press, who "decided to confine the etymology in the main to the indication of the language from which a word or phrase has been borrowed and of its native form and meaning, unless there was some *fresh* light to be thrown upon the derivation." But even within these narrow limits he has had some difficult questions to settle, and his decisions are not always beyond appeal. It is perhaps with regard to the relations of English to Latin and Greek and French that Dr. Fennell betrays least sureness of judgment. His treatment of *gymnosophist* will serve as an example. *Gymnosophist* is derived by Dr. Fennell not directly from the Greek, but from the "Old French *gymnosophiste*." This form of statement is doubly, if not trebly, erroneous. First, *gymnosophiste* is not *Old* French in any proper sense of the term. Secondly, if it were, the English word, which does not occur till the sixteenth century, would, if from the French at all, be from modern French, since sixteenth-century French is not Old French. Thirdly, the English writer who first used *gymnosophist* is much more likely to have taken it directly from the Greek than from a modern language; indeed, he may well have been unaware that it existed in French at all. Similarly, *Jeremiad* is much more likely to have been made up directly from *Jeremiah*, on the analogy of other similar formations, than to have been adapted from *jérémiade*. The dictionary contains many other examples of uncritical etymologizing in this particular. Such words as *extirpation*, *premonition*, *remuneration*, *renovation*, *repercussion*, *retribution*, might no doubt have been simply appropriated from the corresponding French forms, but many of them may more reasonably be explained as transferences from the Latin, accommodated to the model already long established for such words in English. That this model was determined by older borrowings that *were* from the French is, of course, not here to the purpose. Dr. Fennell is too fond of the simple formula "from the French when a corresponding French word exists." The only sound formula is far more complicated, for it must take into account a complex condition of things. Was the English author who first used the word more exposed to French or to Latin influence? Was he given to Latinizing or to Gallicizing? Was the word actually in use in French as early as in English? These are some of the questions that the scientific etymologist must ask himself and that Dr. Fennell is too apt to ignore. Similarly, Dr. Fennell shows an inclination to refer to Anglo-French some words whose first appearance in English was long subsequent to the end of the period of Anglo-French influence. In short, he has clearly in mind neither the chronology nor the multifariousness of the

workings of French upon our language. His looseness in this regard is in striking contrast with the admirable work done by Prof. Sheldon in the new Webster—work of which no feature is more noteworthy than the sure but cautious touch with which the very categories in question are handled. Doubtless the 'Stanford Dictionary' was partly in type when the new Webster appeared (1890), but even then a study of Prof. Sheldon's etymologies would have set Dr. Fennell right in many instances, and would have been of great advantage to at least one paragraph of his Introduction. The niceness of the distinctions involved should not blind us to their historical significance and scientific moment.

The redaction of so miscellaneous a body of articles as those composing the 'Stanford Dictionary' called for wide and accurate scholarship and uncommon sobriety of judgment. In general, the editor has performed his difficult task remarkably well, but there are occasional inequalities. *Hiccius Doctius* is not well defined by "pretentious humbug," but the quotations supplement the definition. *Benedicite* is sometimes written *bendiste(e)* in MSS. of Chaucer, so that the hedging "as if" is superfluous. For *veronica* the definition, "a piece of cloth on which the face of Christ is represented," is hardly satisfactory, and one would have liked a reference to Grimm. *Lucus a non lucendo* is not so often used "to represent an absurd derivation" as to ticket a misnomer. Under *salva reverentia*, *sir-reverence* should perhaps be mentioned, since room is found for *save-reverence*. *Manito(u)* is put off with a single quotation (from Robertson). *Rethor*, in the line of Chaucer given, does not mean 'an orator' but 'a rhetorician,' or 'elcquent writer.' Under *Valhalla* no mention is made of the Icelandic form. *Fedant* may be from French *pédant*, but surely *pedante* is Italian, as Bacon might have taught the editor. *À corps perdu* is not "*literally* 'at all hazards'" as literalness is commonly understood. The short article, "*a futura memoria*, Italian 'for future evidence.' Of witnesses in the Antonelli suit," raises more questions than it answers; nor is the inquirer much helped in understanding "flounces plaited *à coup de vent*" by the gloss "as if in a gale." Amusing for its English is the remark that *à la lanterne* was used "of the early executions perpetrated by the mob in the French Revolution, when the victims were hanged on the chains which went across the street to hold a lamp in the middle." In the case of words and phrases like *Erdgeist*, *Ewigweibliche* (translated by "ever-feminine"), *panem et circenses*, *delenda est Carthago*, a reference to their source would be quite as welcome to the searcher as instances of their subsequent use in literature. It seems odd, under *philosophia prima*, to find no reference to the 'Advancement of Learning,' and no quotation earlier than 1829. No account of the origin of *pour encourager les autres* is given, the earliest reference being to Wellington's allusive employment of the phrase in an 1804 despatch. *Litt. D.* and *LL.D.* are each defined as "the title of one of the higher degrees of Cambridge University," as if these distinctions were never conferred elsewhere. A really inexcusable blunder is that of calling the Younger Edda "a later prose version" of the poems of the Elder Edda. One is not so much surprised at meeting once more the obsolete "great-grandmother" translation of the word. For *Anglomania* Dr. Fennell gives no quotation later than 1825; for *Zeitgeist*, no quotation at all. If this indicates that he has no acquaintance with the American variety of the former, and that the latter has never haunted his literary walks, we are inclined rather to congratulate him on his escapes than to find fault with his omissions.

In a few instances the use of modernized editions has led the lexicographer astray. The French *œillade*, we are told, was "Anglicized as *e(y)liad*, *œiliad*, *iliad*." In the quotation from "King Lear" immediately after, *œillides* is printed, though the quartos and folios have *aliads*, *eliads*, *iliads*. Again, *Cyprus* is said to be "a mistaken spelling for an English word *cipress(e)*, *cypres(s)*, *sypres* of unknown origin," and Milton is quoted as authority for the mistaken form. In Milton's own edition, however, the line in question reads "sable stole of *Cipres* lawn," not *Cyprus*.

Occasionally the Dictionary is didactic, or at least magisterial, in a way to remind us of the father of English lexicographers. *Gradus ad Parnassum* is the "title of a work intended to help English-speaking students to produce Latin verses, but not regarded with favor by competent teachers and critics." *Fater* is "used colloquially by persons who think *papa* vulgar and *father* too homely." *Ramoneur* is "adopted as a trade designation by some high-souled English chimney-sweeps."

We have consumed most of our space in calling attention to the weak points of the 'Stanford Dictionary'; but it will be observed that we have brought out at least one of its strong points in the process—and that is, the astonishingly varied interest of its contents. The defects to which we have adverted are mostly of slight account. As a whole, the Dictionary is an excellent book—a book to be thankful for, to buy, and to use. It enters into competition with no other lexical work in the language, but is an indispensable supplement to them all.

RECENT NOVELS.

Don Orsino. By F. Marion Crawford. Macmillan.

God's Fool. By Maarten Maartens. Appletons.

The Story of a Child. By Margaret Deland. Boston: Houghton, Mifflin & Co.

Under Pressure. By the Marchesa Theodoli. Macmillan.

The Reputation of George Saxon, and Other Stories. By Morley Roberts. Cassell & Co.

MR. CRAWFORD, in his latest novel, returns to Rome and to the families whom he has already made known to his readers, the Saracinesca and their kindred. They are met now in new surroundings, although still in Rome. Sant' Ilario and his wife are here, but are middle-aged folk, and their son, Don Orsino, is the hero. Rome has undergone radical changes, for the year 1870 has intervened, and the *Zeitgeist* has occupied and is rebuilding the city. Rome, which never was ashamed to beg, is now given over to digging as well, and Don Orsino wields, instead of the stealthy rapier, the pen of the man of affairs. Old Rome is gone, and the Older Romans, about to go, sit aghast that their younger blood can stoop to an interest in real-estate speculations. Don Orsino, reared on traditions, the child of romance, in becoming an ardent business man, becomes the link which the young ever is between old and new. The author's even-flowing skill gives us a unique impression of Rome in the hour following the change—Rome of the Romans and not of the foreigner; of the Jubilee and not of the Carnival; of the speculator and not of the priest. It was a scheme worthy of so consummate a designer as Mr. Crawford to make this external disintegrating and rebuilding process accompany his remarkable analysis of the changes that development brings about in humanity. The brain of man has altered very little since man first was, says Science; but his heart has undergone complicated changes, says Mr. Crawford, whose recent tendency has been to portray this transformed organ. He is evidently a disbeliever in the heart of the twelfth century at present—in the romantic passions bred of melancholy in pre-social days; he will have no more of the man who sees and loves and kills or dies. Nor is his alternative any such hackneyed creation as an Osric of the emotions, without depth, or a poly-affectioned Lothario. His Orsino is a man of utmost seriousness and even of concentration. He loves a beautiful woman tenderly and undividedly. She is (temporarily) the queen of his dreams and the sweet companion of his daily shopping expeditions; he lives upon her sympathy; he loves her alike with hot heart and cool head. And what disturbs this happy passion, returned in full measure? Neither death nor jealousy; simply a little jarring inopportunity, an ill-timed absence, a business engagement, a delayed journey—and the matter is over. There is little tearing of hair, no breaking of vows; the tragedy comes solely from the incapacity of Don Orsino's heart to hold an overmastering passion, an incapacity for which no one can blame him, least of all Maria Consuelo.

With her the case is different. Mr. Crawford does not, as yet, pretend that woman's heart has progressed since the twelfth century: he causes this one to act like an old-fashioned heroine, she even going to the length of marrying a pasty-faced speculator to keep him from ruining Don Orsino. Ours has been spoken of as an age

> "When folk have grown too clever to believe,
> And Evolution has disposed of Eve."

There is obviously, however, much more to be done in the direction of Eve, if Mr. Crawford is right as to his Adam, before men and women can meet on any comfortable terms. The process has begun, but let the women be advised to plunge still further into business careers, and to steep themselves in the concerns of the commercial, the scholastic, the philanthropic world; in time they will become incapable of any but fleeting sentiment in affairs of the heart. A type of useful, reasonable woman will arise, and the age of emotional comfortableness will have dawned. We shall read of the Maria Consuelos in romance as we now read of the ladies who had nothing to do but wear their knights' colors at tournaments, and pine for them while they were at the wars; it will be the common experience to get through life without having been, as Mr. Crawford puts it, "more than comfortably in love—and of such is the kingdom of heaven."

We know of no other who is making just the contribution to the art of fiction that this writer is, in the analysis of modern feelings or the impossibility of them; his is a real study in realism among many casualties which bear that much-abused name. In the power of presenting the atmosphere of places and the personality of his characters without triviality of detail Mr. Crawford is preëminent. His wit is abundant and always kept gracious by spontaneity. His style is marked by freedom and a masterly common sense, and is refreshingly free from mannerism. We have, in short, but

one quarrel with him, which is that his superabundant skill in writing leads him too easily into side-paths of criticism and comment, as if from sheer bravado of expression. The little essays into which he is thus betrayed, though compact and admirable in themselves, become diffuse and impeding where they are placed.

'God's Fool,' like 'Don Orsino,' is largely concerned with the snares and perils of the business world and the ghastly depths into which speculation may hurl the speculator. Mr. Maartens, however, does not treat the subject as an episode, but makes it the whole flaming reason of his book. He arraigns the world and his readers with all the wit and causticity of which his witty and caustic pen is capable, and convicts them of money-worship and consequent degradation. His Vanity Fair is unredeemed by any gleam of disinterestedness except among the unintelligent. The rich, it seems, cannot inherit the earth and virtue besides. In the person of 'God's Fool' we have a study (more valuable morally than psychologically, we suspect) of the attitude of unperverted Christianity towards its fellow-men. The fool, made deaf and blind by an injury received in his childhood, his mental development arrested, himself walled out from the world except from the patient few who learn to communicate with him, grows to manhood with no conventional ideas on any subject. His faithful nurse teaches him to be kind to the unfortunate, and benevolence becomes a passion with him. He learns the story of Christ and brings into a mercenary community an inconveniently primitive Christian practice. Having inherited an enormous fortune, he is a person of great importance to his family, whose temptations to use his money, lawfully and otherwise, are worked out into a story of well-sustained and absorbing interest. The incidental sketches of a sordid, loveless, money-besotted society are supremely clever. They are localized in a Dutch town, but are meant for no less wide application than wherever in the whole round world money is made and lost and hearts hardened by the process. Mr. Maartens's wit dazzles on every page; his scathing satire burns; his cynicism appalls; yet his wit is defaced by a curious addiction to puns, his satire is weakened by being too universally directed and by wearing always the militant air of one opposed, and his cynicism is maintained by too free use of the personal note, the confidential style—or, in view of the unflattering tone adopted towards his readers, one might call it, in college phrase, a style of parietal admonition. These, however, are but surface blemishes in a highly striking work by an original writer.

'The Story of a Child' is written in a gratifying vein of reaction from certain earlier books of Mrs. Deland's dedicated to the solving of unnatural moral puzzles. Not alone to these is little Ellen Dale a happy foil, but to many latter-day writings from other pens, in which a preposterous race of nondescripts passes for real children. No one can read of this child and not be touched to the inmost consciousness by the living, breathing reality of the little maid. Her head is half in the clouds, half upon the affairs of her elders; her warm little heart is full, not of schemes of reforming her grandmother or of elevating the masses, but of childish play and the reproduction in her games of the delightful fairies, princesses, or martyrs of her reading; yet so alloyed is she with human frailty that she is constantly planning her own martyrdom to punish those cruel grown people who thwart her, then forgetting her grievances or drowning them in "complaining to her Maker," in order to "balance her naughtiness by a little extra religion." She dreams of sacrifice and forgets to dust her room; she dwells with the delicious unction of a child's imagination upon nursing Betsy Thomas through the smallpox, and upon hovering, in consequence, between life and a saintly death; but decides, finally, to recover to unscarred beauty and the confusion of her enemies. She is, in a word, a very real, naturally naughty and naturally dear child, who will never be compared with Robert Elsmere, but who, we think, does Mrs. Deland more literary credit than John Ward.

'Under Pressure' is dedicated to Mr. Marion Crawford, and has certain points of interest in common with that gentleman's latest novel. It is a description of the "customs, prejudices, and virtues" of the most exclusive and aristocratic portion of Roman society, the time being that most bitter period for old Rome—the early days of United Italy. As in 'Don Orsino,' we have the patrician families with their horrified shrinking from the new and the revolutionary, which, nevertheless, being in the air, sift into their drawing-rooms and rudely dispose of their conservative schemes. The picture given of a Roman domestic interior is exceedingly interesting, with an interest in which melancholy plays a large part. The restricted lives here portrayed, dark with the shadow of ecclesiasticism, even darker with the bondage of caste, have little that is cheerful or inspiring. It is a relief when Love and Revolution enter the house together, and march to an end which we will not dull the edge of interest by revealing. The story, a few theatrical episodes excepted, is well contrived and well told; the book is worth reading, both as a story and as a chronicle of home life and manners in noble Roman circles, from an interior point of view not often employed.

Having had occasion cordially to disparage an earlier volume of Morley Roberts, we take pleasure in finding that he has mended his ways and furnished his readers with a new leaf to turn. In his present collection of stories there is not one which does not show invention at least, and there are several which were worth inventing. The opening one belongs to the least well-developed number, although founded on a good subject, that of a man, ambitious of literary fame, who buys manuscript and publishes it in his own name. "Sam Jackson's Snake" should have been omitted, but "The Troubles of Johann Eckert," a German trader caught in a terrible predicament in the South African desert, is a strong and good story, well told. So is "Exlex," the sequel to the incident related by Motley, of the condemned Dutch murderer who was given his freedom on condition of his serving as executioner to a Spaniard, with permission to kill any one who should thereafter taunt him with the execrated name of hangman. "The Captain's Wife," a sea story, is also a striking tale of horror. The author, in an evident desire to avoid the prolixity of explanation, too often slaps the reader's face with his climaxes, with the effect of being both rude and crude. He chooses his subjects ingeniously, and, when he unfolds them at his best, he deserves to be enrolled among the successful story-writers of the period.

MACAULAY AND WATER.

Social Life in England from the Restoration to the Revolution, 1660–1690. By William Connor Sydney. Macmillan & Co. 1892.

For an unscrupulous book-maker, with an infinite belief in the gullibility of the public, there is no difficulty in putting together a volume on 'Social Life in England, 1660–1690.' He has only to go to some good library, lay open before him Macaulay's third chapter, and order out the books to which Macaulay refers. He will look up Macaulay's references, copy in full a number of more or less interesting quotations, and string them together by a few remarks of his own. It will be safer for him, perhaps, to shuffle up the material, so that it should not come in quite the same order as in the chapter he is following; and he will be wise to refer occasionally to Macaulay as a brilliant writer with whom he is sorry to say he cannot altogether agree. But these precautions will probably be sufficient. The general public no longer reads its Macaulay; and it will doubtless take the writer at his word if he assures it that "the marshalling of all the materials" has been "no easy task," and that he has "sought those materials in many recondite sources" (Sydney, p. 195).

This is what Mr. Sydney has done with unfaltering impudence. It needs but a glance at Macaulay's chapter, and especially at his footnotes, and then at Mr. Sydney's book, to discover this. But that there should be no doubt, Providence has allowed Mr. Sydney occasionally to become drowsy; and then, instead of dishing up Macaulay's ingredients anew, he paraphrases Macaulay's text. A few examples will more than suffice, and we will italicise some of the embellishments:

MACAULAY.	SYDNEY.
When the Duke of Norfolk came to Norwich, he was greeted like a King returning to his capital. The bells of the Cathedral and of Saint Peter Mancroft were rung, the guns of the castle were fired, and the Mayor and Aldermen waited on their illustrious fellow-citizen with complimentary addresses.	Whenever the earl and his suite returned from their sojourn in the capital, the citizens accorded them a welcome similar only to that of a monarch returning from victory. The custom was that the Mayor and corporation should go forth to meet him at St. Stephen's gate, that all the bells of the various parish churches should *chime forth merry peals, that the castle artillery should be discharged*, and that the whole court should attend upon him in order, within one hour of the time that he entered his abode.
In the seventeenth century England abounded with excellent inns of every rank. The traveller sometimes, in a small village, lighted on a public house such as Walton has described, where the brick floor was swept clean, where the walls were stuck round with ballads, where the sheets smelt of lavender, and where a blazing fire, a cup of good ale, and a dish of trouts fresh from the neighboring brook were to be procured at small charge.	In the Restoration era the secluded rural alehouse and the picturesque *hostél* were constantly to be found, many of them corresponding to those which the amiable Isaac Walton discovered *on his numerous piscatorial excursions* through England, with the cleanly swept bricked floor, with the ancient ballads stuck upon the walls, with the linen fragrant with the scent of lavender, with the open fire, the snowy curtains, and *every material detail savoring of comfort and repose.*

The next passage illustrates the trick of transposition. It comes in an account of the Post:

(1.) The porters complained that their interests were attacked, and	It is not surprising, in the least degree, to find that the great and de-

tore down the placards on which the scheme was announced to the public. . . . (2.) A cry was . . . raised that the penny-post was a Popish contrivance. The great Doctor Oates, it was affirmed, had hinted a suspicion that the Jesuits were at the bottom of the scheme, and that the bags, if examined, would be found full of treason. The utility of the enterprise was, however, so great and obvious that all opposition proved fruitless. (3.) As soon as it became clear that the speculation would become lucrative, the Duke of York complained of it as an infraction of his monopoly.

cided success of the post . . . became an eyesore in the eyes of some, or that (3) when it was fully known that the speculation was proving advantageous to its originator, the Duke of York should have complained that the monopoly which he had so long enjoyed was being infringed. . . . (2.) The system was loudly denounced by the Protestants as *a contrivance on the part of notorious Papists to facilitate the communication of their plots of rebellion* one to another. The infamous Titus Oates assured the public that he was *convinced of the complicity* of the Jesuits in the scheme, and that *undeniable evidence* of it would certainly be found by searching the bags. (1.) The city porters were loud in their complaints that their interests were being ignored, and long continued to tear down every placard within their reach which *announced to the public the establishment of the innovation* on what they deemed their rights.

But similarities such as these might be only the unfortunate consequences of a too retentive memory. It is instructive, therefore, to examine the manufacture of some of Mr. Sydney's sections. Take that on Roads. Macaulay mentions Ralph Thoresby, and gives a brief account of his experiences. Mr. Sydney thereupon looks out the reference and gives us three verbatim quotations. Two lines follow in Macaulay about Derbyshire; Mr. Sydney again looks up the reference, and gives us three pages of quotation. And then, tired of his researches, Mr. Sydney falls back on paraphrase:

MACAULAY.

The great route through Wales to Holyhead was in such a state that, in 1685, a viceroy, going to Ireland, was five hours in travelling fourteen miles, from Saint Asaph to Conway. Between Conway and Beaumaris he was forced to walk great part of the way; and his lady was carried on a litter. His coach was with much difficulty, and by the help of many hands, brought after him entire. In general, carriages were taken to pieces at Conway, and borne on the shoulders of stout Welsh peasants to the Menai Straits.

SYDNEY.

So rough was the state of the road through *the Principality* to Holyhead in the month of December, 1685, that a viceroy, *in proceeding from London with his suite to Dublin, consumed five hours* in travelling from St. Asaph to Conway, a distance of fourteen miles. Between Conway and Beaumaris he was forced to ride on horseback the greater part of the way, while his *spouse* was carried in a litter. With the greatest difficulty, and the assistance of many hands, their "great heavy coach" was carried after them entire. It appears that it was then customary for all carriages to be taken to pieces at Conway, and *the component parts* to be borne on the broad shoulders of sturdy Welsh peasantry to *the shores of* the Menai Straits.

If the student of Mr. Sydney's method of composition is not yet satisfied, let him look at Macaulay's account of highwaymen, and notice how, upon his mention of Nevison, Mr. Sydney takes occasion to pad to the extent of two pages and a half, and then replaces Macaulay's abstract of Duval's exploits with other two pages and a half taken from the authorities Macaulay refers to. It must be confessed, however, that the Sydneian-Macaulayese is usually better English than the pure Sydneian. It is when Mr. Sydney tries an independent flight that he talks of "the civil dudgeon which, like some giant earthquake, had shaken society to its very foundations," or speaks of ladies who were "utterly ignorant of the calligraphic art."

Yet, when he is following Macaulay, Mr. Sydney displays a certain timidity. It is in the use of more "recondite" authorities that he feels himself at his ease. Such a "recondite" authority he doubtless considers Chappell's 'Popular Music'; and the consequences may be gathered from a few comparisons:

CHAPPELL.

M. Jorevin de Rocheford, who printed his travels in England at Paris in 1672, says: "The Harp was then the most esteemed of musical instruments by the English." He made this observation at Worcester, where an English gentleman, who had kindly acted as interpreter for him, supped with him at the inn, and "sent for a band of music, consisting of all sorts of instruments."

Evelyn tells us that when Sir Samuel Morland was blind "he buried £200 worth of music-books six feet under ground, being, as he said, love songs and vanity." This was a considerable sum for an amateur to spend on books of vocal music only; and as he continued to play "psalms and religious hymns on the theorbo," it may be presumed that what was interred formed but a part of his vocal library.

SYDNEY.

M. Jorevin, who visited England early in the reign of Charles II., says that the harp was then the most esteemed of all musical instruments among the English people. He made this discovery at Worcester, where an English gentleman who had kindly acted as interpreter for him supped with him at the inn, and ordered a band of music, which consisted of all sorts of instruments.

Evelyn mentions that when Sir Samuel Morland became blind he "buried £200 worth," etc. This was certainly a very considerable sum for an amateur to have spent on books of only a musical value, and, as he continued to play "psalms," etc., it is reasonable to infer that what he buried formed only a portion of his musical library.

It cannot be necessary to multiply quotations. We have already given too large a space to a worthless book; but we have done so because it is only an example of a too numerous class—the class of shoddy literature which works up again for idle and ignorant readers what has already been incomparably better done by great writers. Yet we should hardly have taken the trouble to expose this trash did it not bear the imprint of Messrs. Macmillan. Their name has hitherto been a guarantee for some sort of worthy quality in the works they publish. But this is a book which it is a discredit for a publisher of high repute to have had anything to do with.

Extinct Monsters. By the Rev. H. N. Hutchinson, F.G.S. D. Appleton & Co.

THIS work is an admirable account of some of the larger forms of ancient animal life. The rather sensational title led us to anticipate that it might prove to be an addition to the series (much too numerous already) of semi-scientific works written by authors who modestly tell us in the preface that they have had no scientific training, and consider themselves competent to write only a "popular work." Upon opening such, we always expect to find fresh proofs that even popular works require considerable scientific training, and some critical knowledge of what to include and what to reject. In fact, the best of them have been written by some of the best-trained men, Huxley and Tyndall, for example. But in the present case our anticipation proved groundless, and we find in the author a writer of the same class as the late Rev. J. G. Wood, who shows himself thoroughly equipped for the difficult task of popularizing knowledge of the great extinct forms of Europe and America. He has been assisted by a clever animal painter, Mr. J. Smit, and the work has also benefited by the kindly advice of some of the staff of the British Natural History Museum.

The text makes little pretence to originality, except in the excellent method of presentation. Extensive use has been made of the works of Cuvier, Agassiz, Lyell, Buckland, and of Owen, whose death has just been announced; and in this country of Leidy, Marsh, and Cope. The author first gives a clear description of the history, discovery, range or distribution in space and time, and general anatomy of each of the extinct monsters. As far as possible the special adaptations to certain habits, modes of locomotion and feeding, indicated in the various parts of the skeleton, are pointed out. Then the zoölogical and botanical surroundings are described, and an attempt is made to give a graphic idea of the external appearance and natural environment. Here the artist aids the author, and the huge reptiles of the Mesozoic period and mammals of the American Tertiary are clothed with muscles and skin and dermal armature, and represented in their native element. Upon the whole, the illustrations are very successful. The rather dramatic style of Waterhouse Hawkins, in which these monsters are engaged in fierce conflicts, is avoided; and the animals are represented peacefully swimming, floating, or walking, as the case may be. One feature about the reptiles strikes us as probably faulty; that is, the bodies are in every case represented as very plump and well-rounded. They bear too much the appearance of the stuffed specimens of the old-fashioned museums, whereas, by analogy with modern forms, the skin should hang rather loosely upon the body in great folds, and the limbs should present a decidedly lean appearance. The rounded form of the existing alligator, for example, is given only by the dermal armature; the skin hangs upon the limbs as on the "lean and slippered pantaloon." With this exception, the illustrations of our great American reptiles, founded upon the splendid restorations published by Marsh, are extremely interesting to the palæontologist, and can be none the less so to the general reader. We see the Brontosaurus, sixty feet in length, with its absurdly small head; the Stegosaurus, thirty feet in length, with its row of great dorsal plates projecting upwards above the line of the back; the graceful sea-serpents, or Mosasaurs, seventy-five feet in length; the uncanny Pterodactyls, or flying dragons—and our imagination is carried back to the remote past, when the peaceful farming lands of Kansas and the arid foot-hills of the Rockies consisted of great swamps and inland lakes, peopled with the most colossal forms the earth has ever produced.

The extinct mammals treated of are the Uintatherium, an ancient horned monster of Wyoming and Utah; the Titanotherium, which roamed in vast herds between Canada and the Gulf during the lower Miocene period; the Sivatherium of India; the Mammoth (*Elephas primigenius*) of Siberia and North America, and the extinct Irish elk. Here the text continues admirable, but the artist has relied too exclusively upon instantaneous photographs of the modern elephant and rhinoceros. Thus the Uintatherium is represented with the ankle structure of the elephant, whereas we know from palæontology that its ankle and wrist joints were quite different. Two of these forms are furnished with prehensile upper lips like those of the tapir, whereas the structure of the anterior portion of the skull is wholly different from that of the tapir, and indicates that there could not have been anything in the nature of a proboscis. Well-written popular works, and this is one of them, are the gateways of science. Darwin tells us in his autobiography that it was the influence of a popular book, 'The Wonders of the World,' which impelled him to accept so eagerly the post of naturalist on the *Beagle*. We trust that 'Extinct Monsters' may similarly attract some of its readers to the serious study of the past wonders of the American Continent.

Handy-Book of Literary Curiosities. By William S. Walsh. Philadelphia: J. B. Lippincott Co. 1892.

Mr. Walsh announces the aim of this volume to be primarily to entertain. In this view its success may be conceded, and its prolixity and want of authoritativeness be excused. "The tracing of literary analogies," or the finding of parallelisms for familiar quotations, has especially engaged the editor's zeal, and proverbs and slang have next received his attention, while under a large number of general titles he has stowed away a mass of anecdote, fact, and fancy quite beyond the reach of his index of cross-references. If we know about what to expect under Anagrams or Alliteration, we could not have guessed that under Ambiguities we should find recorded the successive instructions on the face of our mutable United States postal-cards. On the other hand, one might have looked for Lowell's lines—

"life's emblem deep,
A confused noise between two silences,"

among the parallel citations under "Eternities, Between two." In short, if one's entertainment in turning over these pages consists largely in surprises, these are of both sorts, as to what is admitted and what is omitted.

Advertising, Quaint and Curious, and the kindred rubric, Agony Column; Bulls; Errors, Vulgar; Ignorance, Humors of; Punctuation; Puns; Reviews, Curiosities of; Rhymes, Eccentricities of; Self-Appreciation; and Shibboleth, are samples of omnium-gatherum and grab-bag. American political slang is exemplified by Addition, division, and silence; Few die and none resign; I had rather be right than President; Kitchen Cabinet; and Knifing. The lowest end of the scale is reached in titles like Any other man; Before you can say Jack Robinson; How's your poor feet? Let her rip; and Put me in my little bed. Under "First catch your hare" we have the citation from Bracton, and the true meaning of Mrs. Glasse's celebrated recipe, but with a faulty quotation from her book and a mistaken allegation as to the spelling of the lady's name. The talk about *reliable* under Our Small Ignorances shows no acquaintance with Dr. Fitzedward Hall's book on that and other English formations in -able, though the conclusion is sound that the word is sanctioned by good usage. It is the reverse of accurate to say that "when it first appeared in print, it was greeted with contempt and ridicule by pedant and pedagogue." On the contrary, Coleridge's lead in 1800 was followed almost with alacrity by the leading writers of the next two generations. As Dr. Hall has shown, it was a favorite word with the *Saturday Review* itself up to the time when that journal began the ridiculous crusade against it. In a matter nearer home (for *reliable* is not an Americanism), the short and not unfriendly article Abolitionists contains several historical misstatements. Futile are the remarks on "No great shakes," an expression accounted for with a "probably," and unillustrated in use, which is much older and more reputable than is commonly supposed, on both sides of the Atlantic.

It remains to say something about the entries, which are as a rule not strictly alphabetical, but arbitrary, so that, for instance, Henry Clay's high-sounding but really immoral dictum quoted above must be sought not under "I" but under "Right," although it might just as well have appeared under "President." The proof-reading merits praise for its accuracy, and we have observed but a single mischance of the types—on page 937, where the first two words of the Greek line are run together. Not to be commended is the absence of catchwords at the top of the page, since many of the articles fill several pages. We bid good-bye to this medley by saying that it could easily have been dispensed with, but that we prefer to have it rather than to part with it, for occasional reference.

General Taylor. By Oliver Otis Howard, Major-General U. S. A. [Great Commanders.] With portrait and maps. D. Appleton & Co. 12mo, pp. xiii., 386.

The biography of Zachary Taylor is not one of very striking incident, nor can his military career be called great without a liberal use of the word. It is the story of a brave and honest man who did faithful service to his country in all the grades of military rank from subaltern to general. He served on the Indiana frontier against the Indians in the war of 1812, in the Black Hawk campaign on the Mississippi, and in the Seminole war in Florida. The culmination of his career as a soldier was in the war with Mexico, where he proved himself to be a competent leader of a small but independent army of about ten thousand men. He was then elected President, and his sudden death in the early part of his term has always given pathetic interest to his story, especially as it was also associated with critical events in the political history of the country.

Gen. Howard has brought together the available material for a detailed examination of his military life, and, by personal visits to the battle-fields of Mexico, has been able to make the history of the battles of Palo Alto, Resaca de la Palma, Monterey, and Buena Vista both interesting and intelligible to the ordinary reader. In this the maps are of great assistance, and the operations on this line in the Mexican contest are put in satisfactory form. The portion of the book which relates to Taylor's Presidency is subordinate, and does not seem to be more than a sketch of public affairs in their relation to his personal life and influence. It is in accordance with the feeling and custom of the army that a high laudatory tone pervades the book, for the officers of the Mexican war who did their duty have always been heroes to their successors in our army, small as was the actual scale of their operations as compared with that of the great Rebellion. The reader will sympathize in large measure with this tone, and will find the biography a welcome addition to the military history of the country.

Empire and Papacy in the Middle Ages: An Introduction to the Study of Mediæval History for use in Schools. By Alice D. Greenwood. London: Swan Sonnenschein & Co.; New York: Macmillan. 1892.

This little book is one of those numerous bits of work, hacked out by cheap labor to take a place in a "series," which are the bane of our modern educational literature. Why it should appear in a series of "Science Textbooks" it is hard to see, for it is not a textbook and there is no science in it. It is a mere running summary of the history of 1,000 years in 200 pages—a task to be attempted with any hope of success only by the ripest scholarship and the most skilful literary touch. The problem of such a book is to select the telling things and to hold the reader's attention to the great lines of development. Especially are these qualities called for in a book addressed to beginners; in the present case they are conspicuously lacking. The impressions as to race, geographical development, growth of institutions, and the movement of politics which a young reader would get from this book could not be other than vague and confusing. The English of the author is always weak and at times amazing. The old, vicious habit of making all history turn upon the good or bad humor of kings and princes reappears here through a thin disguise of scholarship, and obscures the actual causes of great events. Two little maps in black outline do not add to the usefulness of the book. The parallel table of mediæval monarchs is useful, but even here the fatal incapacity of the author is betrayed by the designation of seven popes, including one with whom Hildebrand had nothing to do and another who represented everything that was hostile to him, as "patrons of Hildebrand"!

BOOKS OF THE WEEK.

NOW READY. THIRD EDITION. 8vo, $4.50.

CIVILIZATION AND PROGRESS.

By JOHN BEATTIE CROZIER.

Revised and Enlarged, and with New Preface,
More fully explaining the Nature of the New Organon used in the solution of its problems.

"The book is worthy of careful study, and is a genuine contribution to sociological science.... The book is a most excellent one."—*Popular Science Monthly.*

"The ability of Mr. Crozier consists in a remarkable clearness of detail vision, singular acumen of distinction—the power, so to speak, of seeing through millstones, of being in a manner clairvoyant.... This accurate and subtle thinker. . . ."—*Academy.*

"This is the most remarkable and important work of the last twenty years. It is not too much to say that Mr. Crozier can enter the lists with men like Carlyle, Comte, Herbert Spencer, and John Stuart Mill, all of whom he treats sympathetically, and hold his own."—*The Rev. H. R. Haweis, M.A.*

"The book of a very able man . . The testimony which we are compelled to give to the high ability of this ambitious work is completely impartial . . Full of original criticism.... Great literary faculty.... A book far less superficial than Mr. Buckle's."—*Spectator.*

"No one can rise from the perusal of this work without the conviction that its author has established a claim to stand high among the most profound and original thinkers of the day . . He has set himself an ambitious task, and he has very narrowly indeed escaped entire success.... Will repay perusal and reperusal."—*Knowledge.*

LONGMANS, GREEN & CO., 15 East 16th Street, New York.

INTERNATIONAL JOURNAL OF ETHICS.

CHARLES W. SUPER, President.

THE BOSTON SCHOOL OF ORATORY. —The Leading School of Expression in America. First to teach the system of Delsarte. Send for Catalogue. MOSES TRUE BROWN, M.A., Boston, Mass.

A Manual of Physics.

Being an Introduction to the Study of Physical Science. Designed for the Use of Higher-Grade Students. By WILLIAM PEDDIE, F.R.S.E, Assistant Professor of Natural Sciences in the University of Edinburgh. Large 12mo, 514 pp. With numerous diagrams. Cloth, extra, $2.50.

SOME BRITISH COMMENTS.—"A treatise deserving of the highest praise. . . . It covers an extent of ground covered by no existing text-book of applied mathematics. . . . The treatment is sound and scientific."—*London Lancet.* "The chapters on general physics are especially interesting. We may instance those entitled 'Matter in Motion,' 'Properties of Liquids,' 'The Constitution of Matter,' and 'The Ether,' as containing information usually sought for in vain in text-books."—*Science and Art, London.* "Dr. Peddie's Manual is both up to date and complete in its mathematical proofs, which are made simple without being deficient in intermediate space."—*British Medical Journal.* "Characterized by an accurate scientific spirit. I know no book which would fill its place."—*Prof. Arnold, Westminster School.* "The chapter on 'Contours,' and the use made throughout of the principle of dymatics are particularly instructive. The book is well balanced in all its parts."—*Prof. C. G. Knott, Imperial University, Japan.*

SOME AMERICAN COMMENTS.—"The selection of topics is judicious, and the arrangement is well suited to secure clearness, compactness, and a good general survey of the subject of physics."—*Prof. C. W. Wright, Yale University.*—"First-rate book for advanced students."—*Prof. T. W. Stratton, University of Chicago.* "I am using Peddie's 'Physics' in one of my advanced classes and like it much."—*Prof. S. T. Moreland, Washington and Lee University.* "Prof. Peddie treats his subject in a clear, simple, and scientific manner. I find his work of much service."—*Prof. C. H. Hutchison, Bowdoin College.* "I rate this work very high, and consider it a very admirable text-book for students in an advanced course."—*Prof. W. Le Conte Stevens, Rensselaer Institute.*

G. P. Putnam's Sons,

27 and 29 West 23d St., New York.

HEATH'S MODERN LANGUAGE SERIES.

A REVIEW OF THE

Systems of Ethics Founded on the Theory of Evolution.

BY C. M. WILLIAMS.

CONTENTS: PART I.—HISTORICAL.

Darwin, Wallace, Haeckel, Spencer, Fiske, Rolfe, Barratt, Stephen, Carneri, Höffding, Gizycki, Alexander.

PART II.—CONSTRUCTIVE.

The Concepts of Evolution; Intelligence and End; The Will; The Mutual Relations of Thought, Feeling, and Will in Evolution; Egoism and Altruism in Evolution; Conscience; The Moral Progress of the Human Species as Shown by History; The Results of Ethical Inquiry on an Evolutional Basis; The Ideal and the Way of Its Attainment.

SOCIAL LIFE IN ENGLAND.

FROM THE RESTORATION TO THE REVOLUTION, 1660-1690.

By WILLIAM CONNOR SYDNEY, author of 'England and the English in the Eighteenth Century.' 12mo, cloth $2.50.

Press Notices.

From the Critic, Jan. 7, 1893.

"'Social Life in England, from the Restoration to the Revolution, 1660-1690,' by Mr. William C. Sydney, is not inferior in value and interest to his 'England and the English in the Eighteenth Century.' In this book, as in that, he has succeeded in delineating the everyday life of the time in a singularly graphic manner. The latter half of the book deals with life in London, all phases of which are realistically painted; but on these chapters we must resist the temptation to dwell. All are as entertaining as they are edifying to the student of sociology."

From the Nation, Jan. 5, 1893.

"We have . . . given too large a space to a worthless book; but we have done so because it is only an example of a too numerous class—the class of shoddy literature which works up again for idle and ignorant readers what has already been incomparably better done by great writers. Yet we should hardly have taken the trouble to expose this trash did it not bear the imprint of Messrs. Macmillan. Their name has hitherto been a guarantee of some sort of worthy quality in the works they publish. But this is a book which it is a discredit for a publisher of high repute to have anything to do with."

A NEW BOOK BY THE REV. STOPFORD A. BROOKE.

THE HISTORY OF EARLY ENGLISH LITERATURE.

By the Rev. STOPFORD A. BROOKE. With Maps. Uniform with Bryce's 'American Commonwealth.' Large 12mo, $2.50.

"It is a comprehensive, critical account of Anglo-Saxon poetry from its beginnings to the accession of King Alfred. A thorough knowledge of the Anglo-Saxon language was needed by the man who undertook such a weighty enterprise, and this knowledge is possessed by Mr. Brooke in a degree probably unsurpassed by any living scholar."—*Evening Bulletin.*

Now Ready. Uniform with Fitch's 'Lectures on Teaching.'

A NEW BOOK BY S. S. LAURIE.

THE INSTITUTES OF EDUCATION.

Comprising a Rational Introduction to Psychology. By Dr. S. S. LAURIE, author of 'Occasional Addresses on Educational Subjects.' 16mo, $1.00.

"Our greatest living writer on education."—*Journal of Education.*

"We can safely recommend so high an authority as Dr. Laurie to teachers."—*School Journal.*

IN THE KEY OF BLUE,

And Other Prose Essays. By JOHN ADDINGTON SYMONDS, author of 'Our Life in the Swiss Highlands.' 12mo, cloth, extra gilt, $3.50.

A PARADISE OF ENGLISH POETRY.

Arranged by H. C. BEECHING. 2 vols., large 12mo, bound in buckram, $6.00.

A NEW BOOK BY CHARLOTTE M. YONGE.

AN OLD WOMAN'S OUTLOOK

In a Hampshire Village. By CHARLOTTE M. YONGE, author of 'The Heir of Redclyffe.' 12mo, cloth, $1.00.

ROUND LONDON,

Down East and Up West. By MONTAGU WILLIAMS, Q.C., author of 'Leaves of a Life.' 12mo, cloth, $1.25.

Sketches of Life and Character in Hungary.

By MARGARET FLETCHER. With Illustrations by ROSE DE QUESNE. 12mo, cloth, $2.25.

"Miss Fletcher's modest account of her travels in Hungary will be found genuinely entertaining, and presenting often quite new views of a highly attractive and interesting people."—*N. Y. Tribune.*

Drawing and Engraving.

A Brief Exposition of Technical Principles and Practice. By PHILIP GILBERT HAMERTON, author of 'Man in Art,' 'Etching and Etchers,' etc. With numerous Illustrations. Small 4to, $7.00.

Gothic Architecture.

By EDOUARD CORROYER, Architect to the French Government and Inspector of Diocesan Edifices. Edited by WALTER ARMSTRONG. With 236 Illustrations. Large 12mo, $2.00.

The Barbizon School of Painters. I.

Corot.

By DAVID CROAL THOMSON, author of 'The Life of Bewick,' etc. With 50 Illustrations. 4to, $5.00.

Pioneers of Science.

By OLIVER LODGE, F.R.S. With Portraits and Other Illustrations. 12mo, $2.50.

The Visible Universe.

Chapters on the Origin and Construction of the Heavens. By J. ELLARD GORE, F.R.A.S. With Stellar Photographs and other Illustrations. 12mo, $3.75.

A History of Socialism.

By THOMAS KIRKUP. 12mo, cloth, $2.00.

Palestine Exploration Fund.

The City and the Land.

A course of seven lectures on the work of the Society. 12mo, $1.25.

Heth and Moab.

Explorations in Syria in 1881 and 1882. By CLAUDE REIGNIER CONDER, LL.D., D.C.L. Third and revised edition. 12mo, $2.25.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 12, 1893.

The Week.

PRESIDENT HARRISON has done well to extend the scope of the Civil-Service Law so as to bring within its operation all free-delivery post-offices, of which there are 601, instead of only the 53 which have as many as 50 employees apiece, the number of persons affected by the change being estimated at more than 7,000. The employees of the Weather Bureau elsewhere than in Washington, between 100 and 200 in all, are also put on the classified list. The only criticism upon this action is that it was not taken at the beginning, instead of the end, of Mr. Harrison's term.

The caucus of Republican Senators on Thursday appears to have agreed, in the words of a prominent member of it, "to do as little as we possibly can" during the remainder of the session. This displays a novel view of public responsibility. These Senators know and admit that legislation on subjects of the highest national concern is urgently desired by the people, yet they propose to stifle it. One exception they do make—"sanitary legislation"; that, they say, they are not disposed to "ignore." But why should they not ignore the popular demand for a national quarantine as well as that for financial and tariff legislation? Not one of these Senators had a "mandate" from the people, at the time of his election, on the subject of "sanitary legislation." Why should they not be as stubborn in blocking the popular will in that matter as in the far more vital measures relating to the currency and public taxation? But, say these sticklers for political courtesy, it is not for us to take any responsibility, and we leave everything to the incoming Administration. But this is the most transparent nonsense, and is proved to be so by the determination arrived at by the caucus to strain every nerve to retain control of the Senate after March 4. They thus say in one breath that legislation is urgently required, that it is not proper for them to touch it at present, and yet that they mean to make it impossible for anything to be done in the future either. Pope Pius IX. was never guilty of so futile and ridiculous a *non possumus* as this. But we do not believe this attitude of lumpish obstruction can be persisted in if the Democratic Senators do their duty. It is within their power to hold the noses of the Republicans to the grindstone, and they ought to do it. It is one thing to agree in a secret party caucus to disregard the popular will, and quite another to do it in an open yea and nay vote.

The report of the House Committee on Banking and Currency in favor of a repeal of the Sherman Silver Purchase Act is the most encouraging step in either branch of Congress since the passage of the Bland-Allison Act in 1878. True, the Committee's recommendation embraces the coinage of the bullion already purchased under the Sherman Act. This is, except for the cost of minting, in no sense a harmful step. It makes no difference economically whether that bullion is coined or uncoined. Its sleep will be equally sound in either form. It will occupy but little more room in the shape of dollars than in the shape of ingots. In the other branch of Congress, also, the signs are encouraging. Senator McPherson's speech was on the right track in every way, but especially in the line of holding the Democratic party up to the text of its platform, which calls for the repeal of the Sherman Act in no doubtful terms. This clause of the platform, as Mr. McPherson convincingly showed, brought Mr. Cleveland more than 100 electoral votes that he could not otherwise have received. The resolution, or amendment to the McPherson resolution, offered by Senator Aldrich, is worthy of all acceptation. If it indicates what we have to expect from the Eastern Republicans when this fight becomes hot, it is highly encouraging. It affirms the purpose of the United States to maintain an adequate gold reserve for keeping all kinds of currency at par with the best kind, and expressly authorizes the President to replenish the reserve whenever necessary by selling the bonds described in the Act of July 14, 1875 (the Specie Resumption Act). It also authorizes the President to suspend the purchases of silver bullion whenever he may think it necessary to do so, and it stops them absolutely after the 1st of January next, unless in the meantime an agreement shall have been reached for international bimetallism. If the Republican Senators from the States east of the Missouri River will stand by the Aldrich resolution, there is a very good prospect of its passage at the present session.

Congressman Bynum thinks that there is no prospect of a repeal of the Sherman Silver Law unless the Bland-Allison Act of 1878 is restored. In the event that the opponents of the Sherman Act will offer the latter act as a compromise, he feels confident that it would be accepted. The reason why the silver men prefer the Bland Act is that it recognized silver as a money metal by coining the bullion purchased by the Government into standard dollars, whereas the Sherman Act treats this bullion as pig-metal, and issues Treasury notes against it redeemable in gold. There is no doubt that the Sherman Act has an educating effect quite different from that of the Bland Act. People do not generally understand the issue of circulating notes against pig-silver, and many persons are asking why they might not be issued against pig-iron as well. Very true. They might better be issued against pig iron, because that could be taken out and sold at any time to redeem the notes with. This educating influence is not to be bargained away lightly. We think on the whole that the Sherman Act can be endured better than the Bland Act, especially when we consider the redemption clause introduced into it which operates as a mandamus on the Secretary of the Treasury to keep all kinds of money at par with gold.

Senator Vilas put a black mark on the Anti-Option Bill on Thursday when he asked Senator Washburn if he was willing to make it applicable only to gambling contracts, *i. e.*, where there is no intention to deliver the property, but only to pay differences. Mr. Washburn declined to do this, because of the difficulty of establishing the intention of the parties. Then Mr. Vilas came down on the bill with a vengeance as an unconstitutional measure, as an attempt to deprive citizens of a right to trade in the products of the country, because, forsooth, some other people are liable to gamble. This is such a monstrous proposition that it needs only to be stated in this way to be condemned. Although Senator Sherman skulked, and acknowledged that he did so, when the question was put to him in this form, it is gratifying to find some Senators who have sufficient backbone to vote as they believe, and not as some ignorant people believe who write letters to them from the rural communities of their States. There is nothing more humiliating in Mr. Sherman's public career—not even his letter affirming the legality of paying the bonds with greenbacks—than his announced intention to vote, in deference to the opinions of a certain class in his State, for what he said as plainly as possible was a bad measure and would not accomplish the object in view.

In the course of Senator Aldrich's speech on McKinley prices last July, he asserted that, while in this country prices had declined between June, 1889, and September, 1891, about 0.75 per cent., in England they had risen 1.9 per cent. No one was able to get him to give his authority for this statement, and the fair presumption that his authority was his own unregulated imagination has now become a certainty through some tables published in the London *Bankers' Magazine* for November, 1892. In these Mr. A. Sauerbeck, who had previously worked out the scale of British prices from 1846 to 1885, brings his in-

vestigations down to date. His base line of 100 is the average of the prices for the years 1867–'73 and the relative figures for the six years following 1885 are, respectively, 69, 68, 70, 72, 72, 72. Thus it appears that prices were stationary instead of rising at the time to which Mr. Aldrich referred. Mr. Sauerbeck has also figured out the tendency of prices during the first nine months of 1892, and his results show a steady decline from 70 in January to 66.8 in September.

A morning paper has taken the trouble to get from Pension Commissioner Raum a statement that the outcry against fraudulent pensions consists of the "bald inventions of the enemies of the pension system." The absurdity of all charges against the "system" becomes apparent at once when we consider that no pension can be granted except on the certificate of the Secretary of War, for, says Raum—

> "The Secretary of War is not only the custodian of these records, but he is the judge of the question of the service of the soldier and of his honorable discharge; and no man can have a pensionable status in this office for an alleged service that is not certified to by the Secretary of War, or upon a discharge that is not verified by the same authority."

So, in the case where a man was drowned while wading across a stream in Georgia, and a pension was applied for and obtained by his widow on the ground that his constitution was so undermined by military service twenty-five years ago that he could not make head against the current, would the Secretary of War be bound to be acquainted with this state of exhaustion and the cause of it, constituting "a pensionable status," or would he merely know that somebody of that name once served in the army? There was a case discovered in Maine a few weeks ago, where a man was drawing a pension who had never been in the army at all. Somebody of the same name had been in the army and had died ere a grateful country could reach him through any of its eagle-eyed claim agents. So his namesake stepped in and saved the honor of the nation by applying for the pension himself, and was not prevented from getting it by any gift of omniscience on the part of the Secretary of War.

The settlement of the disputed electorship in Oregon made the actual division of the Electoral College clear for the first time since the ballots were cast, almost two months ago. The Supreme Court decides that one of the three votes from that State belongs to the Populist candidate, who was supported by the Democrats, against the Republican claim that there was some technical irregularity in the matter which ought to defeat the plain will of the majority of the voters. In three other States there is also a division of the electoral vote, Michigan, under the district system, choosing nine Republicans and five Democrats, while the Democrats get one member of the college from Ohio and the Republicans one from California. In Ohio there was blundering by members of both parties in marking the first name on the ballot, by which the Democrats profited more than their opponents, while in California one Democratic candidate for Elector was cut on personal grounds by enough Democrats to let a Republican slip in, although the rest of the ticket won by from 200 to 650 votes. This is the second time such a thing has happened in California, one of the Hancock Electors in 1880 having been scratched for similar reasons by enough Democrats to allow the choice of a Republican. If the contest in either 1880 or 1892 had been as close as in 1876, the plain choice of the people of the whole country as between the two parties might have been defeated by the action of a few hundred voters in one State, who were actuated by personal hostility against a man whose only part in the election could be to cast a purely formal vote in the electoral college. Such a risk shows the peril which inheres in this system of choosing Presidents.

Cleveland has in all 277 electoral votes, Harrison 145, and Weaver 22, a majority for Cleveland over both Harrison and Weaver of 109. There has been nothing to compare with this since Grant's sweep in 1872, when he had 286 of the 366 electoral votes, as there had been nothing to compare with Grant's record in 1872 since Pierce obtained 254 of the 296 votes in 1852. The contrast with 1872 is most marked when the Southern States are left out of the account. Twenty years ago Grant carried every State in which slavery had not existed—21 in all. This year Harrison lost of these 21 Connecticut, New York, New Jersey, Indiana, Illinois, Wisconsin, Kansas, Nevada, and California—without counting the stray votes against him in Oregon, Ohio, and Michigan. In 1872 the Republican candidate received every one of the 228 electoral votes belonging to the Northern States. In 1892 the Republican candidate in those same States (leaving out of the account the seven States since admitted to the Union) received only 130 out of the 261 electoral votes to which they are now entitled.

The Commissioners appointed last year to report amendments to the revenue laws of this State have made a brief but excellent preliminary report. This is a recommendation that all revenue for State purposes be collected from certain specific sources such as corporations, inheritances, licenses, etc., dispensing altogether with the machinery of assessment of real and personal property, and relinquishing these to the counties and municipalities to do as they please with. This is a step in the right direction and a movement towards peace and quietness in this troublesome matter. It is now for the first time within reach of the State, as the debt has been paid off and as no tax for general purposes was levied last year. For those who do not ordinarily keep the run of such things, it may be well to mention that the State collections are of three kinds, viz., for general purposes, for canals, including canal debt, and for schools. The canal debt having been eliminated, the cost of maintenance of the canals might properly be included in the tax for general purposes. Then the tax for all State purposes may be easily collected from specific sources, as that of Pennsylvania is, with the difference, however, that we need not have, as Pennsylvania has, a State tax on personal property. All steps towards tax reform should be directed towards ridding the community of this tax, not because it is unjust *per se*, but because it cannot be justly collected, and because its burdens fall exclusively upon a few extra-conscientious people and upon decedent estates in the hands of the surrogate. This is the universal testimony of tax commissions. Yet there is nothing that legislators cling to with more frenzied zeal than the general property tax. It is possible for the State proper to dispense with taxes on both real and personal property. Such a reform will dispense with the State Board of Equalization, and we shall hear no more of the shifting of burdens from the interior upon the broad shoulders of the city through that agency. Whenever the system suggested by the Commissioners goes into effect, New York city will pay as much in proportion as she does now or is likely ever to pay under the existing method of equalization, but she will pay it without any sense of injustice, and this is a weighty matter in itself.

Gov. Flower's recommendation that all of the State's pecuniary contributions to agriculture be turned over to Cornell University, with power to apply the same in such manner as the Trustees and Faculty of that institution may devise, is excellent. It ought to be carried into effect without delay. The agricultural disbursements from the State Treasury, except the portion specifically set apart as premiums for agricultural fairs, have become as distinctly a part of the "spoils system" of politics as the work on the canals or the appointments of wardens in the State prisons. When the work of getting delegates for Mr. Hill's snap convention was in progress, one year ago, one of its most noticeable features was the misguided zeal of the Dairy Commissioners' agents in the various counties. These fellows were earning their bread and butter by working for Hill. This was the only kind of butter they were acquainted with or were expected to concern themselves with. The Dairy Commission was started with an appropriation of $10,000 for the purpose of suppressing oleomargarine. The expenditure has grown

to $100,000 per year, while the fight against oleomargarine is not a whit more effectual than it was in the beginning. The Governor mentions some "intelligent suggestions from official sources with regard to the care, feeding, and breeding of cattle." No such suggestions, we venture to say, have ever come, or ever will come, from the "heelers" who draw stipends as Dairy Commissioners' agents in this State. It is extremely doubtful whether any portion of the $300,000 that the State expends nominally on agriculture is really a benefit to that branch of industry. Whether it is or not, it is quite certain that Cornell University is the only well-equipped agency for applying the money to the end for which it is ostensibly appropriated.

The formal verdict of the New York Presbytery in the Briggs case, as agreed upon on Monday, lacks something of entire frankness. It expressly denies "approval of the critical or theological views" of the accused Professor, yet is forced to say that he is "fully acquitted of the offences alleged against him." But if he is fully acquitted, then he *has* the "approval" of the Presbytery in the only sense in which they were called upon to give it—that is, in declaring his views not to be heretical. They were not asked to say whether they individually agreed with him in all respects, but whether his views, as published, were consistent with the standards of the church. In deciding that they were consistent, they officially approved them, and there was no reason for letting Mr. Facing-both-ways appear to deny the fact in the official verdict. We suppose the qualification was put in out of regard to those alarmed conservatives who predict that the denomination is going over to rationalism. But this very meeting of the Presbytery showed that the Presbyterian Church contains another class whose sensibilities must also be consulted—men of tender consciences who refuse to be put into a false position by ecclesiastical shuffling. Dr. Clark, one of the oldest and most honored pastors of the Presbytery, withdrew on the ground that he had been deceived in regard to the strictness of subscription required of a Presbyterian minister, and that the decisions of the Church had destroyed the liberty which he supposed he had the right to enjoy. This is the best commentary on the attempt of the Committee who drew up the verdict to stave off an irrepressible conflict with gentle words and unmeaning distinctions.

If a bitter Catholic controversy is to be precipitated on the country on the heels of the Briggs trial, as that followed the Andover troubles, more people than ever will be disposed to take to the woods. When an infallible Pope finds it as impossible as a locally independent church to keep things running smoothly, it begins to look as if any ecclesiastical system would find human nature too much for it. So far, it is true, the greater part of this immense Catholic "conspiracy," as some papers are calling it, has been blown up in the froth of their own columns, but if the remarks attributed to Archbishop Satolli on Sunday are not pure forgery, it cannot be denied that affairs are somewhat critical. For a Legate of the Pope to characterize a document, endorsed by the Archbishop of New York, as "ignoble," "vile," "reprehensible beyond expression," and filled with "cowardly malice," is not exactly an invitation to join in chanting, "Behold, how good and how pleasant it is for brethren to dwell together in unity!"

It used to be said that the French Canadians who came to this country for work generally returned to their own land after they had acquired what would be for them there a competency. But this tendency appears to have been checked of late years, and in many parts of New England the immigrants of this class are settling with the evident intention of staying. A report from Woonsocket, R. I., shows that the French Americans of that town have within the last three years increased their real estate and personal property to the extent of over $300,000, and Woonsocket seems not to be exceptional in this respect. It is not many years since New Englanders generally viewed the French Canadians with distrust, if not alarm, but we observe that the Worcester *Spy*, a representative journal, has now reached a different conclusion as to them. "If," it says, "all those who have come to this country in the past had turned to with such a will to win success, and had entered into the spirit of the institutions of the country, as have the great body of these men and women who have come down to us from the North, the United States would not now be discussing the advisability of putting up the bars because of inimical foreign immigration."

Gen. M. M. Trumbull publishes in the Chicago *Open Court* an interesting letter which he received from Earl Grey last summer, giving the history of Peel's abandonment of the idea of "seeking for what is called reciprocity from foreign nations when we admit their produce to our markets." Earl Grey says it was Ricardo who knocked this out of Peel's mind:

> "The addresses condemning this proposal which he moved in 1843 and 1844 were introduced by speeches of first-rate ability, and produced a very remarkable effect. He showed conclusively that it would be impossible to make any effectual progress towards freer trade while the policy of insisting upon reciprocity was adhered to, and that this policy had for its base the false notion that formerly prevailed among commercial nations that it was their interest to secure what was called a favorable balance of trade."

The Earl says he narrowly watched Sir Robert Peel while these speeches were being delivered, and saw him visibly wilting under their power. So certain was he of this that he said to Ricardo at the time: "Though we have been counted out, you have gained your object, for I am much mistaken if you have not converted Sir Robert Peel." Sure enough, after those debates, Peel never renewed his attempts to obtain concessions from foreign nations before reducing duties on imports, and was never influenced afterwards in lowering customs taxes by the fact that other countries did or did not admit British goods on favorable terms. In 1846 he openly and emphatically insisted that this was the true policy. Ricardo's argument is just as irresistible to-day for Americans as it was then for Englishmen; but the difficulty is to find a statesman nowadays of Peel's open mindedness.

All attempts to account for the Panama Canal money spent in this country, said to have been upwards of $2,000,000, have failed. Mr. Thompson of Indiana, ex-Secretary of the Navy, answers for his own salary of $25,000 per year, but nothing more. This would account for not more than $200,000 for the whole period. Mr. Appleton of Boston answers for a smaller sum paid to himself for engineering and other services of a legitimate nature. Nobody else has answered for anything. Yet it is known that a very large sum was spent in the United States, over and above what was paid for the Panama Railway shares. It would be interesting to know what use was made of this money. It is to be hoped that the Paris investigation will throw some light on this dark subject. When the exact amount of the American fund is disclosed, it may be worth while for our Government, as an act of international comity, to find out what direction it took.

Word comes from Cuba that the Autonomist party, or Home-Rulers, have determined to take part in the coming election of Deputies to the Spanish Cortes. For some time they have chosen to emphasize their disgust with the government of the island by refraining altogether from voting. But a part of their demands has already been granted by the new Ministry in Spain, in the shape of a considerable extension of the suffrage, and they now propose to express their gratitude by trying to elect representatives to go to Madrid and threaten the Government with all sorts of direful things unless Cuba is allowed to manage her own affairs. There is no great chance, however, that they will be able to make much of a showing at the polls. Indeed, it is shrewdly suspected that the new Spanish Administration has made a show of liberality in Cuban matters precisely for the purpose of getting the Autonomists to stand up and be counted, and thus become ridiculous.

THE ALLEGED APPRECIATION OF GOLD.

IT WAS Mr. Balfour, we believe, who estimated, in his recent speech in Lancashire, that gold had appreciated on the average 1 per cent. a year for the last thirty years. Let us assume this to be correct, and let us ask who has been hurt by it and who has been helped by it.

Taking first the case of the majority in many of our modern societies—those who depend for support upon their wages and salaries—it is clear that such an appreciation of gold must have helped them. A man who has worked for the last thirty years at a dollar a day finds that his wages, compared with their original value, have become a dollar and thirty cents a day. It may be said (and it may be true) that if the standard of value had not varied, he would now be getting $1.30 in that standard, but it is undeniably true that this figure would have been attained only by successive rises, and that in every case the rise would not have been obtained until after it was earned, the employer profiting in the interval. Probably in many cases the rise would not have occurred till long after it was due, for working people know little about monetary science, and those who were at work during the civil war speak regretfully of the high wages they got then, although for the most part their real wages were lower than before or since. A nominal lowering of wages is to these people more to be resisted than the real lowering caused by higher prices, and it admits of no doubt that, so far as the rate of wages depends upon human volition, laborers will protect their interests better when money is appreciating than when it is depreciating. Those who are concerned for the laboring classes, therefore, will not be disposed to substitute a cheaper money for gold in the payment of wages.

It follows that to the extent to which those receiving wages have benefited by the appreciation of gold, those paying wages have lost. Altogether the greatest losers in this way have been the great transportation and manufacturing corporations. These bodies receive little sympathy and perhaps deserve no more than they receive. However this may be, few persons will maintain that gold should not be the standard because its use compels our railroads and industrial trusts to endure a steadily increasing burden in the payment of wages. The class of capitalists is as a rule the best able to look out for its own interests, and it certainly needs no protection against such an insensible appreciation of gold as 1 per cent. a year. It might facilitate the operations of our captains of industry could they know that prices would remain the same, but the danger arising from so slight an annual fall would disorder few of their calculations.

The third great industrial class, that of the landlords, remains to be considered. This class is perhaps, nowadays, little more popular than that of the capitalists, but in this country the enormous number of freeholders renders it dangerous to denounce them. In so far as they have rented their lands for long terms at a fixed money rent, they are the gainers by falling prices and their tenants are the losers. But in this country long terms are extremely rare, and the loss of one per cent. a year for a short period would not be felt as a burden by most tenants.

According to economic theory, these classes exhaust the population of the economic world, but in common parlance there remain two others, the debtor class and the creditor class—the one interested in the depreciation of the standard of value, the other in its appreciation. These classes have never been scientifically defined, but it is possible to state their species. The debtor class must obviously be composed of solvent and insolvent debtors—of those who have property sufficient to enable them to pay what they owe, and of those who have not. But insolvent debtors do not seem to be greatly affected by fluctuations of the standard of value. As they cannot pay their debts, it makes no difference to them whether they are a little more or a little less. In the case of solvent debtors it is necessary to consider the nature of the property which is the real security for the money that they have borrowed. Here we find that where it is personal property, as is to a great extent the case of men in active business, the period of credit allowed is very short. Most promissory notes and loans upon collateral are for days or months rather than years, and the appreciation during such brief periods is altogether immaterial. If it is found to be burdensome, these people are entirely able to protect themselves by reducing the rate of interest, or contracting their business if it does not return them a satisfactory profit upon borrowed capital.

There remains the class of borrowers upon real estate, unquestionably a very large class, many of whom are well to do, many, especially farmers, not having large resources. But even in their case it is to be remembered that in the first place loans upon mortgages made by individuals are almost always for not more than five years, oftener for three or under, so that the loss by the appreciation of gold is limited in duration. In the second place, it is probably the case, certainly the case if the census returns are trustworthy, that real property has appreciated much more than gold during the last thirty years. Those who have borrowed money to buy real estate with have, therefore, upon the whole been favored by the general course of prices, and as a class have made more than they have lost by the appreciation of gold. And in the third place, the rate of interest upon capital has greatly fallen during recent times, so that borrowers have been able to renew their loans upon extremely advantageous terms, gaining more in this way than they have lost by any enhancement of the standard of value. Undoubtedly there are many exceptions to these general rules, but it cannot be denied that upon the whole owners of real estate have in this country obtained so much "unearned increment" that it does not become them to complain of their relatively insignificant losses through the appreciation of gold.

Turning now to the creditor class, what has been their lot? They have seen the rate of interest upon their capital fall nearly one-half within the recollection of the present generation. If they are receiving a slight increase of return owing to the appreciation of gold, it is less than they have otherwise lost, and they clearly have not fared so well as the debtor class. There seems to be little equity in trying to deprive them of this slight gain for the benefit of classes that have made much greater gains. Upon the whole, it does not seem difficult for any man of common sense to satisfy himself that the outcry over the appreciation of gold is altogether unreasonable, and that it is juster and safer to let matters go on with a gold basis than to disorder everything by listening to the numberless schemes urged by bimetallists and silvermen.

No reference has been made to borrowers for very long terms of years, because such borrowers are exclusively governments and great corporations. Such borrowers have undoubtedly had to pay the penalty of taking their chances for such prolonged periods. The game has gone against them and in favor of their creditors, but it might have been the other way. In any case the burden of Government debts has small concern for us, since ours, both national and State, are so nearly paid off. As to railroad corporations, their debts are falling in all the time, and each time that one comes due the option of renewing it or not, and the terms of renewal, are in their own hands, leaving nothing for them to complain of. The same is true of the debts of municipalities.

If we are committed to bimetallism, the considerations presented here are sufficient to show that it is because of an ignorant outcry and a deluded sentiment, and not because of any injustice that has resulted or that will result from the exclusive use of gold as a standard of value.

THE GOVERNMENT AND SECTARIAN SCHOOLS.

THE past year has brought the relations of the Government to missionary schools for the Indians, carried on by various denominations, into unusual prominence. For some time there has been a vague feeling on the part of many of the friends and supporters of such schools that sectarian contest and friction were developing over the question of Government grants of money in aid of them, in a very deplorable manner, and the opinion has often been

expressed that the whole system was vicious and should be abolished. Yet few could have been prepared for the rapid spread of the movement actually to do away with that system which marked the year 1892. A compendious record of the action taken by various church authorities will show the drift of sentiment.

The Presbyterian Assembly at Portland, Oregon, resolved last May that "the practice of appropriating public money for the support of sectarian schools among the Indians, as is now done in the contract schools, ought at once to cease." The Baptist Church has never taken any money from the Government for its own Indian schools, and so was perfectly consistent in memorializing Congress, as it did at Philadelphia last May, to pass a constitutional amendment prohibiting such grants, and also prohibiting the States from aiding any sectarian school or society. On May 9, 1892, the General Conference of the Methodist Episcopal Church at Omaha, besides condemning the system, voted that none of the missionary societies working under its sanction should "receive from the national Government any moneys for educational work among the Indians." The United Presbyterian Church, in General Assembly at Allegheny in the same month, protested against "all Government appropriations for the denominational Indian schools and for other sectarian purposes as unconstitutional." The Board of Missions of the Protestant Episcopal Church voted at Baltimore, on October 19, that "subsidies from the Treasury of the United States in aid of Indian education ought neither to be sought nor to be accepted by this church"; and a week later, at Hartford, the American Missionary Association (Congregational) took similar action.

These denominations are the principal ones, next to the Catholics, that support Indian schools, and the serious change that the action they propose would make in the present policy of the Government may be seen at a glance. Out of the $2,291,650 appropriated by Congress in 1892 for the support of Indian schools, nearly one-third, or $611,570, was given to sectarian schools. The Catholic schools had by far the larger share of this amount, their part being $394,756. We presume that this was fairly their due on the existing basis of contracts made according to the number of schools. Certainly, it is not to be supposed that the present Administration would have allowed them more than their just due. Indeed, if anything is to be inferred from the Catholic outcry against Commissioner Morgan, heard in some quarters, it is that he had not given them all they were entitled to. We know nothing of the merits of this somewhat acrimonious dispute, and refer to it only to say that of itself it is a strong argument against such mixing up of Government and religion. The entanglement has been steadily growing more serious and burdensome. In 1886, the Indian schools under church direction received but $228,259, and in six years, as we have shown, the amount was nearly trebled. In the same period the quarrelling and recrimination have also increased threefold, it would seem, and it is time that the whole system should be abolished.

At the annual Mohonk Conference of the Friends of the Indian, last October, this question was discussed at some length. The general fear appeared to be that the Catholics would not follow the lead of other churches and give up their Government aid. Dr. Ellinwood said:

> "I do not believe that the Roman Catholic Church is going to give up its hold on the contract schools without a tremendous struggle. I have this feeling, that, if we withdraw on the Protestant side, the result will be that more and more schools will be put down in the category of Catholic schools, and that the surest way to the establishment of a relationship of Church and State will be right along that line."

Another speaker argued that the Catholic Church could not afford to put itself in the position of being the only church seeking funds from the Treasury for sectarian uses, and that, even if it did, the question would take such shape that the system would soon go down in any case. Moreover, a letter was read from Bishop Marty, President of the Bureau of Catholic Indian Missions, in which he said that his Church "will endeavor to provide for her own, no matter what the State may do."

What the State ought to do at the earliest possible moment is to attend to its own Indian schools, and let the churches attend to their own. The two cannot be mixed without mischief. Commissioner Morgan has found religious prejudice, injected into a question of public policy, to add new terrors to office-holding. Most important of all, a great principle is at stake. Already the argument has been brought forward by a Catholic of high standing: "We have just as good a right to our proportion of the public-school funds in the several States as we have to our proportion of the national funds for the education of Indians, and this latter right is conceded." The premises of such an argument ought to be destroyed at once. Since the coming of Monsignor Satolli, with full powers from the Pope, the temper of the Catholic Church on the question of the public schools has undergone a great change. The time is now promising for a movement to reaffirm in legislation the American principle of the absolute independence of Church and State, and no better beginning can be made than by breaking off the connection of the Federal Government with religious bodies, through the Indian schools.

MAYOR GILROY'S MESSAGE.

MAYOR GILROY'S message reads very well and "draws attention" to a variety of interesting topics, on one or two of which he speaks with authority, while on the rest his opinions are of no more value than the first man one meets in the Hoffman House café. For instance, there are very few busy men who would cross the street to know what he thinks about quarantine, or immigration, or the public health, to which he devotes considerable space, for with these things he has not, and cannot have, anything to do. About sewerage he gives some information which he acquired while acting as Commissioner of Public Works; about the aqueduct, which he got from the Commission that Tammany has tried to overthrow and discredit; about the street-paving, as to which he is well informed. The rest of the message consists simply of suggestions of enterprises in which he thinks the city ought to engage, and all of which would have something in them for Tammany. The value of suggestions, however, depends largely on the source from which they come, or, in other words, on the character of the man who offers them. Both Mr. Croker and Mr. Hewitt, for instance, know a good deal about the government of this city, but suggestions by Mr. Croker would be received very differently from suggestions by Mr. Hewitt, even in matters on which they were equally well informed.

Our object in commenting on Mr. Gilroy's message at all is not, however, to discredit what he says, but to call attention to what he ought to have said and has not said; or, in other words, to a fatal defect in it, a defect so serious that it is not going too far to say that it ought to be guarded against by law. It is a defect, too, which was very manifest in the Governor's message also. Any one who will take the trouble to examine the law under which the Mayor of New York holds office will find that the sole independent power, the sole power for the exercise of which he only is responsible, is the appointing power. All his other powers are exercised in common with several other persons, whose votes have equal weight with his own, on different boards. The appointing power is by far the most important of all, because the local administration, which Mr. Gilroy says he desires to be "efficient, economical, and progressive," must depend for its efficiency and economy and progressiveness on the quality of the men who fill the administrative offices. Many people, in thinking of administration, local and other, think of it as a machine of some sort which is wound up and then jogs on like a clock with mechanical regularity. It is nothing of the sort. It consists of a group of men paid for doing certain things in a certain way. Maladministration consists of bad conduct on the part of these men; good administration consists of good conduct on the part of these men; and the ultimate responsibility, of course, falls on the person or persons who select them and supervise their work.

Now, the chief, almost the only, duty of importance imposed on the Mayor of New York by law is the filling of the offices. This is his special function. It

was made his special and exclusive function in 1884, under a strong public sense of the mischief that was done by compelling him to share the appointing power with the Board of Aldermen. This was found to work badly because it divided the responsibility, and divided responsibility in administrative matters generally means no responsibility whatever. When the Mayor was released from the necessity of getting the Aldermen to confirm his nominations, people felt that they had accomplished a great reform, for, said they, inasmuch as the quality of the administration depends on the quality of the officers, we shall now know whom to blame when the quality is bad. Therefore, when the Mayor is talking about the work which is not carried on by his appointees, he is simply gossiping about government much as men are wont to gossip in the café. His observations, for example, on quarantine and immigration are about as valuable as his observations on the present condition of France would be. They may be sound, but they have no sort of importance. But when he is talking about the manner in which he has himself exercised his great and exclusive mayoral function of making appointments to office, of supplying justice for the poor through the police courts, of supplying security against fire through the Fire Commissioners, of supplying honesty and skill in street repairs through the Street-Cleaning Bureau, and the proper regulation of the liquor traffic through the Excise Commissioners—then he talks business. This is, or would be, the "message" people want to have, and of this the mayoral message ought, we hold, mainly to consist.

Strange to say, on this topic Mr. Gilroy has not a single word. Between his assumption of his office on Monday week and the issue of his message on Thursday he performed by far the most important acts he will have to perform during his term of office, in making eleven appointments, the only acts of his administration, probably, for which he will be solely responsible. But the message does not contain the slightest allusion to them. It ought to tell us who Michael T. Daly, the new Commissioner of Public Works, is, and what are the qualities or experiences which have marked him out for this place. It ought to describe minutely the claims of the four new police justices, and especially those of Joseph Koch, the late Excise Commissioner, and give Mr. Gilroy's reasons for believing that they will fill the place of magistrates in a great city so as to be an example and encouragement to the honest, sober, and industrious poor, and a terror to evildoers of every degree. But he does not say one word about them, and this omission really makes his message a mockery. If the Comptroller had followed his example, he would have discussed the tariff, the silver question, and the Bimetallic Conference, but have made no mention of the municipal finances.

The collateral objections to this kind of message, though not so obvious, are also very serious. Exhortations to citizens, and especially the poor foreign citizens, to "coöperate" with the authorities in attempts to "improve the outward condition of the city," to "serve the convenience of the people," and to "address themselves to the problems which await solution with patience and courage," and so forth, come with a bad, not to say ridiculous, grace from a functionary who, almost on the day he takes office, proceeds to display in the most marked way within his reach his contempt for the very first conditions of efficient administration, and for the very foundations of public order, by his choice of subordinates. A very large proportion of these Tammany worthies are well known to the criminal and semi-criminal classes as old barroom and gambling-house and dog-fighting acquaintances, and old companions in "big drunks"; and therefore moral exhortation from the man who has picked them up and put them in places of dignity and emolument is well calculated to excite the merriment of the thoughtless. The truth is, the time for preaching from our present class of rulers is past. They ought either to stop writing "messages" or make them very brief. But better still would be a legal provision requiring them to give the reason for their appointments to office, as judges are compelled to give the reasons for their decisions. We all like to listen to anybody who talks on subjects which he understands, but every decent man is restless under sermons from the ungodly.

THE JEWS IN EUROPE.

EVEN such a cool-headed and cautious observer as the London *Economist* declares that the hostility to the Jews on the Continent—that is, in Germany, Russia, Austria, and Hungary—is becoming a very serious political phenomenon. Everybody knows what the anti-Semitic movement in Russia is. It has led to expulsion of Jews from the country on a vast scale and the subjection of those who remain to a persecution which will either compel them to emigrate or make the successful pursuit of any respectable calling impossible for them. Matters have not gone as far as this in Austria, but the feeling against them is rising, and the hostility of the peasantry to them in Hungary is so great that they are in constant danger of their lives. In Germany there has been a great revival of the anti-Semitic movement, which the present Emperor tried to discourage when he came to the throne by dismissing its leader, Herr Stoeckel, the Court Chaplain. But it has never been anything like what it is today. A certain Ahlwardt is now at the head of it, and he recently, in one of his violent speeches, accused a Jewish contractor of having furnished bad rifles to the army and obtained their acceptance through bribery. When put on trial for libel, he produced documents stolen from the War Department, showing that there was some trifling foundation for the charge in the fact that some rifles in a large contract had been found defective. But the trial so endeared him to the public that he was elected to the Reichstag by a majority of three to one; the Conservatives, although he is a Liberal, all supporting him. An anti-Semitic plank was then put in the Conservative platform asking for the exclusion of the Jews from all public offices, and the Reichstag, by an overwhelming vote, gave Ahlwardt his seat, in spite of his condemnation to five months' imprisonment.

The *Economist* ascribes the hatred of the Jews in Germany to jealousy of their success in trade and in the professions, to German pride of race which the Government encourages as a help to patriotism, to the Jews' love of distinction and display, to a "certain satiric insolence of tongue," and finally to "their separateness, by their ceremonials and by their habit of intermarriage." But, as it points out, no change in the character or manners of the Jews is likely, even if possible. Nothing the Government can do, therefore, can make them more acceptable to the German public, and it is equally impossible to attempt to give expression in legislation to the popular dislike of them. They play too large a part in all the great interests of the State to be made objects of persecution, inasmuch as they number among them some of the most distinguished men in every calling. There are signs in France, where the Jews have, since the Revolution, been more comfortable than in any other European country, of the same growth of hostility to them among all classes. The press is becoming more and more savage in its denunciations of them, and shows more and more disposition to make them responsible for all financial scandals.

It is difficult to account for all this, but it is safe to say that the spread of the anti-Semitic feeling is a product, more or less direct, of the socialistic feeling which is now in the air in every country, and seeking expression by all sorts of channels. Its most marked feature is a vague hostility to the rich in trade and manufactures and banking; and in Germany the Jews are made to stand for wealth in general and take the blows intended for it. In France, the Socialist hatred of the well-to do is now expended on the "bourgeois," or black-coated people at large, but there are signs that it may yet be concentrated on the Jews, and especially Jewish bankers and capitalists. Apropos of this there is in the last number of the *Revue des Deux Mondes* a remarkable article, by Vicomte Melchior de Vogüé, on the present crisis in France, in which he makes the prevailing unrest all over the Continent a rising against the domination of wealth over modern communities, not unlike, and in fact the legitimate successor of, the rising of one hundred years ago against the feudalism

of the landed aristocracy. He argues that it is absurd to talk any longer, as the economists do, of wealthy men as simply capitalists discharging an economic function; they are the real rulers of the nations, through their influence of one sort or another on the legislators, and through their control, as employers of labor, of the lives of the poor. They have, he says, displaced both royalty and aristocracy and religion in shaping national policy and defining national interests, and they have become as contemptuous of opinion, as a political or moral force, as ever were the great landholders of the old régime, when one of them had Voltaire cudgelled by a valet. He sneers at the press as a countervailing agency, by pointing out the way in which the public, which once accepted the press as "pure thought" direct from the brain, has now, through sheer force of habit, come to accept it as the product of a factory, worked, like cloth factories, simply for dividends—a phenomenon which he says sheds a flood of light on the situation. In other words, he considers the Socialist movement an insurrection against plutocracy, which has its prototype in the Revolution of 1789.

THE AMERICAN PSYCHOLOGICAL ASSOCIATION.

TORONTO, January 4, 1893.

THE philosophical interests in this country have been the last to feel the need of united effort. Perhaps it is because philosophers are the most independent of men. Some would say it is because they are the most polemic of men. Yet their common ideals and aims should make them the most brotherly of men. It is interesting to note that the movement towards the formation of associations in this department came from the side of psychology, that aggressive and just now somewhat exacting science.

The American Psychological Association was formed last summer at the instance of that far-seeing man, President Hall. The session held at the University of Pennsylvania last week (December 27 and 28) was accordingly the first regular programme. No one, I think, who attended the meeting failed to be impressed with the quite unusual enthusiasm of the members, and the still more unusual peace and serenity that prevailed in all the discussions. It was really an *irenicon*—a message of good-will at the Christmas season—this cordial statement of agreements and differences in one branch, at least, of philosophy.

I say "a branch of philosophy," because the policy of the Association clearly looks towards such a statement of its platform. Among its "charter members" are men of different philosophies and different psychologies, and in the admission of new names the two questions to be asked, as I apprehend, are these: Is he a genuine psychologist? and, Is he a peaceable man? For we are determined—if my breath of the atmosphere of the Philadelphia meeting was well drawn—not to harbor men who do not wish well to the ideals and methods of legitimate academic and scientific psychology, nor men, on the other hand, who lack that breadth of view which constitutes philosophy, or that courtesy of spirit which makes of its adversary a friend.

The Association elected the following officers for the ensuing year: President, G. Stanley Hall; Vice-President, George T. Ladd; Secretary, Joseph Jastrow. The business of the body is largely in the hands of an Executive Council on which many of the larger universities are represented. The programme was not long. It comprised papers by Cattell, Hall, Nichols, Pace, Witmer, Sanford, and Bryan, besides others informally presented. A full report of the proceedings is to be published in the *American Journal of Psychology*, and afterwards in independent form. Of these, perhaps the one of most general interest, apart from Dr. Sanford's observations on dreams, which have already gone the rounds of the newspapers, was President Hall's account of the "History and Prospects of Experimental Psychology in America." While presented as a sketch merely—an indication of the springs of the rising current of present-day interest and effort—it contained a relative estimate of men and events in the immediate past. Dr. Hall attributes to three men, all educators as well as philosophers, a preponderating psychological influence. These three are Mark Hopkins, Hickok, and McCosh. It is notable, as Dr. Hall remarked, that Dr. McCosh was the first in America to recognize the importance of "physiological psychology" and the necessity of cultivating it. It occurs also to the present writer to inquire whether Dr. McCosh was not the first influential educator, who was also a theologian, to recognize and teach the doctrine of biological evolution in this country. It is well, amid the cross-currents of the present and the multitude of details of new research, to look backward to the sources from which we inherit our tendencies, and to the men to whom we owe our inspirations.

A "breezy stimulus" was brought to the meeting by Prof. Hugo Münsterberg of Harvard, who has recently come from Freiburg to be director of the Harvard Psychological Laboratory. Dr. Münsterberg gave us an hour of rapid German, and stirred up a vigorous discussion—as his work always stirs discussion—upon the very foundations of experimental research. This discussion, as well as others, was enriched by the contributions of Prof. Titchener of Cornell, who, besides exemplifying the Leipzig degree—now no rare thing here—brings also the philosophical training of Oxford University.

The Association decided not to take part, in an official way, in the congresses of the World's Fair, preferring to leave its members free to give their support to such arrangements and plans as might be agreed upon by the various World's Fair congress committees. I may also say, for the benefit of those who have not seen the announcement in the philosophical journals, that the International Congress for Experimental Psychology has made a similar decision—*i. e.*, not to hold an extra session in America this year.

The next meeting of the American Association is to be held at Columbia College, New York, during the Christmas recess, 1893. Reports of the present meeting may be had shortly from the Secretary. J. M. B.

MONEY AND LABOR IN AUSTRALIA.

SYDNEY, November 27, 1892.

PROBABLY few countries have in a year suffered a greater loss of prosperity without reaching a crisis than have some of the Australian colonies. Of the causes that have contributed to this loss, the most direct is the sudden inability to borrow money for public works, and the resulting change in the position of the laboring classes. For many years New South Wales and Victoria had only to announce in London their desire to float a loan, to have the amount required over-subscribed at once. Since the Baring crisis England has become more cautious about lending its money to far-distant countries, however different their government and method might be from the ill-fated Argentine. The colonies already committed to public works, undertaken when money was easily obtained, for a time hoped to carry these on, and, rather than abandon them, paid continually higher rates for their loans, thus depreciating still further their own credit, till finally the climax was reached, and the amounts desired were not forthcoming.

In previous years Government expenditure had found employment, in one colony or another, for a large population of laborers, as well as contractors and storekeepers, who suddenly found themselves unprovided for when such works as railways, bridges, and improvements to harbors and rivers had to be suspended. Naturally such men sought for employment in other industries, only to find themselves involved in direct conflict with the labor-unions and classed everywhere as "black-legs." Nowhere have labor-unions till now had greater power than in Australia, being able to limit the number of their members, inasmuch as the Government found work for so large a proportion of the outsiders. The leaders of the unions failed to appreciate the changed position, and with their old-time pride ordered on no reasonable grounds a strike of about 7,000 men employed as miners at the Broken Hill Silver Mines, while in Sydney and Melbourne there were over 10,000 men equally capable out of work. This strike collapsed at about the same time as that at Homestead, Pa., and for the same reasons—exhaustion of funds and abundance of non-union labor. The unionists have changed places with the unemployed, and it remains to be seen whether they will not in turn find themselves treated as "black-legs" when trying for work of another kind. Hard though the lesson has been, there can be no doubt that the results of this strike will be beneficial to the colonies, in bringing about a fairer adjustment of the rewards of capital and of labor. The hard-and-fast scale of wages enforced by the unions must become elastic to suit the needs of the times, and, more than all, their leaders must understand that agreements can no more be broken with impunity by them than by their employers.

For several years there went on in Melbourne the wildest speculations in land and buildings imaginable. In the main streets of this city of 400,000 inhabitants land brought higher prices than in Broadway, New York. Magnificent buildings were erected that, if fully occupied at fair rentals, could not return 1 per cent. on their cost to-day. Many of these are absolutely tenantless. Finance companies and building societies arose in great numbers, and their shares quickly went to heavy premiums, though paid up to but a small proportion of their ultimate liability. With the collapse that has necessarily followed, such shares became valueless, and the holders are in most cases ruined, as the further liability, so little thought of at first, must now be collected by a liquidator or assignee in bankruptcy. Such changes seldom come without some criminal acts being discovered, yet, considering the marvellous ease with which money was obtained,

the record is comparatively a clean one. None of the causes of depression affects seriously the real industries of the colony; the wool clip and the wheat harvest are as sound as ever, the production of silver is increasing every year, and this year, too, the gold mines have been unusually successful. Undoubtedly the cities are too large in proportion to the country, but new countries have suffered from this centralization before. The Australian colonies afford a safe and legitimate field for the investment of the capital of older countries, provided reasonable care is taken and gambling profits are not sought. One of the greatest dangers of previous years, drought, has been materially lessened by artesian boring and water conservation.

In climate Australia has many advantages. Labor in the open air is practicable the year round, and clothing and fuel need not be specially provided for the winter. Sheep and cattle need never be sheltered. The governments are certainly most favorable and many laws are admirable. The United States has already successfully borrowed our Ballot Act, and in time may adopt the equally excellent system of land titles known as the Torrens Act. Conspiracy against the laws for the maintenance of order has been boldly and severely punished, even when such conspiracy consisted merely of words from which no actual violence resulted, and the Government in power knew that they were thereby risking the votes of many of their supporters. Equally boldly in New South Wales have those directors and managers of financial institutions been punished who conspired to the issue of false balance-sheets and misleading prospectuses. Victoria has been slower, but there is as yet little reason to doubt that she will act equally well.

Hence from this depression real good may come. What is most needed is the reëstablishment of colonial credit in London, and this will easily and at once follow on federation. That there are many difficulties in the way is easily appreciated when one remembers how hard it was for the American colonies to unite even in the face of a great common danger. Many private interests may have to be sacrificed to the general good, but it may safely be said that adversity has brought the possibility of federation far nearer than the formal meetings in more prosperous days; and that this result may be soon reached must be the desire of every well-wisher of Australia.

J. E. Bullard.

FOREIGN JURISDICTION IN JAPAN.

Tokyo, December 10, 1892.

For several reasons one may justify himself for having resolved to write to you on this subject once only, and that not before the moment of departure from this country: first, because most people here believe, with Mr. Chamberlain, in 'Things Japanese,' that it is a "thorny question" of which they are "utterly sick and weary"; again, because on this subject a mature opinion alone can be of any value; and, finally, because the publication of conclusions such as those here recorded is infallibly the signal for personal abuse from a section of the foreign press here, which, at the distance of several thousand miles, can be borne with greater equanimity.

I sing, then, the theme of foreign jurisdiction in Japan; of that form of invasion of national sovereignty which consists in maintaining indefinitely a staff of foreign judges and foreign sheriffs within the confines of an independent state; of a system that substitutes foreign laws and foreign procedure for the sovereign rules of a civilized nation; of a policy that denies efficacy to the merest police regulations until they have been confirmed by the assent of seventeen States, scattered all over the globe, some of them less worthy in all that makes national character than the State over whom they domineer; and of a legal arrangement which avowedly rests on the theory, false in fact and abhorrent and humiliating to every Japanese patriot, that the courts of his country are incapable of administering even a mediocre justice between man and man. The American nation is the only one which recognizes, in its relations with Japan, the true notion of exterritoriality—that it is a jurisdiction delegated by the sovereign of the country to certain foreign agents to administer certain abnormal rules of conduct in limited classes of cases. But even in this its best aspect it rests on an assumption of jural deficiency and legal incapacity which is now amply proved to have lost whatever foundation it once had.

The rationale of exterritoriality was concisely expressed by Secretary Fish, in 1871, when he wrote to Minister De Long:

> "All that has been sought by the Christian Powers is to withdraw their subjects from the operation of such laws as conflict with our ideas of civilization and humanity, and to keep the power of trying and punishing in the hands of their own representatives."

This is the whole basis of exterritorial jurisdiction in Japan. The diplomatic documents of the times, in which the epithets "semi-barbarous," "semi-enlightened," "despotism," and the like are freely used, indicate clearly the nature of the dominant conception. Epithets such as these never had any foundation in fact. The right of Japanese culture to receive in the fullest degree the title of a civilization is still to a certain section of people an impassable *pons asinorum*, but it is open to a demonstration as easy and as various as is the Pythagorean proposition.

All that could serve, forty years ago, as the basis of a claim of exterritorial jurisdiction, was the undoubted presence of a feudal framework in the government of the country. Even this never seemed a sufficient basis to Townsend Harris, the negotiator of the treaty. He declared that the claim was "against his conscience"; and the then Secretary of State (Marcy) regarded it as an unjust interference with the municipal laws of a country. But this framework of feudalism disappeared many years ago. Japan had long since outgrown it; and it fell away, amid the cannon-smoke of 1868, like a rotten scaffold which has been left about a completed mansion and finally falls at a tremor of the earth. With it disappeared the outward disfiguring incidents of a feudal state of society. It may be safely said that there is little more left of feudalism to-day in Japan than there is in Germany. As for the inner substance—the degree of refinement to which the art of living has been carried, the private and public virtues of the people—it is inexcusably invidious for us to assume to judge them in any other spirit than that in which we would criticise Italy, France, or any other political equal of Europe. Let any one come to Japan in the spirit of a learner, and he will find that it has lessons of life even for self-contained America.

The exasperating thought to the sensitive Japanese (and that is every Japanese, when the national honor is touched), is that, while the bonds of exterritoriality are fast about his country, other nations whose irregular and irresponsible justice constantly calls for diplomatic intervention are endowed, by an Occident birth (so to speak), with an autonomy which some of these very offenders join in denying to Japan. When the Japanese subject glances over our diplomatic history and reads the incidents of the *Virginius* in Cuba, of Van Bokkelen in Hayti, of Wheelock in Venezuela (to name no others), and realizes that every one of these States is as much beyond his own in international rights as it is behind in much that makes for civilization, it is no wonder that he regards Treaty Revision as first and foremost a question of redeeming the national honor. He need not claim that justice is administered in his country in any manner that could be compared to that of any nation of the earth. Certainly he could not say that the British or American resident could find everything here that he would meet in his own courts. There are certain features of his justice which an Anglo-Saxon cannot expect to find anywhere duplicated. *Quot homines, tot sententiæ*, and the rule applies to nations also. But I am free to say (knowing something of Japanese courts and not very much of European) that I should as willingly be tried in a Japanese court as in that of any Continental nation—and more willingly, in some respects.

To give an instance, the penalties (especially the fines) of the Japanese Criminal Code are considerably lighter, strange as it may seem to some, than in our own country. This was recently well illustrated by the recent action of the British representative in Japan, when he gave assent to the new Game Regulations and promulgated a British draft; for the penalties of the Japanese ordinance reached a maximum of from 20 to 50 dollars (Mexican), while those of the British Order reached from 50 to 100, with the added alternative of a term of imprisonment. In general practice, too, the Japanese courts seem to run to much lighter terms of imprisonment. Again, the foreigner is everywhere here treated with much more consideration than in continental Europe—for reasons which cannot here be explained; and a foreigner may count on more courtesy in a Japanese tribunal than the average commoner could look for on the Continent.

After all, what is it that goes to make a proper administration of justice? Is it good laws? Then most emphatically there is justice here; for Japan has laws equal to the best in Europe. They are the product of a concert between the best foreign and native experts, and have been two decades in preparing. Is it competent judicial officials? There are now some 1,250 in all, nearly half of them trained in Western law; organized into courts on a most approved plan; stationed in every province and county of the empire; and comparing more than favorably with English and French courts in the despatch of business. Many of them lack experience, but that is a defect which time is every day curing, and is certainly not to be emphasized. Is it that the nation must have certain fundamental notions of law and justice? Then it can be demonstrated that Japan is one of the most law-abiding nations in the world; that it possesses a legal and judicial history dating back at least to the days of Charlemagne; that such institutions as banks and exchanges, with their accompaniments of checks, bank-notes, bills of exchange, and "futures," have been familiar for 200 years in Japan; that the judiciary of the last two centuries developed their precedents in a manner differing little in spirit from that of the judges of England; and that a system of procedure and of substantive rights was then worked out, containing in essence all the

titles of European law, and corresponding in general trend to Continental rules. Mr. Blaine, in 1881, in language which there could have been no evidence to justify, predicated of this people "an utter incompatibility of habits of thought on all legal and moral questions," which, with other things, "made it impossible to trust the persons, the property, and the lives of our own people to such a jurisdiction." Of this I can only say that a more cruel libel was never penned in our diplomatic history. So gross a misconception can be compared to some of the ignorant notions of the United States that lodged in many British heads for decades after the Revolution. But time has brought its revenges. "All that has been sought," said Mr. Fish, in the passage above quoted, "is to withdraw their subjects from the operation of such laws as conflict with our ideas of justice and humanity." Yet four weeks ago, twenty-one years after this sentence was penned, an accused murderer, Carstens, arraigned in a Yokohama tribunal, demanded that he should be tried in a Japanese court, not in the German consular court, disclaiming his German nationality for the specific reason that he could hope under the Japanese Code, but not under the German, for a certain diminution of penalty on the ground of extenuating circumstances. Thus in 1892 we are presented with the spectacle of a subject of a leading Western Power "seeking to withdraw" himself "from the operation of a law" of his own State because the corresponding law of Japan is less "in conflict with his ideas of justice and humanity."

It is time that we recognized for Japan the validity of the honorable principle enunciated by Secretary Marcy nearly forty years ago, during a diplomatic incident with Austria:

"The system of proceedings in criminal cases in the Austrian Government has undoubtedly, as is the case in most other absolute countries, many harsh features, and is deficient in many safeguards which our laws provide for the security of the accused. But it is not within the competence of one independent Power to reform the jurisprudence of others, nor has it the right to regard as an injury the application of the judicial system and established modes of proceeding in foreign countries to its citizens when fairly brought under their operation. All we can ask of Austria . . . is that she should give American citizens the full and fair benefit of her system, such as it is. . . . She cannot be asked to modify her mode of proceedings to suit our views, or to extend to our citizens all the advantages which her subjects would have under our better and more humane system of criminal jurisprudence."

If this is good law for Austria, it is even better law for Japan, for the legal system of Japan to-day is probably much better than that of Austria forty years ago. On the principle here set forth, Japan may surely claim that the long-standing indictment against her be quashed without delay, and that her judicial autonomy be once more restored.

And now, in conclusion, who is responsible for this indictment, as it is accepted by the Western States of to-day? First, tradition, and the inertia of diplomacy. The traditions are of two centuries ago, and rest on notions long exploded. The inertia is due to that diplomatic love of the *status quo* which at once establishes and endangers the delicate equilibrium of international forces. Diplomacy will never "move on" from a position of vantage till the policeman of public sentiment lifts his club.

Second, the local opinion of the foreign settlers in the open ports is on the whole against the surrender of foreign jurisdiction. It is idle to say of these communities, as some friends of Japan have reported, that their members are of such a character as to discredit their opinions on any subject. Those whose opinions go to mould the local sentiment are for the most part reputable men and gentlemen, and need not be gratuitously slandered. They are simply mistaken—and this may be said, as a low-tariff champion may criticise the alleged delusion of protectionist manufacturers, without in any way impeaching their good faith. Our views can never be independent of our interests, our national qualities, our opportunities for information, our *milieu*—and the error here flows from all of these sources.

But, third, it is nursed and expanded and disseminated by one or two resident editors, whose pens, with fatal malignity, devote themselves incessantly to the denunciation, in superlative terms, of the general depravity of the Japanese race, and in particular their incapacity to administer justice in their own land. These men (in the practice of their profession) seem to have lost all sense of honor, fairness, and veracity. They will deliberately pervert an opponent's arguments, carefully conceal from the public any but their own side of a case, falsely attribute to others statements and opinions never made or entertained, and invariably attribute to acts the worst motives. Yet these are precisely the persons who talk loudest of the integrity and general superiority of the Western races. As a demonstrative instance, selected from among many, let me chronicle briefly a recent *exposé* of one of these journals' methods. Writing from the ex-parte statement of a foreigner who had laid an accusation of theft in a Japanese court, it broadly charged Japanese laws with being "fundamentally opposed to our notions of right and wrong," and it named, as the instance which "eclipsed all others in blundering stupidity," the discharge of the accused Japanese by the Court in the above case. It said, in the course of the controversy:

"What we do not profess to know has nothing to do with our argument. What we do know is that a coolie, taken in the act of thieving and seen by three witnesses who gave evidence in court, was acquitted. If acquitting a man under such conditions is Japanese law and justice, then it is entirely foreign to European ideas, and that is all we wish to prove."

Put in such a way, the failure of justice might be conceded, though no allowance is made for the Judge's opinion of the witnesses' credibility. But the above comments were all based on an ex-parte statement, and were published before the proceedings of the Court were made public, as they were within a few days. The main facts, it then appeared, were as follows:

"No coolie was arrested. The man arrested was one Yamamoto, a merchant. A Mr. Green found him apparently superintending the felonious transportation of certain tea, a portion of which belonged to the firm, and had handed him over to the police on suspicion. A Chinaman, Lo, a shipping clerk of the firm, testified that he had hired the house to which the tea was being transported, that three Japanese, of whom the accused was not one, were superintending the transportation, and that the connection of the accused was limited to the procuring of a key to the house, at Lo's request. A Japanese employee of the firm testified that the firm's employees had made a mistake in transporting to that house (this being the fact that had excited the suspicion of the accuser). Finally, the head of a company of coolie-porters testified that he had received orders from the employee Lo to carry the tea to the house in question."

What a complete misrepresentation was the former statement ("which we do know") will easily be seen; and the journal in question could not avoid admitting it. One could give a dozen instances to the same effect in almost as many instances, and the one here selected gives only a faint idea of what sometimes occurs. It is journalism of this sort which keeps the community in an unnatural ferment, festering public opinion with the venom of its sting, and irritating sores that might have healed long ago. It is a fact that these journals, flourishing as they do within Japanese territory, assume a tone of arrogance and abuse towards the whole Japanese nation which can only be compared in our country to that of the Anarchist papers of Most and his fellows. In Europe they would speedily encounter the prohibition of the law, if indeed they were not first drowned in libel suits. As it is, they find protection under the ægis of Exterritoriality. They know that their occupation must disappear with that worn-out institution, and they defend it. But to its speedy dissolution every well-wisher of Japan must look forward, and meantime may do what little he can to hasten that end. J. H. W.

Correspondence.

THE MASSACHUSETTS CAUCUS.

To the Editor of The Nation:

Sir: In your issue of yesterday you make severe comment upon the method pursued by the friends of Mr. Lodge in promoting his election to the United States Senate by the Legislature of Massachusetts. You criticise both the fact that a caucus of the Republican Representatives was called, and that it was called at such an early date. The facts are these: Six years ago, when an election for Senator was held, the two houses did not agree in their separate action, and met for joint ballot. On the first vote, the Democrats, being a minority of the whole body, cast a merely complimentary vote for one of their own party. Mr. Dawes, one of the Republican candidates, received the votes of only a minority of the Republicans; but before the vote was declared, Mr. Dawes's partner, a Democrat, arose and changed his vote and cast it for Mr. Dawes. He was immediately followed by the greater part of the Democrats, and the election of Mr. Dawes on the first ballot was thus secured. After the fact of the Democratic action was evident, a number of Republicans who had voted for their candidates also changed their votes; but the fact, nevertheless, remained that the minority candidate of the Republicans was elected by Democratic votes. Ever since that time it has been the determination of the active Republicans that the Republican party, so long as it formed a majority of the Legislature, should control the election of the next Senator, and to that end should nominate its candidate in party caucus before meeting in joint convention. At the next Senatorial election the Republicans were practically unanimous in favor of reëlecting Senator Hoar, and therefore no caucus was held because none was needed. But when the Republicans held their State Convention this autumn, the following plank was adopted by unanimous vote:

"We are to choose a State Legislature which shall elect a United States Senator, as well as care for our State affairs. We believe that the Republicans in that body should nominate in caucus and elect a United States Senator without seeking the advice of, or combinations with, any other political party or parties."

Some time afterwards sixty-nine Republican Senators-elect and Representatives-elect issued an invitation to the other members of their

party who had been elected to the Legislature, to unite with them in calling and attending a joint caucus to nominate a Republican candidate for United States Senator "on such a date as the signers of the call may subsequently determine." The total membership of this Legislature is 280, of whom 195 are Republicans. One hundred and sixty-four Republicans, or about four-fifths, signed the call for the caucus. A circular was then issued indicating the available days for the caucus, and stating that the date of the caucus would "be determined by the wishes of a majority of all the signers of the call," and requesting an indication of preference upon a form enclosed. Of 161 who expressed their wishes, 127 united in favor of holding the caucus on the 4th of January, the day when the Legislature was to be organized. It is a matter of public knowledge that the caucus was held on that day, and by a very strong vote nominated Mr. Lodge as the Republican candidate for Senatorship.

These are politics, and partisan politics, but they are not Hill politics. Mr. Lodge and Mr. Hill are both politicians, but they have nothing else in common. One is no more to be classified in the same category with the other than the Massachusetts Legislature is to be likened to Tammany.—Very truly,

CALM OBSERVER.

BOSTON, January 6, 1893.

[We are glad to have our correspondent's testimony to the fact that six years ago the "active Republicans" of Massachusetts resolved to preserve the party majority in the Legislature from the influence either of public opinion in the choice of United States Senator or of independent sentiment within that majority, as well as from the risk of that sort of coalition by which Charles Sumner was elected to the United States Senate. This exactly conforms to the wishes and dictates of the Machine, whether it be a Hill Machine, a Tammany Machine, or a Lodge Machine. That a State Convention could be brought to pass a resolution like that quoted proves that the sway of the Machine is undisputed in Massachusetts—not that we have made an absurd charge against Mr. Lodge.

Without, however, arguing the point further in our own behalf, we will cite the speech made in the caucus itself by Senator Butler, an opponent of Mr. Lodge.—ED. NATION.]

"I confess that as a Republican I am greatly surprised at the action of this caucus. . . . We have had too many actions in our old commonwealth to regret; we have had too few actions over which we could well rejoice. Way back—perhaps two years ago, in some instances—one of the candidates who has been suggested with reference to this great and honorable office [Mr. Lodge] began his efforts to obtain it. He used methods and resorted to practices never before heard of in this commonwealth with reference to this office. The State Convention passed a resolution demanding a caucus—an extraordinary thing to do—and prior to the election on November 8 this State was raked over with a fine-tooth comb, not in the interest of the Republican party, but in the interest of the man who is a candidate for this place. I do not stand here to detract from his reputation for ability or his standing as a Republican; but I say this, that before everything we are Republicans, and as Republicans we cannot afford to do this thing. Mark you! However this may result, whatever may be the action taken by this caucus, it will not do anything to solidify that beloved party whose representatives we are.

"I could point my finger to many things which have been done by this candidate which are not in keeping with the dignity with which this office has been contested in the past. I do not wish to impute to him things which are beneath a man as a man, but I do mean to say that they should not be done by a man who is a candidate for this great and honorable office, for this office, the highest in the gift of the people of this commonwealth. There has been such a use and abuse of the Machine in his campaign that the precedent may be established in this State that no man can go to the United States Senate in the future except by resorting to similar means. In New York State it is supposed to be a very objectionable thing for a man to use the Machine to secure an election to the Senate. Are we to say by our action that in Massachusetts for a man to get to the United States Senate he must follow along for years with the Machine, using its power to further his own interests? Now, I appeal to the record of the Republican party. Where in the past, in this State, will you find such an instance of Machine manipulation? Nowhere. Men have stood up and announced their willingness to be candidates for the United States Senate, and the judgment of the people of the commonwealth has been made up, not by the special and individual efforts of any man, but by the great consensus of opinion which has grown up until it has become so formidable that it has been powerful to place a man in that high office."

BALLOT REFORM IN THE COURTS.

TO THE EDITOR OF THE NATION:

SIR: It is not often, at least since the days of Chief-Justice Marshall, that a sound political doctrine is enforced by a legal decision before it has become well established in the mind of the community at large. When a new political question comes before our courts, its importance is too often obscured by a cloud of technicalities, and fails of appreciation by judges who are keen enough at untying knots in the law of commercial transactions or real estate. The California case of Eaton vs. Brown, 31 Pacific Reporter 250, decided in October last, is therefore a rather unusual instance of help given by the bench to the cause of political reform in a matter of the highest importance. It was there decided, by a unanimous court, that the provision in the California Ballot Law allowing a "straight" party ticket to be voted by a single cross-mark was unconstitutional and wholly void.

"It is," said the Court, "an attempt to discriminate against classes of voters, and its effect, if allowed to be valid, would be to subject such classes to the alternative of partial disfranchisement, or to the casting of their votes upon more burdensome conditions than others no better entitled under the fundamental law to the free and untrammelled exercise of the right of suffrage. . . . We hold that this provision destroys the just and equal and uniform operation which in an election law, of all others, is demanded, no less by the express terms of our fundamental law than by the genius and spirit of our institutions. It is therefore void and inoperative. There should be no party designations printed at the head of the tickets, because there can be no voting by stamping such designation. Voters can only express their choice by placing a stamp opposite the name of their candidate in the blank space left therefor, except only in the case of Presidential electors, who may, under the law, be voted for in groups by a single impression of the stamp."

What is said above about the spirit of our institutions is not without its meaning. It ought not to be forgotten that the system of marking individual names belongs to the essentially democratic colonies of Australia, where universal suffrage prevails, while the partisan device of marking a straight ticket by a single cross originated under the limited suffrage of monarchical Belgium. Apart from this, though, the soundness of the decision cannot be questioned, and it is a precedent that could well be followed in Colorado, Delaware, Illinois, Indiana, Maine, Maryland, Michigan, Ohio, Washington, and Wisconsin, where the partisan form of ballot is used, as also in Pennsylvania, where it exists in a modified form. New York and New Jersey might be added but that the laws of those States would seem to be beyond judicial cure. To those ballot-reformers who have seen their efforts for the true Australian system marred by partisan legislatures, the possibility of judicial relief is indeed cheering.

CHARLES C. BINNEY.

PHILADELPHIA, January 7, 1893.

A WOMAN ON THE BOARD OF REGENTS.

TO THE EDITOR OF THE NATION:

SIR: Mr. George William Curtis, in his inaugural address as Chancellor of the University of the State of New York, counted himself peculiarly fortunate in occupying a chair in the Board of Regents ennobled by a long line of distinguished occupants. "Each of my colleagues," he adds, "traces a kindred ancestry of his chair, and, contemplating the men whom he succeeds, each acknowledges with me that in the truest sense *noblesse oblige*." Mr. Curtis expressed no wish as to the person through whom the line should be preserved, but, in view of the generous encouragement he always gave to the cause of woman's education, is it not fitting that the chair left vacant by his death should be filled by one of that class for which he did so much? For more than a generation women have received college training, and they have come to occupy positions of trust and responsibility in philanthropic work. The majority of the persons engaged in educational work in this State are women, but few openings of a public character have as yet come to them in this work. Would not the cause of education be served by the election to the Board of Regents of a woman well qualified for such a position? A woman occupying the chair once filled by Mr. Curtis would feel in a double sense the responsibility resting on her.—Respectfully, M.

THE HARVARD ANNEX AND THE UNIVERSITY.

TO THE EDITOR OF THE NATION:

SIR: There are many erroneous notions concerning the fund that the Woman's Education Association is raising for the endowment of the Harvard Annex, in the hope of its becoming part of the University. It seems, therefore, worth while to answer in a few words two questions which are frequently asked: "Why is the connection of the Annex with the University greatly desired? Why is it necessary to raise money for that object?"

The reasons for desiring that the Annex should be connected with the University are: First, that its existence and all its present courses of study may be permanently insured to its students. As it now stands, the College professors teach the Annex classes during hours not claimed by the University, and should extra college work arise, they may be obliged to interrupt their instruction at the Annex. Second, that the students of the Annex may have freer use of the library and other educational facilities belonging to the University than they now enjoy. Third, that the Annex graduates should receive their degrees from Harvard University, a college degree being of far greater value to them than the Annex certificates they now have.

It will be noticed that, under the above conditions, not only do the students miss important privileges, but the actual existence of the Annex itself depends solely on the good will of the professors and the amount of leisure time at their command.

In answer to the second question, why a fund is necessary in order that the Annex should be thus joined to the College, the reasons are : (1.) As the funds of Harvard College were given for the instruction of young men, the members of the Corporation and Board of Overseers cannot use them for the teaching of young women. The Annex must, therefore, be self-supporting. (2.) In view of the larger number of students likely to follow such a change of standing in the Annex, additions in educational outfit, apparatus, etc., would be necessary and would greatly increase expenses. (3.) That the present income of the Annex is not large enough to pay for the post-graduate courses, which are very expensive, and for which Harvard offers large opportunities. These advanced studies are in frequent demand by women who are anxious to fit themselves for the higher positions which such preparation would enable them to obtain.

There can be, at present, no question of separate or co-education. If, when the Annex is properly endowed, the University accepts the charge of its maintenance, the governing boards will arrange all methods as seems well to them at the time, and will alter them afterwards as may seem to them better. In the thirteen years of its experimental existence, the Annex has met a grave demand of the community with such success as its small means and existing conditions rendered possible. It is hoped that the public will recognize the necessity of making it a permanent institution.

Mrs. George H. Palmer,
Katharine P. Loring.

Boston, January 3, 1893.

ROMANCE AND PLAGIARISM.

To the Editor of The Nation:

Sir: A few days ago I received a circular in which blue-pencil marks directed my attention to an article on "Barbara Freitchie" by a *kinswoman* in the *Californian* for January, 1893. Hoping to gather some additional material for my monograph, I sent for it at once. Imagine my surprise when I discovered, in five magazine pages, two at least transcribed literally from my own article in *Sunday Afternoon* for April, 1878, while scattered throughout the remaining three were sentences of my own into which were interpolated certain tricks of rhetoric for which I should be sorry to be held responsible. That the writer had never seen my monograph is made certain by her perpetuating an error in my article of 1878. I spoke there of Ebert as Caspar Fritchie's executor. Ebert denied this at once, in a wrathful letter, and the correction was made in detail in the monograph. It would have been almost impossible for any "kinswoman" to have made this mistake.

To two or three points in this article I ask space to direct attention. The illustrations are evidently copies of Byerly's, made in 1868. In that which represents Barbara's house, the flag is in the wrong window—where Byerly put it, not knowing the story. There it could not have remained an hour, nor would it have been seen by Jackson's men. Then we have a photograph of "Barbara's flag," asserted by the "kinswoman" to have been her father's *Revolutionary flag*. How comes it that this torn flag has *thirty-four* stars? It must have been made after the admission of Kansas—on July 4, 1861! Barbara owned three flags, but not one of these was more than eighteen inches long.

Three points in the text remain. "Barbara was born in 1766," says the "kinswoman"; "and every drop of ancestral blood in her baby body had been inherited from the founders and preservers of the then youthful Union." Let us be merciful to the rhetoric, but will the author tell us what "youthful Union" existed in 1766? She goes on to claim that "Lady Barbara" "was an aristocrat of the *true American type*," associating as an equal with Taney, Key, and Scott! Nothing could have grieved the dear old Frau more than this unfounded claim. In her concluding paragraph the author asserts that the bodies of Barbara and Francis Scott Key lie not far apart among "other noble Marylanders," in the cemetery overlooking Frederick. There, indeed, on the grave of Key, I myself traced the paths of contending armies; but Barbara's body rests among those of her own people, in the little graveyard belonging to the Evangelical Reformed Church.

Somewhere there may be some one who loves the author of this strange appropriation; therefore I will give no further publicity to her name. To the falsehood of her statements I am compelled to ask attention.

Caroline H. Dall.

1526 18th St., Washington, D. C., Jan. 7, 1893.

A CORRECTION.

To the Editor of The Nation:

Sir: Will you kindly permit the author of a book recently published in New York and London to correct a statement of fact erroneously made in regard to him in a prominent American organ? In a very appreciative notice of my work ('Methods of Industrial Remuneration') contained in the last number of the *Political Science Quarterly*, Mr. George Gunton says that "Mr. Schloss is a Fabian Socialist, with a strong bias against the wages system, and in favor of some form of socialistic production." But of that well-known band of Socialists, the Fabian Society, I am not, and never have been, a member. Of course, "we are all Socialists nowadays"; but I do not, and never did, profess myself a Socialist. No one (before Mr. Gunton) ever described me as a Socialist. If I have a bias against the wages system, I am not aware of it, my view being that—to quote from the paper which I read before the British Association last August—"if we will devote ourselves to a careful examination of the wage-system, we shall not improbably arrive at the conclusion that what is wanted is, not so much that wages shall be abolished as that wages shall be increased." As for socialistic production, notwithstanding that I have read with attention several economic nightmares purporting to represent production under a socialist system, I have never yet been able to attach any very definite meaning to those "blessed words," socialistic production.

I am yours obediently,

David F. Schloss.

London, December 23, 1892.

CAPT. JOHN SMITH AND NATHANIEL BUTLER.

To the Editor of The Nation:

Sir: In 1882 the late Gen. Sir John Henry Lefroy edited for the Hakluyt Society a volume entitled 'The Historye of the Bermudas or Summer Islands,' from MS. 750 of the Sloane collection at the British Museum. In his introductory remarks our lamented colleague discussed the authorship of this MS., and from internal evidence attributed it to Capt. John Smith, the historian of Virginia. Ten years have elapsed since the publication of Lefroy's work, and his conclusions have not, as far as I am aware, been questioned. It was only quite recently that Mr. Edward Scott, keeper of MSS. in the Museum, while cataloguing the Sloane collection, came upon a MS. in the same handwriting as 750, signed by Nathaniel Butler. This MS., numbered 758, is described by Sir F. Madden in his catalogue as follows: "1. Mem^da^ for 12 heads of Letters written by Capt. Nath. Butler while Governor of the Bermudas [autograph]. 2. A dialogicall discourse of Marine affairs between the High Admirall and a Captaine att sea, written in six dialogues by Capt N. Butler in 1634, with a table of contents prefixed. 3. A diary of my personall employments from 10 Feb. 1639 to 2 May 1640 by the same Capt. N. Butler [autograph]." A comparison of the two MSS. establishes the fact of the identity of the handwriting, though one is a fair copy, the other a rough draft. Both, however, are written by the same educated hand, and the signature at the end of 758, "Nath Butler," is genuine.

Had Gen. Lefroy seen the Madden catalogue he could not have fallen into the error of attributing the 'History of the Bermudas' to Capt. John Smith, for Madden expressly states that its author was Butler. But at the time Gen. Lefroy edited his book the Madden catalogue, which only went as far as 1,100 of the Sloane MSS., had been suppressed. The Ayscough catalogue, then and still in use, is arranged according to subjects, and our two MSS. fall under separate headings, "Bermuda" and "Butler" occurring in different volumes. Gen. Lefroy, basing his arguments on 750, the only MS. known to him, found several passages in his 'History of the Bermudas' identical with Smith's 'History of Virginia,' book 5, and came to the conclusion that Smith was the author of both works. But Capt. Smith was never at Bermuda, and there is reasonable ground for believing that many of the materials for the Bermuda portion of his work were supplied by Butler. At all events, he is mentioned in the list of authorities quoted by that author under his initials N. B., and as he is known to have visited Virginia in 1623, soon after his governorship of the Bermudas was at an end, he would most probably have met with Smith, who had returned to New England the previous year to lend his assistance in restoring the fortunes of that young colony, then at a low ebb. But even more conclusive proof is afforded by the date, for, according to Gen. Lefroy, Capt. John Smith died in 1631, while the writer of MS. 758, and consequently of 750, was living in 1640.

It may be worth mentioning that this Capt. Nathaniel Butler, who did good service as Governor of Bermuda from 1619 to 1622, and was afterwards (1638–41) Governor of (Old) Providence Island, is one of England's forgotten worthies, being passed over even by the 'Dictionary of National Biography.' He appears, too, to be the individual committed to Newgate in June, 1649, by the Council of State for dispersing treasonable and scandalous books (Calendar of State Papers, Domestic), by no means a singular instance of the way justice was administered in those days.

E. Delmar Morgan,
Hon. Sec. Hakluyt Society.

TINTORETTO'S ST. MARK.

To the Editor of The Nation:

Sir: In reference to Mr. Stillman's letter in your last issue, it may be of interest to you to have the assurance that in August of 1889, "The Finding of the Body of St. Mark," by Tintoretto, was in the Brera at Milan, and that it is so striking a picture, in respect to composition and the management of the light, that it is fitted to arrest the attention of any one looking to composition. As to technique I cannot say.

I find on referring to the catalogue, which was then on sale at the Brera, this entry:

"Giacomo Robusti dit le Tintoret.—V. No. 217. 234 bis. L'Enlèvement du corps de St.-Marc des tombeaux d'Alexandrie. Sur toile: haut m. 3, 97; larg. m. 4, 02. Provenant de la *Scuola grande* de St.-Marc."

Very respectfully yours, E. L. W.

Baltimore, January 6, 1893.

Notes.

Charles Scribner's Sons have nearly ready 'Ivan the Viking,' by Paul B. Du Chaillu; 'Adzuma; or, The Japanese Wife,' a play by Sir Edwin Arnold; 'Froebel,' by H. Courthope Bowen, in the "Great Educators" series; "The French War and the Revolution,' by Prof. Sloane, in the "American History" series; 'The Campaign of Waterloo,' with an atlas, by John C. Ropes; 'A Manual of Natural Theology,' by Prof. George P. Fisher; and 'Higher Criticism and the Hexateuch,' by Prof. Charles A. Briggs, whose 'Defence before the Presbytery of New York' has just been published by the same firm.

Harper & Bros. will publish 'Elements of Deductive Logic,' by Prof. Noah K. Davis of the University of Virginia, and 'Morocco as It Is,' by Stephen Bonsal, jr.

D. Appleton & Co. issue directly a 'Handbook of Military Signalling,' by Capt. Albert Gallup.

Dr. Wm. Clarke Robinson's authorized translation of the second volume of the late Prof. ten Brink's 'History of English Literature' is on the point of publication by Henry Holt & Co. The chief interest of this portion of the work centres in Chaucer.

'The Family Life of Heinrich Heine,' translated by Charles de Kay, is in the press of Cassell & Co.

Macmillan & Co. announce 'The Real Thing, and Other Stories,' by Henry James.

Bret Harte's 'Maruja' has been translated into Portuguese. Publication of it began in the *Jornal do Commercio* of Rio de Janeiro on December 11, 1892.

Mr. Henry Matson's 'References for Literary Workers' (Chicago: A. C. McClurg & Co.) will be a boon to country debating societies. Instead of a bald topical bibliography, he propounds 324 questions, states his own opinion on each, and adds references to the sources of knowledge. He throws in, to boot, 287 questions without either of these accompaniments. Thus we may expend our wits on the problem, "Is Browning a greater poet than Tennyson?" or "Is Edison the greatest living American inventor?" "Was Darwin a greater scientist than Agassiz?" "Is photography of greater importance than engraving?" "Are the so-called trusts . . . a benefit to the public?" "Is the Nebular Hypothesis likely to win an established place in science?" "Is the human will free?" "Does Protection protect?" etc., etc. It cannot be supposed that any one man's opinion is of value for so wide a range of estimates of relative human rank, or political, religious, and æsthetic controversy. Mr. Matson's service, therefore, consists in his references, which are commendably accurate and useful so far as we can judge.

Prof. Frank Forrest Frederick's 'Architectural Rendering in Sepia' (New York: William T. Comstock) is one of the books that give in print the practical directions which an instructor gives orally to his pupils, without any attempt at added system or completeness. They are such directions as the teacher of brush-drawing usually offers, from the pictorial point of view rather than the architectural. As is apt to be the case, Prof. Frederick recommends his pupils in set terms to study nature and seek after truth; but in practice his advice is to do this or that because it has a good effect or accomplishes a pictorial end. Some mocking spirit must have inspired him to fill the book with his pupils' drawings. It was doubtless encouraging to the boys, but instruction-books are not usually put on the market for this. If there was need for any illustrations, they should have been exemplary. These only show what certain pupils have done, and not at all what a skilful draughtsman would do.

William Wood & Co. send us three excellently published reprints, of British authorship, from their Medical and Surgical Monographs, namely, 'Insomnia and its Therapeutics,' by Dr. A. W. Macfarlane; 'Railway Injuries,' by H. W. Page, F. R. C. S.; and 'Unsoundness of Mind,' by J. W. Hume Williams, Barrister-at-Law. The first is purely medical; the second traverses its field medico-legally as well as clinically; and the third examines its grave subject in the light of both medicine and law. All are well written, are interesting, and are profitable for study. Although beyond our pale for review, we may quote from the last (p. 98) a curious doctrine cited by the author without approval as having weight with an English tribunal. A young gentleman of fortune was sought to be restrained through the courts from wasting his property, on the ground of congenital mental deficiency, incapacitating him from governing himself and his estate. This was opposed in his behalf by alleged friends on, among others, these two principles: one, the doctrine of Lord Hardwicke, that "there may be a weakness of mind that may render a man incapable of governing himself from violence of passion and from vice and extravagance, and yet not sufficiently under the rule of law and the Constitution of this country to direct a commission"; and the other, supposed to be derived from Blackstone, that "prodigality which causes great houses to fall and hereditary estates to pass away, thereby occasioning that frequent circulation of lands and other property which cannot be effected without extravagance somewhere, is perhaps not a little conducive towards keeping our mixed constitution in its due health and vigor." These may be good law, but such law is certainly not a good thing. In this particular instance the victim died a pauper in a low public-house within a year after the verdict that gave him liberty to dissipate his fortune, having within that time squandered every available shilling (£140,000).

Among other medical publications we may mention 'Household Nursing,' by J. O. Tunstall, M.D. (London: T. Fisher Unwin; New York: Putnams), a little book with a good motive and diffuse style; and 'Hygienic Measures in relation to Infectious Diseases,' by Dr. G. H. F. Nuttall (Putnams), an ambitious effort to describe within a small compass the conditions that limit the spread of communicable maladies. Taking the presumed opportunities of the writer into account, the result is disappointing, whether the essay is intended for physicians or laymen—which, by the by, is not clear. As English the style is not good, and although some of the directions represent the very latest sanitary views, others are imperfect in expression or in fact. A book in its fourth edition has presumptive evidence in its favor: examination of 'Accidents and Emergencies,' by Dr. C. W. Dulles (P. Blakiston & Co.), shows that it is intelligently prepared, well arranged, and copiously indexed, so that it is one of the very best of this class of family helps.

The bulky 23d annual report of the Massachusetts State Board of Health has one paper of exceptionally wide interest, though it deals with disease distribution in that State alone. During the twenty years 1871–90 the deaths from measles, scarlet fever, diphtheria and croup, smallpox, typhoid fever, cholera infantum, consumption and pneumonia are tabulated and discussed, and mapped in colored shading, with the general conclusion that density of population is a more important factor than geographical position, except in the case of consumption and pneumonia—the one diminishing as we proceed from the seacoast, and the other increasing. Mortality from consumption is the most uniform of all—though there was some gain in the latter half of the period—and no town was without a victim, whereas 185 lost no lives from smallpox, 95 none from measles, 15 none from scarlet fever. Typhoid fever and pneumonia were quite as deadly, only one town being exempt in each case. The paper-mills, with their rags (especially the domestic article), seem to increase the liability to smallpox; water supply affects the course of typhoid fever; milk supply, the employment from home of mothers, and the birth-rate are factors in the case of cholera infantum. The late Dr. Bowditch's conclusion about consumption as to geographical conditions and as to infectiousness are apparently confirmed by this investigation of Dr. Samuel W. Abbott.

The fragments of the "Gospel of St. Peter" recovered at Akhmîm five years ago by the French Archæological Mission at Cairo, but only now published, are the subject of a brochure of some seventy pages by Prof. J. Rendel Harris (James Pott & Co.). He gives a translation of the Greek text, shows the evident canonical parallels, and suggests several parallels with extra-canonical writers. He himself makes it clear that he is but a hurried pioneer, and that when the text shall have been more critically established and more carefully studied in connection with sub-apostolic literature, more important results than his own will be reached by other scholars.

The *Canadian Almanac* for 1893 (Toronto: Copp, Clark Co.) reaches its forty-sixth year. The corrected tariff fills 17 pages, the list of post-offices 32, of the clergy 31, of barristers and solicitors 16; and this is but a part of the miscellaneous information in which banks and legislatures and educational institutions, the militia, etc., also figure extensively.

The 130th volume of the *Almanach de Gotha* (Gotha: Perthes; New York: Westermann) exhibits the customary evidences of the enterprise and spirit of improvement which mark the conduct of this venerable annual. The battle for space has compelled the discontinuance of the *Chronique* begun in 1793, but now well

to be spared; and Prof. Soetbeer's death has furnished a natural occasion for dispensing also with the "Aperçus" on the precious metals which supplemented an original department of the *Almanach* dating back to 1765. The only fresh census of importance is that of Rumania, which shows a population exceeding 5,000,000. The new King and Queen of Würtemberg, the new Grand Duke of Hesse, and the young Khedive are portrayed in the four steel engravings.

Of recent publication in Germany is the sixth volume of Moltke's "Gesammelte Schriften und Denkwürdigkeiten" (Berlin: Mittler), containing the letters written to the lady who was his betrothed from 1841 to 1842 and his wife from 1843 to 1868, as well as several addressed to his brother Fritz, his sister Augusta, and other relatives between 1868 and 1890. The illustrations are a portrait of his wife taken in 1857 and a facsimile of one of his letters to her. The seventh and last volume, which is on the eve of publication, will contain his speeches and an index to the entire work. The admirers of George Ebers's novels will doubtless welcome his autobiography entitled 'Die Geschichte meines Lebens vom Kinde bis zum Mann' (Stuttgart: Deutsches Verlags-Anstalt). It is a neat volume of 522 pages and has already passed into a second edition. Another charming autobiography is the late Werner von Siemens's 'Lebenserinnerungen,' just issued by Julius Springer in Berlin. The eminent German electrician was born at Lenthe in Hanover, December 13, 1816, and died at Berlin December 6, 1892. The opening chapters describe his childhood, and give a delightfully idyllic picture of German country life some seventy years ago. This is followed by an account of his education and experience as a civil and military engineer, his galvanoplastic studies and inventions, and his achievements in the practical applications of electromagnetism to telegraphy, harbor defence, and other purposes. The book is a pleasant record of the joys and sorrows and frequent illusions of the inventor. We may add that the same publisher announces a second edition of Siemens's 'Wissenschaftliche und Technische Arbeiten' in two volumes. The first volume contains his scientific treatises and lectures, and the second his technical studies.

The January number of the *New England Historical and Genealogical Register* follows close upon the issue of the previous quarter. There is not much to remark in it except the abstracts of wills of the Mather family, and Mr. Waters's "Gleanings," in which Harvard College, its graduates, officers, and benefactors receive exceptional illustration. The will of William Burnet, Governor of New York and New Jersey, proved July 9, 1730, is given, his posterity being perpetuated in the Browne family of Salem. The will of Peter Thacher has also a considerable local (Essex County) interest.

Mr. Alvan G. Clark, the builder of the Lick refractor, sets forth, in the January *North American Review*, the possibilities of great telescopes in the future very encouragingly. He carries most astronomers with him in his opinion that the refractor is, for nearly all purposes of research, vastly superior to the reflector, whose mirror is so liable to distortion even by changes in temperature. While Galileo's first instrument opened a new universe in the sky, it was no more powerful and far less perfect than the ordinary opera-glass of to-day. Again and again since then has the world supposed that the limit in size and power had been reached—in 1825, with the Dorpat refractor of nine and one-half inches, again in 1862 with the eighteen-and-one-half-inch telescope made by Mr. Clark for Chicago; still again with the twenty-six-inch lenses for Washington; and finally, with the great thirty-six-inch glasses of the Lick Observatory. But Mr. Clark has now in his workshops a pair of remarkably fine discs of forty-two inches diameter, which he is soon to begin for the University of Chicago; and with the modern perfection in the mere glass-maker's art, and with competent opticians ready to undertake the figuring and polishing of discs of any available dimension, it seems rash indeed to set a limit to the size and capacity of the monster telescopes of the future.

A happy combination of scientific enterprise on the part of Mr. A. Lawrence Rotch, in maintaining the Blue Hill (Mass.) Meteorological Observatory, of the true spirit of thorough investigation on the part of Mr. H. H. Clayton in his study of clouds, and of opportunity for elaborate publication afforded by Prof. E. C. Pickering in the Annals of the Harvard College Observatory, has produced one of the best meteorological monographs that have yet been accomplished in this country. The volume is entitled 'Measurements of Cloud Heights and Velocities,' forming volume xxx., part 3, of the Observatory Annals. Mr. S. P. Fergusson was associated with Mr. Clayton in the work of observations. From among many results, we select the mean height of cirrus clouds for midsummer, 10,106 metres; for midwinter, 7,609; and the corresponding velocities, 25.6 and 53.4 metres per second. The increased velocity in spite of a lower altitude in winter emphasizes the changes in the activity of the circumpolar winds with the seasons.

The *New Education* is the title of a forthcoming magazine in the interest of the kindergarten, edited by Mr. and Mrs. W. N. Hailmann, and published in this city by Simpson & Co., at No. 841 Broadway. President Schurman's new *School Review* makes a prompt appearance, with an apology for existence by reason of the demise of the Syracuse *Academy* and of *School and College*. Like them, it will have the studies of the high school and academy for its province. Prof. J. M. Hart's article on "Regents' Diplomas and School Certificates in English" is in line with recent agitation of the subject of teaching English in preparatory schools. The *Review* is published by Cornell University.

The Harvard College Catalogue for the current academical year contains few noticeable changes. The careful reader of such a catalogue finds indications of its quality in the enumeration of the varied courses of study, of the departmental collections and libraries; of the evening lectures open to the public, and of the titles of papers read at the various studious societies. The more hurried glance is naturally given to numbers, and measures a college by its quantitative value. Last year there were 2,658 students in Harvard University, with 351 additional names in the summer schools. This year there are 2,966, with just 500 additional names in the summer schools. One thousand nine hundred and eighty-five students are now under the Faculty of Arts and Sciences; that is, 1,598 in the College, 181 in the Scientific School, a gain of 60 per cent. over last year, and 206 in the Graduate School. The only falling off is among the special students of the College, who are reduced from 169 to 149; and the failure of the total number of students and of the number under the Faculty of Arts and Sciences to reach even thousands results from this unlooked-for-change.

—Mr. Charles Francis Adams returns to his attack on the preparation for college in English in the *Harvard Graduates' Magazine* for January; and as the same number reprints his report on the subject to the Board of Overseers (minus the justificatory documents), his blows have their full force. He now takes up the examination books of boys of nineteen from twelve fitting-schools of acknowledged eminence, as examples of translation into English from "advanced" Latin or Greek. Of these some are printed verbatim, some in facsimile, and all are vouched for as fair average specimens of the papers handed in at Harvard last June. They would be melancholy reading if they were not so amusing, for in faulty and incoherent rendering and slovenly and nonsensical English they could hardly be surpassed. Mr. Adams asks if the entrance examinations are not "an omnipresent incubus on all correct preparatory instruction," and many will be found to agree with him in thinking that they are. He also asks if they might not be abandoned in favor of admission on probation by certificate—examining the schools, in other words, instead of their graduates. He does not intimate that this practice already prevails very extensively in the college world, side by side with entrance examinations. The University of Michigan, for instance, could at once illuminate the subject by a report similar in its method to Mr. Adams's, comparing the relative proficiency in English and in classical translation by the two sets of accepted students at an early period in the freshman year. Perhaps instructors at that institution might even now be found prepared to generalize about it from experience. Prof. Goodwin supplements Mr. Adams's remarks with some of his own on "the root of the evil," which are undeniably weighty. He shows that if candidates should be excluded on account of their defective English, they ought to suffer the same penalty for the atrocious mangling of their Latin and Greek as exhibited by Mr. Adams, and for their corresponding shortcomings in other branches. His remedy is, under present circumstances, to refuse the bachelor's degree to "any one who has not shown that he can write English either at the time of his admission or at some subsequent examination."

—This second number of the *Graduates' Magazine* is a distinct improvement on the first, though constructed on the same well-devised lines. Prof. Tucker's Phi Beta Kappa oration is replaced by Mr. Winsor's Columbus Day address on "America Prefigured"; and Mr. Roosevelt's "Harvard Men in Politics," by Mr. C. P. Ware's "Harvard Men in the Public Service," in which it is certainly noteworthy that the College has furnished but fifteen members of the Cabinet since the foundation of the Government. President Thwing of Adelbert College treats of Harvard and Yale in the West in a way to show that the elder college (except as the parent of the younger) is not responsible for the development hitherto of Western ideals, though her share is increasing. His explanation of the preference of Harvard graduates for the East, and of Western preference for Yale, has an historic basis, and perhaps Harvard's device of holding local examinations all over the continent has been most efficient in overcoming prejudices against her growing out of orthodoxy in religion and intense social democratic feeling. A new professor, H. Münsterberg, lately of Freiburg, Baden, has a very lively paper on "The New Psychology," which he teaches in the best psychological laboratory in the world, as he

avers. In the news department we observe that it is now both possible and customary for an undergraduate to finish in three years and to enter at once upon a graduate course, though his A.B. is withheld till the end of the fourth year. The Democratic college club of the late campaign set a good example of disbanding when its work was accomplished. The Republican club preferred to linger and to form part of an American league of college clubs. The record of marriages of graduates is a new feature in the magazine.

—Examination of the balance-sheet headed "Dr. Lewis & Clarks Travels in ac. currt. with the Estate of Bradford & Inskeep, Cr." shows some items which may be worth putting on public record for bibliographical or other purposes. (1.) The credit side, entirely from sales of the book. The net price, retail, was $3 a volume, $6 the set. Discounts to the trade varied, being usually 50 per cent. The first sale is entered of date February 20, 1814, which is to be assumed as the actual date of publication. Sales are entered at various dates to December 15, 1814. The total proceeds of sales credited amount to the handsome sum of $5,535.47. (2.) Debit side, being expenses of manufacture of the book, etc. The items were, in cash payments:

Mar. 29, 1813, S. Lewis for altering plates.....	$20 50
Aug. 18, Wm. Kneass, for engraving.....	75 00
Sept. 29, Mrs. Garrett, for folding.....	48 50
Jan. 28, 1814, Henry Charles, for copperplate printing	77 50
March 5, Samuel Harrison, for engraving large plate, i. e., the map.....	325 64
April 27, for folding.....	55 40
April 29, 1 cop. overcharged West & Blake....	4 80
May 29, addit. discount allowed Cramer & Co.	23 33
June 8, O. C. Greenleaf, for 7 cops. del., etc....	28 00
June 8, printing 2,000 cops., circulars, etc.....	1,145 30
June 8, 301 reams printing paper, at 5.00.....	1,505 00
June 8, 3 reams copperplate do., 16.00.....	48 00
June 8, 4 reams large India do., 25.00	100 00
June 8, boxes, advertising, etc.....	40 00
	$3,496 97

At this state of the account there is a good margin of profit. But this is almost entirely offset, thus:

To amt. of unpaid bills:		
Gaskill, for binding.....	$387 95	
Desilver, for do.....	220 82	
Charles, for copperplate printing....	77 50	
		$686 27
To bad debts and copies not paid for:		
26 copies to S. Pleasants, deceased...	$105 00	
125 copies to sundry booksellers who failed.....	592 55	
		$677 55
129 other cops. not paid for.....		520 58
		$1,884 40

Adding $1,884.40 to $3,496.97, the total on the debit side of the ledger is $5,381.37, as against a credit of $5,535.47, reducing profits to $154.10. Then one Paul Allen had a claim of $500, or such part thereof as he had not taken out in trade with Bradford & Inskeep, which much more than wiped out any profit from the book.

—Another memorandum on this sheet is of special interest, as it accounts to some extent for the number of *defective* copies of the 'Travels,' which, as is well known to bibliographers, are extant. When this balance-sheet was drawn up, there were 392 copies wanting plates (probably the plates were held for non-payment of bills); and 35 copies otherwise defective—total, 427 defective copies. Besides which there were 156 copies missing, "supposed to be destroyed in binder's or printer's hands, or never received from printer." Deducting 583 copies, defective or missing, from the ostensible edition of 2,000, it appears that but 1,417 perfect copies of 'Lewis and Clark' were ever in existence; and of these the number which in the course of years have been destroyed, or have lost some of their plates (especially the large map), is so great that a perfect copy is now a rarity.

—Opportunely upon the publication of Mr. Malcolm Bell's 'Work of Burne-Jones,' lately noticed at length in these columns, follows the opening, in the first days of the new year, of an exhibition of the master's works in London, in the New Gallery. The promoters of this exhibition have been fortunate enough to obtain from their respective owners all the artist's important productions, with the exception of the still unfinished "Perseus" series and the "Briar Rose" series, which have already been let into the panels of the room that their owner, Mr. A. Henderson, has built for their adequate housing. The catalogue of the paintings will include many of those hitherto known to the lovers of Mr. Burne-Jones's art only through the admirable platinotype reproductions of his friend and photographer, Mr. Frederick Hollyer of Pembroke Square. Among the paintings may be named "The Golden Stairs," "The Days of Creation," "The Wheel of Fortune," "The Annunciation," "The Garden of Pan," "Merlin and Nimuë," "Venus's Mirror," and "King Cophetua." Those who have had the pleasure of seeing upon the staircase and other walls of "The Grange," Mr. Burne-Jones's home in Kensington, a number of his beautiful studies, in colored and black crayon, will realize what a pleasure is in store for the London pictureseer in the collection of his earlier drawings and designs, now to be shown for the first time, separately from the paintings, in a second room of the Regent Street Gallery.

—The sixth number of the "Bibliothèque de Carabas" (London: D. Nutt) contains a metrical translation of the "Attis" of Catullus, with dissertations on the myth, on the origin of tree-worship, and on the galliambic verse: the whole by Mr. Grant Allen. The translation is full of spirit, and, while not over-close to the original, will yet give the English reader a fair idea of the wild and passionate poem. It was certainly a labor of love with Mr. Allen, for in his opinion "the 'Attis' is the greatest poem in the Latin language," and two of its verses afford "perhaps the very finest example of the adaptation of sound to sense to be found in the whole range of poetry, ancient or modern." Truly, said Sancho, "it is good to live and learn." The dissertation on the myth contains nothing new; of Mr. Allen's treatment of the metre it will probably be enough to say that he calls it iambic-anapæstic, thus returning to the old notion which admitted interchange of unequal measures into the same verse *ad libitum*. A glance into the 'Metrik' of either Gleditsch or W. Christ might have relieved all his doubts about the traditional view of the verse. The most important part of the book, however, is the excursus on the origin of tree-worship; and whether readers adopt Mr. Allen's conclusions or not, all must agree that he has propounded a most interesting theory, and stated it in a manner forcible and stimulating to thought. It is this, that all tree-worship originated in ancestor-worship or ghost-worship; that while all gods were originally ghosts, all sacred trees and tree-gods became sacred because they grew in the first place on the barrow of the deified ancestor. His theory thus forms a link between Herbert Spencer's ghost theory and Mr. Frazer's view, as recently set forth in that remarkable book, the 'Golden Bough.' But while Mr. Frazer holds that the human god was envisaged in the tree or corn, or assumed the shape of a human being representing the tree or corn-spirit, Mr. Allen contends that the corn or other crop is itself regarded as the embodiment or ghost of the divine personage. Hence "it is not Attis that makes the pine-tree; it is the pine-tree that makes the story of Attis"; and so from this particular spirit to all spirits. Mr. Allen supports his view with a wealth of argument and of folk-lore tales from all over the world. We shall leave the pretty quarrel to the specialists, some of whom will doubtless point out to Mr. Allen the danger of generalizing from a single formula.

—At the session of the Académie des Inscriptions et Belles-Lettres on December 2, M. Foucart read an interesting note on the Roman emperors who were initiated into the Eleusinian mysteries. The wide repute of these mysteries in ancient times, and the hope of a future life which they offered, rendered them at an early day attractive to the Romans, whose national religion afforded no such solace. Sulla, Antony, Cicero and his friend Atticus were initiates. Augustus became one in the year 21. The Emperor Claudius attempted to transfer the mysteries to Rome, but did not succeed. Nero did not dare to enter the sanctuary of Demeter, which was interdicted to parricides. In the second century a comparison of inscriptions and authors shows that almost all the emperors were initiates, and fixes the dates of their reception. Hadrian presented himself first in the year 125. Four years later he was admitted to the Epopteia, the highest degree of initiation, and remained at Eleusis until the time of his setting out for Asia Minor. As to his successor, there is up to the present time no evidence. Lucius Verus, the colleague of Marcus Aurelius, was received in 167; Marcus Aurelius himself and his son Commodus in 176, in fulfilment of a vow made by the Emperor during his campaign against the Quadi. In the third century the emperors of Syrian origin inclined by a natural preference towards the Eastern religions.

—At the same session of the Académie, M. d'Arbois de Jubainville offered some observations on the name of the first of the gods of Gaul mentioned by Lucan, Teutates. Lucan makes this name to consist of three long syllables. That, M. d'Arbois says, is a barbarism; the word in Gaulish is Teutatis, with a short *i*. The form Teutates was made in imitation of certain Greek nominatives, like πρφράτης. This is by no means the only Gaulish word to which Latin writers have given a declension borrowed from the Greek. For instance: the Gauls had an accusative in *as*, the *a* being long; but, inasmuch as the quantity was not indicated in writing, it was taken for a Greek accusative in *as*, with a short *a*, and Lucan thought himself free to write:

"Pugnaces pictis cohibebant Lingonăs armis."

As soon as this first step was made, the Greek declension was easily stretched to cover the singular as well as the plural, and Gaulish masculine nouns were given an accusative singular in *a* short. Thus, Juvenal wrote:

"Rufum qui toties Ciceronem Allobroga dixit."

In Gaulish the word would be not "Allobroga," but "Allobrogen," or "Allobrogin." The form "Teutates," for "Teutatis," is only another example of this grammatical syncretism.

WASHINGTON ALLSTON.

The Life and Letters of Washington Allston. By Jared B. Flagg, N.A., S. T.D. With Reproductions from Allston's Pictures. Charles Scribner's Sons. 1892.

To the painters of to-day Washington Allston seems very remote and his reputation very dim and somewhat incomprehensible. "America's

greatest painter," as he used to be thought, and as Mr. Flagg calls him, is little more than a name to most of them. His most important pictures are widely scattered and seldom seen. In the Boston Museum of the Fine Arts hangs, on one of the stairways, the wreck of the "Belshazzar," and the "Allston Room" there contains a number of sketches and unfinished canvases, the débris of his studio collected after his death, which he himself would never have shown. But were his best work more accessible, it is doubtful if it would strongly appeal to us for whom the successive waves of Romanticism, Realism, and Impressionism have swept away old landmarks and rendered old ideals and old methods unrecognizable and unintelligible. The aims of "an historical painter" are as foreign to us as is the artistic "cuisine" of those days, with its "dead coloring" and "impasto" and "glazing"; and even our race affinity seems to have changed. What there was of American art was then provincial English; the best of American art to-day is modified French. Stuart, Copley, Trumbull, Sully were practically English painters; West was President of the Royal Academy, and Leslie is one of the glories of that institution; Allston himself was an A.R.A., and his best work was done and remains in England. Mr. Flagg believes that he would have risen to the successorship of West if he had remained in that country.

It was, of course, principally the influence of blood, language, and tradition that drew American painters to study their art in England, but it is difficult to see where they could have gone to better advantage. In 1801, when, at the age of twenty-two, Allston definitively adopted art as his profession and sailed for Europe, the English school, though sadly fallen off since the days of Reynolds and Gainsborough, was still the best, if not the only, school of *painting* existing. Even Prudhon, one of the greatest of the moderns, was hardly a painter in the English sense, and the School of David, which dominated the Continent, was purely a school of form and not of painting at all. In Allston's time Lawrence was carrying on the tradition of English portrait-painting with great brilliancy, if with less soundness than his predecessors; Turner was in his glory; and Constable was producing the work which, with Bonington's, was destined to aid so greatly, whether or no it originated, the revolution in French landscape art. It was not so much by these men, however, that Allston was influenced as by West and Fuseli, whom he vastly admired and whose work he thought sublime. His ambition and his poetical and literary temperament inclined him to attack the problem of "historical painting," and his stay in Rome, where, like all good Englishmen, he went to study the old masters, strengthened his tendency in this direction. He learned a sound style of painting in England, after the manner of that day, but followed Sir Joshua's precepts rather than his example. His intense appreciation of Italian art led him to attempt the "grand style," while his large catholicity engaged him in a belated eclecticism.

Mr. Flagg praises him as "the last great exemplar of the art of the sixteenth century," and says: "He manifested in his work the spirit and power of the great Italian masters. He copied none, but mingled indications of Titian and Veronese in color, Michael Angelo in form, and Raphael in graceful delineation of the affections." Whatever one may think of this as a judgment of his achievement, it is a very good statement of his aims, and it is significantly like the programme that Haydon might have laid out for himself. In England he produced in rapid succession nearly all of his most important works—"The Angel Releasing St. Peter," "The Dead Man Revived," "Uriel in the Sun," "Elijah in the Desert," "Jacob's Dream." They were much admired and highly praised, received many prizes, and were sold at his own price. His high character, winning person, cultivated mind, and fine manners contributed no less than his work to bring him hosts of friends. He was intimate with Coleridge and Washington Irving, both of whom he had met in Rome, and was thought one of the most promising artists in England. He was on the eve of his election to the Royal Academy when he determined to return to America, bringing with him the great "Belshazzar," then practically finished. This was in 1818, when he was not yet forty years old.

At that time his career practically ended. He lived for twenty-five years longer and painted all that time, but added only one or two to the list of his notable works. The "Belshazzar," which was the tragedy of his life and with which his mind was constantly occupied, he left at his death far more unfinished than when he brought it to this country. Exactly what were the causes of this sterility of his later years it is somewhat difficult to understand. Pecuniary difficulties undoubtedly played their part; illustrating, teaching, and the thousand and one shifts of the artist of to-day whose more serious work fails to support him, were then unavailable, and Allston had to rely upon his brush alone. He was, however, liberally patronized, and again and again refused commissions that would have raised him above debt, in order to devote himself to the "Belshazzar," which he considered himself bound in honor to finish (it was to be bought by subscription and part of the money had been paid), but which was constantly retrograding rather than advancing. He said that debt "paralyzed his hand," and he could not paint merely because he had to; yet he lived well, and always had "sherry wine" on his table, and was certainly a hundred times better off than Millet, whose poverty did not prevent his doing the best there was in him. He was greatly hurt at the charge of indolence, and maintained that he was always working and could not live without his work. He seems to have painted every day, though only two or three hours a day. The rest of the time was spent in mental work—or in dreaming.

The fact seems to be that, away from the stimulating competition of other artists and the influence of other works constantly producing about him, he became morbid and self-centred, and relapsed, not into the indolence that does nothing, but into the indolence that does nothing to any purpose, and undoes as much as it does. He dreamed dreams of impossible perfection, and revelled in mind-made masterpieces which never got on to canvas. With him, if ever, the better was the enemy of the good. His friend Leslie wrote him, in 1830: "I believe I have lost at least half my life in making alterations in my pictures, most of which were perhaps mere changes and additions without being improvements"; and, referring to the "Belshazzar," "I have no doubt you have painted twenty-five pictures on the canvas of that one. What a pity they could not be separated. I dare say you might finish it as well in three days as in three years if you would have the resolution." In a word, isolation, always dangerous to an artist, had reduced Allston to the state of mind so well described in Balzac's 'Chef-d'œuvre Inconnu,' and one symptom of it was the same horror of having any one see his great work before its completion that was shown by Balzac's hero. It was only when, by a rare chance, he seized an inspiration in its newness and carried the work through before the spirit of doubt and delay had time to affect him (as in the case of the "Jeremiah," which was begun and finished in a few months in 1830 in Cambridge, while an epidemic kept him out of his painting-room in Boston), that he produced anything comparable to his large early pictures.

During these years at Cambridge, and afterwards at Cambridgeport, he lived a quiet and very retired life, but much honored by all and almost revered by his friends. The beauty and dignity of his character and person, and his intellect and culture, made a deep impression on those who knew him, and inclined them to believe him a great genius as well as a good man. Personal admiration tinges the eulogies of him written at his death, and his personal qualities have probably largely aided in forming for him a great reputation. Just what is the real value of his work as art it is hard to judge, so much of it is practically inaccessible. Of his coloring we can hardly speak with authority, but the plates given in Mr. Flagg's volume allow of a fair judgment of his qualities of draughtsmanship and composition, and of his general attitude as an artist. His drawing is fairly good in the academic sense, but is very conventional and mannered. He seems to have worked little from life, and, as might have been expected, his mannerism increased with his age. Sometimes his proportions are bad, as in the "Uriel," where the legs are much too small for the colossal head and shoulders. His outline drawings, which have been much admired, are round and unaccented, and show little sense of structure. His composition often seems mechanical rather than organic. The "Dead Man Revived" seems pieced together, and has no unity of arrangement. His costumes are in a curious, hybrid, pseudo-classic taste, and his prettily feminine angels, with their hair dressed in the fashion of Lawrence's portraits, are strangely in contrast with the heavy-muscled prophets and apostles after Michael Angelo and Raphael, which have sometimes an undeniable dignity. "Handling" he avowedly despised, and his technical methods were of the elaborate kind common when artists still believed in "the secret of Titian," and the old art of "painting in oils" had not succumbed in the struggle with modern demands.

Back of all special failings, however, is the falseness of aim. The attempt to carry on under other conditions the traditions of the old masters has always been unfruitful. The great "machines," whether of English artists or French, are at their best unsatisfactory performances. The essential fact about the great pictures of the old masters is that they were *decorations*, designed each for a special place. The decoration and the comparatively small easel picture are the two essentially vital forms of painting; and the great composition which has become too large to be an easel picture, and yet is not a decoration, is nearly always a blunder. The great Salon picture is almost as unsatisfactory as were the ambitious performances of Haydon and Barry, and with these latter Allston must, on the whole, be classed, as one of the failures in art. The effort to revive the art of a past day must, in any event, be doomed to failure, but something of the spirit of the old art may be recovered on the old conditions, and the revived interest in decorative painting in France has already produced a wonderful effect on serious and ideal art. When Ameri-

can artists find a large demand upon them for the decoration of public buildings, we may look for a really great American painter in the sense of Allston's effort. Until then we must expect our best works in portrait, in landscape, and in genre.

Mr. Flagg has discharged his task acceptably, and the publishers have well done their part in preparing this memorial of a man whose name will endure, and who will always retain a certain interest for us as one of the early painters of America.

EVANS'S KASPAR HAUSER.

The Story of Kaspar Hauser. From Authentic Records. By Elizabeth E. Evans. London: Swan Sonnenschein & Co.; New York: Macmillan. 1892.

THE author of this book is an ardent convert to the "Baden theory"—that is, the theory that the mysterious personage known as Kaspar Hauser was the abducted son of the Grand Duke of Baden. Mrs. Evans makes no attempt to conceal her partisanship or to sift or criticise the evidence upon which she relies. Her claim is that the story as she writes it "has always been and is still believed by many thousands of intelligent people in Germany," although "many other people do not accept the statements." She holds that, "properly speaking, there is no evidence upon the other side"—only an "abundance of assertion and abuse"; and she invites any person who is dissatisfied with her view to "form his own decision by examining the sources of information" to which she has resorted.

We should have preferred, for our part, that a new English book on Kaspar Hauser should treat the matter from a critical and judicial rather than a partisan point of view. Mrs. Evans's readers will be persons who either have not at hand the voluminous Hauser literature, or have other work to do than to read it. They will naturally expect the author of a new book on the subject to have done this reading for them, and done it in such a spirit that reliance can be placed on the conclusions reached. But our book is not of that kind. The author includes much that bears the evident stamp of mythology, while every person who had to do with Hauser, or has since written about him, is prejudged, with respect to his character and trustworthiness, from the moment of his first appearance in her pages. The book gives some evidence, too, of hasty execution. The paragraphing is bad, and misprints of German words are numerous.

In spite of these defects, however, Mrs. Evans has produced a book which deserves to be read, and that the more since the theory which she defends has always been too lightly treated in Germany. However suspicious certain circumstances might be, it appeared impossible to establish the facts with certainty; and since the theory tainted the title of the reigning house of Baden and was particularly offensive in that quarter, it soon fell into disfavor. A steadfast few continued to believe it, but the great majority agreed to regard Kaspar Hauser as an insoluble mystery, and to insist that at any rate he could not have been the Crown Prince of Baden. This is the view which finds expression in the ordinary books of reference, both German and English. Meanwhile, the lapse of time has been making it more certain that Kaspar Hauser *was* the Crown Prince of Baden, and the evidence supporting this view has been well put together by Mrs. Evans. She dedicates her work "To the City of Nürnberg, in memory of the kindness bestowed upon the foundling Kaspar Hauser."

The pertinent facts of the story can be quickly recapitulated. On May 23, 1828, a boy, seemingly of about sixteen, appeared suddenly in Nürnberg. He was dressed in the coarse clothes of a much older man. His eyes could not bear the light, his gait was that of a child learning to walk, and he often pointed to his feet as if in pain. His body was encrusted with dirt, and he would take no food but black bread. He could give no account of himself—indeed, he could utter only a few half-intelligible words; but, when given pen and paper, he wrote legibly the name Kaspar Hauser. Public interest being aroused, he was made the ward of the city and turned over to a certain Daumer, who commenced teaching him. In a few months the boy was able to write, and prepared a memoir to the effect that as long as he could remember he had lived in a small dark room, with floor of earth and bed of straw. Bread and water had been brought him during his sleep. Shortly before his release a man had come and taught him to write the name Kaspar Hauser, and to say the few words he had known when he appeared in Nürnberg. October 17, 1829, he was found lying in Daumer's cellar, bleeding from a wound in the head, which he said had been inflicted by a "black man." From this wound he soon recovered, and, after one or two changes of residence, was adopted by an English nobleman, Lord Stanhope, who placed him under guardians at Ansbach. Here, while walking in the public park, December 14, 1833, he received from an unknown assassin (according to his own statement) a dagger-thrust, from which he died three days later.

The strange death of the foundling quickened public interest in him, and he became a European mystery. There were at the time people who regarded him as a vulgar impostor who had committed suicide after imposing on people as long as he could. But this was to ignore a multitude of facts, besides assuming that the people of Nürnberg were abnormally gullible. Since it was evident that no natural conditions of life could have produced, under any conceivable circumstances, those effects upon mind and body which were actually manifested in the foundling, the only recourse left was to the theory of abduction. But this, again, had its difficulties. It was clearly no ordinary case of kidnapping or concealing inconvenient offspring, since the perpetrators of such a crime would have had no imaginable motive for practising such revolting cruelty upon the child himself. It would have suited their purpose just as well or better, one would suppose, to put an end to the child's life at once, or else to let him grow up naturally in ignorance of his origin.

The theory that Kaspar Hauser was the abducted Crown Prince of Baden rests historically on two separate foundations: first, a memoir (written in 1833, but not published until 1852) by Feuerbach, President of the Criminal Court in Nürnberg and a lawyer of the highest standing; secondly, a pamphlet by one Seiler, written about 1840. Feuerbach's suspicion is couched in such terms that it has been matter of discussion how far he really believed in it. Seiler gave a full account of the abduction, having got his information in some way while in the service of Major Hennenhofer, who was the agent principally concerned in the crime. According to this story, Kaspar Hauser was the son of Margrave Karl, and the direct heir to the throne on the old Zähringen line. When about two weeks old, namely, on October 12, 1812, he was taken from the palace at Karlsruhe by the Countess Hochberg, the morganatic wife of the reigning Grand Duke, who wished to secure the succession to her own children. It was alleged that the Countess took the young prince from his cradle while his drugged nurses were asleep, and left in his place the illegitimate offspring of a peasant-girl, the substituted child having been first poisoned to insure its speedy death; that then the young prince was placed by Hennenhofer, at first in the charge of a nurse in a neighboring castle, and then, later, removed to Falkenhaus, near Ansbach in Bavaria, and there kept in close confinement until he emerged into the world as Kaspar Hauser in 1828.

In itself considered, this story rested on no very solid foundation. The author was an irresponsible adventurer, and the story read in parts like mere romantic fiction. But for this very reason it was all the more suspicious that the Baden Government showed such eagerness to suppress the story, to prevent the investigation of it, and, later, to get hold of Hennenhofer's memoirs and correspondence on his death, in 1850. Very singular, too, in view of the details of the abduction story, which, it must be admitted, fitted marvellously with the known facts about Kaspar Hauser, was the publication, in 1875, of the official court records relating to the baptism, death, and post-mortem examination of the young prince alleged to have been abducted in 1812. This publication was treated at the time as a final and definitive refutation of the Baden theory, and is so treated still in books of reference such as Brockhaus's 'Conversations-Lexikon' and the 'Encyclopædia Britannica.' How worthless this refutation was appears when we consider the fact that the Seiler story had provided from the first for the death in the palace of *an* infant supposed to be the Crown Prince. How any record of baptism, death, and autopsy could prove the identity of this babe with the one born to the Duchess Stephanie a few days before is not apparent.

The Hauser literature which Mrs. Evans reviews is extensive, but it consists until very lately of acrimonious controversy, with very little in the way of new facts. But in March, 1892, a pamphlet of a remarkable character appeared in Zurich. It was written by Baron Alexander von Artin, and bore the title 'Kaspar Hauser: The Solution of the Riddle.' If the documents are genuine—their authenticity has not been unchallenged—the pamphlet is properly named. It contains, in the first place, an autograph note in facsimile, written June 5, 1828, by the Grand Duke Ludwig (the uncle of the Karl whose son had been abducted, the putative father of the Countess Hochberg's children, and the man who had profited by the abduction). The note is addressed "To my Government," and begins: "In Nürnberg last month everything gone wrong. Take measures that the peace of my Grand Duchy be not disturbed by this event." Von Artin's pamphlet also contains a death-bed statement by Von Berstett, who was Minister of Baden in 1828 and received the note just referred to. Von Berstett's statement is addressed to a Prince who is not named, and contains these words:

"It was not until after Ludwig's accession [in 1818] that I gradually discovered what I would rather never have known. The letter which I give into your charge was received by me just after midnight, June 5, 1828. I immediately sent in my resignation, but it was not accepted. The official reports concerning the Prince in Nürnberg were of such a nature as made it evident that he could never be put in possession of his rights. He was described as a person crippled and ruined in mind and body. Therefore, considering the welfare of a State

as of more importance than the interests of a dynasty, I held my peace. . . . Maj. Hennenhofer, whom I may well call my evil genius, knows more about this matter than I do."

Unless we have to do here with a forgery of documents (of which the present writer has no evidence), the mystery of Kaspar Hauser may indeed be regarded as cleared up.

The Foundations of Rhetoric. By A. S. Hill. Harper & Bros. 1892.

Prof. Hill's 'Principles of Rhetoric' has been for so many years the accepted text-book in sophomore (or freshman) English at Harvard that it holds a unique place in the memories of thousands of students. Other books on the same subject may have existed, but to the largest body of young college graduates in the country "rhetoric" means only this one familiar volume. The 'Principles' well deserved a success that left it for some years without even a serious rival in the field. Dogmatic in the extreme, it summed up the precepts of Quintilian and the long line of his English successors and compeers in a series of dicta that were almost never lacking in complete clearness and definiteness. The reader might rebel against its absolute condemnation of words or constructions sanctioned by what seemed sufficient colloquial or written usage, but the careful student could never refuse his respect—even if not his allegiance—to principles inspired by such high ideals and developed with such scrupulous care and consistency. Prof. Hill's second volume well deserves a no less careful and respectful attention: first, because it must embody the experience during the last fifteen years of one under whose charge have been carried on various important experiments, on the largest scale yet possible in America, in teaching young men how to write; second, because as a text-book for younger students it shows distinctly what is or may be required of a boy just entering college.

The subject-matter and tone of the book remind one frequently of Cobbett's famous letters to his son on grammar and rhetoric. The tone is that of the master addressing the child, courteous but firm; the subject-matter, the simple and sensible directions that a father who superintended his son's writing might give him, at fifteen, either in logical order or as occasion offered. Swift's definition of style is the best—Proper words in proper places. The principles which lead one (1) to choose the proper word, and (2) to put it in its proper place—these, with brevity, are the "foundations of rhetoric." The introduction deals with the terms and main facts of English grammar. Then follow in succession chapters on improper words (132 pages); on the principles of choice among proper words (26 pages); on improper sentences (74 pages); on the principles of choice among various kinds of sentences (17 pages); and on paragraphs (8 pages). An excellent index completes the volume. Half the book, on a rough estimate, is composed of carefully chosen examples; indeed, the method is professedly inductive. The style is clear and scrupulously correct, and encourages logical thought very much as a good text-book in geometry does, and nowhere offers an impediment to it.

'The Foundations of Rhetoric' bears a close resemblance to the first part of the 'Principles.' It is, however, even a better book in almost every way. The very satisfactory method of leading the pupil on from the study of separate words to that of words combined into a sentence, and then to that of sentences combined into a paragraph—recently developed in this country, on a hint from Minto, by the late Prof. McElroy, and especially by Prof. Hill's colleague, Mr. Wendell—has evidently modified the author's method to a considerable extent. The dogma, too, is not so unbending as in the former book. Certain alleged solecisms are discussed as if there were two sides to the question, even though the victory is always assured to the side of the ideal conservative usage. In spite, however, of the rearrangement of matter and the slight change in tone, the attitude of the author remains the same. "Words are, or are not, words for the purposes of English composition, according as they are, or are not, in present, national, and reputable use" (p. 27). A boy must not, therefore, use so common a verb as "to focus" (p. 28), because it is not in national use. He must not write, "The river tumbles over the cliffs in a *series* (for *succession*) of splendid cataracts" (p. 52), nor, "I cannot believe his *statement* (for *assertion*) that he is ignorant of the subject" (*ibid.*); nor, "The magazine was a *success* from the start" (*ibid.*), instead of "The magazine was *successful* from the start." He must "avoid nouns that are not in good use." Among such are "cablegram" (p. 57) and "editorial" (p. 59); the latter word "is so common now in America and so convenient—'leader' being rarely used here—that there is danger of its establishing itself in the language." Such fine distinctions, such prohibitions of words in current (and, in some cases, reputable) colloquial and written use must, one would think, not only repel the young student's confidence, but perhaps make him mistrust the authority of principles administered so rigidly.

This negative part of the book, the extent of which is indicated by the relative proportions of the chapters as stated above, the teacher will find at once satisfactory and disheartening—satisfactory, because it is the best statement yet made of the numberless pitfalls into which a boy may or must tumble as soon as he takes pen in hand; disheartening, because the teacher who understands boys must know that this is not the way to teach them to write. No other art besides rhetoric, whether simple or complex in nature, begins by telling the pupil what *not* to do. That is not the way a boy learns to shoot, or fish, or swim, or play the violin; if he learns to write at all, that which has helped him most will be not the system of rhetoric that spends its strength on decalogues of thou-shalt-nots, but that which, from the very first to the very last, has kept him at the act and practice of writing. Such guidance a good teacher may supply, but it is only the good teacher who will know how to supply it unaided by a text-book that shall direct the pupil's choice of subjects, suggest or provide for him various materials, and show him how the principles of rhetoric apply with equal force to an abstract in history, a translation from an ancient or a modern language, or the contents of his note-book in physics or chemistry.

The functions of a general guide in matters of composition for younger students, however, Prof. Hill did not intend his book to fill. This is at once the strength and the weakness of 'The Foundations of Rhetoric.' By confining himself to conventional ground, the author has given his work a definiteness of purpose and treatment almost perfect in its way, and which could not easily have been secured in a work largely experimental in character. But has he not lost an opportunity? Boys must be led, not driven. They more frequently use too few words than too many. What they need is a book which does not smack of the purist, and which by theory and by example shall train them in handling all kinds of topics that come naturally to a boy's hand, and in expressing themselves adequately on each.

Lyrics and Ballads of Heine and Other German Poets. Translated by Frances Hellman. G. P. Putnam's Sons. 1892.

This handsome little volume of 250 pages contains many translations of extraordinary merit. The larger part of the book is filled with selections from Heine. To translate Heine's songs from the German into any other language is almost as difficult a task as it would be to translate melody into words. The apparently artless simplicity, the natural flow, the exquisite tenderness of language in Heine's lyrics, his quaint and delicate humor—delicate even in its audacity—defy the art of the translator to such a degree that absolute perfection seems impossible. But most of Mrs. Frances Hellman's renderings approach the original more nearly than any others that we have seen. Among the translations of Heine's poems by Bowring, Leland, Sir Theodore Martin, Emma Lazarus, Kate Freiligrath, Stretelli, Wallis, Thomson, Radford, Macmillan, Garnett, MacDonald, Rogers, and others, we have found but few that equal and none that surpass them. In almost every instance Mrs. Hellman has strictly adhered to the original metre. Her translations are astonishingly literal without being stiff or forced, and the cadence, the swing, the song quality of the originals are preserved in them with surprising fidelity. That they are not all of equal merit is a matter of course, but a good many of them read as if they were poems originally written in English. Such old acquaintances as "Leise zieht durch mein Gemüth," the "Loreley," "Die Rose, die Lilie," "Die Bergstimme," "Es war ein alter König," "Die Botschaft," "Frühlingsfeier," and several other equally popular lyrics, will be greeted with especial pleasure in their exquisite English garb. On the whole, it may be said without exaggeration that the student of German literature will find in this little volume more of the genuine Heine than anywhere else except in the German original.

As examples of fidelity and idiomatic excellence we will transcribe the translation of the "Frühlingsfeier":

> "With such sad bliss doth Spring delude!
> The blooming maids, the savage flocks,
> Onward they storm, with flying locks,
> And cries of pain, and bosoms nude:—
> 'Adonis! Adonis!'
>
> "The night descends. The torchlight gleams,
> As to and fro they scour the wood,
> Which echoes to their frenzied mood,
> Their cries and laughter, sobs and screams:—
> 'Adonis! Adonis!'
>
> "The lovely youth, surpassing fair,
> Stretched on the ground lies pale and dead,
> His blood dyes all the flowers red,
> And sounds of wailing fill the air:—
> 'Adonis! Adonis!'"

And this of "Die Rose, die Lilie":

> "The rose and the lily, the sun and the dove,
> I loved them all once with a rapturous love.
> I love them no more, I love her alone,
> The rarest, the fairest, the dearest, the one;
> She herself is the fountain whence all rapture flows,
> She's the lily, the dove, the sun, and the rose."

The rest of the book, about 100 pages, is devoted to selections from Goethe, Geibel, Uhland, Freiligrath, Rückert, Mörike, and Chamisso. In translating Goethe's "Wanderer's Nachtlied," Mrs. Hellman undertook an impossible task, as several other translators have experienced before her. But her renderings of "Vanitas Vanitatum" and "Schweizerlied" are masterpieces of the first order. The same may be said of many of her translations from Geibel's lyrics, among which "Wie es geht" is

especially remarkable for its tender pathos, and "Der May ist gekommen" for an exceedingly faithful portrayal of the tone of exultant jubilation in the original. Of Uhland's ballads, three are presented, "Die Sänger's Fluch," "König Karl's Meerfahrt," and "Klein Roland," and all three translations may justly be called models of their kind. Many readers will perhaps regard the rendering of Freiligrath's

"O lieb so lang du lieben kannst"

as the gem of the collection.

The little volume is got up in the neatest style of the Knickerbocker Press.

Physics. By George F. Barker. Henry Holt & Co.

Dr. Barker's work deserves the attention of teachers as well as of students. It is not a complete or exhaustive treatise, but simply a text-book sufficient for ordinary use even in universities, and forming an excellent introduction to the most important branches of the general subject. The style is concise but at the same time clear, and the work covers a great deal of ground, serving in some parts as a good book of reference. The arrangement of subjects treated and the names given them make the work specially noteworthy as an exponent of modern views in physics. While these views are not in themselves new, they here form what we believe is essentially a new classification of the subject for purposes of study and instruction, based (to use the author's own words) on the most recent views of energy considered as being ultimately a phenomenon of the æther. At present, says the author, all physical phenomena seem capable of satisfactory discussion under the heads of mass physics, molecular physics, and æther physics.

The introductory part of the work treats of physical relations in general and the laws of motion. Sound is treated as mass vibration, heat as molecular vibration, while under æther physics Lodge's classification is followed with great advantage, and we have chapters on æther vibration, or radiation, æther stress, or electrostatics, æther vortices, or magnetism, and æther flow, or electrokinetics. The gain in this broader treatment of radiation alone is very great. Older physicists must think sadly of the long series of years of groping for truth from the days when theories of the existence of three and even four distinct æthers were proposed to explain the phenomena of radiant heat, light, and chemical action, to the clear views which we now have of radiant energy. The subject of energy of æther stress is most fully treated, and the sections of electrostatics, magnetism, and electrokinetics well deserve commendation. In fact, these form special treatises sufficiently full for all but professional electrical engineers. Two sections on the electromagnetic character of radiation conclude the work.

The amount of detail embraced in Dr. Barker's work is greater than in many much more voluminous treatises. In fact, very little of modern physics escapes at least some attention. Thus, we have a magnetic map of the United States compiled from the maps of the United States Coast and Geodetic Survey by Mr. Schott, and embracing isogonic, isoclinic, and isodynamic lines with sufficient distinctness. Great attention has been paid to the necessary definitions, which are excellent; small matters like the comparatively new notation for fractions are not neglected. More space should, we think, have been given to the air thermometer as the basis of modern thermometry; and a page or two to the object and work of the International Committee of Weights and Measures would have been welcomed. But the work deserves hearty praise for its fulness, its thoroughly modern spirit, its clearness, and a certain freshness in the treatment which adds to its real value as well as to its attractiveness.

Sultan to Sultan. Adventures among the Masai and Other Tribes of East Africa. By M. French-Sheldon ("Bébé Bwana"). Boston: *Arena* Publishing Co. 1892. Illustrated. 8vo, pp. 435.

The justification for this account of an uneventful trip to Mt. Kilimanjaro is that it is a record of a woman's courage, tact, and kindliness of feeling under trying conditions. Mrs. French-Sheldon led a caravan of blacks a thousand miles through East Africa, and lost but one man, who perished through his own disobedience to orders. She had no hostile encounters, but was treated with savage courtesy even by unfriendly natives, and was solicitously cared for at all times by her own followers. We have never read of an African expedition whose leader showed a more sincere interest in the men composing it, or who did so much for their welfare when on the march. Nor do we remember, with the possible exception of Dr. Livingstone's last journey, one in which the ignorant and debased coast porters were so genuinely attached to their "Bébé Bwana," woman master. She does not appear to have had any sufficient reason for her adventurous undertaking, and she adds little or nothing to our knowledge of the regions through which she passed or their inhabitants; but she does give many lively pictures of the life of the caravan and of the native tribes dwelling on the slopes of the great mountain. Many little details, such as would have escaped the notice of a man, or been deemed by him too trivial to record, are given, and enable the reader to form a very vivid idea of these interesting savages. In this she is aided by a profusion of excellent illustrations of the people, their ornaments, armor, and house utensils. Some of those copied from photographs are too indistinct to be of much value. The affliction to which the author refers in her introduction renders inappropriate any criticism of her book as regards its literary character. It is in many respects the unique record of an unusual chapter in the annals of African travel.

Sketches from Eastern History. By Theodore Nöldeke. Translated by Mr. J. S. Black. London: Adam & Charles Black; New York: Macmillan.

In this volume Prof. Nöldeke appears as a writer of popular essays. To the learned world he is known as a Semitic scholar of unsurpassed excellence; here he shows how accurate learning and good judgment can illumine matters of general interest. Of the nine papers, those on the Semitic Race, Islam, and King Theodore of Abyssinia appeared originally in German periodicals, and that on the Koran forms part of the article "Mohammedanism" in the ninth edition of the 'Encyclopædia Britannica,' but all four have been considerably revised; those on Islam, the Caliph Mansur, a servile war in the East, Yakub the coppersmith and his dynasty, some Syrian saints, and Barhebræus were written in 1891. The style is clear and calm, the tone is judicial, and the variety of topics is great enough to attract various classes of readers.

It is pleasant to have a book in which we are told, with the authority of a master, what we may regard as settled or probable on points interesting to us all, but mostly treated in ponderous or inaccessible works. In questions of Arabian and Syrian history and literature there is no better authority than Nöldeke. The field of the Koran he has made peculiarly his own. In the present essay he reviews his former work and somewhat modifies its results; he has now less confidence in critical analysis and dating of the Suras, and is in general disposed to be more conservative. Only he insists that the literary excellence of the Koran has been greatly overrated; while he recognizes its merit, he points out its grave offences against clearness and coherency. The paper on Islam is mainly a history of the outward fortunes of the faith, with the conclusion that, in spite of its political collapse, it shows great vitality in the conquests it is now making in the Indian Archipelago, Central Asia, and Central Africa, and is probably destined to survive a long time.

In the essay on the Semitic Race, Nöldeke reviews the conclusions of Chwolson, who criticises Renan. Chwolson is a Hebrew, with exaggerated notions of the endowments of his race; Renan had an undisguised contempt for what he regarded as Semitic narrowness. Nöldeke endeavors to weigh the arguments impartially: he credits the Semites with great religious intensity and practical power, but maintains that their religion was tinged with fanaticism, and that they are, in fact, inferior to the Indo-Europeans in richness of religious genius. In this he is unquestionably right, as he is right in denying to the Semites (apart from the Babylonians and Assyrians) science, philosophy, and art. Modern Jews who excel in these lines of thought are products of European civilization. Christianity is only in part (really only in its beginning) a Semitic religion. Nöldeke, however, goes too far when he says (p. 6) that the religion of Ezra, the Pharisees, and the Rabbis cannot be looked on as higher than Islam. Here he forgets the mass of culture that lay behind the religious system of the later Judaism, and separated it, notwithstanding its ritualistic trivialities, by a wide interval from the crudities of Mohammedanism. In fact, the ethical side of any religion is the outcome of a given social *milieu*, and is to be judged on its own merits, partly by comparing it with the highest standard, partly by making allowance for its deficiencies of training.

Nöldeke's historical pieces are not less interesting than the others. The sketch of King Theodore will for most persons throw a new light on the character and aims of the unfortunate monarch, as the papers on Mansur and Yakub will reveal some of the picturesque features of mediæval Moslem life.

Down in Dixie: Life in a Cavalry Regiment in the War Days, from the Wilderness to Appomattox. By Stanton P. Allen of the First Massachusetts Cavalry. Illustrated. Boston: D. Lothrop Co. 8vo, pp. xvi., 497.

Mr. Allen of the Troy *Times* has given his reminiscences of service as a private cavalry soldier in the civil war. His book smacks of the true spirit of Sheridan's troopers and is an unquestionably truthful picture of the soldier's life. It does not profess to be history, or to have been revised with reference to accuracy of dates. It gives the author's memories of a soldier's life, beginning with his running away

to enlist while he was yet a mere boy, fourteen years old. His effort has been to make his experience intelligible to others in its different phases, and he certainly has succeeded. The sorrows and labors of a raw recruit undergoing the breaking-in process, the hardships of a winter camp, the beginning of Grant's Wilderness campaign, Sheridan's raid against Richmond, that to Trevelyan station, crossing the James, sickness in camp hospital, orderly service at Meade's headquarters, the surrender at Appomattox, and the final review at Washington—these form the string for an amusing collection of racy camp anecdotes, either true or deserving to be true, so faithfully do they picture the elements of the soldier's life.

Such pen pictures resemble the drawings of an artist accompanying the army. They are full of local color, and help greatly in understanding the larger story told by the historian. We need to remember, however, that the draughtsman in each case allows himself much latitude in the posing of his figures and the general setting of his picture. Imagination is confessedly used, and no stricter accuracy than faithfulness to the general spirit is to be demanded. Used in this way, such books are instructive as well as amusing, and Mr. Allen's is one of the best. It is not a diary kept at the time, by which we might check or supplement the more formal account of the campaigns of 1864–5. It is a series of freely drawn sketches, based on memory and true in substance, but rather illustrative in character than strictly descriptive in fact.

BOOKS OF THE WEEK.

Recent Importations in Limited Quantities:

PABLO DE SEGOVIA: *The Adventures of a Spanish Sharper. By* FRANCISCO DE QUEVEDO. *Illustrated with over 100 Drawings by* DANIEL VIERGE. *With an Introduction on "Vierge and his Art," by* JOSEPH PENNELL: *and "Critical Essay on Quevedo and his Writings," by* H. E. WATTS. *Super Royal Quarto, bound in parchment, old style (limited edition only), $20.*

This is the chief work of QUEVEDO, who has been likened, in his wit, to Dean Swift, and in his grace to Horace.

"The Paris edition made a prodigious sensation, and, deserved to do, covered the illustrator with glory. The English edition will revive in this country the old popularity of 'Pablo de Segovia,' and spread amongst us the reputation of M. Vierge. To those not acquainted with the best book illustrations of France, the designs will be a revelation—fresh, intense, and abounding in vigor, color, spirit, and fun, excelling in minutest details and very delicate draughtsmanship, while so apt to the subject are these designs that no Briton will in future think of Quevedo and his Pablo without M. Vierge."—*London Athenæum.*

SHORT STALKS; or, Hunting Camps, North, South, East, and West. By EDWARD NORTH BUXTON. With numerous fine illustrations by Whymper, Lodge, Wolf, etc. 8vo, $6.00.

"It is some time since we have come across so pleasant and attractive a record of sport, travel, and adventure as this. It is the work of a keen sportsman and traveller, who has employed his rare and brief holidays, as Englishmen love to employ them, in rapid travel and the pursuit of wild game in the remoter districts of two hemispheres."—*London Times.*

THE LIFE OF WILLIAM COWPER. By THOMAS WRIGHT (Principal of Cowper School, Olney, author of 'The Town of Cowper,' etc. With [illegible] illustrations. Demy octavo, cloth, $5.

This work aims [illegible] most complete Life of Cowper ever publishe[illegible] contain numerous illustrations and reproduc[illegible] fac-similes of papers and places and scenes o[illegible] life, obtained from all the well-known autho[illegible]es and students of the subject.

"Mr. Wright has not only concentrated in his biography all that is best in the work of his predecessors, but has added a great deal that is new and strange. . . . This loving and minute record."—*London Chronicle.*

HOURS IN A LIBRARY. By LESLIE STEPHEN. First, second, and third series, reissue in cheaper form, 3 volumes, $6.00.

PRACTICAL ZOOLOGY. By A. MILNES MARSHALL, M.D., M.A., F.R.S., Professor of Zoology, Owens College, England, assisted by C. HERBERT HURST, Lecturer in Zoölogy, Owens College, England. 8vo, cloth, $3.50.

"The volume has special value for students of anatomy."—*Prof. Henry F. Osborne, Princeton College.*

HAYDN'S DICTIONARY OF DATES RELATING TO ALL AGES AND NATIONS, FOR UNIVERSAL REFERENCE. Twentieth Edition. Containing the History of the World to the Autumn of 1892. By BENJAMIN VINCENT. With an American Supplement, containing about 200 additional pages, including American Topics and a Copious Bibliographical Index. By G. P. PUTNAM, A.M. In one thick octavo volume, $6.00. Half Russia, $9.00.

"Is the most universal book of reference in a moderate compass in the English language."—*London Times.*

THE SUPERNATURAL: ITS ORIGIN, NATURE, AND EVOLUTION. By JOHN H. KING. 2 vols., $6.00.

"The work covers a wide range of fact and theory, and will prove of great interest and value in the investigation of a subject which is attracting at this time a great deal of attention."—*Detroit Free Press.*

SCOTT'S WAVERLEY NOVELS.

Edited by ANDREW LANG.

NEW LIMITED EDITION OF 1,000 COPIES.

Sir Walter Scott has stamped his genius on an entire country and language, and by many is considered to stand first of all the world's great novelists.

The Waverley Novels are read by millions, and in every civilized country in the world, but hitherto they have never been properly illustrated.

This edition will be enriched, at a cost of over $40,000, with proof impressions on imperial Japanese paper, of 300 original etchings from paintings by celebrated artists, among whom are many members of the Royal Society for the promotion of Fine Arts in Scotland, and such masters as **Sir J. E. Millais, R.A., R. W. Macbeth, R.A., Lockhart, Gordon Browne, Pettie, Lalauze, Lefort, Teyssonnieres,** etc., etc.

It will be edited by **Andrew Lang,** the greatest English critic and Bibliographer, who will furnish critical introductions, glossaries, and notes to each novel, supplementing the author's own notes and prefaces.

Mr. Lang was granted access to Scott's private library at Abbottsford through the courtesy of the Hon. Mrs. Maxwell Scott, to whom this edition is dedicated.

This is the most magnificent edition ever made of the works of any novelist.

The type will be large and new, set in a fine open page; the margins ample, and the paper a beautiful natural tint. The volume will be a small 8vo, easy to handle, and the binding vellum cloth, gilt tops, slightly trimmed. Complete in **48 volumes,** issued at the rate of about 2 volumes per month, at **$2.50 per volume.**

Also, 500 copies printed on Holland hand-made paper, with 50 additional illustrations, making a total of 350, and bound in half leather, gilt tops, at **$5.00 per volume.**

[EXTRACT FROM THE LONDON TIMES.]

"*It would be difficult to find in these days a more competent and sympathetic editor of Scott than his countryman, the brilliant and versatile man of letters who has undertaken the task.*

"*The illustrations by various competent hands are beautiful in themselves and beautifully executed, and, altogether, this edition of the Waverley Novels bids fair to become the classical edition of the great Scottish classic.*"

Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

THE BOSTON SCHOOL OF ORATORY. —The Leading School of Expression in America. First to teach the system of Delsarte. Send for Catalogue. MOSES TRUE BROWN, M.A., Boston, Mass.

SCOTT'S

Waverley Novels

Edited by ANDREW LANG.

New Limited Edition of 1,000 Copies.

Scott has stamped his genius on an entire country and language, and the Waverley Novels are read by millions, and in every civilized country in the world. These great novels have never before been properly illustrated.

This edition is enriched, at a cost of over forty thousand dollars, with proof impressions on Imperial Japanese paper of three hundred original etchings from paintings by celebrated artists of France and England, among whom are **Sir J. E. Millais, R.A., R. W. Macbeth, Gordon Browne, Pettie, Lefort, Lalauze, Teyssonnieres,** *etc.*

Andrew Lang, *the greatest English critic as editor, will furnish critical introductions, glossaries, and notes to each novel, supplementing Scott's own notes.*

This is the most magnificent edition ever made of the works of any novelist.

The type will be large and new, set in a fine, open page, the margins ample, and the paper a beautiful natural tint, the volume a small 8vo, easy to handle, and the binding vellum cloth, gilt tops, slightly trimmed. Complete in 48 vols., issued 2 vols. per month, at **$2.50 per volume.** *Also 500 copies printed on Holland hand-made paper, with fifty additional illustrations, and bound in half leather, at $5.00 per volume.*

Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, H. Williams, 195 West Tenth Street, New York; or A. H. Roffe & Co., Boston, Mass.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVI. comprising the first half-year of 1893.]

WATER CLOSETS

The Best Edition of

SCOTT'S Waverley Novels.

New Library Edition. Published in connection with Adam and Charles Black, the authorized publishers of the works of Sir Walter Scott.

Each volume contains a complete novel, printed on fine paper, in bold, legible type. To the last volume is appended a synopsis of the principal incidents and persons introduced in the text.

The entire work is complete in twenty-five volumes, and is illustrated with steel engravings by the most eminent artists of their time, including Vandyke, Zucchero, Le Joeque, Wilkie, Turner, Roberts, Landseer, Stanfield, Frith, Creswick, Hook, Horseley, Stone, Ward, Ellmore, Pickersgill, Phillips, Faed, etc. No artists of a later period have been able to give to the public such excellent representations of the scenes and characters depicted by the author of the Waverley Novels.

The *New Library Edition* contains *fifty steel engravings*, and is sold in cloth binding at $1.75 per volume ($43.75 per set). Half morocco, $56.25; half calf, marbled edges, $80.00; three-quarters calf, $100.

The *New Library* SPECIAL *Edition* contains *one hundred and eighty-five steel engravings*, and is sold in sets at $62.50, cloth binding; three-quarters calf, extra, $125; full tree calf, gilt edges (London), $150.

"It is a stately edition—the best now in print, and will undoubtedly supply in the best way the increasing demand for the Waverley Novels which has been noted of late."—*New York Times.*

"And this superb edition, printed as if for a prince, and bound for all time, is worthy of the works of the master."—*Philadelphia Press.*

"*The best* popular edition of Scott that we are acquainted with."—*Chicago Dial.*

"It is the edition of the day, and combines cheapness with elegance."—*Boston Transcript.*

"The edition is the best ever offered the American public."—*Cincinnati Commercial Gazette.*

This edition is for sale by all booksellers.

The Nation.

NEW YORK, THURSDAY, JANUARY 19, 1893.

The Week.

THE death of ex-President Hayes, though sudden, has no shock for the public mind, and no political significance whatever. It must truthfully be said, also, that the event will excite very little interest. His highest honors were thrust upon him, not achieved by personal ambition, and his Administration did not win him popularity. He retired from office never again to take an active part in public affairs, and passed the life of a private gentleman who could lend some prestige to philanthropic boards and conferences for the elevation of the freedmen and the protection of the Indians. His means raised him above the necessity of making bitter reflections on the ingratitude of republics, and his good sense and just estimate of his own abilities kept him simple and unostentatious to the end of his days. In the long line of Presidents he will be remembered as the one the fairness of whose election was so seriously disputed as to bring the country to the verge of violent dissension; but also as the one who was fated to bring the civil war to a close by withdrawing the support of Federal troops from the carpet-bag governments of the South. If he disappointed the hopes of civil-service reformers, and had the insensibility to reward the members of the Southern returning-boards who counted him into office, he at least put a needful pause to the awful descent into jobbery and venality which marked the Administration of Grant. His personal habits and choice of associates, and the estimable character of his wife, went far to redeem the tone of Washington society during his incumbency. His want of force and of a distinct reformatory purpose prevented him either from laying a foundation on which his successor might build, or from compelling his successor to persevere in the same path. In fact, it was too evident that things under President Garfield were lapsing into their old course when the hand of Guiteau interposed to change the destiny of the party and the country.

Mr. Sherman has reported from the Senate Finance Committee a bill to repeal the Silver Purchase Act, and to provide for the issue of circulating notes by national banks up to the par value of the bonds deposited by them. Senators Sherman, Allison, Hiscock, McPherson, and Carlisle voted in the Committee in favor of the repealing bill, and Senators Harris and Voorhees against it. Senators Morrill, Aldrich, Vance, and Jones were absent. These, if present, would have been equally divided. The composition of the Committee is fairly indicative of the progress of sound doctrine in the Senate. One year ago, instead of 7 to 4 in favor of the bill, the vote most likely would have been 6 to 5 against it. It is safe to count both Allison and Carlisle as henceforth active supporters of the repealing bill. Whether a vote on the measure can be reached at this session is problematical, but it is a great gain to have got it before the Senate in the regular way. It will be a gain even if the silver Senators try to kill it by delay. One year ago they wanted nothing so much as a straight vote on free coinage, and when they secured it they actually had a majority for it. Now it appears that they want to avoid a vote, and when they speak of the repealing bill they say that they will "talk it to death" whenever it is pushed. This means that they know they have lost their majority, and that the repealing bill will pass whenever a vote is reached. If it is not reached at this session, President Cleveland will have very strong reasons for calling an extra session.

The Boston *Herald* considers the Cate Bill reported by the House Committee on Banking and Currency objectionable because, although it repeals the Sherman Act, it provides for the coining of the silver bullion now in the Treasury. The *Herald's* objection is stated in these terms:

> "As we understand the matter, only silver dollars to the face value of the outstanding Treasury notes will be held in the Treasury. The rest of the coinage will pass into the currency in one form or another. That residue, reckoned on the present volume of purchases of silver bullion, would add at least $35,000,000 to the amount of silver dollars or silver certificates in active circulation."

It is to be said on the other side that if the Treasury finds any way to put out the extra 35,000,000 of standard silver dollars, it will get gold dollars or gold value in return for them, and hence no harm would be done. But it is not likely that the Treasury could force these cartwheel dollars on the public by any possibility. Every effort has been made to put out more of these inconvenient coins, but the public have refused to carry more than some $60,000,000 of them, or say $1 per capita. There is no law authorizing the Secretary of the Treasury to convert his own silver dollars into silver certificates. But, if the evil which the *Herald* discerns were real, it would be a very small price to pay for the stoppage of bullion purchases.

We do not see why the Quarantine Bill which has passed the Senate does not provide as uniform and effective a system of national quarantine as can be hoped for without completely abolishing all State quarantine establishments. Section 3 puts it in the power of the national Government to assume full control of quarantine regulations at the port of New York or anywhere else at any moment when the action of the local quarantine officials fails to meet the approval of the Secretary of the Treasury. It also gives the Secretary of the Treasury specific authority to detail, for special duty at New York, the Supervising Surgeon-General of the Marine Hospital Service, or any other equally competent sanitarian, with full power to overrule and supplant the Health Officer of the port at any moment when his conduct fails to conform with national regulations, or in any other manner fails to meet the approval of the national authorities. This is, in effect, full national quarantine, and, taken in connection with the other requirement, that the Secretary of the Treasury shall have rules and regulations drawn for the whole country and their administration made uniform everywhere, leaves little to be desired.

The feeling in favor of electing Senators by the popular vote, instead of through Legislatures, is plainly growing. At the recent election a proposition looking to an amendment of the Federal Constitution for that purpose was submitted to the people of California, and ratified by an overwhelming majority. In Iowa there is a movement in the same direction so far as present conditions permit. A new Senator will be elected by the Legislature to be chosen next November, and there is a strong sentiment in favor of having each party name its candidate at its State convention, as was done by the Democrats of Illinois in the case of Gen. Palmer. The Iowa Democrats are practically unanimous for Gov. Boies as their candidate, and there does not seem likely to be any opposition to the formal naming of him by the Convention. The Republicans are by no means united upon a candidate, and there is much division of opinion as to the wisdom of picking out one man to be supported by all the factions. It is urged against the plan that the friends of every one of four or five possible candidates before the Legislature would work zealously for the party during the campaign if the choice were to remain open, while if the other policy were adopted, the supporters of all except the one named by the State Convention would lose much of their interest. Notwithstanding this element of opposition, however, it seems likely that the Republicans will finally conclude to name their candidate in State Convention, like the Democrats. Meanwhile the lower house of Congress has (on Monday last) passed, without a dissenting vote, a joint resolution for an amendment to the Constitution providing for the popular election of Senators.

The solemn business of nominating Mr. Murphy by machine for United States

Senator was carried out with only slight friction at Albany last week, and this action was confirmed by his election on Tuesday last. The obvious delight which the Machine leaders take in proceedings of this character is one of the most curious things about them. Everybody outside the Machine is convinced that this Murphy election is one of the most fatuous blunders ever committed in politics. Yet the Machine leaders chuckle over it, and are even persuaded that by forcing it through in defiance of public sentiment they have "humiliated" the President-elect. It is reported that as soon as Mr. Murphy takes his seat as Senator, he and his associate, Senator Hill, will make a formal call upon President Cleveland and tender him their services in carrying out his policy. It is just possible that he may not care for their assistance, and it is more than probable that he will get along better without it than with it.

The City Club started last week on what we conceive to be its true mission, the exposure of public abuses and the prosecution of official violators of the law. This work, in the present condition of the city government, can be done only by a powerful organization. Individuals cannot and ought not to be expected to undertake it. What serious work it is may be inferred from the simple fact that almost the whole bench of police magistrates—the exceptions are few—are in sympathy with the law-breakers, and use their power more or less to hinder and demoralize the police force in their attempts to repress or punish crime. Justice Burke, Mayor Gilroy's latest appointment, went to work discharging criminals almost as soon as he mounted the bench. Grady, whom the City Club have made arrangements to prosecute, got eight women out of confinement to which they had been sentenced for six months by Justice Taintor, who is one of the few respectable police magistrates—either by a trick played on the Commissioners of Charities and Correction or by a gross violation of the law. In the one case he ought to be pursued before the Common Pleas for misconduct in office; in the other he ought to be indicted by the Grand Jury, under the statute. This is a state of things which we think has no parallel in the history of civilized cities, and would excite more horror and astonishment if we had not come to it by gradual stages. We have been brought to it by a composition of causes. Which of them all has been most powerful is something which must be left to the discussion of the historian. The work before decent people now is to watch these malefactors from day to day, and use such legal machinery as exists for bringing them to justice and letting in light on their activities. They can easily crush any individual who assails them, but they cannot crush, and ought not to be able to cow, an organization like the City Club, if it has its heart in the work. Any intelligent and patriotic American who can sleep and work quietly and contentedly under Tammany rule may be sure there is something wrong with his moral make-up. He is not only a traitor to free government, but to civilization itself, of which these Tammany men are the sworn foes.

The speeches made by eminent citizens at the Lotus Club banquet to Mayor Gilroy on Saturday night call attention anew to one of the most serious obstacles to all efforts to secure not merely honest but respectable government for this city. Mayor Gilroy has offended public decency by appointing two notoriously unfit persons, one of them a murderer, to high public office. He has been denounced for this conduct by the City Club, which has a membership of nearly 1,000 of the most respectable people of the city, under the presidency of the city's most eminent lawyer, James C. Carter. Mayor Gilroy stood up at the banquet and called this censure of himself "slandering a public official, belittling his efforts, and making the name of the city a byword in the mouths of people of other municipalities." The impudence of this assumption, that the slander and reproach were not caused by the official who made the shameful appointments but by the citizens who rebuked him for it, was peculiarly Tammanyish and not at all surprising. But it was surprising to have a man like ex-Mayor Grace get up after Mr. Gilroy and sustain him in his impudence by saying: "My confidence in the certainty of the success of Mayor Gilroy is great. I sympathize with him in his disposition to find fault with the criticism and slander of those who are out of office directed to those who are in. I believe it is largely on account of this manner of slandering that so many good citizens take so little interest in politics." Does Mr. Grace really think so? What about the effect on decent citizens of finding the Gilroys eulogized in the very same terms as the Hewitts and Graces by men from whom better things were expected? It was less surprising, but no less significant, to have Chauncey M. Depew get up after Mayor Grace and say: "I am not here as a member of the City Club. In fact, I never was an amateur reformer. I truly sympathize with Mayor Gilroy when he says the people of this city who do not practise politics, are too prone to complain of the men on whose shoulders rests the burden of administering affairs."

Messrs. Grace and Depew are the leading representatives of the anti-Tammany political forces in this community, the County Democracy and the Republican party. Is it any wonder that there is no public confidence in the sincerity of that opposition when these two men stand up and not only defend the most offensive form of Tammany misgovernment, but ridicule as "slanderers" and "amateur reformers" the citizens who protest against it? If Messrs. Grace and Depew think Scannell and Koch are fit men for a Mayor to put into high office, why are they not both in Tammany Hall? Certainly they have cut from under their feet all ground upon which they can stand hereafter as opponents of Tammany rule. They surely cannot expect that Mayor Gilroy can do anything worse than this by which even they may be induced to take sides with his "slanderers." They have come to his defence at the moment when he stood in sorest need of it from some respectable source. Thousands of voters have said in former anti-Tammany campaigns: "Oh, the County Democrats and Republicans are no better than Tammany—they only want to get control in order to run the city in their own interest." Messrs. Grace and Depew now show that this talk was not without foundation.

The death of Gen. Butler comes at a time when he had well-nigh passed out of the public mind. It needs to be said that at several distinct periods he concentrated upon himself a very large share of public attention. The first of these periods was when he went as a delegate to the Charleston Convention of 1860 and voted fifty-seven times for the nomination of Jeff. Davis for President of the United States. His next appearance in a distinguished rôle was when he entered the Union Army. From Big Bethel to Bermuda Hundred, where Gen. Grant reported him as being "in a bottle, securely corked," it is doubtful if he rendered any real military service to the nation, although he managed to keep himself in evidence more than the generals (like Terry, for example) who took up his bad jobs and carried them to triumphant success. After the war, he entered Congress and disputed the leadership of the House with Blaine at one time, with results rather favorable to himself. His ambition was next fixed on the Governorship of Massachusetts, and, after one or two unsuccessful assaults, he actually carried that fortress. He had in the meantime become a sort of Democrat—a Butler Democrat — and in this character he turned up in 1884 as a candidate for the Presidency, with the intent of drawing enough votes away from Cleveland to elect his old enemy Blaine. It was supposed, at the time, that this arrangement was made with Butler by "Bill" Chandler at the "*Tallapoosa* Conference." At all events, the Butler campaign expenses must have been paid by Republican funds, as the Greenback-Labor party, whose nominal candidate Butler was, had no money of its own. The ignominious defeat of this conspiracy left Butler stranded politically, and he gradually passed out of notice. His career was one of great restlessness

coupled with considerable smartness and an entire lack of moral sense.

The Panama Canal Company procured the services of Mr. Thompson of Indiana, who was at that time Secretary of the Navy under President Hayes, as Chairman of the American Committee at a salary of $25,000 per year. This was open and above board. As the American Chairman had nothing to do but to draw his salary, which we suppose he did with his usual energy, the question might be asked, What was the use of having an American Chairman at all? Evidently the only object was to enable M. de Lesseps to say to the French investing public, as he did with suitable frequency and flourish: "Behold, we have the American Minister of Marine actively enlisted in our enterprise." This assurance would go a great way with Jacques Bonhomme, upon whose imagination an official of this grade has a powerful charm. But it would do more. It would convince the French people in general that no difficulty would arise on this side of the water touching the Monroe doctrine. This doctrine, being altogether indefinite, is exactly suited to the purposes of anybody who occupies an influential position and is inclined to make trouble. Of course old Mr. Thompson never had any such thought; he is not that kind of man at all. But his chairmanship would serve to convince the French public that no trouble on account of the Monroe doctrine would arise. This would account for Mr. Thompson's salary of $25,000 for say eight years. Now, if there was a certain number of discerning persons in the Congress of the United States who had the power to make it hot for De Lesseps by stirring up the sediment of the Monroe doctrine in Senate and House, and thereby frightening French investors, and if it was deemed best to "placate" them, *i. e.*, purchase their silence, we can understand how the rest of the $2,400,000 used over here, on the testimony of M. Charles de Lesseps, may have been "got away with." But we should like very much to know their names, and the names of the disbursing agents as well.

On the whole, it may be now concluded that M. Ribot has managed to escape the danger with which the Republic was threatened a few weeks ago, and has given the Parisians time to recover their senses. The plan of burning down a house in order to roast a pig has always been in favor with the population of the capital, and they have resorted to it so many times that it was almost necessary for the Republic to meet and defeat it once at least in order to make sure of its stability—just as, as has been said, a banking-house has to pass through at least one panic to make its credit good. But it is melancholy to see the way in which it was thought necessary at first to treat the Panama prisoners in jail, in order, doubtless, to assure the public of the sincerity of the prosecution. They were taken to court every day handcuffed, at first in the ordinary prison van like the vilest criminals, but then in a cab, and, except that they were allowed to receive their meals from the outside, underwent other indignities which we inflict only on convicts. This is partly explained, however, by the fact that in the French law every accused man is a convict, and appears in court as such, and the judge "heckles" him as our lawyers do witnesses under cross-examination. The only new incidents in the case are the exposure of the enormous profits made by Eiffel of the great Tower, and some revelations about M. Hébard, the proprietor of the *Temps*, which seem to need a good deal of explanation.

The expulsion of the foreign correspondents from Paris by the Ministry seems a high-handed measure, but nobody who knows anything of the condition of the Parisian press and of the influence on the popular mind at crises like the present will doubt its expediency. The foreign correspondents in question either are Frenchmen, or live among the French journalists, frequent the same cafés, and get materials from them for the various lies, rumors, and insinuations which they scatter all over Europe. M. Ribot has to contend with two great difficulties—the excitability of the French people, and more particularly of the Parisians, combined with their now traditional tendency to change the form of the government as a remedy for either bad administration or bad legislation. During the last hundred years they have tried this remedy about nine times; and whenever a parliamentary crisis arises, it presents itself as a possibility to nearly everybody's mind—Conservative as well as Radical—and the population of Paris passes through a fever such as overtakes other nations only about once in two centuries. If the Billion Dollar Congress had been French, it is not unlikely that President Harrison would have had to fortify himself in the White House, and "Tom" Reed to take refuge in Canada, and we should have had to fight proposals to divide the Union into five Confederacies—one Free Trade, one Protectionist, one Populist, one Silver, and one Paper. The play of the press on the Parisian mind is, therefore, a matter of serious consideration for the Government, particularly as the press is manned in the main by frivolous and ignorant adventurers, who hate quiet times, and to whom a revolution would be a "lark" of the finest kind. The best Frenchmen do not heed them, but they have shown again and again their ability, by persistent lying and denunciation, to rouse the plain people—"les petites gens"—into a state bordering on frenzy.

With the French journalists it is difficult for M. Ribot to deal without appearing to attack the liberty of the press, and it may seem to us here that he might well disregard the correspondents of the foreign press also. But that is because we have happily no idea of the importance of foreign relations to all European statesmen. We ourselves can hardly be said to have any foreign relations at all. There is hardly any conceivable contingency which can make what foreigners think about us a matter of serious political concern. But to every European Power, except England, the foreign estimate of the character and stability of its political institutions is of the last importance, because every one of them expects to have every other either as an ally or an enemy in a bloody contest. It might, for instance, be a very serious matter to France to have the Russians, or Austrians, or Germans, or Italians come to the conclusion that the Republic was rotten, the voters disaffected, the army insubordinate, and all French statesmen venal. But this is the very notion the foreign correspondents have been trying to diffuse. They have been leading the foreign public and money market to believe not only that the Republic was on the verge of overthrow, but that French politicians were so degenerate that, if it were overthrown, nothing better or more durable could be expected in its place; and this would mean, if accepted, that France was neither formidable as an enemy nor valuable as a friend.

Caprivi's speech in favor of the new Army Bill before the Committee of the Reichstag no doubt showed the intention of the Emperor and the Cabinet to stand by that unpopular measure just as it is, but some of his arguments read queerly at this distance. Experience had shown, he said, that when war was threatened it was best for Germany to take the offensive, and therefore she needed increased forces. In other words, she must put herself in a position to be the bully of Europe. In that way, he continued, it was possible to obtain speedy victories and lasting results. But the most obvious lasting result is the increase of the army year by year, and continually growing tension with the country over which "speedy victories," with results that have been lasting in this sense, were won. This will scarcely reconcile the taxpayers to the new burdens which it is proposed to lay upon them. On the whole, we like Dr. Delbrück's argument in favor of the Army Bill better. He puts the matter on high ground, saying that much more is at stake than the mere granting of a sum of money, and that "a sovereign who deliberately makes a resolution, and then is compelled to abandon it, cannot be a sovereign longer in the true sense of the word." This has the right ring. The Emperor wants it, and that is enough. What sort of an Emperor is it that can't have his own way? Dr. Delbrück seems to be a left-over courtier of King Canute.

PARTY DUTY.

THE *Tribune* of Monday has an address to the new General Committee of the Republican party, in which it gives them the following excellent advice:

"For the present the Republican party in this city and State can be little more than a protesting power, but as such it can exert a tremendous influence. By vigilance, intelligent criticism, and uncompromising hostility, by keeping in touch with healthy public sentiment and responding to every impulse in the direction of reformatory effort, it can crystallize the honest elements of opposition to the Machine within and without the Democratic party and thus ultimately sweep from power the existing corrupt municipal and State governments."

If a party were an individual, it would be very ungracious to keep reminding it of its bygone faults and shortcomings. But a party is a perpetually changing body. New members pour into it every year; old members die off, and new questions, or new aspects of old questions, occupy its attention. There is, therefore, no way within our knowledge of supplying the recruits and converts with the fruits of political experience without going back over the history of the organization to which they belong. We would therefore respectfully point out to the members of the Republican party, and especially the younger ones, who are now weeping among the party ruins, that there is no visible human agency so much responsible for the present depressing condition of State and city affairs as the Republican party. Therefore the *Tribune* ought to have inserted, under the general head of "keeping in touch with healthy public sentiment and responding to every impulse in the direction of reformatory effort," a list of party errors to be hereafter avoided, and, if possible, atoned for.

For example, as to the shocking appointments to important public offices recently made by the Governor and the Mayor, consider the kind of example the party of intelligence and morality has set to our (for the most part) foreign-born or ignorant rulers in this matter. In 1884 it nominated for the Presidency, in spite of repeated warnings, a man whose personal character was objectionable to a considerable body of its members, and among these were some of the most respected and respectable men in the country. Whether the charges against him were true or false made little difference. From the great rule that public office is a public trust, it follows easily that no man to whom the beneficiaries object on personal grounds should be deliberately and defiantly put into a place of importance; for, to make a man fit for such a place, not only is it necessary that he should be pure, but that those whom he is to serve should believe him to be pure. Not only, however, were the objections made to the Republican candidate in 1884 derided, but the objectors were loaded with ridicule and abuse very like that with which the Hillites now load those who object to Judge Maynard. In fact, the arguments and epithets used in both cases are almost identical.

Out of this break with "healthy public sentiment and reformatory effort" came directly the growth of Quay as a party leader, and the appearance of Wanamaker as a religious worker under Quay, and a daily increasing contempt for what may be called the application of morals to politics. Nothing more cynical has been done here by Flower, or Hill, or Croker than was done in Pennsylvania, between 1884 and 1890, under the personal direction of the Chairman of the National Republican Committee. In defending and apologizing for all this, the Republican moralists had, by the time the Democrats got into power in this State, used their furniture and woodwork and the cargo of the ship to keep the fires going, and came into port in this State a dismantled moral wreck, under the command of one of the oldest and most notorious of the party reprobates, Mr. Thomas C. Platt. So much for the way in which the Republicans have led up to and made possible the Maynard incident.

Their responsibility for the rise and progress of Hill and Hillism is even plainer. They were so full of wrath with the Mugwumps for not accepting Blaine at their hands in 1884, that in 1885, in order to punish them and show the Mugwumps their weakness, they actually defeated their own candidate, Mr. Davenport, and thereby put Hill in the Governorship, and started him on the path of mischief which he has ever since trodden with faithful feet. Over this most unfortunate result the *Tribune* itself, as we have often shown from its columns, chuckled publicly and its editor chuckled privately. As soon as Hill got into the Governorship he became a power, prepared the way for Croker, Gilroy, and Flower, and made their methods seem attractive and legitimate because in his hands they had proved successful.

Our piteous plight in the city is explicable in very much the same way. Tammany did not recover from the low estate to which the Tweed frauds had reduced it as long as Tilden lived and remained the leader of the Democratic party. He left behind him in this city an element of Democratic opposition to it which it was of the highest importance, in the interest both of city and State, to nourish and encourage. It represented, though by no means perfectly, to a hopeful extent, "the better element" in the Democratic party in the city, and, as was seen, was prepared to give us such respectable candidates for the Mayoralty as Messrs. Grace and Hewitt. But the Republicans, far from seeking to turn this division to account for the benefit of the city, gleefully used it, on every possible occasion, for the benefit of the tariff and other Republican fancies. They ran Gibbs against Grace, Roosevelt against Hewitt, and Erhardt against Hewitt, thus slowly building Tammany up into the power we see it to-day, and finally, by defeating Scott by abstention, made Croker a dictator in both city and State. In fact, a more sorrowful story than the latter days of the Republican party we cannot recall in the whole history of politics. It reads like the fall into vicious courses of a brilliant minister of the Gospel, or like the adoption by a missionary of the manners and customs of the savages whom he was sent to evangelize. The party cannot, any more than any other sinner, recover its old place without bearing in mind what the sins are which have most easily beset it, and what have been the opportunities which it has missed or abused.

THE HARM OF IMMIGRATION.

THE proposal to suspend immigration wholly for a time as a safeguard against cholera has in it a good deal of the old mediæval admission of inability to take scientific precautions against cholera. The mediæval legislator knew of only one way of protecting the community against foreign infection, and that was absolute non-intercourse. He put ship, cargo, and passengers under a ban for a long period, and though his quarantine was never completely effective, it gave him the satisfaction of feeling that he had done everything he could think of besides praying; for praying, coupled with promises of church-building or gifts to churches, was his main reliance. The best-known church in Venice—that of the Madonna della Salute on the Grand Canal—celebrates the stoppage of a pestilence by the Virgin Mary after quarantine had totally failed. We have no such reliance on the Virgin for such purposes, but we have had a reliance almost as great on our Jenkinses, who meet our vows by keeping the enemy at a distance. This is still the simple remedy of all the more untutored States to-day. When they see "the pest ship" approaching, they train a gun on her, and make her anchor in some remote spot until her passengers either get well or pass on to a better country. We have been shamed out of this system as regards ordinary traffic and cabin passengers, but we still cling to it as regards the lower class of immigrants. The chance of infection from them seems to us so great that, sooner than attempt to disinfect them, we propose to shut them out altogether. This is hardly creditable either to our administrative or to our sanitary resources. Disinfection is now simply a question of money and space. Given a place to put infected people, in reasonable comfort, the problem of disinfection is no more serious than the maintenance in health of a regiment of recruits.

This would be all true even if the immigrants came here only for their own good, and were of no manner of use to the American community. But is this the case? The only way we have of deciding it is to find out where the places are in the United States in which there is no demand for the coarser forms of labor which the immigrants supply. We have made a good

deal of inquiry on this point, but never could get any answer even from the advocates of restriction. Where are the farms on which there is no place for the "hired man" or "hired girl"? Where are the towns in which the supply of domestic servants is overflowing, and "the help" compelled, through competition, to take any places that are offered them? Where are the works of irrigation, or drainage, or canal, or railroad, or aqueduct building, or mining in which labor is a drug, and the contractors have everything their own way? And, to look at the matter retrospectively, which are the great public works already in existence that would be in existence now if the tide of European emigration had not begun to flow this way after 1840? Since 1840 almost all our railroads have been made. They form altogether a great work, such as no other modern nation can show, because they cover immense distances through regions that were utterly wild and but thinly peopled when the roads were made, and, indeed, from the point of view of laboriousness, have had no prototype except the roads which the Romans carried to the remotest corners of the Empire.

We are aware that Gen. Francis A. Walker, who has been discussing the emigration problem from both the moral and the economical point of view, with great freedom and force, holds that we could have executed all our great public works through the native population solely. He holds that, as the clearing of the continent of its timber and the fencing of the land for agricultural purposes was a stupendous job, and was executed solely with American hands, there would have been no difficulty in getting American labor for the railroads when the demand for them came. But the probabilities seem to us all the other way, for the reason that nearly all American manual labor has hitherto been expended on the home of the laborer. The American of the last century and the beginning of this did a great work, but it was done almost invariably in order to secure himself a house with arable fields around it. He has never shown any disposition to go to a distance, in a gang, as a hired man, and live in huts on rude fare for months away from his family, cutting canals and railroads through swamps and mountains. He has apparently always felt that he could do better for himself, and, when the country called for the railroads, let the foreigner come in and make them.

Nor has it been shown that the low standard of living of the newly arrived emigrant drags down that either of the immigrants already here or of the natives. There is no available testimony on this head which does not point the other way. There is no class of emigrants, on the contrary, who do not little by little raise their standard of living in their desire to assimilate themselves to the American population. The process may be slow where the emigrants of the same origin keep together in villages or in certain quarters of the great towns, but the movement is almost always upward. They gradually wear better clothes, eat better food, and become more cleanly in their habits. Those who have been here for ten years are rarely distinguishable from the natives in dress, and though the improvement in their dwellings and personal habits is slower than in dress, it goes on. In fact, the physical or moral harm which the immigrants, simply as additions to the laboring population, have done to the United States is not perceptible, or, at all events, has never been clearly pointed out.

The harm they do the country as additions to the voting population is undoubted, notorious, and undeniable. The practice which prevails all over the country, and of which both parties are equally guilty, of seizing the emigrants and imposing the franchise on them very soon after they land, almost willy-nilly, has had an influence on our public men, on our press, and on our legislation of the most deleterious kind. A whole volume might be filled with illustrations of this. Nearly all the economical absurdities produced on the stump or embodied in legislation are due to a desire to "capture the foreign vote." The degradation of our city government is largely due to the readiness of the natives to let the immigrants sack the cities in return for their support in the Federal arena. In truth, there is no corner of our system in which the hastily made and ignorant foreign voter may not be found eating away the political structure, like a white ant, with a group of natives standing over him and encouraging him. There is not to-day, however, a single proposal before the country from any reputable source to procure a naturalization law which will arrest the great debasement of our politics through the incessant additions made to the voting population by the half-civilized new comers, and we are on the point of seeing nearly all our large cities turned over completely to them and the handful of demagogues who control them.

THE KANSAS SITUATION.

THE condition of Kansas at this moment is so extraordinary as to challenge the attention of the nation. Rival bodies claim the right to be considered the legal House of Representatives, and one side seems ready to resort to force if necessary to carry the day. The wildest doctrines are proclaimed amid the loudest applause, and almost any extreme of folly appears possible.

The situation results from the rise of the Populist party. Under the name of the Farmers' Alliance, it almost elected its candidate for Governor in 1890, chose "Jerry" Simpson and four other Alliance candidates as Representatives in Congress, and elected a Legislature which sent Peffer to the United States Senate. At the recent election it carried the Governorship and the upper branch of the Legislature, but failed to secure the lower house, a clear majority of its members being Republicans, while three or four regular Democrats could not be depended upon to help the Populists. Ever since the election the managers of the latter party have been scheming to secure control of the House, and thus of the whole Legislature, which is to choose a United States Senator.

The new Governor, Lewelling by name, was inaugurated on January 9, and his inaugural address was a singular production. He pictured the condition of the State as terrible. "Our hearts have ached," he said, "because of evictions under the Irish tenant laws, but hundreds of our own families are made homeless every year by the foreclosure laws of Kansas, and thus the power which freed the African is forcing into the same crucible the sons and daughters of our own blood." He proceeded:

> "Two great forces are forming in battle line: the same under different form and guise that have long been in deadly antagonism, represented in master and slave, lord and vassal, king and peasant, despot and serf, landlord and tenant, lender and borrower, organized avarice and the necessities of the divided and helpless poor. I appeal to the people of this great commonwealth to array themselves on the side of humanity and justice."

He proclaimed it the especial duty at the present time to "protect the producer from the ravages of combined wealth." First among these ravages he ranked the refusal to permit the free coinage of silver, and next the withdrawal of circulation by the national banks, as a result of which "the purchasing power of the dollar has become so great that corn, wheat, beef, pork, and cotton have scarcely commanded a price equal to the cost of production." He drew a gloomy picture of "the farmer who wearily drags himself from dawn till dark to meet the stern necessities of the mortgage on the farm," and of "the business man, early grown gray, broken in health and spirit by the successive failures, anxiety, like a boding owl, his constant companion by day and the disturber of his dreams by night."

"Is the State powerless against these conditions?" asked the new Governor. "Then," he answered himself, "the State has failed, and our boasted civil compact is a hollow mockery. But," he declared, "government is not a failure, and the State has not been constructed in vain." He closed with a glowing picture of what would be accomplished by "the generation which has come to the rescue":

> "Conscience is in the saddle; we have leaped the bloody chasm and entered a contest for the protection of home, humanity, and the dignity of labor. The grandeur of civilization shall be emphasized by the dawn of a new era, in which the people shall reign. And if found necessary they will 'expand the powers of government to solve the enigmas of the times.' The people are greater than the law or the statutes, and when a nation sets its heart on doing a great and good thing, it can find a legal way to do it.
>
> "I have a dream of the future. I have an enduring faith, the evolution of an abiding faith in human government. And in the beautiful visions of a coming time I behold

the abolition of poverty. A time is coming when the withered hand of want shall not be outstretched for charity, when liberty, equality, and justice shall have permanent abiding places in this republic."

On the evening of inauguration day the Populists held a "love-feast," at which speeches were made by Jerry Simpson, Mrs. Lease, and others of their leaders, in the same line as Lewelling's. The Governor had said: "The Government must make it possible for the citizen to enjoy liberty and the pursuit of happiness. If the Government fails of these things, it fails in its mission. It ceases to be of advantage to the citizen; he is absolved from his allegiance, and is no longer held by the civil compact." Simpson proceeded from generals to particulars. "You must organize the Legislature in this hall tomorrow," he said, "and I wouldn't let the technicalities of the law stand in the way. Call this revolution if you will. I do not favor revolution in this case, but only as a last resort; but see to it that you organize the Legislature here to-morrow." This advice was followed. That is to say, the Populist minority of Representatives elected a Speaker and organized a House on one side of the Chamber, while the Republicans did the same thing on the other side, being supported by three of the Democrats.

A secret caucus of the Populist leaders was held on January 11, which was addressed by the Assistant Attorney-General, by one of the Weaver Electors, by a Populist candidate for United States Senator, and other prominent members of the party. This caucus adopted resolutions congratulating the people of Kansas upon having the organization of the House in their interest, and saying, among other things:

"Resolved, That we endorse and applaud the glorious action of the Representatives, and urge them, if not recognized by the Governor, to say to him, as did Mirabeau to his king when the monarch refused to recognize the French Assembly of the people: 'Slave, go tell your master we are here by the will of the people, and we shall disperse only at the point of the bayonet.'

"Resolved, further, That we urge the representatives of the great American people to stand firm as a unit, and that we pledge them unfaltering support in their movements against the representatives of greed and avarice."

On Thursday the Governor recognized the Populist House, and it began to look as though the leaders were bent upon having their way at any cost—going so far even as to impeach Supreme Court judges, if necessary to secure decisions which will give them some color of law for their performances. Not a few members of the party look with disfavor upon this programme, but such men as Simpson and such women as Mrs. Lease thus far are in control of the organization.

The most extraordinary feature of this whole business remains to be stated. It is found in the facts that Kansas is, on the test of illiteracy, one of the most intelligent States in the Union; that it has an excellent public-school system, many college institutions, and a State university; that it has few cities, and not a large foreign element; and that it has always been considered a fair sample of an American commonwealth, in which the system of self-government was working out its perfect fruit. Such an unexpected outbreak as this of the last two or three years shows at least that it is not only in the cities, where the foreign-born swarm, that demagogues may thrive and the doctrine of revolution be preached.

THE CATHOLIC CONTROVERSY.

THE outbreak of dissensions among the higher clergy in the Catholic Church in this country is not a thing of a day's bringing forth. The origin of the trouble dates a long way back, and resides partly in personal differences between rival Catholic leaders, and partly in grave questions of ecclesiastical policy. Archbishop Corrigan had his first personal clash with Archbishop Ireland years ago in the matter of the attitude of the Church to the Knights of Labor, when the New York prelate, it was understood, was for dealing with that organization in the summary way adopted by the Canadian hierarchy. Then came the McGlynn case, with its further injection of personal bitterness. But above and beyond all these questions relating to persons, there gradually grew up two parties in the Church sharply divided on the subject of the proper attitude of Catholics towards American public schools.

Archbishop Corrigan was the leader and representative of what may be called the High Church party. He was for exalting the authority of the Church over all political institutions. The only relation of Catholics to the school system which he would countenance was one of hostility, and of endeavor to force an appropriation of public funds for the support of the parochial schools. In this he assumed to pose as the especial champion of the Papacy, and wished it to be understood that he had truer ideas of the divine rights of the Church and of the authority of discipline than those of the episcopate who differed from him. For a long time everything went his way. The decrees of the Baltimore Council on the school question were after his own heart. All the talk was of forcing every parish to have its own Catholic school, and of visiting with the severest ecclesiastical pains those Catholic parents who should send their children to the public schools. Archbishop Ireland's famous Faribault plan of compromise between Catholic ideas and the American school system was denounced as a wicked and dangerous measure, which would be sure to be condemned by the Pope as soon as the Holy Father could get his hands on it.

But then came Archbishop Ireland's pilgrimage to Rome, of last year, and its unexpected consequences. He seems to have won over the Pope and the Propaganda completely, and has got a series of decisions which has left his opponents dumfounded. His Faribault plan, instead of being disallowed, was approved. More than that, a fully empowered Legate of the Pope was despatched to this country for the special purpose of settling the school question, and the fourteen authorized propositions which he read in the name of the Holy See at the gathering of archbishops in this city last November, more than sustained the Archbishop of St. Paul. In fact, it was the Corrigan plan that was condemned, inasmuch as the highest and infallible Catholic authority decided that it was no sin for Catholics to patronize American schools, and that they should be allowed freely to do so where they had no parochial schools, or where the latter were distinctly inferior to those maintained at public expense.

This was a fearful blow to his Grace of New York, who had appealed to the Pope and got more than he bargained for. It was not to be expected that he should manifest any great happiness over the result, as he certainly did not, but it was to be presumed that he would submit, even if sullenly. Yet the revelations of Sunday week make the astonishing fact clear that the very prelate who had been most strenuous in exalting papal privilege and preaching the doctrine of submission, and who had denounced all efforts to Americanize the Church, is now endeavoring to excite resistance to the Pope's decision on the school question, and to arouse a spirit of resentment at foreign dictation in matters of church policy. He has set about this, moreover, in the way of a politician endeavoring to manufacture public sentiment through inspired interviews and editorial articles, and, like some politicians, has come to grief through the publication of one of his intriguing letters marked "Private."

It may not be true that his conduct has been made, or will shortly be made, the basis of serious charges against him at Rome, though the utterances of both Archbishop Satolli and Archbishop Ireland show that they resent his scheming and are disposed to hold him to a pretty strict account of some sort. But however that may be, the exposure of his methods cannot but bring a heavy loss of prestige both to him and to the cause for which he stands. If the papal approval of Archbishop Ireland's Faribault plan was of itself a victory for liberal Catholicism, the subsequent decisions of the Pope, through his representative, and the humiliation of the leader of the reactionaries, have put that victory beyond question and made it secure. Infallible wisdom cannot reverse its judgments, and therefore it will no longer be possible for good Catholics in this country to maintain their attitude of uncompromising hostility to American public schools.

Looking at the matter in its larger aspects, it reveals the same liberal spirit which has marked Leo's policy in regard to the French Republic. As Mr. Santa-

yana remarks in his late article in the *New World*, this is but a wise recognition of the fact that history has brought about a change of the seat of power in France, and that the same expediency which once made it advisable for the Church to cast in her lot with the conservative parties and dynasties of Europe, now impels her to seek alliance with the rising might of democracy. It will be largely due to the sagacity and firmness of the Pope if the Catholic Church succeeds in what the writer quoted declares to be its present hope—that of "regaining the confidence of the masses." He judiciously observes:

"Whether this vast ambition is capable of realization, it is, of course, impossible to say. All that we may predict with safety is that, if it is realized, it will be in a form materially different from that intended. The Catholic may be allowed to believe that the Church is infinitely adaptable, and in all societies maintains the same doctrines and diffuses the same influences. But the impartial observer will nevertheless think that this elasticity of the Church is a property of its organization rather than of its religious content, and that the world has already seen more than one religion under the name of Catholicism. Perhaps the democracy of a future age may call itself Catholic—even this would be a strange repetition of history. But that new Catholicism would be something different from what we know, and something to which our affection or our aversion would be only partially transferable."

THE GEOLOGIC ATLAS OF THE UNITED STATES.

THE beginning of this new year will be marked in scientific annals by the appearance of the first number of the 'Geologic Atlas of the United States,' issued by the National Geological Survey at Washington. It is now more than ten years since the reorganization of the Survey, and in this interval its publications have consisted of annual reports, monographs, bulletins, and statistical summaries of our mineral resources. A large number of topographic maps of different parts of the country, of which more below, have also been prepared and sparingly distributed to libraries, but not generally published as yet. The results of much of the field labor of the Survey still remain in its offices; partly because their final preparation involves deliberate review and comparison, and partly because their publication requires the adoption of a consistent plan that shall with good probability hold for a number of years to come, and in which the scheme of map-coloring and description shall be as uniform as possible for all parts of the country. The first folio of the final atlas, prepared in accordance with this matured plan, is now before us. It is a beautiful product of good work.

The largest preliminary undertaking required for the preparation of the Geologic Atlas was to secure a topographic map on which the geology of the country could be adequately represented. Much topographic work had previously been done in the West by different surveys, but it was of various styles, and it had not been uniformly drawn and published. The maps issued by the Coast Survey, the Lake Survey, and the Mississippi River Commission covered only a relatively small part of the national domain, and, like the work of the earlier Western surveys, was not in form for the use of the geologist. The United States Geological Survey therefore began to make a topographic map of the country in 1882, the largest map ever undertaken by a nation. The successive annual reports of the director contain accounts of the plan and progress of the work. The chief problem of the map has been to decide on a method of field work and a scale and style of publication that should at once present results of sufficient accuracy and minuteness and yet not cost too much. The total cost for the entire topographic survey will of course be a large sum, but we can only regret that Congress has not allowed an even more liberal use of public funds for this purpose. The maps already issued serve truly to teach us more of our home geography than was ever known before, except by observant travellers or by individual observers in local districts; we would gladly see a greater expense incurred and a greater degree of accuracy reached.

Up to the end of the last fiscal year, June 30, 1892, an area of 547,000 square miles—about one-sixth of our domain, distributed over forty-two States and Territories—had been surveyed. Six hundred and forty-nine map sheets had at that time been completed—295 of these being on a scale of 1:62,500; 338 on a scale of 1:125,000; and 61 on a scale of 1:250,000. Hereafter, all surveys will be made for the first of these scales, about an inch to a mile; this being about the scale that is now generally adopted by many countries. Smaller scales do not allow of the introduction of necessary topographic and geologic detail; larger scales involve too great an expense. All of these maps are drawn on a uniform system. The sheets on a scale of a mile to an inch cover a sixteenth of a latitude and longitude "square degree"; each sheet being named after its chief town and State. We may note that convenience of use would be served if an index of the names of the eight adjacent sheets were added on the margin. Each sheet is printed in three colors. Brown gives the topographic relief, indicated by contour lines which give the altitude above sea level; the vertical interval between the contours varying from 5 to 250 feet, according to the scale of the map and the needs of the district. The water is in blue; and all names, roads, and boundaries are in black.

Quite apart from the geological use to which these maps will all be put, they are of great value from their indication of the actual form of our country. Those who are interested in geographic study know that the maps commonly published fail to give any proper representation of the features of our States. A few special maps have been published by State or local geological surveys, but the area they include is insignificant. The real expression of the great remainder of the country has been only vaguely known, except to those who travel extensively over it. But, with the national topographic maps in hand, the case is quite different. Recognizing at the outset that the limit of their cost has kept down their scale and has reduced their minute accuracy below what geographers would wish, we still find in them a vast fund of long-desired information. In New Jersey, Massachusetts, and Rhode Island, where local and national authorities have joined forces and completed the surveys, the State atlases are published and are in great demand; and, fortunately, the cost of purchase is so low in single sheets that everybody in these States may now have a reasonably good map of his surroundings. Elsewhere the published sheets do not as yet completely cover any State; but the areas surveyed are large, and when the maps are brought together, they present the topography of the regions with much distinctness. Where but on these maps can one find an adequate picturing of the Berkshire plateau of western Massachusetts, deeply incised by the valleys of the Deerfield and Westfield Rivers, which sink more than a thousand feet below the broad uplands? Look at the sheets of middle Pennsylvania and enjoy the portrayal of the remarkable linear mountain ridges of the Keystone State. Examine the intricate topography of the dissected plateau of West Virginia and of the adjoining part of eastern Kentucky, and learn from the inaccessibility of those districts the reason for their slow civilization. See the broad prairies of Missouri, the peculiar glacial hills of Wisconsin, the clustered sand dunes to leeward of the rivers in Kansas, the lofty tablelands of Utah and Arizona. The educational value of these maps alone repays their cost. With all their other uses included, we believe the nation would be well warranted in permitting a greater expense and a finer detail in their preparation.

With such maps as these in hand, the field geologists have drawn in the boundaries of various rock formations; and a considerable number of sheets are now geologically hand-colored in the Washington office; but their publication is a matter of deliberation. After preliminary discussion in the office, a plan of publication was drawn up and submitted for comment to many members of the Survey. The criticisms thus secured have been duly considered, and finally a definite plan of publication is entered upon. A single sheet, that of the district around Chattanooga, Tenn., is now completed in atlas form. The atlas has a stiff paper cover of large size, with an index map on the face, locating the map within its State. Eight large sheets are included in this cover. The first contains a general explanation of the maps for the whole country, and this will be repeated uniformly in all the atlases, except so far as experience with those first issued suggests changes for later folios. The second sheet contains an outline of the geological history of the region of which the map makes a part; in this case, the region concerned is that of the Appalachian Mountains, and the general essay is prepared by Mr. Bailey Willis. This sheet will be repeated with the maps of the Appalachian region. The third sheet presents an account of the limited area about Chattanooga included in the map, under such headings as geography, rock series, structure and mineral resources; this being by Mr. C. Willard Hayes. Then follow four map sheets—the first, topographic; the second, geologic; the third, economic; the fourth, containing structural sections placed in their proper position on an outline geologic map. The last three are elaborately colored. Finally, there is a table of columnar sections of the rock formations. In short, the atlas contains a concise monograph of the region, verbal and graphic, in its general and local relations.

It is manifest that a considerable intelligence is required for the understanding of so broad an account of a region as is here presented; but it is equally manifest that a serious and successful attempt has been made by the officers of the Survey to present the facts in as untechnical a form as is consistent with clearness and brevity. Subsequent monographic reports will discuss the region more fully; but the present intention of the Director of the Survey, as expressed in this product of the work under his charge, is clearly to give us a statement of the geological history, structure, and products of our country in as generally useful a manner as is consistent with scientific accuracy. The people of the United States are to be congratulated on the beginning of so grand

a series of national publications as is foreshadowed by this atlas of the Chattanooga sheet.

AN EXHIBITION OF THE WORK OF BURNE-JONES.

LONDON, January 3, 1893.

THREE winter exhibitions in the New Gallery exhausted the artistic resources of the three great royal houses of Great Britain. For this year novelty had to be sought in less exalted quarters, and upon Mr. Burne-Jones fell the honor of succeeding Tudors and Stuarts and Guelphs.

By their choice the managers showed their wisdom. At no earlier period in the artist's career could his life's work have claimed the serious attention it now commands; the chances are it will never again arouse the same interest and respect. Not that there has been any marked development or change in his art of late, but various other causes have conspired to bring him into unusual prominence. Artistic opinion in England is more influenced by French thought and French criticism than the English themselves realize, or, if they did, would care to admit. The result of Burne-Jones's success across the Channel has been his increased notoriety at home. His drawings were found worthy of the French Luxembourg; at once in England he became the legitimate successor to queenly amateurs and royal martyrs in popular galleries. The few who have always recognized what is great in his work, despite its shortcomings, have not doubled or lessened their appreciation; but the many, who have hitherto either sneered or else preserved a discreet indifference, are now prepared to worship. The new impetus in his favor has been the stronger since in France he is applauded for those very qualities which most appeal to the average Englishman.

He had exhibited in Paris, and been praised, several years before, but still it was only in 1889 that the French may be said really to have discovered him. His appearance in their exhibitions just then was opportune. Frenchmen were on the lookout for a new fad in art. They had had their fill of realists and naturalists, of impressionists and *plein-airistes*. Literary men were evolving new schools with bewildering rapidity, but, in the art world, matters seemed to have come to a standstill. Indeed, the degree of technical skill artists had attained appeared to leave little scope for any important revolution, any startlingly novel or morbid development except in *subject*, and it was therefore to subject that attention was turned. Here, for the seekers, the required fad was found, made to their hand. In France and elsewhere, isolated and belonging to no special group, were a few men who had always shown a tendency to the fantastic in subject and the decorative in treatment, with results that were in marked contrast to the prevailing realism. There was in France itself Puvis de Chavannes, strong enough to be accepted as master by the Parisians when his methods were least in fashion. There were in Germany Max Klinger, Franz Stuck, and, above all, Arnold Böcklin, slighted in Berlin, and for years believed in by no one but Baron Schack of Munich. Descending upon Paris—for its conquest, Zola would say — came, from one hardly knew where, Fernand Klumpff and Carlos Schwabe — moderns in technical accomplishment, primitives in design and arrangement. And it was at this juncture that Burne-Jones arrived, bringing with him all the traditions of the pre-Raphaelites. The cue was given; the faddists took it up to good purpose. Art is holy, preached Sâr Peladan and the Rosicrucians, as if the same theory had not already been proclaimed by Ruskin and worn to shreds in England. The artist should paint only the ideal, the more progressive critics agreed with Octave Uzanne. If idealism or mysticism or religion on canvas was what was wanted, there was not a French painter who was not equal to the occasion. With the addition of halo and appropriate title, it was a simple matter to transform boulevardians and peasants into Christs and Madonnas; it was, after all, far easier to render the light that never was, on sea or land, than actual sunshine; in the end, allegory required less research than elaborate historical composition. Last spring, mysticism was rampant in both Salons. But the line was quickly drawn between the genuine and the imitation; between the men who painted "the ideal" to be in the movement, and the men whose special game had been to paint it all their lives—between Puvis and Jean Béraud, between Böcklin and Latouche, between Burne-Jones and Blanche. And among the acknowledged leaders of the idealists, or mystics, Burne-Jones was ranked very high. True, in technique, he was centuries behindhand. But if to him subject plainly was of more importance than handling, if his drawing at times degenerated into the archaic, this was but a sign of his deeper mysticism. Besides, charm of color and ingenuity in filling a given space were felt to be redeeming qualities in his work. Even in their fads, the French do not lose all artistic perception. In England it has always been his subject which has captivated his admirers. Now that his shortcomings, which pass for mysticism, have been sanctioned in Paris, it is to be feared that his influence will be far more widespread than heretofore, and that this influence will be exerted by all that is weakest in his art.

For this reason the exhibition of his work is just now of peculiar interest, not only to managers of a gallery, who look to profit, but to students, who look to the future. The collection is fairly representative. It includes all his most famous pictures, with the exception of the "Adoration of the Magi," the "Perseus," the "Sponsa di Libano," the "Briar Rose" series; but these can be the more readily dispensed with since it is in them his mannerisms are most intolerable, his defects most aggressive. The result of bringing together such a number of his paintings and studies is at once to emphasize his strength and his limitations. What these are it would be useless to point out in detail, so admirably have his qualities as an artist been summed up in the *Nation*'s recent notice of 'Edward Burne-Jones: A Record and Review.' But in the original work certain facts necessarily are more conspicuous than in the reproductions. If he has any claim to greatness, if he excel at all, it is as a colorist, and the beauty of his color is lost when his pictures are reproduced in black and white. Moreover, it is as a colorist that the extent of his debt to Rossetti is most apparent.

It might be difficult to trace to its source the inspiration of Puvis de Chavannes or Böcklin. But with Burne-Jones there can be no such difficulty. He is the direct product of the Pre-Raphaelites, who, in their turn, were the artistic offspring of Ford Madox Brown. Of all this school, whether founder or brotherhood, the one really great and original man was Rossetti. He was a most indifferent painter, a still worse draughtsman; but he was a poet who succeeded, after a fashion, in putting his poetry on canvas, and in producing beautiful color in the process. His poetic individuality may arouse appreciation, but the student could not possibly find a more misleading and incompetent master. Burne-Jones, however, accepted him as the infallible Pope of Art, from whom he borrowed method (or lack of method), color, subjects, models, and, in a word, everything that was to be borrowed. Some of his first water-colors, dated in the early sixties, the "Fatima" or "A Dream," for example, might indeed pass for literal copies of Rossetti. In the review I have referred to, the critic explains that his finer accomplishment followed his emancipation from Rossettian bondage. But his pictures prove this to be only in a measure true. To all the affectations and technical weaknesses which, in his blind faith, he accepted from the master, he added something of the latter's trick of color. In his least mature work, as in Rossetti's, there are times when the rich hue of a bit of drapery, or the warm glow in a glimpse of distant sky, forces one to forgive primitiveness of design and execution. His "Merlin and Nimuë" and the "Forge of Cupid," both dated 1861, are simply little gems of color. And in the elaborate working out of detail he seems also to have appropriated for himself much of Rossetti's decorative sense, which, on occasions, saved him from tediousness. Two tiny water-colors, "Clara von Bork" and "Sidonia von Bork," attributed to 1860, as elaborate as anything he has ever done, are among his masterpieces. Apparently, in those early days, doubt never disturbed his artistic creed—he knew what he wanted; it had not occurred to him that the means provided by Rossetti were inadequate, and so he managed to produce the effects for which he was striving.

But with time he evidently became conscious that the master was but an apprentice who could not teach the very things which it is most important for the student to learn. He threw off Rossetti's childish technique and broadened his own methods. It is curious to contrast the breadth with which the minute detail in the globes held by the angels in "The Days of Creation," dated 1877, is suggested, with the elaborate carrying-out of the gown in "Sidonia von Bork." He has never concerned himself with the problems of light and atmosphere which are the delight and despair of the modern artist; for him impressionism, at least in the rendering of facts in Nature, has had no meaning, no fascination. But he has learnt how to put his paint on canvas, and in technique has grown more accomplished. It seems, however, almost as if, with increased knowledge, had come increased distrust. His later work is tentative, experimental, compared to the youthful water-colors, in which there was no hesitation. Effort is too often visible. Frequently it appears to have weakened his grasp of color, to have made him more ingenious than artistic in his decorative scheme. There are notable exceptions, of course. Nothing could exceed the exquisite depth and richness of color in his portrait of his daughter, though perhaps on no canvas is his curious inability to draw the human face more marked. And nothing could be more effective and finer than the design of the "King Cophetua," though even here one could have wished for less invention, or ingenuity, in the details. But when all is said, his best period is that which produced the "Chant d'Amour" and the "Wine of Circe," when he had full command of the color he had inherited from Rossetti, but was beginning to take some heed of technical requirements. In these was none of the fussiness of such compositions

as the "Briar Rose," none of the crude tints of the "Danaë" or the "Sponsa di Libano."

In his drawings is found the same combination of strength and weakness. He is a master in some of his studies of detail. Those of draperies and of armor, done in chalk on black paper, even Menzel could not surpass. And yet his more finished designs for a series of illustrations for the 'Æneid,' fine as many are in feeling for line, are hopelessly niggled. And so with his heads: some may be delightful in their suggestiveness, others are irritating in their monotony and feebleness. The few cartoons for stained glass exhibited in the present collection might lead one to suppose that his designs are meant to serve as merest hints for Mr. Morris, so inferior are they to the windows themselves. This is unfortunate, for it is really when Mr. Burne-Jones has a definite space to adorn for a special purpose that he is most successful. A pianoforte, decorated by him with a lovely arrangement of scrolls and figures, and a large chest in *gesso*, with the panels designed by him and executed in color, are proofs of his supremacy in this kind of work. It is to be regretted that he has not devoted his talents more wholly to it.

But the important consideration is less Mr. Burne-Jones's own position than the result of this exhibition on the younger and rising generation of art-students. The effect of Rossetti's influence on Burne-Jones we know, and for that matter we have already seen something of the nature of the spell cast by Mr. Burne-Jones over a select few. To realize how baleful it is, one has but to look at the work of his son, of Mr. Strudwick, of one or two others who belong to the little clique ridiculed of old as the "greenery-yallery." Mr. Burne-Jones himself, like Rossetti, has certain qualities which make him great despite his shortcomings. But they are the very qualities which cannot be imitated; from him his followers acquire only his mannerisms, which they mistake to be his chief virtues. It would be far better for the student to begin by studying the work of men like Bonnat and Bouguereau, for, vapid and conventional as it is, the drawing is usually academically correct, the technique workmanlike. With a sound foundation, the student who has anything in him may be trusted to evolve a style for himself. On the other hand, the faithful copying of Mr. Burne-Jones's work could but teach him the crudities which have always stood in that artist's light. Unfortunately, sometimes it is not even Mr. Burne-Jones, but his imitator, who is studied.

The beauty of Burne-Jones's work speaks for itself. But its danger to others cannot be too strongly insisted upon. He is a marvellous exotic. Exotics have been produced throughout all the centuries, from Botticelli and onward. But it is not these men who advance art, although the best of them, like Puvis de Chavannes, are in no sense behind their age. The artists who really have the greatest power, and whose influence is the healthiest, are the men who give dignity and beauty to their own times and surroundings—men like Rembrandt, like Velasquez, like Corot, like Degas, like Whistler. N. N.

THE DIARY OF THE DAUPHINESS.

PARIS, January 5, 1893.

IT was Victor Hugo who once spoke of what he called "la pitié suprême"—a pity which has its foundation in the lowest depths of human nature, which survives all revolutions, which becomes a tie between the conqueror and the conquered, between the victim and the executioner, which is nothing but the most dramatic expression of the frailty of human life, of the terrible mystery of existence, of the apparent injustice of destiny. I have never thought of the young children of Louis XVI. and Marie Antoinette, shut up in the Temple, without feeling this "supreme pity." Whatever may be said of the King, of his want of comprehension of the affairs of state, or of Marie Antoinette, of her levity, her weaknesses, we all must feel that their young children, at least, were absolutely innocent and faultless; they became the victims of errors which they had not committed, of which they were even ignorant; and their destiny was marked by that awful fatality which the Greeks so often invoked in their admirable dramas. I can well conceive that all souvenirs of the young Dauphin and of his sister should now be considered almost sacred. M. de Chantelauze has written with pious care the history of the captivity and death of Louis XVII.; I have now before me a memoir written by his sister, Marie-Thérèse-Charlotte of France. The manuscript of this memoir is written in a copybook, on very coarse paper, with this title: "Mémoire écrit par Marie Thérèse Charlotte de France sur la captivité des princes et princesses ses parents depuis le 10 août 1792 jusqu'à la mort de son frère arrivée le 9 juin 1795."

The Committee of Public Safety having decided that a woman should be placed near the daughter of Louis Capet, to be her companion, a lady offered herself, and was accepted. She gave as her name Madeleine Hilaire La Rochelle; she was the wife of Citizen Bocquet de Chauterenne (Hilaire de la Rochelle had served in the French navy). The child saw at once that Madame de Chauterenne was moved by a sentiment of pity and devotion; she soon became intimate with her, and called her Renète (her name was Renée). It was the painful duty of Madame de Chauterenne to inform Madame Royale of the death of her young brother. The scene is thus told by M. de Beauchesne, in his 'Louis XVII.':

"'Madame has no longer any relatives.'
"'And my brother?'
"'She has no brother.'
"'And my aunt?'
"'She has no longer any aunt.'"

This took place at a time when the Convention was negotiating with Austria. The liberty of Madame Royale was one of Austria's conditions; the Cabinet of Vienna offered a ransom of two millions; the French Government asked in exchange for the Princess the French prisoners delivered to Austria by Dumouriez, Sémonville, Maret, Beurnonville, and Drouet, the famous postmaster of Varennes. The Treaty of Bâle was ratified on the 28th of November, 1795, and it was agreed that the Princess should be exchanged at the Swiss frontier. She was allowed to choose a person who should accompany her. She chose Mme. de Sérent, whom she had always seen with her aunt, Madame Elisabeth.

Renète was not allowed to go with Madame Royale, as the Emperor of Austria had stipulated that none of the persons who had been with her during her captivity in the Temple should accompany her to Vienna.

"My dear good little Renète," wrote the Princess, the day before her departure, "don't be so afflicted. You augment my sorrow by your own. Can you believe that I will ever change towards you? No, never. I shall always remember with pleasure my little Renète. I hope to see you again. Nothing is impossible. . . . I thank you, my Renète, for all you have done for me during the past six months. I end, for I don't know what I am saying. To-day is a great day for me, and my head is confused. Adieu, handsome, good, sweet, amiable, gay, complacent, frank, charming Renète."

The Committee of Public Safety did not accept Mme. de Sérent, the Princess's companion, and chose Mme. de Soucy, the daughter of her former governess, Mme. de Mackau. On leaving her prison, the Princess left with her dear Renète the papers which are now published, and which were the diary of her captivity. She was placed under the guardianship of a captain of gendarmes, M. Méchin. She left Paris on the 18th of December, and, after a journey of six days, arrived at Huningue, a little town near Bâle. There she wrote to Mme. de Chauterenne·

"I was recognized the first day at Provins. You have no idea how people ran to see me. Some called me my dear lady, others my dear Princess. Some wept with joy, and I also was near weeping. . . . What a change from Paris to the departments. At Charenton people were already refusing to take the assignats. They murmur loudly against the Government. People regret their old masters, and even me, poor thing. They all seem grieved at my departure. I am known everywhere, notwithstanding the care of those who surround me. . . . Oh! my dear Renète, if you knew how I feel! What a pity that such a change should not have taken place earlier! I should not have seen my family perish with so many thousands of innocent people. . . . My companions are very worthy people. Our M. Méchin is a good man, but very timid; he is in constant fear lest the *émigrés* come and seize me, or the Terrorists kill me."

On December 26, 1795, the exchange took place, and the daughter of Louis XVI. was placed in the hands of the envoy of Austria, who signed this paper: "The undersigned, in virtue of the orders of his Majesty the Emperor, declares having received from M. Bacher, French ambassador delegated to this end, Madame the Princess Marie-Thérèse-Charlotte, daughter of his Majesty King Louis XVI."

The manuscript left in the hands of Mme. de Chauterenne remained in France till 1805. Madame asked for it then, and it was sent to Mittau. Madame herself made a copy of it, which she gave to Mme. de Soucy; she sent the manuscript back to Mme. de Chauterenne. In 1823 Mme. de Soucy had a few copies of the memoir printed. Madame, who had become the Duchesse d'Angoulême, was very much displeased and had all the copies bought up and destroyed. Two or three only were preserved. Mme. de Chauterenne had kept her manuscript faithfully, and she sent it to the Comte de Chambord a few months before he died. The Duchess of Madrid found it among the papers of her uncle, and allowed M. Gabriel de Saint-Victor to make a copy of it at Viareggio.

The diary begins, as we have said, on August 13, 1792, at the Temple. Madame gives the list of the persons who were shut up on that day. We find in it Mme. de Lamballe, Mme. de Tourzel and her daughter Pauline, the servants of the King, the Queen, and Mme. Elisabeth. Louis XVI. fortunately found a library in the prison. Marie Antoinette worked at some tapestry. A few days afterwards all the servants were sent away. The King remained alone with a gendarme. Mme. de Lamballe and Mme. de Tourzel were obliged to leave the Temple. "My father was no longer treated as King. He was not called 'Sire' or 'Your Majesty,' but 'Monsieur' or 'Louis.' The *municipaux* were always sitting in his room with their hats on their heads. They took from my father his sword, which he still had, and emptied his pockets." The jailer was named Rocher. "He tried in every way to torment my

father. Sometimes he sang the Carmagnole, and, a thousand horrors! sometimes, as he knew my father did not like the smell of a pipe, he contrived to puff his smoke over him. There is no sort of small torment that he did not invent. My father bore everything mildly and forgivingly."

The prisoners were constantly insulted. They heard from time to time the sound of drums; they learned by bits the news of the outside world. One day they were dragged to the window, and the head of Mme. de Lamballe was shown them on a pike. At times a sentry gave them in secret some mark of affection—a word, a look. They learned of the establishment of the Republic on the 22d of September; soon after, Louis XVI. was separated from his wife and could see her only at meal times.

"My father," writes the Dauphiness, "rose at seven. He prayed, then dressed himself with my brother; they went up stairs and breakfasted with my mother. After breakfast my father went down with my brother and gave him lessons till eleven. My brother played till twelve; then we walked together, whatever the weather, while the guard was changed and the new guardians assured themselves that my father was in the Temple.

"The walk lasted till two, when we dined; after dinner, my father and mother played together trictrac or piquet. At four, my mother went up to her room with my brother, as my father generally slept at that time. At six, my brother came down, took lessons and played till supper. At nine, after supper, my mother undressed my brother and put him to bed. My father went to bed only at eleven."

What could have been the thoughts of the unfortunate prisoners who led this dull, quiet life? The monotony of it was broken only by insults and fears. The King's trial began in December; Louis XVI. showed the greatest calmness and fortitude during the whole of it. The sentence was announced to the King in his prison, first by his lawyer, M. de Malesherbes, and afterwards by Garat, the Minister of Justice. The King asked for a reprieve of three days, which was refused.

Madame gives very minute details as to the last moments of the King. On his way to the scaffold, he met a doorkeeper whom he had scolded a little the day before. He offered him his hand, and said, "Mathé, I am sorry to have offended you; I beg you to pardon me." On the road to the guillotine he read the prayers of the dying. Cléry, the King's servant, gave to Marie Antoinette the King's wedding ring and a lock of her own hair which he had always had on his person. I have no space nor have I the desire to enter into further details of the horrible drama. If ever the Dauphiness was accused of coldness, of hardness, when she was known afterwards in France as the Duchesse d'Angoulême, she can easily be forgiven. Such an infancy, such a youth must leave an indelible mark. There is a degree of forgiveness which borders on insensibility, I might almost say on immorality. The Duchesse d'Angoulême could not forget those days in the Temple, and the awful tragedy of which she was the innocent witness. She was, in one sense, more human than Louis XVIII., who took regicides into his councils. Those who disliked her during the Restoration disliked in her the living protest against the crimes of the Revolution. She lived but to suffer, and to her has fitly been applied the verse of Dante:

"Vedi che son un che piango."

Correspondence.

FRANCE AND THE UNITED STATES.

To the Editor of The Nation:

Sir: You have twice referred to the article of Count Melchior de Vogüé upon the "Present Hour" in the *Revue des Deux Mondes*, but I think you have not brought out its strongest point. It is most striking as showing how the problem of popular government, even if we allow for the difference of population and circumstances, is precisely the same in France and in the United States. After pointing out that the two dangers are from private combinations of capital on the one side, controlling government after the fashion of feudalism, and from the socialism and communism of labor on the other, he says that the real evil is the weakness of government as a mediating force, and exclaims:

"Where is the sacramental division of powers, O Royer-Collard! The Legislature has in every respect taken the place of the Executive, which is reduced to the lowest servitude. It had already encroached upon the judiciary by removals, and how it is now trying to absorb this third power is the topic of the day."

He, like almost all the other writers from Paris, says that these Panama scandals are made use of by Monarchists and Bonapartists, just as Boulanger was a while ago, in a desperate effort to upset the Republic. They are throwing mud at everybody, including President Carnot, and are moving heaven and earth to bring on a general election, expecting to get a majority of their own men. Meantime, the Chamber, notwithstanding its absorption of power, is in a state of panic like a flock of sheep, which panic is rapidly spreading to the country, and preparing for the recoil from anarchy to despotism which has made up the weary round of the last hundred years. Fortunately Minister Ribot, probably backed by the President, has refused to dissolve the Chamber, but the pressure is tremendous and the result doubtful. M. de. Vogüé then takes the next step:

"In our Babel, where every one gives a different opinion on public affairs, it is not difficult to discern under this cacophony the common want, the universal aspiration. What is needed is a firm and consistent guidance; and it is looked for only from a man. The mass of our people joins a horror of revolutions to the desire for a strong national and social protection, and, with the instinct of good sense, it believes in the efficiency of this protection only when it sees it embodied in a name, in a physiognomy, and above all in a heart. The élite has the same idea, because the élite, which knows itself well, feels itself to be still more feeble than the mass, and is more distrustful of its capacity to govern itself. They do not all say so; many are kept back in public by a sort of timidity, by a fear of connecting themselves with a recent and miserable occurrence, by old habits of language and style contracted in opposition under 'the tyrant.' All think so, even those who officially print or say the contrary. Which of us has not seen some publicist among his friends, still excited by the article he had just written on the dangers of personal power, lay down his pen and exclaim to himself, 'Where is the man?'

"For my part, I see nothing to be ashamed of. The shame is in thinking so poorly of this land of France as to decide *a priori* that henceforth in great national crises it can produce nothing but a baleful dictator, a military adventurer, or a politician without scruples. If the exasperation of discontent came near delivering a republic to a Boulanger, have we not seen republics defended and respected by a Cavaignac, a Washington? The President of the Republic makes but one mistake, that of ignoring his strength. Placed in his high position without intrigues and without noise, with a modest but unstained reputation, he has gradually strengthened himself and grown in public opinion, aided by his irreproachable attitude and the good fortune which has marked his official career. I believe I shall not be contradicted by any one who has passed through our rural departments within two years, when I say that but one name is there respected, potent, and popular, that of the inaugurator of the Exposition, of the Friend of the Tsar. Not all the machines which the skilled politicians could combine would stand against a direct word from the President.

"Suppose that, at the next crisis, when we have descended still some degrees lower in anarchy, the President should at last wish to reassure and govern the country; that he should compose a Cabinet of men of affairs, armed with a decree of dissolution: if these men are still obscure, what matter provided they are competent in their respective departments? I would wager all that I hold dearest in the world that, after such an act, the country consulted in the name of the President would send him a compact majority, docile in the hands of the chief of state."

There are several pages more like this extract, which, indeed, I have greatly condensed. Every word is golden, and cannot be too strongly commended to your readers. Might it not all have been written for this country? Certainly we are not in danger from socialism or foreign war or the machinations of priests, Monarchists, and Bonapartists. But we have a Congress floundering in a slough of tariff and silver and pension bills, where, as in all the State legislatures, the lobby of private interests flourishes with as much vigor and success as in France. And we have an enormous advantage in that the President, instead of being elected, as in France, by the houses, is the direct choice of the people. Suppose that, instead of sending humble messages to Congress, the President should address himself directly to his constituents, telling them that the real trouble in our politics is the anarchy of the legislature; that the guidance of legislation is just as much executive work as the mint and the post-office; and that if we are to have any sound finance, it must be through measures laid before Congress by the Secretary of the Treasury with a public demand for immediate debate. What sort of a response do you think we should get from the country?

Of course, the outcry would be as to the danger from executive power. Is it better that the President—who, after all, cannot get a law or a dollar of money without the assent of Congress—should have open and responsible power, or be limited to intrigue and office-trading with members and committees, which are now his only, though very powerful, means of influence? Is it better that power should be lodged with the Chief Magistrate intrusted with and responsible for administration, or with the Speaker, an officer of the House, whose election is based on his formation of the committees, the most corrupting power imaginable, who represents only one 340th of the country, and who is directly responsible for nothing whatever, whether in legislation or administration? G. B.

Boston, January 14, 1893.

THE RESULTS OF POPULAR EDUCATION.

To the Editor of The Nation:

Sir: President Eliot, in the December *Forum*, states that universal education has "failed to produce general contentment and public happiness." It does not seem to me that the kind of happiness which flows from contentment is what education may be fairly expected to produce, but that rather, as he says later on, "it may be that general discontent is

a necessary antecedent of social improvement, and a preliminary manifestation of increased knowledge and wisdom in all classes of the community." I do not think that "public education should mean the systematic training of all children for the duties of life," but, on the contrary, something supplementary to the narrowing influences of a purely practical or technical training which will be necessitated later on by the exigencies of life.

If there is "serious and general disappointment at the results of popular education," it would seem to me to be the consequence of a fundamental misunderstanding as to the nature of the results to be expected from it, and an insufficient appreciation of the intrinsic value of learning in itself, as compared with the practical or material benefits to be derived from it either by the individual or by the community at large. The intrinsic value of liberal culture is shown by the relatively low salaries which persons in literary or scientific pursuits are willing to accept for their services. Evidently such persons find something in their profession, be it contentment or progress, which they value more highly than the material comforts which an increase of income might give. Again, it is well known that the cost of education in our public schools is small in comparison with the sums which those who cannot have such education free are willing to pay for it. Does it not follow that public education has at least been successful from an economic point of view?

In stating some of the material advantages derived from education, Mr. Eliot says little or nothing about books and inventions, which may especially be called products of education. The value of one of the latter—the Bell telephone—which will soon belong to the public, is probably greater than the total amount (some $30,000,000) contributed by all the State legislatures of this country to the cause of higher education since the Declaration of Independence. Does any one doubt that the community has been amply repaid by inventions alone for the amounts expended upon public education, considered simply in the light of a business investment? But aside from the material advantages to be derived from education, is not the enormous issue of copyrights and patents in late years a proof of intellectual activity? As Mr. Eliot says: "We find on every hand evidences of increased intelligence in large masses of people." It seems to me that intelligence, not outward contentment, is the true test of the success of education.

There is, accordingly, some doubt in my mind as to Mr. Eliot's fundamental assumption that "education has not accomplished all that might fairly be expected from it"; and while I heartily agree with him that the introduction of a systematic development of certain mental faculties would be a great improvement in existing methods of instruction, I question in his article several minor points, which, perhaps, I may be allowed to mention without discussion.

First. While a judicious elimination of studies pursued chiefly for the sake of information is highly desirable, the extreme subordination of such studies seems to me unwise. Information, not observation, furnishes our principal store of facts, and "facts," as Mr. Eliot says, "diligently sought for and firmly established, are the only foundation for sound reasoning."

Second. There would seem to be no fundamental distinction between the faculty of "expressing one's thoughts clearly, concisely, and cogently," and that of "making a correct record of things observed."

Third. It seems to me desirable to recognize, under the head of reasoning, at least three distinct faculties, namely, *generalization*, met with in all studies which, like natural history, deal largely with classification; *explanation*, or the study of cause and effect, which constitutes the bulk of modern physical science; and *judgment*, or quantitative reasoning, exemplified in the treatment of statistics, the fair adjustment of accounts, and the solution of problems in accurate measurement.

Fourth. The importance of arithmetic in quantitative reasoning, and the lamentable deficiency of students in this particular, are to me sufficient ground why more, rather than less, time should be devoted to simple arithmetical operations in the schools.

Fifth. There seems to me to be considerable doubt as to the extent to which the substitution of one subject for another can be carried without prejudice to the training of those faculties which each subject is specially fitted to develop. Observation may be trained by Greek roots, or expression by chemical symbols, but how about the *amount* of training in each case?

In conclusion, I would point out two dangers which are closely related to what precedes, and seem to me likely to impair the future success of education. The first is the proposed adoption of the elective system by the preparatory schools, which will enable a student to follow his natural bent in strengthening those faculties in which he is strong and neglecting those in which he is weak. The second is an increasing tendency in higher institutions to adjust their curriculum, their hours of study, and even their standards of scholarship to the accommodation of those whose chief interests lie in society or athletics. If teachers and scholars do not uphold and respect the worth and dignity of education, by whom is it likely to be respected or upheld?—Yours truly,

HAROLD WHITING.

BERKELEY, CAL., December 31, 1892.

AN EDITORIAL OVERSIGHT.

TO THE EDITOR OF THE NATION:

SIR: In the January number of the *Cosmopolitan* is an interesting article entitled "The Making of an Illustrated Magazine." On pages 268, 269, is the following in regard to selection of manuscripts for publication: "From the registering clerk they pass to the hands of an assistant editor, who gives each contribution a careful reading, and then sends to other readers for fresh judgment such manuscripts as seem to require supporting opinions. . . . After much work the manuscripts are assorted under three heads. . . . A consultation next follows with the editor-in-chief of the magazine, the doubtful manuscripts are carefully gone over," etc. From these quotations and from other matter on the same pages, we must infer that great care is used in making selections for this one of "the four great magazines."

In the same number of the *Cosmopolitan* is also another interesting article, entitled "The Confessions of an Autograph-Hunter," in which the writer exultingly describes his methods of collecting autographs—methods so dishonorable and confessedly so intended to deceive as to be little short of criminal. Are we not bound to believe that this selection somehow slipped in, unread by "an assistant editor," by "other readers," and also by "the editor-in-chief"?—Yours very truly,

D. S. KELLOGG.

PLATTSBURGH, N. Y., January 7, 1893.

THE ADVERB AND THE INFINITIVE ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "F. H." not long ago declared that an Englishman, if he dislikes a particular word or phrase, is sure to assert that it had its origin in this country. Indeed, so used are we to having our British cousins point the finger of scorn, as an Americanism, at what was sufficiently good to have found favor with Shakspere and his fellows, that we have become tolerably callous. As constant dripping wears away a stone, so perhaps it is only by constant nagging that we can induce our cousins to look at objects as, in Mr. Arnold's phrase, in themselves they really are—so-called Americanisms included. Be that as it may, at all events the complaint of "F. H." has a certain application with regard to the locution about to be discussed—namely, the placing of an adverb or other word or words between the infinitive and its sign *to*. This locution, we learn from Mr. Andrew Lang, once had the honor of being the subject of a telegram from the British Government to its Commissioners in Washington who were negotiating a treaty in 1871. "The Home Government," writes Mr. Lang, in his 'Sir Stafford Northcote' (1890), "kept putting in their oar, and once—for which much may, by literary persons, be forgiven them—they telegraphed that in the treaty they would *not* endure adverbs between 'to' (the sign of the infinitive) and the verb. The purity of the English language they nobly and courageously defended" (vol. ii., p. 13).

Here we find the British Government posing as the defender of the English language against that American corruption of it about which Dean Alford took so melancholy a view. From the assumption that there is a sort of divine right by virtue of which the British Government becomes the arbiter as to the correct use of English, to the assertion that the locution in question has originated with, or is in some way peculiar to, American writers, the step is an easy one. If any one is disposed to take this step, let him first consider well a paper contributed by your correspondent above mentioned to the third volume of the *American Journal of Philology* (1882, pp. 17–24). Mr. Hall has there brought together a large number of examples of this locution, ranging from a period as early as the last quarter of the fourteenth century to the present day; and among the writers cited—to mention only the more reputable and those only who use the locution in their formal writings—are Matthew Arnold, Sir Thomas Browne, Burke, Coleridge, Madam d'Arblay, Defoe, De Quincey, Dr. Johnson, Macaulay, Ruskin, H. Spencer, Leslie Stephen, and Wordsworth.

But as the examples given by Mr. Hall are largely from the by-ways of literature, as none are from American writers, and as there still seems to be a hesitancy in acknowledging the wide extent to which the locution is used by reputable writers, perhaps a few more examples by way of supplement to those of Mr. Hall will not be amiss. Besides the passage quoted above, Mr. Andrew Lang has elsewhere expressed, in no uncertain terms, his opinion of the locution.

"He who aims at failure," he writes, in 'How to Fail in Literature' (1890), ". . . can hardly be too reckless of grammar, and should always place adverbs and other words between 'to' and the infinitive. . . . But some one may reply that several of our most popular novelists revel in the kind of grammar which I am recommending. This is undeniable, but certain people manage to succeed in spite of

their own earnest endeavors and startling demerits. There is no royal road to failure. There is no rule without its exception, and it may be urged that the works of the gentlemen and ladies who 'break Priscian's head'—as they would say themselves—may be successful, but are not literature. Now it is about literature that we are speaking" (pp. 25, 26).

Could dogmatism go further than the implication that though a writer using the locution may be successful, yet the writing containing it cannot be literature? The Rev. John Earle, in his 'English Prose' (1890), though erroneously asserting that the locution came into general use about 1870, has this to say in its favor: "To conclude this section, there is one remark that should be made upon a phenomenon so novel and interesting. It is this: We must recognize in this innovation an instructive effort to satisfy the desire for greater lucidity" (p. 186). And in what is doubtless the most recent work on the subject, the 'Foundations of Rhetoric' (1892), Prof. A. S. Hill, though discussing the locution without dogmatism, yet seems unwilling to acknowledge its wide usage among writers of repute.

"This example," he says, "shows a common fault, one into which even good writers occasionally fall—that of putting an adverb or an adverbial phrase between 'to' and the infinitive—words so closely connected that they should not be separated. . . . Its prevalence has led some students of language to insist that good use sanctions, or, at least, condones, the practice of putting adverbial expressions between 'to' and the infinitive; and one well-known scholar has adduced what at first sight seems to be a formidable array of citations, ranging from the time of Wickliffe to the present day. On examination, however, it turns out that the names of some of the highest authorities on a question of good use—Addison, Goldsmith, and Cardinal Newman, for instance—are conspicuous by their absence; and that each of several other authors of highest repute is represented by only one example" (pp. 136, 138).

Though I am unable to adduce examples from the three writers specified, yet in the following list will be found the names of such reputable writers as Browning, Mrs. Browning, Byron, Hawthorne (?), O. W. Holmes, Keats, Lowell, Massinger, and Shakspere; while additional examples are given from such stylists as the late Matthew Arnold and Mr. Herbert Spencer:

"To bodily act." Shakspere, *Coriolanus* (1623), Act I., sc. ii., l. 5.

"To truly make." *Nero* (1624), Act II., sc. iii. (1888), p. 37.

"A dancer in the morning to well breathe you." Massinger, *Guardian* (1655), Act I., sc. ii. *Plays* (1889), vol. ii., p. 205.

"To rather pity and excuse, than blame me." B. Franklin (1738), *Works* (1887), vol. i., p. 477.

"To quite give," "to here unburthen," "to continually burst," "to entirely give," "to quite understand," "to nearly reach," "to certainly write," "to cheerfully, in all things serious, obey," "to either attach," "to shortly avail." Fanny Burney, *Early Diary* (1889), vol. i., pp. 18, 47, 122, 222, 252; vol. ii., pp. 11, 50, 51, 76, 86.

"To silently wish." Susan Burney (1779), *Early Diary of F. Burney*, vol. ii., p. 269.

"To under value the land." Washington (1797), *Writings* (1892), vol. xiii., p. 425.

"To slowly trace." Byron, *Childe Harold* (1812), Canto II., st. xxv.

"To vainly bleed." *Id.*, *Corsair* (1814), Canto I., st. xiii.

"To nightly call." Keats, *Endymion* (1818), Book I., l. 362.

"To half beg." *Id.*, *Cap and Bells* (1820), st. iv.

"To publicly express." Whittier, *Abolitionists* (1833), *Prose Works* (1889), vol. iii., p. 59.

"To really know." Browning, *Pippa Passes* (1841), *Poems* (1887), vol. i., p. 366.

"To tamely acquiesce." *Id.*, *Colombe's Birthday* (1844), Act V. (cited in Hill's *Principles of Rhetoric*).

"To never trust." Mrs. Browning, *Aurora Leigh* (1856), Book viii., *Poems* (1890), vol. vi., p. 308.

"To so present," "to rightly connect." H. Spencer (1852), *Essays* (1891), vol. ii., pp. 334, 339.

"To vaguely conceive." *Id.* (1861), *First Principles*, Part ii., ch. iii., p. 170.

"To forcibly dismember." J. L. Motley (1862), *Correspondence* (1889), vol. ii., p. 102.

"To rightly see," "to fairly try," "to fin'lly git." Lowell, *Poems* (1890), vol. i., p. 219; vol. ii., pp. 266, 311.

"To really understand." O. W. Holmes (1860), *Elsie Venner* (1891), p. 271.

"To utterly extirpate," "to thoroughly republicanize." *Id.*, *Pages from an Old Volume of Life* (1891), pp. 107, 404.

"To half do." *Id.* (1867), *Guardian Angel* (1891), p. 393. See p. 275.

"To at least make." N. Hawthorne (about (1864), *Septimius Felton* (1883), p. 372. (This piece was never revised by Hawthorne, and was not published till after his death.)

"To unwittingly disparage." M. Arnold (1869), *Culture and Anarchy* (1883), p. 150.

"To actually follow." *Id.* (1872), *Literature and Dogma* (1883), p. 234.

"To neither strive." *Id.*, *Poems* (1883), vol. ii., p. 188.

"To directly serve." *Id.*, *Discourses in America* (1885), p. 107.

"To similarly degrade." J. C. Collins, *Introd. to Tourneur's Plays and Poems* (1878), vol. i., p. xxix.

"To entirely obliterate." H. Van Laun, *Gil Blas* (1886), vol. i., p. 300.

"To formally advocate," "to so enfeeble," "to sharply draw." Rev. A. V. G. Allen, *Continuity of Christian Thought* (1885), pp. 86, 159, 221.

"To profoundly modify," "to seriously modify," "to considerably reduce." Sir R. S. Ball, *Story of the Heavens* (1886), pp. 279, 426, 481.

"To really consider." H. C. Lodge, *George Washington* (1889), vol. i., p. 102.

"To more than counterbalance." T. R. Lounsbury (1891), *Studies in Chaucer* (1892), vol. i., p. 447.

"To successfully carry." *Nation*, 1 Dec., 1892, p. 418.

So far as appears, then, the first use of the locution by an American writer was more than a hundred years after its appearance in the Shakspere First Folio; and not until well into this century did it, so far as the present writer is aware, find its way into formal writings in this country. But, whether used much or little by American writers, an examination of the examples given by Mr. Hall and those given above shows how utterly groundless and absurd was the alarm caused the British Government by the fear lest corruption should, in this respect, creep into the language from this side of the water. How often must our cousins across the Atlantic be reminded that, in the words of Lowell, *our* ancestors "unhappily could bring over no English better than Shakspere's"?

ALBERT MATTHEWS.

BOSTON, January 8, 1893.

"SNIBAR."

TO THE EDITOR OF THE NATION:

SIR: Most of Lewis and Clark's names are absolutely determinable, both etymologically and geographically; a few have hitherto defied conjecture. The worst of them are those that look well, but are not what they seem. One of the most curious cases is the name of the creek in Missouri called by the explorers Eau Beau, translated Clearwater. Nothing could be clearer, apparently; but here is a snag of a singular shape. Elsewhere in the Biddle text the same creek is called Hubert's—and there is always a danger-signal in a case of such different words. I find that Eau Beau is one form, and Hubert's another, of the same name and the same word—a word which is also hidden in "Snibar," present appellation of the creek in question. The curious history is this: Lewis's map of 1806 (never published till November 4, 1887) inscribes Bau-beaux. The Lewis and Clark codices, in manuscript, yield Euebeaux's, Eubert's, Eue-bert, etc. Gass, 1807, prints Du Beau or Du Bois. Pike's map, 1810, has Eabeace. Brackenridge, 1814, Ibar's. An unidentified map before me inscribes Aux Héberts. Maj. Long, 1823, prints Au Barre, with Chenai (misprint for chenal, slough) prefixed. Beck's Gazetteer, 1823, has Chenel Ebert. Wetmore's Gazetteer, 1837, speaks of Schuyte Aber, and has quite a story of an old trapper, one Aber, who came to this creek and supposed it was a slough or cut-off of the Missouri. Here I presume that Schuyte is a misprint for Schnyte, and that a form of German Schnitte, a cut, slice. The doubt is that there was a German in the country before 1804; for with scarcely an exception the names that have reached us were then French, if not Indian or English. I should imagine the person to have been a Canadian voyageur, or coureur des bois. But, whoever he was, and whatever his name, the creek was called after him; and every name above is a form of his name—Eau Beau, Bau-beaux, Euebeaux, Euebert, Eubert, Hubert, Hébert, Du Beau, Du Bois, Eabeace, Ibar, Au Barre, Ebert, Aber—and "Snibar" is the same, with Chenal prefixed. This word is also found as Sniabar and Snybar.

After identification of the words from Lewis and Clark to Long, my attention was called to the other forms, in Beck and in Wetmore, by Mr. A. J. Hill of St. Paul, to whom I wrote. Accepting the chenal element in Snibar, Mr. Hill furnishes two other cases, which would confirm the view here taken, were that required. There is a Snicarty, a bayou of the Mississippi, in Pike County, Ill., otherwise given as Che nail-ecarte in Beck; and a certain Sny Magill in Iowa.

ELLIOTT COUES.

No. 1726 N STREET, WASHINGTON, D.C.

Notes.

DEFINITIVE announcement is now made of Dr. Elliott Coues's new edition of Lewis and Clark's 'Travels,' to be published in this city by Francis P. Harper. It will contain *all* of the original Philadelphia edition of 1814—preface, Jefferson's memoir of Lewis, history of the expedition, maps, plates, and appendices; together with a new preface, bibliography, memoirs of Lewis, Clark, and Sergeant Gass, copious notes (historical, geographical, ethnological, zoölogical, botanical), a new map, new portraits and other illustrations, and a complete index (the first ever made). The edition will consist of 1,000 copies in four volumes (the maps and index making one); 200 copies on hand-made linen paper, the rest half as costly. It will be ready in the spring.

G. P. Putnam's Sons are about to publish, for subscribers only, the Works of Fenimore Cooper in thirty-two volumes, octavo, from new type and with new designs by well-known artists. Six volumes will be ready next month.

D. Appleton & Co. announce a 'Dictionary of Every-Day German and English,' by Martin Krummacher, Ph.D., with an outline of grammar and several pages of "travel talk."

Macmillan will speedily publish a collected edition of the poems of William Watson, including his recent volume, 'Lachrymæ Musarum.'

Ginn & Co. have in press Leigh Hunt's 'Answer to the Question, "What is Poetry?"' including remarks on versification, by Prof. Albert S. Cook of Yale.

Tait, Sons & Co. will publish directly 'The Parsifal of Richard Wagner,' from the French of Maurice Kufferath.

'Early Maryland, Civil, Social, and Ecclesiastical,' by Theodore C. Gambrall, D.D., of Baltimore, will be published shortly by Thomas Whittaker, who also announces 'The Private Life of the Great Composers,' by John Frederick Rowbotham, with portraits of the fifteen subjects.

Mr. A. W. Pollard, author of 'The History of the Title-Page,' is editing a series of "Books about Books," the first of which will be 'Great Book Collectors,' by Mr. Charles J. Elton and Miss Mary Augusta Elton. Among the later volumes will be one on 'Book Plates,' by Mr. W. J. Hardy, and another on 'Bindings,' by Mr. H. P. Horne. There are to be six volumes in all, of about two hundred pages each, and containing from ten to thirty illustrations. The series is published in London by Kegan Paul, Trench, Trübner & Co. From the prospectus it seems likely to be severely British in its scope, neglecting the French on one side and the American on the other. From Paris we have the news that M. Ernest Thoinan has in preparation an elaborate work on 'Les Relieurs Français (1500-1800),' in writing which he has been aided by the staff of the National Library. In Paris, also, M. Octave Uzanne has published at last his 'Physiologie des Quais.' In the spring the *Century* will begin a series of papers on the art of the bookbinder, to be abundantly illustrated and to give full attention to the development of the art here in the United States. Articles on the subject are also announced to appear during the year in the *Portfolio*.

Many of these books will furnish additions for the second edition of 'A Bibliography of Book-binding,' which Miss S. T. Prideaux has recently published (London : James Bain). To the catalogue of the loan collection of bookbindings exhibited at the Burlington Fine Arts Club, two years ago, Miss Prideaux contributed an interesting historical introduction; and there are other papers of hers on the same subject which show that she is a student as well as a lover of the bibliopegic art. This bibliography is fuller than any of its predecessors in French, and it is, we believe, the first serious attempt at a bibliography in English. It lacks classification, being a mere list of titles of books, pamphlets, and articles in periodicals arranged more or less alphabetically. For a subject of this sort, in which the interest is both artistic and historical, the chronological arrangement seems advisable, and so does a separation of the languages in which the entries are written. Despite the higgledy-piggledy appearance of the page, Miss Prideaux's list is useful and welcome. For a British work it is unusually abundant in its American material.

The need of an index to Von Holst's seven-volume 'Constitutional History of the United States' has been so urgent that it is almost ungracious to criticise the eighth volume, containing in 356 pages an Index and List of Authorities, compiled by Mr. Ira Hutchinson Brainerd (Chicago : Callaghan & Co.). The truth is, however, that Mr. Brainerd displays no aptitude for his task, either in pithy selection and abstraction, or in arrangement, or in typographical elegance. His sub-entries are sometimes alphabetically ordered, sometimes not, and sometimes a mixed practice prevails. The alphabetical order is of no value whatever, as a rule, being purely subjective, whereas in an historical index the grouping should be above all topical and chronological. The confusion we have intimated is well illustrated under Zachary Taylor, the first entry being "character as a general," the twelfth, "death," the thirteenth, "presidency"; then, after numerous entries for this period, comes "Mexico, invades," and the war in detail, then more Presidential items, then "Texas, is ordered to protect, anticipating annexation," etc. We deeply regret that a standard work which has suffered so much from inadequate translation, should be so badly served in a hardly less important particular.

The number of articles reprinted as books from the 'Encyclopædia Britannica' justifies the common characterization of that work as a congeries of books. The two latest reprints to come under our notice are the Earl of Selborne's 'Hymns, their History and Development in the Greek and Latin Churches, Germany and Great Britain,' a dainty little volume with rubricated borders (London: Adam & Charles Black; New York: Macmillan), and Mr. P. G. Hamerton's 'Drawing and Engraving: A Brief Exposition of Technical Principles and Practice' (same publishers). Both (or rather all three) essays have undergone some revision and enlargement, and Mr. Hamerton has to great advantage introduced a large number of cuts, steel engravings, and etchings by way of illustration. In his section on wood-engraving, he ignores the American school, unless his allusive censure be recognition, and he really cannot have seen the highest products of it, or he never would have said that the art "cannot give the delicacy of [the steel line-engraver's] lines." We believe that ninety-nine persons in a hundred would take Kruell's "Webster" for a steel engraving even after examining it; yet it is pure wood-engraving, and not in the least imitative of the sister art. In an appendix Mr. Hamerton has a comment on Mr. Ruskin, apropos of "the law of progress in drawing," and gives graphic proofs of Turner's liberties with landscape as exemplified in his Rivers of France.

Other reprints on our table are Mr. Henry C. Lea's 'Superstition and Force,' in a fourth edition, not much altered, but considerably extended and perfected under certain heads, making it more than ever a standard authority (Philadelphia : Lea Brothers & Co.); the first volume of four into which, for popular acceptability, Mr. Charles Booth has recast his 'Life and Labor of the People—in London' (Macmillan), this portion relating to East, Central, and South London; the 'Letters of James Smetham,' in Globe octavo form (Macmillan); Scott's 'Antiquary,' in Black's Dryburgh Edition (Macmillan), with illustrations by Paul Hardy; and 'Sketches by Boz' in the younger Dickens's reprint of the first editions of his father's novels (Macmillan). Mr. Dickens's Introduction gives interesting particulars about this collection, of which the first sketch appeared nearly sixty years ago; and reminds us that "Boz" (being short for Moses pronounced with a cold in the head) should be sounded with a long *ō*.

In a style consonant with its source is the neat volume of 'Tales of Adventure and Stories of Travel of Fifty Years Ago,' illustrated with twenty plates from "the Annuals" (London: Sampson Low; New York: Charles Scribner's Sons). A certain degree of refinement is associated with steel engravings such as were used, to the happy fostering of the art, to adorn the obsolete Annuals of our mothers and grandmothers. The plates here brought together embrace designs by Stothard, Corbould, Wilkie, Cattermole, Prout, Turner, Collins, Maclise, Roberts, Sir T. Lawrence, and others, and in several cases—notably Coleridge's verses on "The Garden of Boccaccio," Barry Cornwall's "On a Lady Playing the Guitar," and Thackeray's on "The Happy Anglers"—we have the poems written to order to the plates. Spain colors largely the prose selections, to which, among others, Scott, Thomas Roscoe, Lord John Manners, Byron, and William Howitt (who writes on Mrs. Landon) contribute. The sum of the whole is not weighty, and gives an idea of the little worth of the neglected residuum; but the collection is well contrived to fix the impression of an outlived age and literary medium. The editor gives a useful list of the Annuals, beginning with the *Forget-Me-Not* (1823-1847), and ending with the *Amaranth* (1859).

Zola's new novel, 'Docteur Pascal,' which brings to its end the long history of the Rougon-Macquart family, will make its first appearance in the *Revue Hebdomadaire*.

The *Festschrift* of the Geographical Society of Berlin, in commemoration of the four-hundredth anniversary of the discovery of America, prepared by Dr. Konrad Kretschmer, has just appeared in two sumptuous volumes (Berlin: Kühl; London: Sampson Low & Co.), under the title 'Die Entdeckung Amerikas in ihrer Bedeutung für die Geschichte des Weltbildes.' The first volume (pp. xxiii, 471) contains the text, the opening chapter of which gives an account of the cosmography of the ancients, beginning with the Homeric period, and ending with Seneca's prophecy in his 'Medea.' Then follow chapters on mediæval cosmography, the knowledge of the Atlantic Ocean before Columbus, the geographical conceptions entertained by Columbus's contemporaries, and especially by Toscanelli, etc. An interesting and instructive description is also given of the oldest maps of America to 1520. The second and somewhat larger volume is the atlas, a collection of forty maps, twenty-five of which are now published for the first time. They are admirably done in colors and are exceedingly creditable to the printers, Giesecke & Devrient of Leipzig. Indeed, the entire work is a superb specimen of typography, well worthy of the learned society from which it emanates and of the event which it celebrates. The price is 75 marks.

'Cristoforo Colombo e le sue Ceneri,' by Monsignor Rocco Cocchia (Chieti: Ricci), is another contribution to the discussion of the vexed question of the identity of the bones transferred from the Cathedral of San Domingo to Havana in 1877 with the remains of the discoverer of America. The author, who belongs to the Order of the Capuchins and is now Archbishop of Chieti, was present at the disinterment, and is convinced that the body of Columbus was the one actually removed. He has already published two works on the subject, 'Descumbrimento de los verdaderos restos de Cristóbal Colón' in 1877, and 'Los Restos de Cristóbal Colón' in 1879, and in the volume before us amplifies his former statements without adding anything essentially new.

From the *Athenæum's* report (issue of December 31) of the debates at the Head Masters' Conference, in London, it appears that the discipline in English leaves something to be desired in England as well as with us. There was great unanimity of feeling on the subject, "though every speaker took the opportunity of pointing out that his own school was not guilty of neglecting English."

One may learn something from the December *Macmillan's* concerning the Oxford of the tropics. Crowning a wind-swept plateau on the eastern coast of Barbados, three hundred feet above the sea, stand the impressive buildings of Codrington College, the most venerable pile of collegiate buildings in the British colonial

empire. Founded in 1710 by Christopher Codrington, Captain-General of the islands, it began with seminary buildings merely; the West Indian population being too scanty and ignorant to benefit at once by a college. Hurricanes more than once wrought ruin in what had been completed. The College, actually built in 1742, did not really begin to rank as the Alma Mater of the West Indies until 1829, and it is now in affiliation with the University of Durham. The students of Codrington College devote themselves not only to divinity, but to medicine, surgery, and arts as well, obtaining from the only institution in the West Indies empowered to bestow it a university degree. The beautiful buildings and grounds, the avenue of palms and the rich vegetation, the scholastic quiet of chapel and library, furnish a retreat both noble and dignified. From its walls have gone forth three-fifths of all the present staff of West Indian clergy.

The house of Dietrich Reimer (Hoefer & Vohsen), Berlin, have begun a third edition of Dr. R. Kiepert's "Grosser Hand-Atlas," to consist of 45 maps published in parts of five each in the course of the present year. Part I. shows Hanover and Schleswig-Holstein, Denmark and South Sweden, Northwestern Africa, North America, Central America, and the West Indies. These sheets are of uneven date as respects engraving, but all have been overhauled and brought down to date, and among those yet to come some will be wholly new for the present edition. Two innovations are to be praised—a bold engraving of the name and number of each map upon the back; and for each a special index of names, which records the population also, and which is accompanied by a body of condensed statistics respecting each country, prepared by Dr. Paul Lippert, Librarian of the Prussian Statistical Bureau. The Atlas, therefore, becomes a gazetteer. Besides the map of this continent, one of the Eastern United States is promised. Of the mechanical execution of the newer sheets it would be useless to speak; they are beautiful specimens of cartography.

A correspondent writes: "In your account of some educational benefactions at the close of the year 1892, in your issue of January 5, you omitted to mention a gift of $125,000 to the medical school of Western Reserve University at Cleveland, Ohio, by Mr. John L. Woods of that city. Mr. Woods has given the University in all $400,000. During the year 1892 Western Reserve University received in gifts $300,000, among which was another gift from Mr. Woods of $50,000 to the College for Women."

—In the January *Atlantic*, Mr. Sherman S. Rogers pays the last tribute to George William Curtis as the leader of the movement for civil-service reform, whose services in behalf of it, he thinks, "will constitute his highest claim to the gratitude of his countrymen." Mr. Rogers sketches the history of the movement from its source in the resolution of Mr. Jenckes through the Congresses and Administrations of the last twenty years, and describes Curtis as the centre about which the work for reform gathered and went on; and he brings out the fact that it was not so much the political sagacity of Curtis as his elevation of motive and charm of character that won him confidence and leadership among younger men. Mr. Parkman's "Feudal Chiefs of Acadia" opens another episode of the history which he gives life to, and promises a continued topic of interest, and Mr. John Fiske says the word of praise and honor for the historian Freeman with the ardor of an admirer of so varied and generalizing a mind. History is also a third time touched in the study of Cola di Rienzi, which Mrs. Preston and her collaborator add to their series of portraits. In the whole number, perhaps the most attractive piece of writing is Sir Edward Strachey's brief contribution to the eulogy of "Love's Labor Lost," in which mood, substance, and style alike recall days of real culture in literature, and disclose a rare feeling for the values of poetic drama. The paper is neither of criticism nor of scholarship, but springs from pure appreciation of Shakspere's youthful temperament, and delight in it for its own sake—a kind of composition (neither seeking to get nor to give instruction) which is now seldomer met with than in any literary period hitherto, because of the decline of taste.

—In *Harper's*, Mr. Edward F. Waite writes of the history of the pension laws of the country and of their administration with much detail, and endeavors to give a clear view of the present state of legislation and how it came to be what it is. The subject is treated, without any bias, as a large item of the public accounts in respect to which fuller and more exact information ought to exist in the community, with a view to sound judgment of the measures taken and the methods of administering under them; and the article itself is therefore an important one and should receive wide attention. Theodore Child gives a brief general survey of the quarters of Paris occupied by the prolétariat, and one or two scenes from the life led there, by which he brings out the character of the small industrial groups and the manner in which a family pieces out a living in honesty. Mr. Poultney Bigelow describes very feelingly the annoyances of being watched by Russian police spies, and tells why he and Mr. Remington left Russia without doing what they had intended. Mrs. Annie Fields writes pleasantly a few words of reminiscence of Tennyson in which the more cordial side of his nature is illustrated.

—The *Century* contains a paper upon Whittier from the pen of Mrs. Elizabeth Stuart Phelps Ward, which exhibits his personality more frankly and clearly than any other that we have noticed. The extracts from his correspondence, brief as they are, hold out a promise of interest in his letters which is very welcome, and disclose his traits as a man with great attractiveness. Mr. Talcott Williams writes of the "Kindergarten Movement" very elaborately. The topic is one of local interest in this city, and should secure attention from those who have sympathy with the work now being done here in this direction. The younger brother of Millet tells in a simple way the story of the early life of the great artist. His surroundings in boyhood, the character of his parents, and his attachment to the peasant ways in which he grew up are the principal things dealt with, and serve to explain the ground of his nature out of which the special feeling shown in his art came. The letters of Gen. Sherman and his brother during the war continue, and reproduce history as it was when it was current, with graphic effect.

—In *Scribner's* the recollections of Lincoln penned by the Marquis de Chambrun, who was with him during the last visit to Petersburg and saw him then familiarly, are very lifelike, and, though they contain nothing new, are welcome as further illustrations of the man, and especially as being the record of impressions made on a foreigner. The writer was perhaps as much impressed by the way in which the country bore the loss of its greatest man as by anything in Lincoln himself. Mrs. Mario's description of the poor of Naples is a contribution to the chapter of misery now appearing in this magazine, in which philanthropy's mantle of rose-color is put to less use than has been the case with other papers, and the truth of the matter stands out in its nakedness. This is the best way. Other important topics are the Peary Relief Expedition and "The Impressions of a Decorator in Rome."

—That *villa*, 'manor,' a little metamorphosed, is occasionally a constituent of English names of places, was suggested some years ago by Mr. H. C. Coote, in his 'Romans of Britain'; and the suggestion is not unreasonable, to the thinking of the eminent Professor of Anglo-Saxon in the University of Oxford, the Rev. John Earle, who has devoted a short article to the matter in the pages of the *Economic Journal*. Of *-well*, in mediæval times *-welle*, and in Anglo-Saxon *-wella*, *-wel*, *-wyl*, 'fountain, or stream of running water,' it is an accepted fact that we have examples in *Ashwell*, *Blackwell*, *Bothwell*, *Bridewell*, *Coldwell*, *Fulwell*, *Hanwell*, *Hartwell*, and *Hawkwell*, to instance a few from among numerous cases. As to the source and the sense of the second member of these words, Prof. Earle raises no question. In *Wiltûn*, now *Wilton*, however, he inclines to find what is equivalent to the rather tautological *villa-town*, with which, in one respect, *Sharpness Point* is comparable; and he would restore *Wellington* as *Wellingatûn*, 'the town of the villa-folk.' Moreover, there are the Essex and Norfolk *Wella*, *Wela* in Yorkshire, the old *Welingaham* and *Wellingewic*, with *Sidwell*, *Eastwell*, etc., in all which, on grounds that are alleged, he is disposed to see the word *villa*, as also in *burhwella*, a term occurring in a land charter. It being, as he states, acknowledged that *-wyl* and *-weil* sometimes stand, in the German nomenclature, for *villa*, it seems by no means unlikely that the Latin word may be "obscurely imbedded" in certain British place-names, also. This view, though at present little better than a probable conjecture, will perhaps, on farther investigation, be clearly demonstrated.

—It is more than twelve years since Thomas Hodgkin issued the first volumes of his work on 'Italy and Her Invaders'; and now he reissues them in a second, enlarged edition (Oxford: Clarendon Press; New York: Macmillan), and in a form which seems likely to be final. At the time of their publication we spoke at length of Mr. Hodgkin's volumes, so that it is not necessary for us to review them now; but we can commend again the careful scholarship, the justice, and the clear style in which they are written. The work has already taken the position of a standard for that intricate and often obscure period of history from the fall of the Roman Empire to the coming of Charlemagne. In his revision Mr. Hodgkin has expanded his first volume into two, but we do not observe that he has added any irrelevant matter; on the contrary, the specialist will find here the results of much patient investigation of original sources, and the more general reader will not be overpowered by a mass of petty details. The final chapter of the second volume, in which the author discusses the causes of the fall of the Western Empire, is worthy of any living English historian. Froude might surpass it in style—though in the matter of Froude's style we do not follow the prevailing fashion of laudation—but we should look in vain to Froude for conclusions so sober and

statements so fair as Mr. Hodgkin here presents. To have succeeded, after Gibbon, in giving a satisfactory picture of the stupendous spectacle of the dissolution of Rome is an achievement whose magnitude cannot yet be exactly defined. Gibbon's work describes the decay of the Imperial world-system; Mr. Hodgkin, taking the other point of view, makes more prominent the manifestations of the new forces of Teutonism which were to supersede the failing forces of Rome and to build up a new Christendom.

—Among our larger, but not largest, cities, five show preëminent growth during the last decade. Those five are Minneapolis, St. Paul, Omaha, Kansas City, and Denver. These cities, and no others, had so grown as to rank for the first time among the twenty-eight places each numbering more than 100,000 inhabitants. They thus displaced five of the cities which in 1880 had stood in the foremost twenty-eight, namely, Albany, Richmond, New Haven, Lowell, and Worcester. Still, all these ousted cities showed a fair increment. Their relative decline during the decade in the list of cities was as follows: Albany fell from No. 21 to No. 29; Richmond from No. 25 to No. 34; New Haven from No. 26 to No. 35; Lowell from No. 27 to No. 37; and Worcester from No. 28 to No. 32. The decline in relative rank was greatest in Lowell. On the other hand, the advance of Minneapolis was from No. 38 to No. 18; St. Paul from No. 45 to No. 23; Omaha from No. 63 to No. 21; Kansas City from No. 30 to No. 24; and Denver from No. 50 to No. 26. The progress of Omaha, which in ten years outstripped forty-two competitors in the race for population, was altogether unprecedented. All the losses were in the old East—in Massachusetts, Connecticut, New York, and Virginia; all the gains were in the new West—in two cities on the Mississippi, two on the Missouri, and one far beyond it.

LANCIANI'S ROME.

Pagan and Christian Rome. By Rodolfo Lanciani. Profusely illustrated. Boston: Houghton, Mifflin & Co. 1892.

It is the popular impression that the excavations on ancient sites which have been carried on so extensively during the past twenty-five years, have had for their object the discovery of purely ancient or classical civilizations. Lanciani's new work is a proof that, so far as Rome is concerned, the popular impression is, as usual, mistaken. The book contains six chapters with the following titles: Pagan Shrines and Temples, Christian Churches, Imperial Tombs, Papal Tombs, Pagan Cemeteries, Christian Cemeteries, and an introductory chapter on the Transformation of Rome from a pagan into a Christian city. The main idea of the book is to trace the course of this transformation, and to show that it did not take the world by surprise. "It was the natural result of three centuries. . . . It was not a revolution or a conversion in the true sense of these words; it was the official recognition of a state of things which had long ceased to be a secret." In describing the change, the author's intention is "to mention only subjects illustrated by recent or little-known discoveries, or else to select such representative specimens as may help the reader to compare pagan with Christian art and civilization."

It is almost impossible to overestimate the amount of material which Lanciani had at hand to help in the compilation of this book. Some idea of it as mere magnitude may be gained from two or three concrete examples. Nobody needs to be told what a fertile field for the study of the civilization of an ancient people is afforded by its tombs. In 1887, when the Corso d'Italia was opened, 855 tombs were discovered in nine months. Scarcely less important for the same study in Italy are the *favissae* of temples, the vaults in which were buried by the thousand terracotta or bronze objects which had been hung up on the temple walls as "ex-votos." Periodically, when no space was left for the daily inflow of votive offerings, the priests were forced to have a house-cleaning, and to get rid of the old collection in order to make room for a new one. In the temple of Juno at Veii, there were no vaults, but the stuff was carted away and thrown over the cliff on which the temple stands into the valley below. Thus was formed a regular dump-heap, which, even after two centuries of explorations, was still two hundred feet long, fifty feet wide, and three or four feet deep. From it four thousand objects were taken in a fortnight's campaign in 1889, and twice as many left behind as worthless. Among the objects preserved were models of every part of the human body, as well as entire human figures, alone or in groups, dressed or undressed, some with movable limbs; there were also figures of animals, toilet articles, and sacred utensils of every sort. Still another source of knowledge lies, of course, in inscriptions, and of Christian inscriptions alone we are told that De Rossi, the great authority in this branch, has studied more than 15,000, and that there is still a yearly addition of 500 to the stock.

To pass from mere numbers, among the most important or interesting of recent discoveries on the pagan side are the remains of the temple of Isis, with its *cynocephalae*, obelisk, and the sphinx of the unfortunate Amasis; the shrine of the oath-god Semo Sancus; the tomb of Ecloge, Nero's old nurse, who, with two other women, buried the tyrant's body when all others had deserted him; the prehistoric cemeteries of the Viminal and Esquiline; the tomb of Platorinus, magistrate under Augustus, which once contained also the remains of Caepio, famous in court intrigues under Tiberius; the tomb of the "wonderful boy," Sulpicius Maximus, inscribed with the Greek verses which he extemporized at Domitian's Capitoline games. The account of him reminds one of that other precocious boy, John Evelyn's son, who, at the age of five, "had a stronge passion for Greek," and "wept for sorrow" on being told that Plautus was too hard for him to read. Then, too, we find the record of the discovery in 1890 of the inscription commemorative of the Secular Games—the festival for which Horace wrote the "Carmen Saeculare." Lanciani gives us a full account of this festival, based upon the inscription itself, with its delightful line:

CARMEN·COMPOSVIT·Q·HORATIVS·FLACCVS

It was a line in this inscription that finally settled the question about *Roma Quadrata*, which, we now know, was the name of an altar and not the name of the Palatine city itself. It is probable that Lanciani is right in supposing that the remains of the old altar lie buried deep under the convent of the nuns of the Visitation. We think also that his theory is correct about the disposition made of the enormous mass of earth which Trajan removed to make room for his forum. It was used to cover up a whole tract, serving as a cemetery, and lying between the Salaria and the Pinciana. The level of this tract was thus raised by some twenty-five feet; the upper strata, continuing to be used as a cemetery, contained tombs of the time of Hadrian and later; the lower, tombs of the republic and early empire. Among these later was unearthed in 1885 the mausoleum of the Lucilii.

Turning now to Christian remains, we hear much of the Catacombs. The earliest discovery of catacombs was in 1578, and this is the date of the beginning of Christian archæology. The importance and interest of the Catacombs, with their frescoes, sarcophagi, and inscriptions, are too well known to call for more than mention here. Among early Christian buildings we are given accounts of the origin and remains of private oratories, the "houses of prayer" in which the Gospel was first preached in Apostolic times—famous among them being the house of Pudens, who is mentioned in the Epistle to Timothy; over it was built St. Pudentiana. In connection with his description of this house, remains of which were found in 1870, Lanciani explains how the shape of the oratories, whose general plan was like that of all other Roman houses, may have suggested the form of the modern church. The *tablinum* became the apse, the *atrium* the nave, and the wings of its peristyle the aisles. This theory is attractive, but perhaps it does not take sufficient account of the basilica. Other interesting buildings were the oratories and chapels built over the tombs of martyrs, and the houses of these martyrs themselves, such as that of John and Paul on the Cælian, a full account of which has appeared in the *American Journal of Archæology*. Of a different nature is the author's account of the earliest representations of Christ, of an utterly different type from the modern conception, which grew up in the fourth century. Descriptions of the churches of Rome, in their early and present state, abound throughout the book; more than a page is devoted to this subject in the index. St. Peter's holds, of course, the place of honor, and the account of its development is full of interest. Another interesting section of the book deals with the conversion of pagan monuments, especially temples, into churches. From his experience of twenty-five years of active exploration, Lanciani is emboldened to state that every pagan building which was capable of giving shelter to a congregation was transformed at one time or another into a Christian church or chapel.

Given such material and a man who has had such chances to study it, we should expect a most scholarly and interesting book. Interesting it certainly is; the style is charming, and, in spite of an obscurity here and there, when we remember that the author is a foreigner his mastery of our idiom must be matter for admiration. Further, the excellent illustrations are a great addition to the work, which, with its handsome "Roman" binding, large type, and fine paper, shows that nothing has been grudged which the mere bookmaker's art has to offer. But in method of treatment and in exactness of scholarship we find much to be desired. The author does not in general pursue a subject according to the comparative method, which in the study of a past civilization is the distinctive mark of modern scientific research; rarely, except in the matter of church architecture, does he trace cause from effect or effect from cause. A great opportunity for such treatment was here offered by a city whose history covers almost the whole period of which man has positive knowledge. Origins, survivals, reappearances, and disappearances of customs, methods, and habits are

to be found all along the line, early and late. In this direction the author misses his opportunity, and his work will serve merely as material on which others may build. But probably the book was never intended for serious students; in fact, it bears many of the marks of a "popular" book. Archæologists and many literary scholars will find in it practically nothing that is new to them, but only the old dressed out somewhat more gayly than usual.

But if it was meant for the general reader, we have the right to demand a more than ordinary degree of scrupulous exactness from the author, because his public is defenceless against the prestige which a statement from him carries with it. Now, there are in this book a good many statements in which archæological enthusiasm goes too far, and which will not bear the test of a sober investigation. Thus, at the very outset, the assertion is made that as early as the reign of Domitian the Christian faith had been accepted by various patricians. As examples, Flavius Clemens, the Emperor's cousin, and Acilius Glabrio, consul under Domitian, are cited, and the point is made that the argument does not rest upon ecclesiastical documents, but upon Roman historians and biographers of the time of Domitian himself. Who are these writers? For Flavius Clemens the authority given is Suetonius, who says that he was put to death *ex tenuissima suspicione*. Lanciani translates this "on a very slight suspicion *of his faith*." But the context contains not a word to suggest that his faith had anything to do with his execution. The truth is, that for his case as well as for the banishment of Glabrio, the authority for the charge of atheism is Xiphilinus, a monk who lived ten centuries after Domitian, and who has left us an epitome of Dio Cassius, who was born over half a century after Domitian died. Lanciani cites Xiphilinus without the least warning that he did not live "in the time of Domitian." And even in this writer we read that the two noblemen were converts to the Jewish, not to the Christian faith. For Glabrio's execution we are referred to Suetonius (*Dom.* 10), where it is said that he and others were put to death *quasi molitores rerum novarum*. This expression, says Lanciani, "has a religious meaning in the case of Glabrio, a convert to the Christian faith, called *nova superstitio* by Suetonius and Tacitus." Tacitus, who says not a word about the death of Glabrio, nowhere uses *nova superstitio* of Christianity; Suetonius uses the phrase, but not in connection with Glabrio's death. But the tomb of Glabrio has been found in Rome (he was killed in exile) with the inscription upon it—we are given a plan of the crypt, whose "small oratory at the southern end seems to have been consecrated exclusively to the memory of the ex-Consul." Proof enough, apparently, that he was a Christian; but Lanciani says never a word of the fact that the letters of the inscription belong to the time of the Antonines, and probably refer to a descendant of the Consul. Yet this fact is stated in at least one of the articles to which reference is made in a foot-note on the same page on which the inscription is reproduced. Well may he remark that it is not known when Glabrio's remains were transferred from his place of exile to Rome. The fact is, there is no evidence that they were ever transferred at all.

On the Christian side, another example of unscientific treatment is the discussion of the burial-place of St. Peter. We do not here raise the question whether the saint was or was not buried there; but we do say that if the question was to be treated at all in this book, none but sound arguments should have been employed; any others merely discredit the art of the archæologist. We believe that even the tyro will feel that there is not a single weighty argument in the whole twenty pages devoted to this subject, except the purely negative one that no other city save Rome ever claimed to possess St. Peter's tomb. This is, to be sure, a strong argument, but all the rest are mere traditions. Yet "for the archæologist," says Lanciani, "the presence and execution of St. Peter in Rome is a fact established beyond a shadow of a doubt by purely monumental evidence." "So much the worse for the archæologist, if the argument is here fully set forth," will be the comment of every thoughtful reader. And it is, to say the least, very strange to find unmentioned the fact that, even according to Church traditions, there has been a disturbance of St. Peter's remains. It is no modern story that only half his body lies under the church that bears his name and the other half under St. Paul's. We find this asserted in a fourteenth century MS. appendix to the 'Mirabilia,' and Evelyn heard it when he was in Rome in 1644.

We have already pointed out one instance of inexact quotation from Suetonius. On page 168 Livy is inexactly quoted; on page 175 a statement from Livy is attributed to the 'Monumentum Ancyranum,' which in turn on page 174 is called a copy of the "will" of Augustus. On page 313 it is hardly correct to say that Trajan's celebrated letter to Pliny about the Christians "made persecution a rule of state." On the contrary, the Emperor was evidently quite unwilling to write anything which could be taken as a law of the Empire, for he seems to have thought that the new sect would require different treatment in the different places in which it appeared. He expressly says, "The Christians are not to be sought out." On page 270, Lanciani accepts without question, though it is certainly matter for doubt, the theory that a recently discovered Pompeian fresco represents the Judgment of Solomon. On the next page we have an illustration from one of the well-known frescoes of the Villa Pamfili, which Petersen is said to take as a representation of the same judgment. We have not seen the article in which Petersen suggests this theory, but it seems as unlikely that he would have suggested it without publishing that other fresco, found in the same place, of the child about to be cut in halves, as it does that "Hamlet" was ever played with the part of *Hamlet* left out.

On the subject of the Secular Games, there is absolutely nothing in the newly discovered inscription to prove that the first stanzas of Horace's "Carmen" "were sung when the procession was marching from the temple of Apollo to that of Jupiter Capitolinus, the middle portion in the Capitol, and the last on the way back to the Palatine" (p. 81). Again, in verses 17 to 20 of the hymn there is a prayer to the goddess to prosper the decree of the Senate in reference to the matrimonial laws. The allusion is, of course, to the new laws which set a premium upon wedlock, and which, among other penalties, forbade marriageable but unmarried adults from being present at festivals. But Lanciani thinks that the reference is to the *suspension* of this penalty for the occasion of the Secular Games, because a suspension is noted in the inscription. Moreover, in a foot-note we are informed that this inscription is of such exceptional interest (as, indeed, it is) that it is given *as edited by Mommsen* (our italics) at the close of the volume. Sure enough, we find at the end the inscription, but *not* as edited by the great German. What we are offered is a reproduction by some photographic process of the inscription as it appeared in the *Revue Archéologique*. That magazine professed to be publishing Mommsen's text; how false was its claim may be judged from the fact that in a single reading we noted no less than forty-three deviations from Mommsen, including blunders in numerals, in spelling, in assimilations, omissions of the apex, and insertions of restorations never sanctioned by Mommsen; furthermore, a whole line was omitted in one place and a complete line inserted in another. The inscription, therefore, as here published, is utterly untrustworthy and almost worthless to scholars. It seemed so incredible that Lanciani could have been guilty of such a piece of carelessness that we looked into the matter, and found that both foot-note and inscription were inserted in this country without his knowledge, and without consultation with any Latin scholar. We suspect, also, that the proofs of the book may not have been submitted to his eye, for this would account for various false references in the foot-notes. No man familiar with the classics could let such a reference stand as "Suetonius, Dom. 92"!

BANDELIER'S INDIANS OF THE SOUTHWEST.

Investigations among the Indians of the Southwestern United States carried on mainly in the years from 1880 to 1885. By A. F. Bandelier. Final Report. Part II. Archæological Institute of America. Cambridge. 1892.

With this, the second part of his Final Report, Mr. Bandelier closes the account of his investigations among the Indians of New Mexico, Arizona, and other portions of the Southwest. In it he deals "more particularly" with the archæology of that region, and, satisfactory as is the treatment of this branch of his subject, it is confessedly incomplete in so far as it shows only one side of the shield. To understand the full extent of his work in that quarter, it is necessary to take this volume in connection with his other publications in this same series. Especially must it be studied in the light which Part I. of this Report throws upon the ethnology of the tribes that are found there to-day, or may have lived there at some time in the past; for one volume supplements the other, and both are necessary to enable us to understand the origin of these ruined structures and the development of the people who built them. That this is the only way in which these remains can be satisfactorily investigated is a point upon which we have repeatedly insisted, and our object in referring to it now is to call attention to the fact that Mr. Bandelier's success in clearing up the mystery in which they were supposed to be enveloped is due, not so much to work in the field as to his researches in the library. Undoubtedly these "finds," as they are called, furnished him with a text, and there can be no question as to their number, or the interest that attaches to them from an archæological point of view; but aside from this, no matter whether they consist of the ruins of houses or mere broken arrowheads, they are cumulative in character, and tell us nothing new of the life of the people among whom such work was possible—nothing that we did not know before, or might not have inferred from previous publications. Sweeping as is this assertion, it hardly goes far enough, for we may safely say that all the "digging"

that has taken place in this country since Squier's day has not brought to light one additional fact of the slightest ethnological importance.

But while heartily approving of our author's method of investigation, we are by no means sure that he has chosen the best manner of publishing his researches. To divide the subject as he has done — the ethnology in one volume and the archæology in another—may have enabled him to preserve a certain continuity in discussing the different questions that sprang up in the course of the inquiry; but, on the other hand, the fact that the two lines of investigation, instead of running in parallel planes, are often found united, made it impossible for him to keep the trains of thought separate, and, consequently, there were times when he was obliged to repeat himself. This occurs oftener than is desirable, though it can hardly be spoken of as a fault, since the fact, or rather statement, of whose repetition we complain is not unfrequently an integral part of the text, and, of course, its reassertion is necessary. With this slight comment upon the manner of publication, and with an expression of the regret which all students will feel at the absence of an index, our fault-finding must come to an end; for although exception may be taken to certain statements, yet, as a rule, the points of contention will be found to lie outside of the pale of documentary evidence, and, so far as they are matters of opinion, a difference is permissible. Thus, for example, while it is possible, as we are told (Part I., pp. 182-317 and Part II., p. 581), that the Navajos show a greater aptitude for progress in a material sense than many of the Pueblos, it is by no means certain that this superiority "results naturally from the effects of a shifting life." In fact, so far is this from being the case that the evidence all seems to point the other way. But, even assuming that our author is as faulty in his fact as he is believed to be in the explanation, it would not affect the accuracy of his account of the actual status of these tribes in the scale of progress, nor would it invalidate his conclusion as to the correlation between the phase of development which they had reached and the origin and character of these ruins. This, it will be remembered, was the problem that confronted him, and it is a pleasure to be able to say that he has solved it in a manner that leaves nothing to be desired.

This will not be news to all who know the thorough manner in which Mr. Bandelier does his work, but for the benefit of those who are unacquainted with his methods, it may be well to add that, in the present instance, he has followed the plan of investigation with which his 'Archæological Tour in Mexico' made us familiar. Indeed, he may be said to have improved upon it, for, not content with some years of work in the field and the evidence of the early records, ecclesiastical as well as civil and political, he identified himself with a neighboring band of Pueblo Indians for the purpose of studying their customs, and learning what they had to tell of these ruins and of the people to whom they belonged. In thus appealing to tradition, he draws from the only source of information which he had thus far left untouched, and while its revelations are not always trustworthy, yet, when they are in accord with the testimony of the early chroniclers and the evidence of the spade and pick-axe, they stamp the conclusions to which they lead as final.

An example of the favorable results that follow from the use of these several lines of inquiry will be found in Part I., p. 131, and in Part II., pp. 6-291, where we are told that it was information given our author by a Tehua Indian that led to the identification of the abandoned Piros village of Tabira with the Gran Quivira of the Spanish records. A similar success crowned the effort to account for the hundreds of ruins that are scattered about this region, and to reconcile their number with the statement (Part I., pp. 121–136) that in the sixteenth and seventeenth centuries "the aggregate population of the Pueblos could not have exceeded 25,000 souls," and was probably never greater. Facts like these were, at one time, thought to involve a contradiction, but an explanation of the seeming difficulty becomes simple enough when we take into consideration the frequency with which these Indians changed their village sites as well as their mode of building. On this point the evidence is clear; and, generally speaking, not only are the reasons for such changes not hard to find, but they do not differ from those that actuated the Indians east of the Mississippi under similar circumstances. In the one region, as in the other, the supply of wood, water, and arable land, to say nothing of the safety of the position and the character of the available building material, were among the factors that decided the style of house and the choice or abandonment of a village site.

Of the civilization of these tribes, when they first came in contact with the whites, our accounts are full and explicit. For all practical purposes, they may be said to have reached the same level of development, though our author finds it convenient to divide them into Pueblos, or rather "land-tilling Indians," and "wandering tribes," like the Apache. This line of separation is, no doubt, marked, but it was neither permanent nor impassable, for instances are on record, within the historic epoch, of "wild tribes becoming villagers and villagers turning to a wandering life." There are also tribes (Part II., p. 582) one part of which was living in villages, while the remainder led a roving existence. Aside from these differences, which are of degree and do not necessarily mean any decided advance in the scale of progress, there was a general sameness prevailing in the culture of these tribes. One and all, they were living in what is known as the stone age, and their arts, industries, manners, customs, religion, form of government, etc., belonged essentially to this phase of development. Variations there were in many particulars, but they were slight, and when found among the sedentary tribes they "appear" to be due to physical causes and influences. Even "the difference between the arts of the savage and Pueblo is," we are told (Part I., p. 186), "marked only in degree, according as the mode of life exacted from man a peculiar development under altered circumstances. The religious system, the general character of creeds and beliefs, appear analogous, if not uniform. So were the system of government and the social institutions. It was language that separated the various groups and kept them apart."

Such, in brief, is the story of these tribes as told in the early chronicles. It is conclusive as to the existence of a uniform stage of development throughout this entire region, though the differences in some of the arts, especially in the manner of building, among these tribes and between them and their neighbors, indicates an improvement in the direction from north to south. The advance was not great, for, in mechanical skill, the houses of the Iroquois and the Alaskan tribes compare favorably with the stone and adobe buildings of the southwest, and such changes as do exist were due to a difference in the building material of the respective localities. Still, there was progress; and though "the transition does not necessarily imply a common origin of the tribes that inhabited these different regions," yet its bearing upon this point (and, we may add, upon the origin of the Nahuatl civilization of Mexico and Central America) cannot be overlooked. Especially is this so in view of the fact that the traditions of the Southwestern tribes speak of "the drift of these shiftings from more northerly regions to southerly climes," and, what is more to the point, "these traditions are to some extent borne out by the evidence of their language." There are other matters of interest discussed in this report of which we would gladly speak did time and space permit. As it is, we content ourselves with again commending these volumes to all who have more than a passing interest in the abandoned pueblos of the Southwest and in the people who occupied them.

In conclusion we must be permitted to acknowledge the obligation which we, in common with all other students of American antiquities, owe to the Archæological Institute of America for the publication of this report. Even if it had never done anything else, the Institute, by this one act, has amply justified its existence.

Books in Chains and Other Bibliographical Papers. By the late William Blades. A. C. Armstrong & Son. 1892. 16mo, pp. xl, 232.

THIS collection of Mr. Blades's minor writings and contributions to journals begins with an introduction and appreciative criticism of Mr. Blades's literary work. "Books in Chains," the most important paper, describes the collections of books in various English churches that have been or still are chained for public use. The chain prevented theft and the lending of books to forgetful borrowers. When books were in manuscript and on vellum, and necessarily expensive, this safeguard was necessary. When books of paper were made cheap by printing, it became possible for the poor reader to buy the books that he had borrowed, and so the method of chaining slowly fell into disuse. Yet there are chained books in some of the parish churches of Great Britain; they are still to be seen in the Laurentian Library at Florence. Mr. Blades thus explains the use of chained books in churches:

"The custom of fastening books to their shelves by chains was common at an early period throughout Europe. When a book was given to a mediæval library, it was necessary, in the first place, to buy a chain, and, if the book was of especial value, a pair of clasps; secondly, to employ a smith to put them on; and, lastly, a painter to write the name and class-mark across the fore-edge. Large collections of chained books were for the use of particular bodies of students; but when religious zeal made many people feel the want of spiritual food, it led to the chaining of single volumes in churches, where any parishioner, able to read, could satisfy his soul. The Bible was, of course, one of the most common, and among others were Fox's 'Book of Martyrs,' the various works of Bishop Jewel and other divines."

The paper on the use and development of signatures in books is a favorable example of the careful manner in which Mr. Blades examined every detail of book-making. Until he wrote on the subject, everybody accepted the dictum that signatures to books were first used by Anthony Zarot of Milan, in 1470, or by Koelhoff of Cologne in 1472. It does not appear that any one had taken the trouble to examine early manuscripts to see whether signatures are not older than typography. Mr. Blades, who first investigated the question in a proper manner,

has demonstrated that the chief use of signatures was and is for the binder; that binding is as old as books, and that signatures are as old as binders. In proof of this proposition he cites the signatures in some sixteen manuscript books, now in British libraries, written at various times, between the eleventh and fifteenth centuries. Then come specifications of twenty printed books containing manuscript signatures, and twenty books containing both manuscript and printed signatures. The uncertain steps taken by the early printers in their first attempts to make use of this method for the exact arrangement of the folded sections of a book, are traced with a thoroughness that leaves nothing to be desired.

The "Early Schools of Typography" shows the calm, judicial temper of an investigator who means to present all sides of the subject in the clearest light, but Mr. Blades has arranged a presentation that does not lead us to a wise conclusion. His mistake begins with the assumption that typography is more an outgrowth of old processes than the invention of an entirely new art; that it is the unavoidable development of engraving on wood and of block-book printing. This handling of the subject commits him to the theory that improvement in typography must have been slow and gradual, and that there must have been a rude practice long before the perfect practice of Gutenberg. This begs the whole question. There is no evidence that the successful demonstrator was indebted to an earlier inventor. Reasoning from an imperfect knowledge of some petty undated books attributed to an unknown printer of Holland, once supposed to be Coster (who is said to have printed books between 1423 and 1440), he assumes that these books are the missing links in the chain of gradual development. He has to admit that the legend of Coster is fabulous, and that our knowledge of the date of these books is imperfect and unsatisfactory, for quite as much evidence can be offered to show that they were printed after 1450 as before. Whether it was earlier or later is of small interest. It is more important for us to know that this so-called Dutch school of typography, which he thinks was first, was based on processes that other printers never accepted. It was not "the art that is now used." It had no scholars and no known development, for neither in Holland nor in any part of Europe have been found other books made by rival printers after the Dutch method.

The theory of gradual development in the invention of typography is not more warrantable than it would be if applied to the invention of the steam-engine. We have evidence that the expansive force of steam was understood long before the invention of the steam engine. It is certain that the Marquis of Worcester and others made use of steam for mechanical purposes, but there is no evidence that James Watt was indebted to any experimenter for his form of steam-engine. He worked out the problem alone. He was the first to give us the essentials of the steam-engine as it now is. The judgment of the world is right in giving the honor of an invention, not to the man who imagined its possibility, or even to him who made a feeble application or an experimental use of his invention; the honor is due not to the man who tried, but to the man who did. "It is perhaps possible," writes Lessing, "to show of all inventions that somewhere somebody must have been very near to it. To assert of any invention whatever that it could or should have been invented long ago, is nothing but chicane; we are to prove, incontrovertibly, that it was really invented, or else be silent."

The last paper is a detailed description of the technical faults in a British painting intended to show the invention of typography—the work of a painter who must have thought that technical accuracy was of slight value. It can be read with profit by all designers who are accustomed to construct sketches not from knowledge, but from imagination.

The Campaign of Waterloo.

A Military History. By JOHN C. ROPES. 8vo, $2.50 *net.*

In this volume, which is the result of many years' careful study, Mr. Ropes presents a masterly analysis of the military problems and questions of policy involved in the Waterloo campaign.

ATLAS OF THE CAMPAIGN OF WATERLOO.

14 maps. 16x22 inches. 4to, $5.00 *net.*

A supplementary volume containing the most complete series of maps of the battlefield ever engraved, showing the varying positions of the three armies during the campaign.

Adzuma: or, The Japanese Wife.

A Play in Four Acts. By SIR EDWIN ARNOLD. 12mo, $1.50.

This play, which was written by Sir Edwin Arnold during his recent residence in Tokio, aims at telling in dramatic form and with faithful adherence to native manners a popular mediæval story of feminine virtue.

The Higher Criticism of the Hexateuch.

By CHARLES A. BRIGGS, D.D. 8vo, $1.75.

The field of the Higher Criticism of the Bible has been chiefly the Pentateuch and the book of Joshua. This volume presents the results of Dr. Briggs's studies and is designed for the general public rather than for Hebrew students. The events of the past few months render any utterance on this subject by Dr. Briggs of peculiar interest.

EUROPEAN WINTER AND SUMMER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

MATTHEW ARNOLD IN THE "NINETEENTH CENTURY."

"The New York NATION—a newspaper which I read regularly and with profit, a newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best newspapers anywhere."

THE NATION,

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art, both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American, desirous of keeping abreast of the best political and literary thought of the day, can afford to be without it. Subscription price, $3.00 a year, post paid.

Address

PUBLISHER OF THE NATION,

208 Broadway, New York City.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York,

HAVE JUST PUBLISHED:

The Story of the Tuscan Republics.

By ISABELLA DUFFY. (No. XXXV. in the Story of the Nations Series.) 12mo, illustrated, cloth. $1.50; half leather, gilt top, $1.75.

"The history herewith presented by Miss Duffy is exceedingly complex and in many portions difficult, Miss Duffy knows Florence well, and has given thorough study to other parts of Italy. Her narrative is one that gives real pleasure to the reader, and affords the requisite guidance through the mazes of mediæval Italian history. The volume is packed with information, and is thoroughly deserving of commendation."—*London Athenæum.*

The Story of a Cavalry Regiment.

The Career of the Fourth Iowa Veteran Volunteers. From Kansas to Georgia, 1861-1865. By WILLIAM FORSE SCOTT, late Adjutant. 8vo, with maps and battle plans, gilt top, $3.50.

Whist Nuggets. Papers about Whist and Whist Players. Compiled by W. G. McGUCKIN. No. XL. in the Knickerbocker Nuggets Series), $1.00.

PARTIAL LIST OF CONTENTS: Whist and Whist Players, *Abraham Hayward*—Modern Whist, *London Quarterly Review*—Thirty-Nine Articles of Whist, *Richard Irving Dunbar*—Rhyming Maxims, *William Pole*—The Duffer's Whist Maxims, *Cavendish*—Cards Spiritualized—Mrs. Battle's Opinions on Whist, *Charles Lamb*—Ladies' Whist, *Spectator*—A Whist Party, *Philip H. Welch*—A Hand at Cards, *G. W. P.*—Metternick's Whist, *Chambers's Journal.*

A Country Muse. New Series, by NORMAN R. GALE, author of 'A June Romance.' 16mo. Limited edition, $1.00.

"Being plain as a pikestaff that Mr. Gale is a poet not merely of promise, but of exquisite achievement—and of achievement in a manner of poetry almost obsolete with us at present; a manner in the best tradition of English poetry at its strongest and sweetest, English love, English pastures—can we make it plainer by comment?"—*London Daily News.*

Alcoholism and Its Treatment. By J. E. USHER, M.D., Fellow of the Royal Geographical Society of London. $1.25.

"Dr. Usher's treatise will be found interesting and suggestive even by readers who have no professional purpose in view."—*London Times.*

Nullification, Secession, Webster's ARGUMENT, AND THE KENTUCKY AND VIRGINIA RESOLUTIONS. Considered in reference to the Constitution and Historically. By CALEB WILLIAM LORING. 8vo. $1.00.

Malmorda: A Metrical Romance. By JOSEPH I. C. CLARKE, author of 'Robert Emmet,' etc. 12mo, illustrated, paper, 40 cents; cloth, gilt top, 75 cents.

*** Notes on New Books, a quarterly bulletin, prospectus of the Story of the Nations and Knickerbocker Nuggets Series sent on application.

BEST PORTRAIT OF TENNYSON.

The Poet at the age of 70. Etched from life by Rajon. The head in profile, half life size.

Of this Portrait F. G. Stephens, in his biography of Rajon, says: "It is simply one of the finest specimens of modern draughtsmanship."

Unsigned artists' proofs, $18.00. A few early signed proofs on Japan paper, $60.00; on vellum, $75.00. Special illustrated prospectus free by mail. Also, Catalogue No. 9 of high-class Modern Etchings, for holiday presents, with 50 illustrations, mailed on receipt of ten cents in stamps.

ALEXANDRE DUMAS' ROMANCES.

New Limited Edition of 1,000 Copies.

The most complete and only finely illustrated edition ever issued of the principal romances of this great French writer, newly translated by eminent scholars. Dumas's novels are mainly sketched with a historical background, covering the romantic period of French history, including the time of Richelieu, Louis XIV., XV., XVI., the French Revolution and Napoleon. His **'Three Musketeers'** *and* **'Count of Monte Cristo'** *have become world-famous.*

This edition is embellished with over two hundred superb etchings and photogravures, mainly by French artists, such as **De Neuville, Leloir, Emile Bayard, Flameng, Lefort,** *and others, supplemented by landscapes and portraits from authentic paintings of the sovereigns and their favorites, ministers, generals, etc.*

The manufacture of this edition is perfect.

All of the illustrations will be proof impressions on Imperial Japanese paper.

This edition is printed from entirely new plates, set from new, large type, in a small page with ample margins, and will be complete in **40 octavo vols.,** *bound in English vellum cloth, paper titles, gilt tops. It will be issued by subscription only, at the rate of about 2 vols. per month, at* **$2.50 per vol.**

Prospectus and specimen pages showing type, page, and paper, with sample illustration, sent on application.

Public Library

The Nation

VOL. LVI—NO. 1439. THURSDAY, JANUARY 26, 1893. PRICE 10 CENTS.

THE

POPULAR SCIENCE MONTHLY

FOR FEBRUARY.

The Glass Industry. I. By Prof. C. HANFORD HENDERSON. Traces the progress of glass-making in America during colonial times.

A Marine Biological Observatory. By C. O. WHITMAN. A plea for the extension of the work of research now carried on at Wood's Holl.

The Æsthetic Sense and Religious Sentiment in Animals. By Prof. E. P. EVANS. Contains evidence which goes to show that animals possess at least the rudiments of the finer mental faculties.

Ghost Worship and Tree Worship. By GRANT ALLEN. Shows the probability of the latter practice having grown out of the former.

Other Articles on

MAN IN NATURE; BIRDS OF THE GRASS LANDS (illustrated); SCIENCE AS A FACTOR IN AGRICULTURE; HABITS OF THE GARTER SNAKE (illustrated); NUMBER FORMS (illustrated); TREPANG (illustrated); SCIENCE TEACHING; PREHISTORIC TREPANNING; NEW STAR IN THE MILKY WAY; DISCOVERY OF SEXUALITY IN PLANTS; SERVILITY IN DRESS; SKETCH OF ROBERT BOYLE (with Portrait).

50 cents a number; $5.00 a year.

D. APPLETON & CO.,

NEW YORK.

D. Appleton & Co.'s New Books.

Seedlings.

By Sir JOHN LUBBOCK, Bart., F.R.S., etc., author of 'Ants, Bees, and Wasps,' 'Origin of Civilization,' etc., and editor of the "Modern Science Series." With 684 Illustrations. 2 vols., 8vo. Cloth, $10.00.

These volumes contain the results of most extensive observations made at Kew and elsewhere, with a view to solving some of the many interesting problems connected with the germination of plants. The numerous illustrations will be found of the greatest value to botanists in elucidating the text.

The Naturalist on the River Amazons.

By HENRY WALTER BATES, F.R.S., late Assistant Secretary of the Royal Geographical Society. With a Memoir of the Author by EDWARD CLODD. With Map and numerous Illustrations. 8vo. Cloth, $5.00.

In company with Alfred Russel Wallace, the author in 1848 began an exploration of the Amazons region for the collection of objects of natural history. This volume records the adventures of an eleven-years' sojourn, during which specimens of nearly fifteen thousand species were obtained, and includes descriptions of habits of animals, sketches of Brazilian and Indian life, and various aspects of nature under the equator.

The Great Enigma.

By WILLIAM SAMUEL LILLY. 8vo. Cloth, $4.00.

"An important contribution to the apologetics of theism. . . . This great argument, which involves a critical examination of some of the main currents of modern speculative thought, is presented with rare dialectical skill. A powerful book."—*London Times.*

New Edition of Haeckel's "Creation."

The History of Creation;

Or, The Development of the Earth and its Inhabitants by the Action of Natural Causes. By ERNST HAECKEL, Professor in the University of Jena. The translation revised by Professor E. RAY LANKESTER, M.A., F.R.S. With 46 Illustrations. In two vols., 12mo. Cloth, $5.00.

"The book in its present form con not fail to interest all who have a taste for natural history. . . . It is a sufficient recommendation for it that it is the statement of the views of one of the most learned, experienced, and honored naturalists of modern times."—*From the Reviser's Preface.*

Dictionary of Every-Day German and English.

By MARTIN KRUMMACHER, Ph.D. In Two Parts: GERMAN-ENGLISH and ENGLISH-GERMAN. 16mo, 356 pages. Cloth, $1.75.

In addition to the Dictionaries proper, this volume contains lists of the most important technical terms, proper names spelled differently in the two languages, a sound-notation, an outline of grammar, and several pages of "travel talk" in parallel columns.

Handbook of Military Signaling.

Prepared by Captain ALBERT GALLUP, Signal Officer First Brigade, National Guard, New York. Illustrated. 16mo. Flexible cloth, 50 cents.

This manual has been approved by the Signal Office at Washington, and its use has been prescribed for the National Guard of the State of New York.

Rousseau's Emile;

OR, TREATISE ON EDUCATION. Abridged, translated, and annotated by WILLIAM H. PAYN, Ph.D., LL.D., Chancellor of the University of Nashville, and President of the Peabody Normal College. The twentieth volume in the International Education Series. 12mo. Cloth, $1.50.

Rousseau's "Émile" may be regarded as the source of social, political, and educational ideas that advocate a return to nature. It is the most radical work of the kind ever written, and not only gave the primary impulse to Pestalozzi and Basedow, but set on fire all Europe, and probably did more than any other book to bring about the French Revolution. No book is more helpful than this to provoke original thought in regard to the grounds of educational theories.

Charles Darwin:

HIS LIFE TOLD IN AN AUTOBIOGRAPHICAL CHAPTER, AND IN SELECTIONS FROM HIS LETTERS. By his Son, FRANCIS DARWIN, F.R.S., Fellow of Christ's College, Cambridge. With Portrait. One volume, 12mo. Cloth, $1.50.

". . . It is not merely an abbreviation of the 'Life and Letters' published some six years ago, for it contains new matter, and is altogether a better constructed and more readable narrative. The parts of this volume which will be found especially satisfactory are the brief autobiography found among Darwin's papers, the account of his religious views, which is fuller than anything hitherto published on the subject, and the recollections contributed by his son."—*N. Y. Sun.*

RECENT FICTION.

A Comedy of Elopement.

By CHRISTIAN REID, author of "Valerie Aylmer," "Morton House," etc. No. 108, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

In the Suntime of Her Youth.

By BEATRICE WHITBY, author of 'The Awakening of Mary Fenwick,' 'Part of the Property,' etc. No. 109, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

"Miss Whitby is far above the average novelist."—*New York Commercial Advertiser.*

"'Part of the Property' is a thoroughly good book. . . . It is refreshing to read a novel in which there is not a trace of slipshod work."—*London Spectator.*

From Dusk to Dawn.

By KATHARINE P. WOODS, author of 'Metzerott, Shoemaker.' 12mo. Cloth, $1.25.

"Rarely, indeed, does an author attain to such wide prominence in so short a time as did Katharine Pearson Woods on the appearance of her somewhat socialistic novel called 'Metzerott, Shoemaker.' That story, however, with all its absorbing power, gave only the faintest evidence of the real strength that has hitherto remained latent, but which is now so wonderfully developed in her latest story, 'From Dusk to Dawn.'"—*Baltimore American.*

"A thoughtful, acute, observant novel, designed to illustrate the nature and effects of hypnotic influences. The whole treatment is stimulative of thought in comparatively new channels."—*New York Commercial Advertiser.*

"Furnishes the reader with plenty of attractions in the way of humor and ingenuity, but it is also a story with a purpose."—*Hartford Post.*

For sale by all booksellers; or will be sent by mail on receipt of price by the publishers,

D. APPLETON & CO., 1, 3, and 5 Bond St., New York.

COPLEY SQUARE, BOSTON, MASS.
SCHOOL OF DRAWING AND PAINTING.
Seventeenth year now open.

Courses in drawing from the cast and from life in painting and in decorative design, with lectures on anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell, (Drawing and Painting), C. Howard Walker, J. Linden Smith (Decoration), Edward Emerson (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the museum. For circulars giving detailed information, address Miss ELIZABETH LOMBARD, Manager.

THE OHIO UNIVERSITY

AT ATHENS now offers ten post-graduate scholarships having a cash value of $100 each, exclusive of tuition. The subjects are as follows: English Literature, Mathematics, Latin, Psychology, History of Education, Chemistry, Biology, Physics, Philosophy, Greek. It also embraces efficient Preparatory and Undergraduate Departments. A thoroughly organized School of Pedagogy under the charge of Dr. J. P. Gordy is likewise in process of development.
CHARLES W. SUPER, President.

Two Scholarships for Women.

The Harvard University Examinations

For Women will be held in New York on June 27, 29, and 30, and July 1, 1893. Two scholarships, one of $300 and one of $200, are offered in connection with these examinations.

For information apply to the SECRETARY, No. 32 East 33d Street.

THE BOSTON SCHOOL OF ORATORY. —The Leading School of Expression in America. First to teach the system of Delsarte. Send for Catalogue. MOSES TRUE BROWN, M.A., Boston, Mass.

When you build your house, **Stain** the **Shingles**; don't paint them. You would not paint the hardwood finish of the interior, because it would destroy its beauty. It is the same with Shingles. Paint them, and you detract from their beauty; stain them and you add to it. **Cabot's Creosote Shingle Stains** are as durable as **paint** and **cost less.**

Send 6c. stamps for wood samples and sketch-book.

MT. DESERT.

For rent ($200 for the season of 1893—$100 on execution of lease)—a Swiss cottage, just completed, at Seal Harbor, on southern shore of Island, nine miles from Bar, and four from N. E. Harbor. House has 2½ stories, with balcony on three sides of second. It contains living-room (with fireplace), kitchen (with large store-room), dining-room, two chambers, and bath-room (with hot and cold water). Drains to sea; water from village water-works. Fronts west, with view of water and Sargent's Mt. No other building within 200 feet. Fine trees on high ground (belonging to lot) back of house. If occupants board out (hotel and boarding-house at $8 and $6 per week at 200 yards distance), kitchen and dining-room would serve as chambers. If desired, house would be furnished for boarders for $50 additional. Address W: M. Griswold, Cambridge, Mass.

EUROPEAN WINTER AND SUMMER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

BRASS WORKS,
PHILADELPHIA, PA.

MACMILLAN & Co.'s NEW BOOKS.

NOW READY.

Collected Edition of the Poems of William Watson.

16MO, CLOTH, $1.25.

Also Limited Large-Paper Edition printed on English Hand-Made Paper. Only 100 copies for sale. $3.50.

*** In addition to Mr. Watson's latest poems, this volume contains all the poems included in the volume entitled 'The Prince Quest and Other Tales,' a small edition of which was published in 1884.

Third Edition of Sir John Lubbock's New Book.

The Beauties of Nature,

AND THE WONDERS OF THE WORLD WE LIVE IN.

By the Right Hon. Sir JOHN LUBBOCK, M.P., F.R.S. With numerous illustrations and full-page plates. Uniform with the new edition of "The Pleasures of Life." Third Edition. 12mo, cloth, gilt, $1.50.

"His volume is a perfect storehouse of information, imparted in a style that at once charms and interests. There are over fifty illustrations and twelve page-plates, all admirable, the latter being of uncommon beauty and interest."—*Saturday Evening Gazette, Boston.*

A New Book by the Rev. Stopford A. Brooke.

The History of Early English Literature.

By the Rev. STOPFORD A. BROOKE. With Maps. Large 12mo, $2.50.

"It is a comprehensive, critical account of Anglo-Saxon poetry from its beginnings to the accession of King Alfred. A thorough knowledge of the Anglo-Saxon language was needed by the man who undertook such a weighty enterprise, and this knowledge is possessed by Mr. Brooke in a degree probably unsurpassed by any living scholar."—*Evening Bulletin.*

Now Ready. Large 12mo. Cloth, $2.60.

A Review of the Systems of Ethics

Founded on the Theory of Evolution. By C. M. WILLIAMS. 12mo, cloth, $2.60.

Social Life in England,

From the Restoration to the Revolution, 1660–1690. By WILLIAM CONNOR SYDNEY, author of 'England and the English in the Eighteenth Century.' 12mo, cloth, $2.50.

"He has succeeded in delineating the every-day life of the time in a singularly graphic manner. The latter half of the book deals with life in London, all phases of which are realistically painted; but on these chapters we must resist the temptation to dwell. All are as entertaining as they are edifying to the student of sociology."—*Critic.*

Now Ready. Uniform with Fitch's 'Lectures on Teaching.'

A NEW BOOK BY S. S. LAURIE.

The Institutes of Education.

Comprising a Rational Introduction to Psychology. By Dr. S. S. LAURIE, author of 'Occasional Addresses on Educational Subjects.' 16mo, $1.00.

"Our greatest living writer on education."—*Journal of Education.*

England in Egypt.

By ALFRED MILNER, late Under Secretary of Finance in Egypt. 8vo, $5.00.

"A more diffuse and elaborate work would not have been so useful as this volume, which is conspicuous for lucidity and orderliness of treatment and exposition. The literary style is also distinctly better than it would have been if it had been overlaid with a veneering of finish. His book is an important contribution to the literature of a subject which, from the dawn of history, has never ceased to interest mankind."—*N. Y. Tribune.*

Sketches of Life and Character in Hungary.

By MARGARET FLETCHER. With Illustrations by ROSE DE QUESNE. 12mo, cloth, $2.25.

"Miss Fletcher's modest account of her travels in Hungary will be found genuinely entertaining, and presenting often quite new views of a highly attractive and interesting people."—*N. Y. Tribune.*

New and Cheaper Edition. Now Ready. Globe 8vo, $1.50.

Letters of James Smetham.

With an Introductory Memoir. Edited by Sarah Smetham and William Davies. With Portrait. Globe 8vo, $1.50.

"His style is full of charm. He possesses a wonderful gift of description. His letters are full of the most brilliant word pictures. He has also a remarkable humor, fresh, bright, natural, and even delicate and kindly. His flow of thought is full and steady. . . . Beyond the personal interest, however, there is a literary one, and few men have bequeathed to the world a richer epistolary legacy than the painter, James Smetham."—*New York Tribune.*

In the Key of Blue,

And Other Prose Essays. By JOHN ADDINGTON SYMONDS, author of 'Our Life in the Swiss Highlands.' 12mo, cloth, extra gilt, $3.50.

Now Ready. Mr. H. A. Jones' New Play.

Uniform with "Saints and Sinners."

The Crusaders.

An Original Comedy of Modern London Life. By HENRY ARTHUR JONES, author of "The Middleman," "The Dancing Girl," "Saints and Sinners," etc. 16mo, cloth, gilt, 75 cents.

Echoes of Old Country Life.

Being recollections of Sport, Politics, and Farming in the Good Old Times. By J. K. FOWLER. With Illustrations. 12mo, cloth, $2.50.

"One of the most delightful volumes of reminiscences that have appeared during the last few years."—*N. Y. Tribune.*

Now Ready. A New and Enlarged Edition with Portrait.

Wanderers.

Being the Poems of WILLIAM WINTER. New Edition. Revised and Enlarged. With a portrait of the author, reproduced from a drawing by J. N. MARBLE. 18mo, cloth, 75 cents.

*** Also a limited large-paper edition, printed on English hand-made paper. Price, $2.50.

"The poems have a singular charm in their graceful spontaneity."—*Scots Observer.*

A Paradise of English Poetry.

Arranged by H. C. BEECHING. 2 vols., large 12mo, bound in buckram, $6.00.

New and Cheaper Edition.

The Life of Jesus.

Critically examined by Dr. DAVID FRIEDRICH STRAUSS. Translated from the German Edition by GEORGE ELIOT. 8vo, cloth, $4.50.

A new book by the Bishop of Durham.

The Gospel of Life.

Thoughts Introductory to the Study of Christian Doctrine. By BROOKE FOSS WESTCOTT, Bishop of Durham. 12mo, cloth, $1.75.

A new book by the late Dean Church.

Cathedral and University Sermons.

By R. W. CHURCH, Sometime Dean of St. Paul's and Fellow of Oriel College, Oxford. 12mo, cloth, $1.75.

NEW NOVELS.

Just published Vol. 4. $1.25.

Rob Roy.

Ready.

WAVERLEY.	GUY MANNERING.

THE ANTIQUARY.

*** Large Paper Limited Edition, on Hand-Made Paper. For prices apply to the booksellers.

Adventure Series. New Volume.

The Life and Adventures of James P. Beckwourth,

Mountaineer, Scout, Pioneer, and Chief of the Crow Nation of Indians. Written from his own dictation by T. D. BONNER. New edition, edited, with preface, by CHARLES G. LELAND ("HANS BREITMANN"). Illustrated, large 12mo, $1.50.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 26, 1893.

The Week.

It is now, as we write, the 25th of January, and the second session of the Fifty-second Congress is more than half over. Practically nothing has been accomplished during the eight weeks since the Senators and Representatives met, and nothing more than the passage of the regular appropriation bills is expected during the five weeks that remain before the 4th of March. No important action on any great question of public policy is longer anticipated by anybody. The reason nothing will be done is because we still maintain an absurd system by which a Congress does not meet for its first session until more than a year after its election, and meets for its second session after the election of its successor. The result is, that during the second session there is an entire absence of a sense of responsibility to the people when, as is now the case, the election has gone against the party which was in control of the Government. Overwhelming as was the defeat of the Republicans last November, they still control, and will control until the 4th of March, the Presidency and the upper branch of Congress. Consequently no measure advocated by the successful party can become a law if it is not approved by the beaten party. The Republicans are practically unanimous in refusing to allow the will of the people regarding the McKinley Law to be executed during this session. While they are not so unanimous as to the silver issue, it is obvious that the majority of them do not mean to have the Sherman Silver Law repealed this winter.

The story has got abroad that the Silver-Purchase Act is doomed. It is believed not only in Europe, but in Asia, that America will soon stop buying silver. As a consequence, our securities have begun to advance both there and here, and India has begun to agitate the silver question more than ever. A committee of the India Council, of which Lord Herschell is Chairman, is holding almost daily sittings and taking testimony from every quarter, and is apparently as far as ever from reaching any decision. The cultivators of the soil in India have begun to make themselves heard, and they are, as might be expected, opposed to any change in the monetary standard. Their taxes are payable in rupees, and they have been gaining in this particular while the rupee has been falling. Their produce is sold for gold and their rents are payable in silver. The loss falls on the Government, and on the Government's creditors, in so far as the claims of the latter are payable in rupees. The cultivators say that they are the people of India—that the Government's creditors are mostly Europeans who have no permanent residence there, or middlemen and dwellers in cities, who are only an imperceptible part of the population. They say also that any step which should amount to a change of the standard of value would demonetize more silver in the form of ornaments than in the form of coin; that the country people have always been in the habit of putting their surplus in this form, knowing that it could be turned into money at any time. To take away this right, they say, would be an act of injustice. At all events, the common people would never be able to understand the reasons for it. Hence very grave consequences of a political nature might be apprehended. The silver party in India contend that nothing can be done but to stand and take the consequences, even if America stops its silver purchases altogether. It is plain that our purchases and accumulations are driving all civilized countries by sheer terror to the single gold standard. We have pushed Rumania and Austria there, and it is not doubted that when Russia resumes specie payments, she will do so on a gold basis. No country wishes to be caught with a large amount of the white metal when the United States stops buying. The longer we continue to buy, the worse will be our own condition as well as that of our neighbors.

President Andrews of Brown University, delegate to the Brussels Conference, spoke at a public dinner in Boston last week. His words were very cheering to bimetallists. He predicted the early adoption of the silver basis by the nations of Europe. He thought it most likely that Austria would take it up first—as soon as she gets fairly rid of it—and Italy next, she having got rid of it ten years ago. Then France, Germany, and Great Britain would come along in due order. These countries got rid of it in 1874, 1871, and 1816 respectively. The United States, Mr. Andrews thought, would be the last to come in, but the United States might hasten the steps of the other laggards by stopping the purchase of silver bullion. We had been doing the difficult work of holding up the price of silver for the benefit of Europe, and had received no benefit ourselves. The American delegates to the Brussels Conference were fully persuaded of this fact. These views as to the early triumph of bimetallism must be the peculiar possession of Mr. Andrews. The suggestion that the United States should stop buying silver in order to bring Europe to her senses is, however, very acceptable. Opinions may differ as to the effect of such a policy on Europe, but there can be no doubt as to its effect on the United States. It would remove the only drag on the nation's prosperity, the only cloud on the financial horizon. The relief to business interests would be so great that, after six months, there would be no silver party in the United States. Probably even Mr. Andrews would see things more clearly than he does now.

The election of a regular Democrat as United States Senator from California gives that party three of the four seats which it needed to gain in order to control the upper branch of Congress, with the help of Vice-President Stevenson's casting vote; New York and Wisconsin furnishing the other two. A single more Democrat is all that is now needed, and Wyoming seems pretty sure to furnish him, with a fair chance of another from Montana, and possibilities of a third from Kansas. In any event, it is now certain that the Republicans will not control the Senate, for Mr. Stewart, who will come back from Nevada, can no longer be counted as a member of that party.

Tammany has succeeded in its purpose of retaining its grip upon the Quarantine at New York at the expense of the health of the entire country and at the cost also of the success of the World's Fair. The bill which the House passed on Monday is nothing more nor less than a Jenkins bill, and is mere waste paper, so far as making any real change in the control of Quarantine is concerned. It leaves Jenkins supreme at the port of New York; and national quarantine at all other ports than that of New York would be an absurdity. As the matter stands now at Washington each house has passed a bill of its own and the two are totally irreconcilable. The Senate bill, which was passed by a unanimous vote, placed the control of quarantine partly in the hands of State officials and partly in the hands of the national Government, but the national Government was given full authority to overrule and supplant State officials at any port whenever, in its judgment, the conduct of the latter was inefficient or unsatisfactory. The House has refused to pass this bill, and has passed instead one which leaves the State officials in complete control, and stipulates that none of the powers which it confers upon the national Government "shall be construed to warrant a Federal official in relaxing State rules." This is, as we have said, nothing less than a Jenkins bill, and it would make matters no better than they are at present to pass it.

Congressman Fellows has introduced a resolution calling for an investigation of a great many things connected with the Monroe Doctrine and the Panama Canal, the most important and pertinent being

an inquiry as to the disposition of the $2,400,000 which the Paris investigation shows was spent in this country. It is Col. Fellows's opinion, apparently, that this money was spent in suppressing the Monroe Doctrine, or the usual proclamation and assertion of the same at the seat of the United States Government. This is our opinion also. Our curiosity on this point is no less than that of Col. Fellows. We should like very much to know the names of the patriots who allowed their ardor for the Monroe Doctrine to be chilled by contact with the francs and centimes collected from the chambermaids and garçons and small cultivators of our sister republic. We hope that Col. Fellows will pursue this inquiry fearlessly. Let us know who were the betrayers of the Monroe Doctrine. Col. Fellows has shown his usual discernment by plunging at the very core of the problem. He wants to know whether this Monroe Ddoctrine is infringed by the carrying of foreign goods across the Isthmus of Panama in pursuance of a contract made with some other steamship company than our own Pacific Mail. That inquiry is all right, because it leads up to the profounder question, What is the Monroe Doctrine? And this leads up to the question, Who were the betrayers of that doctrine and how much did they get?

Judge Nelson of the United States District Court for Minnesota has declared the Chinese Exclusion Act of May 5, 1892, unconstitutional. We suppose that the case will be carried to the Supreme Court on appeal, and that an authoritative judgment will finally be rendered by that tribunal. The act requires all Chinese laborers in this country to take out certificates of residence within one year, and provides for the deportation of all who refuse to comply with the requirement within that time. Hardly any cases, however, have been reported where the law has been obeyed, and it is not improbable that the Supreme Court will sustain Judge Nelson's view that Congress had no constitutional power to pass such an act.

Mr. Cleveland showed a characteristic appreciation of the proprieties in making a tedious midwinter journey to attend the funeral of the late ex-President Hayes. The attempt, renewed since his death, to criticise Mr. Hayes for having discharged the duties of the Presidency after he was declared to have been elected, is absurd and unjust. There was nothing else in the world for a man in his place to do. Even if he had believed that Mr. Tilden was entitled to the office, he was powerless to give it to him, since his own refusal to serve would only have put the Republican candidate for Vice-President in the White House. Having simply done his duty in discharging the duties of the Presidency when the office had been duly awarded him, it was right that there should be paid to his memory all of the conventional tributes appropriate on the death of a former President.

Mr. Cleveland is rendering a great service to the community by refusing to submit to the tyranny of the newspapers as exerted through the reporters. This seems a strange thing to say, considering that his resistance consists simply in refusing to allow reporters to stand in the hall of his private house, to watch his doings and those of his family, and in refusing to give information at the door about his visitors and their comings and goings. He insists on his right to privacy, and on protecting his home against the invasion of speculators in the kind of gossip called "news" by some of our contemporaries. He is all the better fitted for this kind of public service, too, by the fact that probably no man in the country has suffered so much from journalistic barbarity as he has. A swarm of reporters followed him into the country on his wedding trip, and encamped in tents or lay concealed in the bushes, armed with field-glasses, around the house in which he passed his honeymoon, like African savages around the lair of a wild beast. It was one of the most shocking incidents in American history. Nothing has happened within the last hundred years, either in war or in peace, so likely to give strangers a low idea of our civilization. He was pursued in the same way into the Adirondacks when he had a cottage there in his vacation during his Presidency. The tormentors lay in wait for him and his wife in the surrounding woods, like the Iroquois or Pequots in the last century. They have dug up the hatchet against him again, now that he has been reëlected and become once more a public man.

Senator Saxton has introduced a bill amending the Corrupt Practices Chapter of the Penal Code in several important directions. The sections forbidding undue influence of all kinds for the purpose of inducing any person either to vote or to refrain from voting, are extended so as to include the offence of bribing voters to refrain from registering. Any one offering inducement of any kind to keep another's name off the registration list is pronounced guilty of an infamous crime, punishable by imprisonment for not less than three months nor more than one year, and in addition forfeits any office to which he may have been elected at the election with reference to which the offence was committed, and becomes incapable of holding any public office under the Constitution and laws of this State for a period of five years after conviction. All this penalty, except disqualification for office, is inflicted under the law at present for all persons found guilty of bribery or undue influence of any kind. In adding disqualification for office Mr. Saxton imitates one of the most effective features of the English Corrupt Practices Act. His amendment makes the increased penalty apply to all cases of undue influence, including that of inducement to refrain from registering. The old penalty of imprisonment remains for voters who accept such inducement.

The New York Court of Appeals has affirmed the judgment of the lower court convicting James Hughes, a typical "Labor" leader, of the crime of extortion, and sentencing him to a year in the penitentiary. Hughes was Master Workman of the Cutters' and Trimmers' Branch of the Knights of Labor, and took $1,000 from a firm of clothing-dealers in Rochester, as he said, for defraying the expenses of raising a boycott which had been declared against the firm on account of a dispute between the firm and its employees regarding the apprenticeship question. It was established that he devised and put into operation a scheme for destroying the business of this firm, "because they did not at once obey his commands in respect to the number of apprentices they should employ; and when they submitted to his dictation and apologized for seeking to do their own business in their own way instead of his, extorted money from the firm as the price of forgiveness"—a proceeding which he called "soaking" the manufacturer. It is a great gain to have such a criminal convicted by a jury, and then to have its verdict sustained by the highest court.

The tide of immigration to this country set in so strong during the early part of 1892 as to promise a larger flood for the twelve months than during 1891, which latter year had never been exceeded save in the phenomenal period of 1881, 1882, and 1883. During the first six months of last year the arrivals at our ports aggregated 353,961, against 325,307 in the same period of 1891, and the last six months seemed likely to show a corresponding gain. But the cholera scare and the embargo policy adopted a few weeks later changed the situation completely. During September the arrivals at this port numbered only 21,824, against 41,954 in September of 1891; and though there has been a partial recovery during the last quarter, the total for the second half of the year was nearly a third less than in the second half of 1891. For the whole year 1892 the immigrants numbered 543,487, while during 1891 there were 590,666. There was a falling off of about a tenth from the United Kingdom and Italy, a still greater one in the case of Russia (from 73,177 to 52,267) and Poland (from 31,285 to 26,889), a slight gain from Sweden and Norway, a trifling reduction in the German contingent, and unimportant changes in most other countries.

Mr. E. R. L. Gould of the Department of Labor, and Resident Lecturer at Johns Hopkins University, has just brought out a pamphlet of considerable value called "The Social Condition of Labor." It is based upon investigations which Congress, in 1888, ordered Commissioner Wright to make into the comparative cost of producing certain tariffed articles in this country and Europe, and the comparative cost and scale of living of American and European workingmen. The figures thus far tabulated relate only to the industries connected with the production of coal, iron, and steel, and Mr. Gould's pamphlet is a convenient summary and interpretation of the mass of statistics given in the bulky volume published by the Government. Absolute precision cannot be claimed for the results. The investigation in Europe was much hampered, and the returns finally secured are not as full or as representative as is desirable. All the American manufacturers of steel rails, with a single exception, refuse to state their cost of production. Yet pretty full information was obtained from 454 American and 164 European establishments in this group of industries, while 2,490 "budgets" of American and 770 of European workingmen were secured and the wages of several thousand of laborers tabulated. From the data thus gathered certain general inferences can be drawn, even if they are not accurate in all details.

One inference of great economic interest is the same as that previously established by the preliminary report of Commissioner Wright and the investigations of Mr. Schoenhof—that, though the rate of wages is higher in the United States, "the labor cost of manufacture is not correspondingly greater." Another important point is, that the income per family in Europe is not so much less than in America as is the income per workingman. His low wages are supplemented by the earnings of the other members of his family, which are relatively higher in Europe than in the United States. "Hence it is quite false to say," observes Mr. Gould, "as political 'pauper labor' conjurers are so fond of doing, that low wages to the husband must necessarily mean a correspondingly low standard of life to the family." Of great significance for the present discussion of the "degradation" of American labor by immigration are the figures showing how rapidly the foreign laborer rises to the wages and the standard of living of the native. Workingmen of British and German origin actually earn more in this country than those of American birth; and the other nationalities, even the Poles, Italians, and Bohemians, are swiftly closing up the gap. Mr. Gould's main objection to the latter classes is that they save too much of their wages, and "esteem economy more highly than social betterment." Habits of saving, in fact, seem to be almost sinful in the eyes of this Johns Hopkins lecturer. He lays down the principle that "a parsimonious people are never progressive, neither are they, as a rule, industrially efficient." This puts him in line with the "making work" theories of labor agitators, and is an endorsement of the great Powderly's practice of always smashing his bottles so as not to take the bread out of the mouth of the honest glassblower.

The death of Phillips Brooks strikes down the greatest figure left to the American Church. He long ago rose above his own denomination, and made his large personality a part of broad and progressive Christianity everywhere. Men felt that the fact of his being an Episcopalian was a mere accident, and that his generous nature would have made its own sect, or, rather, absence of all sect, wherever he had found himself placed. Indeed, one may go further, and, echoing Sumner's cry that he was a man before he was a Commissioner, say that Phillips Brooks was a man before he was a clergyman. Certainly he could never have been the clergyman he was had he not been the man he was. It was prophesied by some who assented to his election as Bishop with reluctance, and by others who looked upon it with dismay, that his massive humanity would soon be trimmed down to fit the traditional proportions of the episcopal bench. But his term as Bishop of Massachusetts, all too short, was yet long enough to show the falsity of such predictions. What he had been as rector, preacher, lecturer, he continued to be as Bishop—a lover of truth and simplicity, a hater of shams and conventions. His personality and his fame will doubtless remain unique in the history of American Christianity. Not a great thinker, with no taste for theology, without the arts of popular eloquence or vulgar success, with not even a talent as an ecclesiastical organizer or administrator, he stood for years as the great exemplar of sterling manhood in the pulpit. He has left little to perpetuate his fame except the deep impress of his personality on many lives; but they will long make his memory fragrant, and he himself would surely have chosen that form of remembrance as his greatest reward.

That the Briggs case would be appealed to the General Assembly was plainly foreordained from the foundation of the world, and the great effort made, since his acquittal by the Presbytery, alike by conservatives and liberals, to hush the matter up just where it stands, only serves to show how serious is their fear that the unity of the denomination is imperilled by pushing the trial to the bitter end. Even the *Observer* has advised the prosecution to stay their hand, and all manner of influence was brought to bear upon them from other quarters to the same end. But their decision to go on with the case represents what is not only the undoubted wish of the Church as a whole, but also the only logical and practical thing to do. It is simply impossible that there can be any peace in the Presbyterian Church until its highest and final authority has decided whether a Presbyterian minister can hold the views of Prof. Briggs. There may not be peace then, but even division of the church would be less intolerable than would be a condition of things in which the denomination would be left without any clear test of orthodoxy or ministerial good faith.

The Khedive of Egypt, who is making the present trouble in that country, is a youth of nineteen who was taken from school last year in Vienna to succeed his father. The wonder is, therefore, that he has not before now got at loggerheads with his British guardians. All his natural surroundings—that is, the old Turco-Egyptian Mussulman aristocracy—are naturally hostile to the system of government which the English have introduced, namely, the system of equality before the law, pure justice, strict financial accountability, and stern military discipline. They formed, before the arrival of the English, a sort of Tammany Society for the whole country, which spoiled and larruped the taxpayers and divided the money among the members. They therefore hate British ascendancy, just as Croker and his "organization" would hate the rule of "business men" in this city. They have, of course, done what they can to prejudice the Khedive against the English occupation, and have been greatly helped by the French, who are playing a very childish part in the matter. They refused to join in the occupation of Egypt when invited to do so, and they were chagrined when England occupied it alone. They have been ever since trying to tease her into evacuation, though unable to deny the enormous benefit which English rule has conferred on the Egyptians, and unable to say what would or could take its place, or what would happen if it came to an end. Moreover, no better way of prolonging it could be devised than egging on the little Khedive into revolt, for England cannot of course withdraw under a threat of force from either him or France. M. Ribot put this very well in a speech on the foreign policy of his Government when he first took office, in which he said he had not used "a *mise en demeure*" (an ultimatum) against England, because France herself would not submit to such a threat. France is, in fact, in no position to use or threaten force in the matter. Germany always hangs over the French imagination as a cloud, and, in the event of a Franco British collision in the Mediterranean, Italy would be almost certain to throw her weight in the scale, and a disaster to the French arms would be as fatal to the republic as it would be to a monarchy.

TAMMANY APOLOGISTS.

THERE appeared on Sunday, in an unexpected quarter, the New York *Tribune*, one of those curious appeals to Tammany men to "rise on stepping-stones of their dead selves to higher things," which every now and then make their appearance in the local press, and must hugely amuse "the organization." Says the writer:

"Its leaders are not dull or foolish men; if they were, the power they now hold would not be in their hands. Some of them are substantial citizens who have property and extensive business interests; and private as well as public motives would naturally prompt them to do what they could to realize the magnificent possibilities of New York. If they only take large views, and look beyond the day and its passions and prejudices to the long future, they can make for themselves a name which will live, and for the city a measure of prosperity such as few imagine."

The notion that Tammany men thirst for glory and desire to make an impression on posterity by great public benefactions, well illustrates the hopeful, kindly side of the American character. Tammany men know all about it, and rely on it more than on anything else to keep them out of the hands of the police. Over and over again during the last twenty-five years, just as the long-suffering public was beginning to lose patience, a few respectable men have stepped forward and expressed the conviction that, bad as Tammany was, what it most needed was kindness and forbearance; that if people would only trust it, and rely on its better instincts, it would yet do great things for the city. One more trial, and "our word for it," etc., etc.

What these hopeful eulogists forget is, that although the leaders of Tammany change, the organization does not. Kelly may succeed Tweed, and Croker may succeed Kelly, in the chief command, and a swarm of "Mikes" may succeed a swarm of "Barneys" and "Jerrys" in the minor offices, but the nature and objects of the society and the nature of the bond which keeps it together do not change. It is still, as it was in Tweed's day, an association for the seizure and management of the public revenues of the city for the pecuniary benefit of the members. Why people suppose it to have other objects in view, we cannot imagine. It never makes any pretence of political aims, in the proper sense of the term, or of any devotion to architectural or other arts. If it were to set up to-morrow in good faith as an association for the improvement of municipal government, it would be disbanded before the next election. Nothing would kill it more effectively than to have the leaders respond to the *Tribune's* appeal to "take large views and look beyond the day and its passions and prejudices to the long future," and declare that they were going "to make for themselves a name which will live." It would fill the Boys with rage and disgust.

There could hardly be a better illustration of Tammany's frankness in dealing with the public than its action on the Quarantine Bill now before Congress. The country, outside of Tammany, is almost unanimous in its desire to have the Quarantine turned over to the Federal authorities. Boards of trade, chambers of commerce, medical societies, leading sanitarians are almost unanimous on this point. We have not seen a single argument against it, on either administrative or hygienic grounds, from any organ of intelligent public opinion. The Tammany delegates in Washington, however, fight the plan with intense bitterness, on the simple ground that the organization has the patronage at New York and wishes to keep it. Croker's brother-in-law, a young deputy coroner, gets $12,000 a year out of it and perquisites. They do not pretend that he is competent. They cannot pretend it seriously in the teeth of the Chamber of Commerce report on him. They do not argue about the danger to the public health, or to the Exposition, in case the present system is maintained. They answer very much as the English coal-miner answered the clergyman at the close of an open-air sermon: "What you say, sir, may be all true, but we don't care tuppence about it." Their business is to take care of the "organization." "The organization," as Croker said of "Mike" Daly, "approved of putting Jenkins there," and that's an end on 't. We cannot recall any other incident in the history of Tammany which reveals more clearly the selfish, anti-social, and purely commercial character of the society. It may therefore prove useful in opening the eyes of the Democratic party to the danger of acting under the domination of the organization in dealing with national concerns.

There is one other consideration which we should like to put clearly before the Tammany apologists of all parties. It is this: When you come forward, as you do every now and then, to declare, as the *Tribune* does on this occasion, that if Tammany would only give us "the cleanest and best streets, the most perfect wharfage system, the finest Police and Fire and Health Departments, the most beautiful parks, the most complete system of rapid transit, the most commodious and elegant public buildings known in any city on earth," you would forgive it everything, do you not ignore, much as the French did when they accepted Louis Napoleon, the existence of such a thing as a public conscience? That there is such a thing in a modern city containing 458 churches and synagogues, 141 public schools, and 147 banks, you will hardly deny. Society could not hold together, especially in a large city, without it. Well, if there be a public conscience, how can we accept these beautiful buildings, fine streets, and magnificent wharves at the hands of men who, to the best of our knowledge and belief, make a business of abusing a great public trust—that is, who systematically convert funds derived from the taxation of the poor to their personal use and behoof? Has the chief city of the Union, in the four-hundredth year of Columbus, come to such a pass that it has to depend for its monumental glories on a huge system of compounding with thieves? Did the Roman plebs ever sink lower than this? They surrendered their liberty to great soldiers and statesmen in return for the spoils of foreigners. But it is gravely proposed—we hear it every now and then—by our local moralists that we should surrender our liberty to our own thieves in return for a moderate restitution of our own goods.

Suppose this city were a hotel which the Big Four were conducting, under a private trust for the benefit of widows and orphans, and they were to pay the elevator man $8,000 a year, and the furnace man $5,000, and the hall boys $2,500, and they were to employ street rowdies as porters, and put the office in charge of discharged convicts, to make what they could out of it, and give a carouse every Saturday night to a huge party of gamblers and brothel-keepers, would you shut your eyes to these doings because they set a good table, and the rooms were made comfortable, and the furniture was gorgeous and in good repair? Of course you would not. You would say, "These men have no right to waste the property of the poor in this way. We do not care how splendid the hotel is. They are thieves, just the same, and must be ousted. We will not accept favors or place or commissions at their hands. We will not associate with them, or encourage them, or connive at them, or attend their banquets or orgies. Our one duty towards them as American citizens is to expel them from the trust. Their money is the money of the needy. To be liberal or efficient with part of it while they waste or appropriate the remainder is to add insult to injury."

In short, as *Harper's Weekly* remarked last week: "It is not by Tammany, nor through Tammany, nor with Tammany, it is only over Tammany that the way lies to any reform in the city government." Therefore the sooner we stop excusing it and being hopeful about it and giving it trumpet calls to glory and duty, the better for the city. The work of reform consists in exposing it, and in getting the anti-Tammany majority, which undoubtedly exists, to vote against it.

DIVORCE IN SOUTH DAKOTA.

BISHOP HARE of South Dakota is heading a movement for changes in the scandalous divorce laws of that State, and thereby adding to the list of public services associated with his name. We call those laws scandalous, though in some respects they are more commendable than the divorce legislation of other States. For example, the grounds for divorce defined in the statute are only six, and none of them trivial, and there is no mischievous clause, as in some others, allowing divorce to be granted in "the discretion of the judge."

But some of the provisions are wide open to the grossest abuse, and many of the actions for divorce brought within the past two years have been a travesty not only on justice but on decency.

The law requires but ninety days' residence in order to gain the right to sue for divorce in South Dakota. No other State or Territory allows so short a period; six months being the lowest limit elsewhere, and from one to five years being the rule. Moreover, the courts have held that a man may comply with the statutory requirement, and be "in good faith a resident of the State," by simply staying at a hotel as a transient guest, impatiently waiting for his decree of divorce in order to take the first train home again. Then, too, absolute service of summons on a respondent is not required, publication in a South Dakota newspaper being held to be certain to fall under the eye of an accused wife or husband living in Florida or Maine. And the action, once begun, may be hurried to a conclusion in a little more than two months.

One does not need to take a high view of the sacredness of marriage, or a low view of divorce, to pronounce all this demoralizing and shocking. Some 400 suits for divorce were begun in South Dakota in 1892, and large numbers of them were instituted by people who sought out the land of divorce made easy for that express and single purpose. Many cases of flaunting shame are recorded—rich profligates consorting openly with the women whom they are to marry as soon as the decree of the court makes them free to do so, scattering money with lavish hand in the shops of jewellers and florists, and even endowing local charities, enriching hotel proprietors and unscrupulous lawyers. Even when matters are not so outrageous as that, the breaking up of the whole idea of the family, and of the most ordinary notions of decency in human intercourse, is often most disastrous. Where, out of savagery, could such sights be witnessed as are said to be common in Sioux Falls hotels, where a divorced husband may be seen introducing his new wife to his old one, who, in her turn, presents her new husband, while the bewildered children involved in this scandalous mixture wander about in disconsolate uncertainty as to their identity and relationships? This is the very chaos of marriage, and it is no wonder that the respectable citizens of South Dakota are moving against such demoralizing exhibitions in self-defence. Their own homes are imperilled by the very presence of these destroyers of the home.

Not the least painful feature of the whole business is the jocular treatment of the scandal in the newspapers. We are told of the jealousy of Chicago at seeing her great divorce industry transferred to Sioux Falls, of Dakota "boom" literature ranking the facilities for divorce alongside those for the growth of wheat, with much more of what a news association that offers to write for editors when they are ill or on a holiday, calls "satirically humorous" writing. This is as much like the crackling of thorns under a pot as is the laughter of French journalistic jokers over the hideous Panama corruption. The South Dakota Legislature ought to understand that Bishop Hare and those working with him speak for the whole country when they cry out against these laws that encourage what is practically polygamy. One thing is certain, that if any State continues to glory in the shame of such divorce laws, so administered, the movement for Federal legislation on the subject, to take the whole affair out of its hands, will speedily grow irresistible.

Such a movement has already gained considerable headway. The New England Divorce-Reform League, organized in 1881, became a National League in 1885. Under its prompting, Congress directed the Commissioner of Labor to collect the statistics of marriage and divorce throughout the whole country. This was a long step towards uniform if not national legislation on the subject, and it seems certain to be followed by others. The loose statutes of a few States continually nullify the more stringent legislation of others. How intolerable it is that citizens of New York, for example, should be able to set the laws to which they are subject at defiance, by temporarily removing to another State. If the various States do not amicably agree to put a stop to such practices by harmonizing their divorce laws, the need of a constitutional amendment, such as was proposed by Senator Dolph and Congressman Springer in the Forty-ninth Congress, putting the whole matter in the hands of Congress, will become imperative.

Meanwhile Bishop Hare and his fellow-petitioners deserve every encouragement in their efforts to get the South Dakota Legislature to repeal the worst features of the existing divorce laws. They are moderate in their demands. They do not seek to embody the church idea of marriage in civil legislation, but ask only that the period of residence required of a suitor be extended, and the residence made bona-fide; that personal summons on a respondent be made essential, and that the process, once in court, be marked by a suitable deliberation. In other words, they simply petition the Legislature to give the State—what it now sorely lacks—a reputation for ordinary decency in its divorce laws.

THE EGYPTIAN COUP D'ÉTAT.

THE *coup d'état* of the English in Egypt, by which the Khedive was given twenty-four hours to dismiss his new anti-British Ministry, is mainly interesting as a full revelation of the policy of the Gladstone Ministry touching the Egyptian occupation. Nobody denies that the British Government, when Egypt was occupied, and since then, made pledges which, if faithfully fulfilled, would, by this time, have led to the evacuation of the country. What the supporters of the occupation say is, that the British Government, when they made these pledges, were deceived as to the nature of the task which they had undertaken. They supposed that all they had to do was to overthrow the rebellion of Arabi and set the Khedive on his legs, and put the governmental machine once more in working order. They found, after taking possession of the country, that the governmental machine was utterly rotten, and could not be put into working order, and, what was more serious, that the revolt in the Sudan had not only taken from Egypt an immense province, but had created on her southern frontier an enemy with whom she could not cope, and by whom, if left to herself, she would probably be speedily overrun.

The task which devolved, therefore, on the British was not simply the creation of a new administrative system and the reform of taxation, but the creation of an army able to fight the Sudanese. To quit the country before these things are done would involve one of three things—a relapse into anarchy and barbarism such as prevailed under Arabi; the conquest of the country by the savage and fanatical Sudanese, which would be a spectacle such as Europe has not witnessed since the fifth century—namely, the devastation of a large and flourishing and civilized province by a horde of savages; or the occupation of the country by some other European Power in place of the English. This European Power would probably be France. Turkey would like to occupy it, and maintains that she owns Egypt; but France would forestall Turkey. England, therefore, naturally says that if Egypt cannot stand alone, and some European government has to take charge of the country and defend it, she is herself the one to do it, as she is in possession already, and is making her occupation a civilizing process, and has a very strong commercial as well as political interest in the prosperity of the country.

The only European Power, barring Turkey, which objects to this view is France, for various reasons, of which the principal are: simple jealousy of England, and chagrin over Freycinet's refusal to join in the occupation when first proposed by England; remembrance of the large part played by Frenchmen and French capital in the making of the canal, and in the industrial development of Egypt generally; and sensitiveness about French supremacy in the Mediterranean. The result has been constant pressure from France on England during the past five years to get her to fulfil her pledges by evacuating, and increasing difficulty on the part of England in finding logical excuses for her refusal, and increasing doubts on the part of the English Liberals as to the wisdom of continued occupation. Is Egypt worth the risk of incurring French hostility? is a question which has of late been becoming more and more pro-

minent in British politics. But the return question, Do you really propose to evacuate under French pressure—that is, to march out as the French march in?—is just as hard to answer. Even the most Radical stomach in England turns at this thought, for there can be no question that when the English go, the French must come in, or let the Sudanese hordes come down to Cairo and reduce the country to a howling waste.

This danger from the Sudan is making more and more impression on sober-minded British politicians. The volume just published giving Father Ohrwald's account of his 'Ten Years' Captivity in the Sudan' makes it clear that the fanatical, and, as the world now knows, extraordinarily martial population which now holds the country above Assuan, longs to take possession of Egypt by a Mussulman crusade, and fully believes in its power to do so if the English could be got out of the way. In spite of the crushing defeat inflicted on them in 1889 at Toski, they still threaten the frontier, and every year witnesses attacks on the Egyptian outposts which show that sleepless vigilance is still a condition of Egyptian security. The Egyptians have been moulded into very respectable troops by British officers, and they stand up against the Sudanese now in a way which would have been thought impossible immediately after the experience of Hicks Pasha and Baker Pasha in 1883–4. But nobody believes that they would maintain their fighting qualities without British leadership. In the very last affair, two or three weeks ago, they were badly cut up by a small force of the dervishes, and attack on a larger scale is among the every-day possibilities of the situation. The dervishes are poorly organized and armed, but their movements are swift, and intelligence from the desert in which they form for the attack is hard to get. They subsist on very little, and their desperate valor and strong expectation of Paradise make up for all defects of organization. In fact, Egypt cannot defend herself, and has never done so since the days of the Ptolemies.

It is plain that Lord Rosebery has, for the present at least, no question as to what England should do. He has given notice to the Khedive that he will stand no insubordination, and notice to France that if England is to leave before she herself thinks proper to do so, she must be expelled by force—a job which France is in no condition to undertake. On the other hand, the sober-minded commercial men in England are by no means satisfied with the situation. Egypt requires 3,000 English troops to-day, and may any day call for 10,000, and, in the present condition of Europe, French enmity is an unpleasant cloud on the diplomatic horizon. The *Economist*, which represents this class, puts the whole matter in a nutshell when it says:

"Meanwhile, the English are governing very well for the people, though not to the contentment of the governing class, and, as the *Economist* has always maintained, with an unrewarded expenditure of energy, and at the cost of an undue strain upon their strength, which is distinctly lowered both by the locking up of their troops and by the permanent hostility which the occupation excites in the French Foreign Office."

BLOWITZ ON JOURNALISM.

M. DE BLOWITZ, the well-known Paris correspondent of the London *Times*, discusses in the last number of the *Contemporary Review* the great question, "Can a young man be taught to become a journalist?" The reasons why he discusses it are two in number. One is, that the question "whether journalism can become 'a normal career' has always haunted, and, I may say, besieged," Blowitz himself. In this condition he cannot reasonably be expected to remain without a struggle to be free. The second reason is, that the absence of journalism from the category of "normal careers" constitutes, in the opinion of M. de Blowitz, "a strange anomaly, an effect tremendously out of proportion to its causes," and "a real danger for the future, which is daily becoming more impressive."

This "strange anomaly" and "real danger for the future" he describes as follows:

"Moreover, as I say, this state of things is daily becoming more impressive. From moment to moment the ranks of journalism are being augmented by the arrival of those who, having knocked vainly at other doors, think to enter there as into a career in which chance is the only master. Often those who have elsewhere seemed to fail come to journalism and succeed in it, as much to their own surprise as to that of others. By this I do not mean that these men were dried fruit, useless and incapable, who enter journalism only because they could do nothing else; nothing of the sort. I mean that for the most part they are men who have a feeling that they are superior to every normal or established disciplinary system, whom, in fact, discipline chafes, to whom the hierarchic or bureaucratic idea is an intolerable bugbear, who cannot make up their minds to follow another's lead along a path to be traced slowly step by step. They leave the slower and more regular professions to enter journalism, much as formerly mercenaries engaged themselves to this and that foreign army, quite willing to fight at random on the morrow against an enemy whose very existence, the night before, was unknown to them.

"Once become journalists, they change their newspaper, as formerly they changed their profession or career. They jump from grave to gay, from the political journal to the journal of satire; they become at will reporters, chroniclers, art critics, literary reviewers, not seeking in any way to study the course of events, the drift of the time, but, on the other hand, fitting all contemporary ideas and events to the measure of their own personal temperament, so that an event or problem, thus treated according to the fancy of a journalist, appears tragical or comic, without any sort of regard for its real character. Instead of describing it as it is, and establishing the principle which it illustrates, they scatter abroad confusion, and produce in the public mind a condition of uncertain kaleidoscopic eclecticism which is the negation of all really authoritative opinion, and the destroyer of all conviction. By the reciprocal action and reaction of journalist and reader, confusion of ideas becomes more and more marked, and so soon as this chance journalist creates a sort of special public, he becomes convinced of his own authority, elaborates into a doctrine the fancies at first only lightly thrown upon the paper, takes himself absolutely *au sérieux*, becomes at one and the same time his own temple, god, and prophet, and thus adds a capricious and false note to the general discord of chance human opinions."

He illustrates all this by the condition of French journalism, and then produces his remedy, in answer to the question, "Can a body of journalists be created whose professional education, established training, and certified aptitudes will reassure the [alarmed] public conscience?" Not only, says he, can this be done, but "it *must* be done," and he proceeds to show how.

He and six friends met and drew up a scheme of journalistic training, which was as follows: The youthful candidate is in the first place to have a "call" to be a journalist, the existence of which should be proved by his wishing to be a journalist. Having proved his "call," the youth is to produce the first regular degree given by the colleges of his country. He has also to show himself "seriously grounded in two languages besides his own." They then take complete possession of the wretched man for a period of five years, and they put him in the hands of professors "to teach him the history and literature of each of the historic divisions of Europe, to initiate him into the origin and tendencies of the spirit of his most remarkable contemporaries in every country," and also to give him a

"general idea of the political constitutions, the ethnological and climatic conditions, the products, the geographical situation, the means of communication, the armed forces, the budgets and public debts of every nation. He would be given the documents necessary for consultation. He would be taught to draw both landscapes and the human face. He would learn to box, to ride on horseback, and to use a revolver; but the science of arms, so called, would be rigorously interdicted, because a man obliged to support his arguments by weapons, or who indulges in personalities which place, so to speak, arms in the hands of his foes, is neither a journalist nor worthy to be one. Finally, such a pupil would undergo a graduating examination, and if he failed in any way to satisfy his instructors, he would remain another year; after which, for three years more, he would spend in succession some months at school or college in other lands, so that the remaining three years should be used up by his presence at foreign schools of journalism, and travel in countries where these schools are established, as well as in countries where they might not yet exist."

There is a good deal more of this sort of thing. At last the poor fellow, if he has survived, gets his journalistic certificate, but even then his troubles are not over, for after he begins to write he is to come under the eye of a "paper called the *Judge*, in each capital, edited by the most competent and authoritative hands, sustained by all, speaking in the name of all, written in a clear and pure style," the sole function of which would be to watch the graduates, and point out every morning the errors and blunders committed by them on the previous day; but they, of course, would not be permitted to answer back.

The article is very amusing reading as an illustration of the good Blowitz's estimate of himself, for there can hardly be a doubt that he thinks he would make a very good editor of the *Judge*. But it also reveals in a lamentable manner his want of constructive power, because he makes no arrangement for giving the

journalist, after he has trained him, the quasi-monopoly which the members of other "normal professions" enjoy. The public, for instance, will as a rule only employ doctors who have a medical degree; can only employ lawyers who have been admitted to the bar, and will only listen to clergymen who have graduated from theological seminaries. Therefore, M. de Blowitz should have provided that no newspapers should be permitted to circulate except those of the certificated editors, or have guaranteed in some way that the public would not listen to the young fellows who refused to accept the special instruction of the professors touching "the history and literature of each of the historic divisions of Europe," etc., etc., and revelled in ignorance of the "origin and tendencies of the spirit of their most remarkable contemporaries." If these abandoned persons got all the "sales," what use would the trained journalists be to mankind?

The fact is, that M. de Blowitz has prepared his curriculum for the wrong person. It is the newspaper reader and not the newspaper writer who will have to pass through it, if journalism is to be reformed on the Blowitz lines. There should be legislation providing that nobody should read newspapers until he had obtained a State certificate not only of fitness to receive the highest order of journalistic instruction, but of a positive and overmastering desire for it. This public once created, nobody need give himself any trouble about producing the right kind of journalists. The demand would produce them, just as Blowitz describes them, on horseback and armed with revolvers, and stuffed full of the humanities and all the "'ologies." Until the public is reformed as aforesaid, the bad journalists will, we fear, hold the market, and oppose their "fakes," "scoops," and "beats" with considerable success to the learned essays of the prigs whom Blowitz and his friends propose to let loose. They have as yet only one pupil, who is now on his travels and sends them in promising "reports" on the countries he visits, but Blowitz is silent touching the commercial value of them.

THE ROYAL ACADEMY'S WINTER EXHIBITION.

LONDON, January 10, 1893.

THE winter exhibition is the Royal Academy's atonement for the summer show. It still has last May's sins of incompetency to answer for, and again the Old Masters and the great English painters of the late eighteenth and early nineteenth century have been pressed into service; again the result is a collection of no small interest.

The Academy may be hopelessly unjust where contemporary work is concerned; it can afford to be generous with the art of the past. This year, as usual, every nation is represented, and every school. In general character, the assortment of old masters offers no novel or unlooked-for features. It differs only in the particular examples which now give it chief distinction. What these are can be pointed out in a few words; but to me the most important section of the exhibition is that considered of least value, which represents three English artists, less well known, but with a more immediate relation to a recent art movement threatening to increase in influence every day. The three are Blake, Samuel Palmer, and Edward Calvert.

But, to begin with the old men, the Italian work is the least satisfactory. The primitives suffer from comparison with last year's display, when the Academy was used as showroom for the Dudley collection before its dispersal by auction. Color glows here in a little head of a boy by Bellini, character is stamped there upon a portrait by Piero della Francesca, but the authenticity of both these canvases is now being questioned by the critics, who would rather quarrel over the origin of a picture than enjoy its beauty. Of the later schools, the Venetian alone is to the fore in point of number, but the Giorgiones and Titians, the Tintorettos and Veroneses, leave one cold and sceptical. The one Italian who stands out, supreme and incomparable, is Moroni. His "Titian's Schoolmaster," as the portrait is called, has been loaned from the Duke of Sutherland's collection, and it is one of the painter's masterpieces, rivalling, if not excelling, the famous "Tailor" in the National Gallery. It is very simple in treatment and quiet in color. The elderly, gray-haired man is sitting, a book in his hand; his dress is black, relieved only by the white collar, and the background is gray; but in this gray there is marvellous depth and richness, just as in the pose and face there is strong individuality, and the whole composition has that distinction which none but Moroni himself, Velasquez, and one or two other masters have been able to impart to their portraits.

It seems almost too obvious a truth to add that of these few masters Rembrandt is among the most distinguished, and in the present exhibition he and some of the other Dutchmen, as well as the Flemings, have more justice done to them than the Italians. There are several fine portraits by Rembrandt, lent by the Queen, Earl Brownlow, the Glasgow Corporation, and Captain Holford. But more remarkable, because examples of subjects more rarely treated by him, are two Scriptural landscapes, one, especially beautiful in color, from Buckingham Palace, and a stunning study of a man in armor, as impressive in its solemnity as a whole as it is what, were he a modern, we should call clever in the rendering of the metal, its sheen and reflections. The Van Dycks are also unusually good, more particularly a "Burgomeister Triest" and an "Earl of Warwick," proofs of what a fashionable painter, the productions of whose studio too often savor of the commercial workshop, could do at his best. Two De Hooghes are interesting, as his work ever is, in showing his preoccupation, more than two hundred years ago, with the problems of light which now exercise artists; and an example of Terburg, his favorite model in her favorite fur-trimmed silken jacket, reminds one, but not so effectively as those in Berlin and Dresden, of his anticipation, in color scheme and arrangement, of Whistler. If I say that there are also an excellent Metsu, a delightful study of dogs' heads by Snyders—a relief after his regulation extravagant heap of fruits and game—and an opulently vulgar but tremendously skilful "Daughter of Herodias" by Rubens, I have completed the list of the work of foreign schools which calls for special attention.

The old masters among British painters are once more to be seen as is possible only in Great Britain. There are Sir Joshuas, Gainsboroughs, and Romneys, Constables, Turners, and Cromes, in addition to many of their lesser contemporaries. Most noteworthy of all is a superb Romney, with something more in it than the beauty he knew so well how to give his sitters. It is the portrait of "Lady Russell Holding up her Child to the Glass," but the subject has been made by him the excuse for a lovely composition and a lovelier scheme of color. The curves of the old-fashioned round glass are repeated in the Chippendale table upon which the child stands; the red in a somewhat too conventional curtain is carried out through all the shadows; but most delightful is the simple, straightforward manner in which the child, whose face is seen solely in its reflection in the glass, is modelled. One wonders how, with such a master to study, British painters of children could have degenerated to the level of Millais's Bubbles and Burton Barber's Mustard Pots. I will pass over the other Romneys and British work of the same and a somewhat later date, just mentioning John Frederick Lewis, whose water-colors are apt to be overrated, but who is seen to unexpected advantage in two oil-paintings of the Eastern subjects he affected; and I will come, without further delay, to the three men about whom the interest of the show centres.

Blake, like Rossetti, like Burne-Jones, is an exotic who holds a place apart in the history of art. He, too, was a poet, who was able to express his poetry with graver and brush in beautiful lines and color, but whose artistic knowledge was elementary, whose technique in paint was abominable. In his most successful efforts he was great, despite his shortcomings; in his failures he was irretrievably and disgracefully bad. But his worshippers, to whom his subjects and his mad symbolism have supplied reams of copy, cannot discriminate between the good and the atrocious. They accept all that he has been pleased to leave them as if his drawings did not present the same well-nigh unaccountable inequalities as his poetry. The lengths to which their blind worship has carried and still carries them should serve as warning to the faddists who just now will not listen to a word of criticism against Burne-Jones. Were it not for the notorious Academical indifference to art, one might think that the present collection of Blakes had been hung as a timely lesson. For if proof were needed to establish the folly of upholding him as a master, it could be had in the illustrations to the 'Divina Commedia,' to which Academicians have consecrated an entire room. These were the task of Blake's extreme old age. It is true that Gilchrist thinks they exhibit no symptoms of age or feebleness, that the power of mind and eye and hand is in no wise dimmed; true that Swinburne awards them a place of much prominence among the late labors of Blake. But I do not think there is an artist who would not declare them forlornly childish, better fitted for the waste-paper basket than the walls of an important gallery. In one or two is a faint suggestion of beauty in the lines of figures sweeping through space, in the decorative idea of the composition. But, as a rule, they are deplorably crude in drawing, while in them the horrible monsters of Dante's hell dwindle into mere nursery bugaboos or pantomime creations, and the color is that of a toy paint-box. Now that mysticism in art has come into fashion, there is danger of a revival of the Blake cult; it is well to be prepared by taking, at the outset, the common-sensible es-

timate of his work, not only in its strength, but in its limitations.

There is as little question that Blake influenced Samuel Palmer as that the latter has been unduly and unwisely exalted by his admirers. He has fallen a victim to the zealous critics—those experts, as Whistler calls them, who are so careful and conscientious in "establishing, with due weight, unimportant reputations—discovering the picture, by the stain on the back; testing the torso, by the leg that is missing; filling folios, with doubts on the way of that limb; disputatious and dictatorial, concerning the birthplace of inferior persons; speculating, in much writing, upon the great worth of bad work." Palmer, it is the correct thing to say, offers you in his productions all that is most romantic in art. What one really finds is great straining after effect in subject and treatment, little observation, and no spontaneity. He was better qualified technically than Blake, but was without the latter's genuine poetic feeling. His water-colors refuse to be overlooked: the violent hues scream at you from across the room, but every time he has but the same trick of deep blue shadows and lurid skies, the same melodramatic device, to show you. His drawings are less offensive, chiefly because they are in black and white, but they are not the result of study of nature, and their archaic methods become the most aggressive affectation, though in fairness it should be admitted that, at this little game of sham primitiveness, he is far more accomplished and plausible than many of his modern successors.

Edward Calvert was a much bigger man than Palmer, even if his reputation be less widespread. Indeed, he is hardly known in his own country. Some of his designs have been, for the last year or two, on exhibition at the British Museum, but I fancy that his appearance now at the Royal Academy is his introduction to the majority of his countrymen. The fact is, he has not yet been discovered—he has not yet attracted the notice of those exploiters, "sombre of mien and wise with the wisdom of books, who frequent museums and burrow in crypts; collecting, comparing, compiling, classifying, contradicting," even if he be more worthy of the honor than Blake and Palmer. If I have named him with them, it is because his subjects, at least, are in sympathy with theirs to a certain extent. He, too, nominally sought his motives in an unreal world; but while Blake's inspiration was the supernatural, while Palmer tended to the theatrical, Calvert simply borrowed classical titles for his delightful arrangements of figures and landscapes which did not actually exist or come together in quite the same way in nature. His pastorals were Greek, his shepherds Arcadian, his gardens were consecrated to Cythereia, his groves sacred to Artemis. It is curious that in his engravings and black-and-white drawings, of which there are several examples, he is as affected and morbid as Palmer himself. The world would not be the loser had this part of his work been totally forgotten. It is in his painting that he must be studied. Nothing is more striking than the individuality of his style. The quiet key in which he works may at times recall Puvis de Chavannes; the way he puts in his little figures faintly suggests Monticelli; his composition may be likened to Mason's best designs; but the results he produces are not in the slightest degree similar to theirs. His charm is in the refinement of his methods rather than their vigor, in his decorative power and not his realism. In lovely low-toned landscapes or old marble temples, he places youths and maidens clothed in pale blue or crimson draperies, while in the distance goats, climbing a mountain path, tell white against the intense summer sky, or, on a high hillside, black cattle at pasture are silhouetted against the brilliant afterglow. Had Theocritus been a painter, he might have given us just such idyls and pastorals on canvas. One, the largest, oblong in shape, is more beautiful than the others. It is called "Arcadian Shepherds Moving their Flocks at Dawn," and, of all the Calverts I have seen, this is the masterpiece. His soft silvery grays are in harmony with the early morning hour; over the pale shadowy hills the white sheep make an unbroken curving line, and the observation of nature is just, as the decorative use made of it is perfect. Of course, during his lifetime, Calvert was unrecognized by the Royal Academy. On looking at this small group of about twenty of his pictures, one cannot but wish that he had been allowed such a legitimate channel for his undeniably great talents as Puvis has found in France, for example.

THE CATHOLIC INDIAN SCHOOLS.

To the Editor of The Nation:

Sir: Agreeing entirely with your conclusion as to the Indian schools, as expressed in your editorial entitled "The Government and Sectarian Schools," I yet venture to call attention to a fact which you perhaps have not sufficiently emphasized, namely, the reason why our Roman Catholic fellow-citizens are less willing than the Protestants to surrender Government support in their Indian schools. This is not merely because their schools are more numerous than all the Protestant schools put together, but because the public schools which it is proposed to substitute for them are not in all cases secular or undenominational schools, but are often actively and even aggressively Protestant. That this is the case must be plain to every one who will read the very valuable report of "The Tenth Annual Meeting of the Lake Mohonk Conference of Friends of the Indian," held in 1892, to which you refer. For instance, the Rev. James M. King, D.D., who made the main speech on "Sectarian Contract Schools," says frankly that the Catholics object to the Government schools "because they have the Protestant Bible and Gospel Hymns in them." He adds naïvely: "This is the essence of partisan politics"; and then goes on to exhibit his own conception of comprehensive politics by saying, "In this Columbian year it becomes us to remember that our civilization is not Latin, because God did not permit North America to be settled and controlled by that civilization" (p. 63). Can it be reasonably expected that any sincere Catholic will accept schools conducted in this antagonistic spirit as "non-sectarian" schools?

Mrs. A. S. Quinton, who followed Dr. King, went still further into particulars, and showed that some Government schools were already, to all intents and purposes, distinctively Protestant schools.

"The Church," she says, "will look after the religious schools, *and the religious culture in the Government schools.* [The italics are my own.] . . . Among the Moquis, just coming down from their ledges in Arizona into civilized homes, a Government school is to-day illustrating the fact that Government schools are Christian schools by the presence of Christian teachers. Superintendent and Mrs. Collins are as distinctly Christian teachers *as you ever met with in any denominational school.* At the very first exhibition I attended at that school they came forward and recited the Golden Texts of three months; I do not know many white Sunday-schools where that could be done. Their hymns and recitations of Scripture were *just such as we should wish for our mission schools.*" (P. 67.)

After reading this, can any one doubt what Mrs. Quinton means by the Church's "looking after the religious culture in the Government schools"? In view of such descriptions, it does not seem strange that the Protestant sects should be willing to abandon their own separate schools—for why should they keep them up?—or that the Catholics should wish to retain theirs. The curious thing is, that those who believe in sustaining, at the public expense, what they themselves describe as being practically "mission schools," should still believe firmly that they themselves are unsectarian and that only the wicked Catholics are sectarian! Or rather, it would seem a curious thing, if a similar inconsistency had not existed in the older States for many years and only very gradually yielded to more liberal views. Horace Mann describes some of the Massachusetts public schools as being, in his day, as essentially sectarian as any Sunday-school; and I well remember when, during the Know-nothing excitement, a child was excluded from a Worcester public school under my charge—though against my protest—for refusing, under her father's direction, to read in the Protestant version of the Bible. If it has taken a long series of laws and rulings to establish religious freedom in the public schools even of Massachusetts, there is no reason why it should be born full-grown in the Indian Territory. There is certainly no evidence that it exists there now.

Cambridge, Mass.

THE "AMERICAN SABBATH."

To the Editor of The Nation:

Sir: Many of the arguments in favor of closing the Chicago World's Fair on Sunday which were presented before the House Committee at Washington last week, reflect perfectly the widespread confusion prevailing, even among intelligent persons, as to the claims of Sunday observance upon Christians. Indeed, it is not going too far to assert that the vast majority of American laymen at least still believe that the Mosaic commandment, "Remember the Sabbath day to keep it holy," somehow enjoins the observance of Sunday. Half of them will scarcely believe that Sunday is not mentioned in the Bible at all.

The writings of the ante-Nicene Fathers show beyond controversy that in the early Church Sunday and the Sabbath were never confused. The Apostolical Constitutions (ii., 59; vii., 23), the Epistle of Barnabas (c. 15), Ignatius (To the Magnesians, c. 9), Irenæus (Against Heresies, iv., 8), Justin Martyr (First Apology, c. 67), and Tertullian (Against Marcion, iv., 12, and Against the Jews, 4), all distinguish carefully between the Sabbath and the Lord's Day. And, later, Augustine says (55th letter), "Of all the ten commandments, that relating to the Sabbath is the only one in which the thing commanded is typical. . . . We are not commanded to observe the day of the Sabbath literally by resting from bodily labors as it was observed by the Jews. . . . The Lord's Day, however, has been made known, not to the Jews, but to the Christians, by the resurrection of the Lord, and from him it began to have the festive character which is proper to it (*ex illo habere coepit festivitatem suam*)." Some of the Fathers, indeed, demand the observance of

both Sunday and the Sabbath—a doctrine which the Synod of Laodicea (ca. 375) formally condemned; but not one of them grounds the obligation to keep Sunday on any text having reference to the Hebrew Sabbath. The Sabbatarian error first appears in the writings of Alcuin, and it never secured a firm foothold in either the doctrine or the practice of the pre-Reformation Church. Roman Catholicism to this day regards Sunday as a church day, like Good Friday or Assumption.

The doctrine of the Protestant Reformers was the same. Luther, Melanchthon, Zwingli, even Calvin (Institutes, bk. ii., c. 8, sect. 28-34), all protested, as have Continental Protestants from their day to ours, against the idea that Sunday was a Sabbath. In England, too, the dominical view of Sunday originally prevailed. Tyndale, the translator of the New Testament, shortly before his martyrdom, declared Sunday a day ecclesiastically ordained and nothing more. The doctrine of the Church and the whole course of legislation in England down to the beginning of the seventeenth century bear witness to the same fact. Of English statute law regulating Sunday observance before the time of the Puritans there is little, and what there is commonly mentions Sunday in connection with other church holidays, and prescribes the same conduct, enforced by the same penalties, for them all. Sunday recreation is in no case forbidden. On the contrary, Sunday in ante-Puritan England was a favorite day for ceremonies and festivities. William Rufus, Henry I., Henry II., Richard I., Edward I., Edward II., and Edward III. were crowned of a Sunday. Fairs (being originally institutions of a half-sacred character) and markets commonly took place on a Sunday, and, as they frequently do in Germany to-day, either in the churchyard itself or in convenient proximity to the church where the buyers were assembled. Here, too, Sunday tournaments were held. And Sunday plays were acted, though in violation of the Canon Law, within the church itself. But, considerations of place apart, there was no reason why a play should not be acted on Sunday as well as on any other day. A glimpse of an English Sunday in 1573 is given in Thomas Cartwright's 'Reply to the Answer made of Dr. Whitgifte against the Admonition of Parliament' (Whitgift's Works, iii., 384):

"In all their [the churchmen's] order of service there is no edification according to the rule of the apostle, but confusion. They toss the psalms in most places like tennis-balls. The people, some standing, some walking, some talking, some reading, some praying by themselves, attend not to the minister. He again posteth over it as fast as he can gallop, for either he has two places to serve, or else there are some games to be played in the afternoon, as lying for the whetstone, heathenish dancing for the ring, a bear or a bull to be baited, or else jackanapes to ride on horseback, or an interlude to be played; and if no place else can be gotten it must be done in the church."

In the year 1595 appeared, under the title 'Sabbathum Veteris et Novi Testamenti,' a book written in English by Nicholas Bownde, whose doctrines were destined to work a great change in English Sunday observance. Bownde's almost forgotten book deserves to be reckoned among the most influential works ever printed. It formally advocated for the first time the doctrine of substantial identity between Sunday and the Sabbath which had begun to make itself felt among the Puritans. With Puritan skill in misinterpreting the Bible, and with Puritan rigor in applying his misinterpretations to life and conduct, Bownde argued the obligation of Christians to observe Sunday as the children of Israel were commanded to observe the Sabbath. The ground was prepared for the seed he sowed. The concurrent testimony of authorities so diverse as Heylyn, chaplain to Charles I., Thomas Rogers, writer of the preface to the Thirty-nine Articles, Thomas Fuller, and David Neal, the eulogistic historian of the Puritans, proves that Bownde's doctrine spread with unexampled rapidity. In the words of Heylyn, it "carried a fair face and show of piety," and soon became "the most betwitching error, the most popular deceit, that was ever set on foot in the Church of England." To call Sunday a "Christian Sabbath"—a *contradictio in adjecto*—and to keep it as if it were a Hebrew Sabbath, soon became the characteristic mark of a Puritan.

The Sabbatarian controversy was the first doctrinal strife that arose between the Church and the Puritans. Their previous discussions had turned entirely upon points of ritual or of church discipline. In 1599 Archbishop Whitgift ordered Bownde's book to be burned by the common hangman, and Lord Chief Justice Popham forbade the reprinting of it. None the less the Sabbatarian doctrine spread among the Puritans. Rogers tells us:

"It was preached in Oxfordshire that to do any servile work or business on the Lord's day is as great a sin as to kill a man, or to commit adultery. It was preached in Somersetshire that to throw a bowl on the Sabbath day is as great a sin as to kill a man. It was preached in Norfolk that to make a feast or a wedding dinner on the Lord's day is as great a sin as to kill a man. It was preached in Suffolk that to ring more bells than one upon the Lord's day to call the people unto the church is as great a sin as to commit murder."

By 1630, according to Green's estimate, nine-tenths of the English people were Puritans. About that time some churchmen and Catholics, who had not accepted Bownde's doctrine, appealed to the Crown, complaining that they were hindered in their accustomed and legal liberty of Sunday recreation by Puritan magistrates and neighbors. In 1632, Charles issued in response the famous and much-belied 'Book of Sports.' But neither the King nor the swarm of dominical writers who hastened to defend his deed, could stay the political tide which was sweeping Puritanism towards the Long Parliament and the Commonwealth. At the Restoration, Sabbatarianism occupied in the hearts of Englishmen, churchmen and Nonconformists, Britons and Americans alike, a position from which it has never been dislodged. Such, briefly sketched, is the history of the Puritan, alias the "American," Sabbath.

January 16, 1893.

Notes.

The Cassell Publishing Co. are about to issue a new edition of the works of William Hale White, author of 'Mark Rutherford' and translator of the 'Ethics' of Spinoza; 'On Sledge and Horseback to the Outcast Siberian Lepers,' by Kate Marsden; a 'Diary of the Salisbury Parliament, 1886-1892,' by Henry W. Lucy, with designs by Harry Furniss; a volume of essays by Zola, 'The Experimental Novel.'

Macmillan & Co. will shortly publish 'The Survivals of Christianity: Studies in the Theology of the Divine Immanence,' by Dr. Charles James Wood.

D. C. Heath & Co., Boston, announce 'Select Speeches of Daniel Webster,' edited with notes by Prof. A. J. George; and 'Select Masterpieces of the Middle Ages,' edited in modern German by Prof. Carla Wenckebach of Wellesley College.

Of the number of out-of-door books that have been left by the passing season, few have any distinction. The most consist of collected papers out of journals or magazines, and endeavor to combine the varied interests of the amateur in nature-observation and in sentiment and literature. Thoreau, the Nestor of this literary fashion, is represented by the fourth and perhaps the last of his posthumous "Seasons," 'Autumn' (Houghton, Mifflin & Co.), edited by H. G. O. Blake, and exhibits his qualities just as before. It is, possibly, unfortunate for his reputation that he has latterly been known by these successive issues of inferior work to the prejudice of his own "books." Mr. Bradford Torrey's 'Footpath Way' (the same publishers) is a true naturalist's book, and catalogues much of its author's painstaking observations on the birds and flowers of his New England haunts; but the more important papers have been noticed by us on their original appearance in the *Atlantic*, and nothing remains except to note the more permanent form in which they now appear. Dr. W. C. Prime's 'Along New England Roads' (Harpers) is collected from a correspondence of more than forty years in the New York *Journal of Commerce*, and represents the countryside as it is seen from a carriage in drives that wind among or radiate from the Berkshire Hills. There is an infusion of human interest in the narrative that lends a genuine character to the rugged landscape and reinforces the spirit of the whole. Occasionally, too, one meets with a curious relic of history, as in the statement that the "smock marriage," or marriage *en chemise*, was celebrated in Vermont in 1789, under the theory that obtained in England, that such a ceremony relieved the husband of responsibility for the wife's debts before marriage. 'Field Farings: a Vagrant Chronicle of Earth and Sky,' by Martha McCulloch Williams (Harpers), is very closely confined to the sentiment of landscape, and on the whole renders nature in a very diluted color-wash, but with appreciation of the pleasures of the varying seasons to the eye and touch.

Mr. Richard Jefferies's 'Toilers of the Field' (Longmans) is much more than an out-of-door volume, though several of the papers it contains are only descriptions of the aspects of nature-change. All are collected papers, partly from early publications, partly from his last days, and the volume has the weakness of a posthumous work. The main part, however, is a study of the habits, condition, and character of the agricultural population in certain counties of England, and is of the highest interest and value to any one seeking competent information in respect to that class of laborers. The story is one, principally, of almost brutal life, with its slight alleviations of health and rough enjoyment, and occasionally a touch of charity. It is a shameful story, and sets forth the condition of life in which these people are born, and which their prayer-book teaches them to pray to be content with, with the fervor of a humane man and the frankness of an economist; and the horizon of misery is widened beyond "the London poor" to the state of a nation, so that one can infer what the lowest strata of toilers are in England at large. The volume is thus one more of the "documents" of the social system which are having silent effect in many quarters, and which help towards an understanding of the

social movement in the minds of the comfortable classes here.

Whether Mr. Albee's 'Prose Idyls' (Houghton, Mifflin & Co.) is to be reckoned as an out-of-door book may be doubtful, but it is not more doubtful than any other classification of it. The style is singularly affected, but the substance is perhaps more remote from anything natural in heaven or earth. "Having finished his morning's allotted task, the writer of beautiful books bethought him to walk awhile and cool his flagrant brain"—that is the mode of expression. If the curious latter-day form of literature known as "Pastels in Prose" had been practised by our grandfathers, one would have looked on these "idyls" as much belated "pastels," but they are rather premature than antiquated in their general suggestion. Some are meant to be satirical, some poetical, some didactic, but their predominant quality is "queerness"; they remind one of the "come-outer" genus, and bear perhaps a relation to the seminal days of transcendentalism. They belong with Emily Dickinson's verses—the "sports" of literary decadence.

In Mr. George H. Ellwanger's 'In Gold and Silver' (Appleton) three out of the four papers are devoted to out-of-doors; fox-hunting and trouting being the special tags on which the particolored threads of nature and sentiment are made to depend and compose into patterns of rhetorical device. The opening paper contains the praise of rugs, and in particular of one rug which should have come from the 'Arabian Nights.' The volume is prettily illustrated, and it is also published in a limited edition on Japan paper.

The thing that "scientific criticism" would be, could it get itself born, is illustrated by Joseph Jacobs's 'Tennyson's In Memoriam; an Appreciation and a Study' (London: David Nutt). The preface is a revised issue of the *Academy's* obituary notice of Tennyson, which shows how unfit the writer was to practise the method of "appreciation" which he calls the "Oxford" style; the remainder is on the "Cambridge" plan, of which his friend Prof. R. G. Moulton, now of Chicago, is the exemplar, and reduces the theory to practice with only *in extremis* for its period. A tabulation of the false rhymes, a chart of the argument, an identification of borrowed or suggested passages, a summary of what the poem tells us of Arthur Hallam, an inquiry as to the precise date of the several divisions, and similar matters compose the "study"; and when all this apparatus has been laboriously accumulated, that is the end. The poetry is left to take care of itself. If anatomy is psychology, this may be literary criticism; but, to our apprehension, it is mistaking the great poem for the paper it is printed on, and criticising it as a study in pulp.

Dr. Leon Kellner, already favorably known to students of English for the elaborate syntactical study prefixed to his edition of Caxton's 'Blanchardyn and Eglantine' (Early English Text Society, 1890), has recently published a short text-book called 'Historical Outlines of English Syntax' (Macmillan). The book is a genuine contribution to a neglected department of English philology, and ought to be useful not only to teachers of historical grammar, but to teachers of composition and rhetoric. The classification is sensible and not too subtle, the discussion of idioms is interesting and enlightening, and the examples are abundant and well chosen. In a treatise dealing with so difficult and complicated a subject, there are of course many propositions which are merely tentative, and these the author has not always distinguished from established facts; but in general the book is to be commended as careful and scientific. Perhaps Dr. Kellner is a little too fond of appealing to "psychology"; but much is to be forgiven the pioneer.

We are late in noticing 'Harper's Chicago and the World's Fair,' by Julian Ralph, a book written in a jaunty journalistic style and containing a good deal of information about what has been called "The White City," and the other which might, not unfairly, be called the black city. A great deal may be learned about the architecture and sculpture of the Fair from these pages, but, when they were written, the painting of the Fair was not yet in existence. It is a pity that the illustrations of the sculpture should deal so largely with the worst examples.

Place aux dames. After Mr. Hamerton's 'Man in Art' comes M. Marius Vachon's 'La Femme dans l'Art' (Paris: J. Rouam & Cie.; New York: J. W. Bouton). The book need not be taken very seriously as a contribution to art criticism, but it is a rather amusing compilation of all sorts of information about the artistic treatment of the female face and figure, from the Egyptians to modern times (though the French school is the only modern school discussed), and also about the famous women who have influenced the arts, either as patrons or models, and those who have achieved reputation as artists. It is a thick quarto, in paper covers, well printed, and illustrated with 400 cuts from various sources, some good, some bad, and most mediocre.

It seems sometimes as if the series of reprints from *L'Art* called "Les Artistes Célèbres" (Macmillan) would be better entitled "Les Artistes Obscurs," so often does it deal with second-rate talents. One of its latest issues is devoted to Les Hüet, and its wealth of illustrations fails to give any reason for occupying one's self with those mediocrities.

The twenty-second volume of M. Jusserand's excellent series of "Grands Écrivains Français" is the Life of J. J. Rousseau by M. Arthur Chuquet (Paris: Hachette; New York: F. W. Christern). In compacting a critical biography of Jean Jacques into 200 pages, M. Chuquet has achieved what is almost an impossibility. His success is due largely to his resolute refusal to argue controverted points. He sets forth the biography, first of all, in a chapter sixty-five pages long, relying on his own authority and wasting no space in discussion. In ten briefer chapters he considers Rousseau's chief works, and sums up his influence and his characteristics as a writer. His attitude is admiring, but sane, and his study of one of the most complicated figures in the history of French literature and one of the most interesting is an honest piece of work. The next volumes promised in the series are 'Mérimée,' by M. Auguste Filon, one of the clever critics of the *Revue Bleue*, and 'Alfred de Musset'—not by M. Jules Lemaitre, to whom it was at first assigned, but by the lady who signs herself Arvède Barine.

M. Ernest Legouvé bears his eighty years bravely. It is not so long ago that he published his delightful 'Soixante Ans de Souvenirs,' and but a year or so since he issued his plays in a uniform edition with prefaces. Now he has gathered into a volume called 'Épis et Bleuets' (Paris: Hetzel; New York: F. W. Christern) nearly a score of brief essays, most of them autobiographic, and all pleasant reading. Perhaps half of them have to do with the theatre in one form or another, and these are by far the most interesting. M. Legouvé tells us of the great comedian Régnier (whose pupil M. Coquelin was), and of his aiding Jules Sandeau in dramatizing "Mlle. de la Seiglière." He describes M. Delaunay, the eternal lover of the Comédie-Française; studies the successive typical servants of the stage; takes up one of the commonest accusations against his old collaborator, Scribe, and turns it into a eulogy, and utilizes one of the fables of La Fontaine to give a course of instruction in the art of reading aloud in a single lesson. The only fault to find with the book is the publisher's and not the author's: it is a stiff and ungainly volume, harsh with gilt edges, and padded with obviously extraneous illustrations.

The historical appendices to the Bulletins of the Boston Public Library are a recent innovation much to be commended. The January issue follows its list of magazines and other serial publications taken at the Library (filling thirteen pages) with facsimiles of two most interesting Revolutionary documents, viz., the original paroles of honor respectively of the British and the Hessian officers captured at Saratoga and first cantoned in Cambridge and vicinity, where the paroles were signed. The pieces are large, and have been very skilfully copied. Gen. Burgoyne heads the British, and Gen. Riedesel the Hessian list.

We have received the first number of *Ethische Kultur*, a weekly paper published in Berlin by F. Dümmler and edited by Prof. Georg von Gizycki, under the auspices of the German Society for Ethical Culture, yet not as its organ. No one could have been chosen to give expression to the spirit of that Society better qualified than Prof. Gizycki, whose writings are not unknown on this side of the water, and whose estimable character is in keeping with the highest moral and spiritual aspirations of the time. The special feature of this initial number, besides the editorial profession and Prof. Friedrich Jodl's definition of ethical culture, is the beginning of an authorized translation of W. Kingdon Clifford's 'Ethics of Belief,' by Lily von Kretschman. Moral tales, and biographical sketches of men eminent for moral worth, are a part of the intended miscellany of this journal.

Historical scholarship never, we believe, launched a more solid and scientific periodical than *Toscanelli*, whose prospectus we have already given, and of which the first number is before us (Florence: Loescher & Seeber). The cover bears a feeble design, but the typography is of a high order, and the paper of the best, while the contents (in French) augur invaluable contributions to our knowledge of Columbus and his contemporaries from hitherto inedited sources. The editor, G. Uzielli, has the laboring oar in this number, and by good right devotes himself chiefly to Toscanelli, for he is engaged upon a Life of this great precursor and prompter in the revival of geographical discovery. Vespucius receives the next largest share of attention. His family is illustrated by two new documents from the hand of his father, a notary, confirming the birth-year of the navigator as 1451, and proving that he was in Paris in 1478–1480 with a kinsman, Guido Antonio Vespucci, who was ambassador to the court of Louis XI., to seek assistance for Florence after the conspiracy of the Pazzi. Guidantonio's despatches are apparently in the handwriting of Amerigo, of which a facsimile from a newly found MS. is given in *Toscanelli;* hence it is inferred that the latter was an attaché of the embassy, which, says Sig. Uzielli, was certainly the origin of the chain of events that led up to the invasion of Italy by Charles VIII. in 1494, and to the subsequent ruin of the Italian republics and of Florence in particular. Under "Nouvelles Diverses" we find con-

temporary manuscript mention, of great importance, of the arrival at Florence in March, 1493, of the news of Columbus's discovery, by Pietro Parenti. But there is too much in *Toscanelli* to summarize. For Columbian studies it is indispensable.

In his *Mélusine* for November-December, 1892, M. Henri Gaidoz has a curious paper on the familiar Catholic image in which the Virgin is shown with her heart pierced with seven swords ("Notre-Dame des Sept Douleurs." He gives two broadsides having this representation—one modern, in color, such as are still hawked about in France, and one older (say two centuries), in which the disposition of the swords, radiating beyond the shoulders of the Virgin, connects this symbolism with that of the ancient Assyrian goddess of war, Istar, prototype also of Artemis ,and Diana. M. Gaidoz would have the copying very direct from some Assyrian cylinder, in the case of the Virgin, and he instances many appropriations of pagan cameos to Christian uses—a Jupiter for St. John, Athena and Poseidon for Adam and Eve, Venus for the Virgin, etc. The cult of the Sacred Heart of Jesus and of Mary is of French origin.

The Munich *Medicinische Wochenschrift* (No. 46) has a timely paper "On Cholera," by the eminent Bavarian epidemiologist, Prof. Dr. von Pettenkofer, with an account of his own experience in taking into his stomach a dose of bicarbonate of soda mixed with a strong and perfectly fresh "bouillon-culture," containing about a milliard of very lively comma-bacilli. His heroic experiment seems to prove quite conclusively that the mere presence of these bacilli in the human viscera is not sufficient to produce cholera, but that other pathogenic conditions are necessary to this result. The dreaded bacilli are comparatively harmless unless they are favored by a local and an individual predisposition to the disease. These factors are still, to a great degree, unknown quantities, to the investigation and determination of which epidemiologists should now devote their chief attention. Pettenkofer denies that cholera is contagious, and asserts that all measures based upon the theory that it is—such as quarantine and other methods of isolation—are not only perfectly futile, but positively pernicious. There is no epidemic against which individuals and communities can, by a rational system of sanitation, more effectually protect themselves than cholera; and nothing is more absurd than the panic with which otherwise intelligent persons are seized at every rumor of its approach.

The principal paper in *Petermann's Mitteilungen* for December is an account of that still undeveloped part of the Brazilian State, San Paulo, watered by the River Parapanema. Its attractions for the settler appear to be a mild climate, sufficient rainfall, and a soil suited to the growth of vegetables, rice, corn, tobacco, cotton, sugar, and wine. It is urged, however, that the cultivation of coffee, to the exclusion of the food-products, should not prevail as in other parts of the State. The chief drawback is the presence of Indians, who oppose the intrusion of the whites in ways very similar to those of the natives of North America a century and a half ago. In this number the editor gives his usual summary of the geographical literature of the year. The total number of notices of works and important papers in the scientific journals is 1,170, as against 2,092 for the previous year. The loss is largely in works on Africa, which have fallen off from 542 to 166. More than a third of the whole number relate to Europe; Asia and America have 183 and 180 respectively, while Africa sinks to the fourth place.

The *Scottish Geographical Magazine* for January opens with an account of a recent ride through Persia, of which the most noteworthy passage is that referring to the absorbing interest in Teheran in the question as to the "present relative strength of England and Russia." The other papers are on the physical conditions of the waters of the English Channel, and the distribution of aquatic plants and animals. In the latter, Mr. H. B. Guppy explains the great similarity of fresh-water flora and fauna, as compared with the diversity of terrestrial organisms, by the uniformity of the conditions in which they live. They are not affected, as are land plants and animals, by differences of "soil, humidity, nocturnal radiation, wind, and many of those complex agencies that give endless variety to climate and terrestrial life." In confirmation of this he cites the fact that the temperature of the Thames, one warm August day, varied only two degrees (64° to 66°), while the temperature of the air in the shade varied twenty-two degrees (50° to 72°). The obituary for 1892 contains notices of an unusual number of men distinguished for their services to geographical science, as Dr. H. W. Bellew, Gen. Sir Lewis Pelly, Col. Sir R. G. Sandeman, Capt. William G. Stairs, Prof. Freeman, John MacGregor, M. Henri Duveyrier, M. Paul Crampel, and M. Joseph Martin.

The recent discovery, at the Lick Observatory, of a new comet, through the agency of the sensitive plate, forms another striking instance of the service which photography renders to astronomy. On October 12, Mr. Barnard made an exposure, four hours twenty minutes in duration, on the Milky Way near Altair; and upon developing the plate an indistinct, darkish line or hazy trail made its appearance. The reality of it was subsequently verified by visual observation, this being the first comet ever discovered by photography. It will soon be vain for these oft-times elusive visitors in our solar system to attempt to escape the untiring photographic plate, when once a competent battery is exposed to the action of their light—frequently faint, and in this instance mainly actinic. Caught by such unimpeachable record, a comet may go its nebulous way and yet be for ever after a subject of study, though its path may never, perhaps, lie our way again.

—Students of sociology who recall the mention in these columns last December of the valuable original work in geology by Miss Florence Bascom, a pupil and assistant of Prof. George H. Williams of Johns Hopkins University, will be glad to know that it is officially admitted (not announced) by the University authorities that Miss Bascom will receive, at the annual commencement in June, the degree of Doctor of Philosophy. The woman whose good fortune it will be thus to secure practical equality for both sexes in the distribution of Johns Hopkins honors, is a daughter of Dr. John Bascom, at present acting Professor of Political Economy at Williams College, Massachusetts, and formerly President of the University of Wisconsin. It was at this co-educational institution that, between the years 1882 and 1887, Miss Bascom received her B.A., B.S., and M.A. degrees. After teaching for several years, in 1891 she, under careful and friendly advice, applied for permission to pursue the full course—lectures, laboratory, and outdoor work—of a graduate student in the geological department of Johns Hopkins. Both the Faculty and the Board of Trustees acted favorably on her application, but it was stipulated that Miss Bascom should not be enrolled as a student on the University register, should pay no tuition fees (which might inconveniently establish a precedent), and of course should not compete for any scholarship, fellowship, or other prizes, some of which rewards the previous character of her work showed to be easily within her reach. At the final examination in May, Miss Bascom will present for her doctor's theses some of the results of her original work during the past two years, which work has already secured for her the Faculty's unanimous endorsement, as being a "fit person for the degree of Doctor of Philosophy," and the Trustees' final authorization to "continue her studies leading up to a degree." The manner in which Yale and the University of Pennsylvania have offered women post-graduate instruction forms a suggestive contrast to that in which a University whose bold inception and early prime mark an era in educational evolution has provided a few select women students with advanced instruction. But although Johns Hopkins is still publicly in the attitude known in political circles as "hedging," she will chronologically distance her two rivals in the presentation of a Ph.D. degree to a woman.

—Capt. Willard Glazier's pretended discoveries at the head of the Mississippi aroused the Minnesota Historical Society, which has had a detailed survey and map made of the region about Lake Itasca, and an exhaustive summary prepared of the history and exploration of the great river. This work has been executed by Mr. J. V. Brower, and, as published, constitutes vol. vii. of the Minnesota Historical Collections ('The Mississippi River and its Source'). It is copiously illustrated with maps, portraits, and views. The principal map represents in considerable detail, on a scale of three inches to a mile, the region about the head of the river, from Lake Itasca southward to the summit of the divide. It shows the region to be composed of an alternation of irregular hills and marshes, and dotted with scores of small ponds, many of which have no apparent outlets. This region, half of which is under water, is drained into Lake Itasca by numerous water courses. Mr. Brower finds the ultimate source of the river to be in a partially enclosed basin containing many ponds, lying directly south of Lake Itasca, and distant from its head about three miles. For all practical and popular purposes, therefore, Lake Itasca may continue to be known as the source of the Mississippi. The history of the exploration is confined to that of the main river, as commonly accepted, and is full and even voluminous. Mr. Brower credits De Soto with the first discovery in 1541, and thus disagrees with most writers on the subject, who identify the Rio del Espiritu Santo, which appeared on the maps many years earlier, with the Mississippi. Considering the conditions of the case—among them the fact that earlier explorations had been effected by coasting along the shores, that the mouth of the Mississippi is, as seen from the Gulf, a very obscure feature, and that the Rio del Espiritu Santo is represented on these early maps as flowing, with other smaller streams, into a bay shaped not unlike that of Mobile—it seems probable that Mr. Brower has reached a correct conclusion. It may be added that Dr. Walter B. Scaife has recently published a similar conclusion in his 'America: Its Geographical History.' Another good result has followed from Capt. Glazier's geographical "raid," at least indirectly. The State of Minnesota has

set apart the region about the head of the Mississippi as a State park.

—The unwary should be warned that Hannah Lynch's translation of Perrens's well-known 'History of Florence from 1434 to 1531' (vol. i., London: Methuen & Co.) is not a satisfactory English rendering. In fact, neither the publisher nor the translator deserves much credit for it. The latter does not often miss the general sense of the original, and sometimes her version is passable, but such passages as the following (which might easily be furnished by the dozen) show that her conception of English idiom is of the very slightest: "The tide brought back the Medici, and the ebb carried them away, until what time the spirit of liberty ceased to repel them, and they definitely took root upon this tortured *a*round [*sic*], in the shadow of the imperial pikes and guns. Here again documents about for a long while past" (p. viii.). "It was plotted in Rome among two very distinct parties—Romans and Florentines" (p. 292). Exasperating, too, are the curious blunders in regard to proper names. In most cases in which Perrens courteously prefixed M(onsieur) to the names of contemporary Italian writers, the translator has followed his example. The unsuspecting reader finally begins to wonder why so many Italians had Christian names beginning with "M," and suddenly realizes that "M. Cipolla," for instance, stands for Sig. Cipolla. The translator's knowledge of Italian, moreover, must have been slender and easily confused by the French text before her, as the following errors (not a twentieth part of those which might be cited) will bear witness: Lorenzo de' Medicis (throughout), Rinaldo des Albizzi (throughout), Rinaldo de Albizzi (p. 23), Guarino de Vérona (p. 177), Giovanni de' Ravenna and Guarino de' Verona (p. 181), "balie" (p. 285). Nor is the proofreading above reproach. It is certainly unpleasant to read Italian history in bad English, especially when the proper names are a mixture of French, Italian, and English.

—We have received from J. W. Bouton a sumptuous volume, the first of five to be published by the Société de l'Art Français, under the title of 'La France Artistique et Monumentale.' The society has been formed, we are told in the introduction, to uphold the art of fine book-making, which has languished of late in the hands of publishers. Its protest against such a desertion has taken shape in this series of volumes on the great monuments of French art, edited and written by men who are distinguished in the literature of art. M. Henry Havard is the editor; the contributors are MM. Eugène Müntz, Louis Gonse, Ch. Yriarte, and others well known. It is not a work for the scholar, but for the cultivated amateur, and for him it is exceedingly well done. It shows us the churches of Rheims, whose cathedral, though marred like all others, remains perhaps the best type of the great thirteenth-century church; the church of Brou, more familiar in name than in form, and known to all readers of Matthew Arnold; the palace at Avignon, home of the Papal court during its "Babylonian exile," and alive with memories of Clement VI., of Petrarch, and of Rienzi; the Château of Pau, cradle of Henri IV.; the Park and Château of Versailles; the Hôtel Carnavelet, and the Bagatelle in the Bois de Boulogne. The story of these is told and their artistic aspect sketched with French clearness and animation. For the second volume are promised the Louvre, the Châteaux of Amboise and Fontainebleau, Mont St. Michel, the Palace of the Legion of Honor, and the civic buildings of Angers. The book-making is the very best—a paper only too heavy (two hundred pages making a volume nearly two inches thick), and a page distinguished by a happy proportion of letterpress, leading, and margin. The full-page heliogravures and the woodcuts in the text are as fine as modern art can make them. We have not seen any better presentation of so difficult an interior than that of the Galerie des Glaces at Versailles, or a more charming out-door view than that of the fountain of France Triumphant in the garden; nor have we seen mediæval sculpture, whether of figures or of architectural detail, more beautifully rendered in a way than in the cuts after M. Boudier, for instance, on pages 2, 15, and 17.

—The death of Albert Delpit, which occurred at Paris on the 4th instant, calls for some brief notice, not so much on account of any great literary eminence which he achieved as for certain half-personal reasons. He was an American by birth, and his work was better known here than that of some other novelists of the same rank, inasmuch as a great part of it had the advantage of appearing in the *Revue des Deux Mondes*. Delpit was born at New Orleans on January 30, 1849. He went to France when he was about ten years old, and received his education at the Lycée of Bordeaux. Almost immediately upon his graduation he began to write, chiefly in the reviews founded by the elder Dumas, whose Secretary he was for a time. Soon after the war of 1870, in which he had fought bravely and won the cross of the Legion of Honor, he published his first poem, "Les Chants de l'Invasion," which received from the Academy a Montyon prize. Later in life he was given the Vitet prize for the *ensemble* of his work. He wrote a dozen or more novels and nearly as many plays, but achieved no very striking success save in "Le Fils de Coralie," which may be said to have made his reputation as a dramatic author. Delpit was always more or less of the school of Dumas. At least, it was action that he loved rather than analysis or reflection, and his mind was in no degree sicklied o'er with the pale cast of thought of the psychologists. And yet he was not without sympathy with younger men and schools, as was shown by his fierce polemic with Brunetière over the question of Baudelaire's bust, in consequence of which he left the *Revue des Deux Mondes*. He was of a fiery temper in private as well as public life, and two of his duels—with M. de Borda and with M. Alphonse Daudet—are still remembered.

—Some months ago we adverted briefly to Mr. Charles Johnston's study of the races of northeastern India, in which region he claims to have discovered, with much besides which is curious, that a very considerable element of the population is unmistakably Indo-Chinese. In the January number of the *Asiatic Quarterly Review* Mr. Johnston prosecutes the record of his novel researches in a paper entitled "The Yellow Men of India." Of these he finds three centres. The first is in Kocch Behar, a part of the northeast of Lower Bengal; the second is in the Santal Parganahs; and the third is in the northern half of the Eastern Ghats, a section of the Madras Presidency. As to physical peculiarities, language, religion, and customs, the inhabitants of these three regions exhibit a very close family likeness; and they are also, in common, diligent and skilful cultivators of the soil. Those among them who dwell nearest to the Hindus by whom they are surrounded, have become more or less assimilated, in various respects, to their neighbors; but the bulk of them are, in all probability, much what their ancestors were several thousand years in the past. And in the kindred of those ancestors, long ago converted to Brahmanism, Mr. Johnston is confident that he sees the original Vaiçyas, one division of the *ârya-vâcho dasyavah* of Manu, "men of non-Aryan race, speaking Aryan tongues." For further particulars we must refer to the essay, of which we have been obliged to content ourselves with stating meagrely the bare conclusions. The factual grounds on which those conclusions are based, and likewise the minute characterizations given of the "Yellow Men," are instructive reading. For instance, we are told that the unalloyed natives of Kocch Behar are so far gone as gynecocrats that all their property is vested in the women. Again, among the Savaras of the Eastern Ghats, a wife may leave her husband whenever she pleases, and the husband is powerless to prevent her from doing so—a great improvement, in point of expeditiousness, on divorce courts.

WOODBERRY'S SHELLEY.—I.

The Complete Poetical Works of Percy Bysshe Shelley. The Text newly collated and revised, and edited with a Memoir and Notes, by George Edward Woodberry. Centenary Edition. In four volumes. Boston: Houghton, Mifflin & Co. 1892.

A NEW edition of Shelley would not necessarily deserve more mention than a description of the paper and typography with which it is issued; but the work which is here announced presupposes the labor of years, and, in some sense, the preparation of a lifetime. It is, perhaps, the rarest sort of tribute which a man of letters can lay upon the monument of a great genius; for it represents an amount of painstaking drudgery in details which few can understand and appreciate, and which can be lightened and illuminated only by a special loyalty and devotion. This solace and pleasure undoubtedly Mr. Woodberry has felt in the course of his labors. If any one now living has a right to undertake the care of an edition that is worthy of the poet, Mr. Woodberry may claim that right; for he adds to the research and accuracy of editors like Rossetti and Forman and Dowden the delicate sympathy and insight of a mind which belongs to Shelley's own spiritual family.

Shelley was born on the 4th of August, 1792. In January, 1822, he wrote to Hunt, "My faculties are torpid and shaken to atoms; and if 'Adonais' had no success and excited no interest, what incentive can I have to write?" The scorn and indignation which the 'Adonais' expressed for the tribe of critics was not felt entirely on behalf of Keats, genuine and generous as was the sympathy of Shelley. In that lament he confesses that "in another's fate he wept his own." The generation which adored Byron and admired Moore's melodies was not quite ready for Shelley—there was no one to listen to his piping; he had fallen on evil days, and had prepared for himself a repute which he was far from deserving. Hence it was that towards the close of his short life he could write the melancholy lines we have quoted. He never felt the warm and vivifying sunshine of fame in which Browning and Tennyson spent most of their days. He never could have anticipated that, before the century was out, his works were to be treated as classics, the fragments which he had slighted or flung aside would be carefully gathered together, and ela-

borate editions, in which every word and rhyme of his were weighed, would be published in rapid succession. The bread for which he starved is now laid by pilgrims every day upon his grave; his memory it is which keeps the warder's bell tinkling all day long at the gate of the green cemetery below the pyramid of Caius Cestius.

If Shelley has now attained the rank of a classic, he reminds us of the Greek and Latin classics in this respect, that his text has needed editing more than that of any of his contemporaries. He was not careless in composing; but he wrote at a white heat, and he published immediately. His works were for the most part printed at a distance from the author, and carelessly printed. Revision, when it was undertaken in later editions, proceeded under difficulties. Hence an unusual number of passages which are doubtful or obscure in grammar or in meaning; hence, too, unusual opportunity and necessity for the functions of the editor. Mr. Woodberry's intention has been to "summarize the labors of more than half a century on Shelley's text, and on his biography so far as his biography is bound up with the text." He has besides made use of all the original sources that were accessible; and among these he offers, for the first time in an edition of Shelley, the variorum readings of the Harvard College manuscripts, which he had already edited in a separate publication. He adds, from the printed books in the collection of Mr. C. W. Frederickson of Brooklyn, an interesting paragraph restored to the preface of 'Hellas'; and in the Notes, some extracts from unpublished letters of Shelley. His object has been to furnish the general reader with a complete and authentic text, and the student with a view of its sources, variations, and emendations. The Notes, derived from the letters and from Mrs. Shelley's introduction, supply the history of each poem. For these various purposes, it is fair to say that no other edition can be matched with Mr. Woodberry's. Mr. Rossetti, while performing for the first time the services of a careful editor, took some liberties in his revision and emendations. Mr. Forman's work represents a reaction against these and a more literal adherence to the originals, an adherence which Mr. Woodberry does not always support in matters of punctuation or of spelling. Such spellings as knarled, desart, and extacy—such archaisms as eyne and treen, except so far as they made rhyme—were freaks of no significance and of no poetic value, in which Shelley's own usage varied. On the other hand, Mr. Woodberry has judged it no part of his editorial functions to correct grammatical errors (except in rare and obvious cases), nor to make or adopt metrical corrections. In these points, which involve the idiosyncrasy of the poet, he has been very wisely more conservative than his predecessors, while his choice of readings shows a trained judgment and a delicate ear for his author's subtle melodies. And hence he is willing to leave Shelley to himself in cases where Rossetti and Forman have thought it necessary to amend the metre. Here is one instance from the 'Prometheus Unbound' (Act II., scene v., 95):

> "Realms where the air we breathe is love
> Which in the winds on the waves doth move,"

where Forman and Dowden insert *and* after *winds;* on this Mr. Woodberry remarks: "The emendation corrects a faultless line merely to make it agree with stanzaic structure, and, like all metrical emendations in a poet so accustomed to irregular and original melody as Shelley, is open to the gravest doubt." The same principle leads him to retain, in the fourth act,

> "Purple and azure, white, green, and golden,"

where again Forman and Dowden tame the line to rule by inserting *and* before *green;* and again in the little poem to the Aziola, Mr. Woodberry is satisfied with

> "music
> Unlike, and far sweeter than all,"

where Forman would double *far*, to produce a mathematically accurate line. These are a few samples of Mr. Woodberry's fidelity and of his fitness for his task, which, indeed, requires a craftsman's ear for rhythm. In this matter Shelley was not only a law unto himself, but a teacher of melodies to others of his guild. He discovered new sources of rhythm and music in a language which Spenser had already moulded to the poet's use.

The complete conspectus of various readings in the foot-notes and at the close of each volume furnishes the student and lover of Shelley with all the apparatus he can desire. The taste which governed the editor's work is shown in such notes as that on the lines from "Evening —Ponte al Mare, Pisa"—

> "The chasm in which the sun has sunk is shut
> By darkest barriers of enormous cloud,
> Like mountain over mountain huddled"—

where our editor reverts to Mrs. Shelley's reading, 1839, and defends *enormous* against *cinereous* of the Boscombe MS., adopted by Rossetti, Forman, and Dowden. The variation of a single manuscript, he urges, does not prove that it was the poet's deliberate choice, while *cinereous* simply adds a trait of color, instead of the cumulative effect of mass to which the description has been ascending, and for which the epithet *enormous* prepares the way.

The brief memoir condenses skilfully the immense mass of material that has accumulated with reference to Shelley's life and character, and traces his personal history, with justice, albeit with those gentle touches which may be expected from a friend who is a literary artist. It is quite right that this should be so. Mr. Woodberry has little room for comment or discussion, but he sets forth all the facts in an order which is very favorable to his subject. He paints a portrait that is slightly idealized, and he gives his sitter the benefit of every doubt, of every softened light and shade. He might as well confess that he is in love with that fascinating face which looks from the title-page; and really this is the best attitude for the biographer. He does not forget his good sense, as Prof. Dowden sometimes does in his most laborious and valuable biography; he has none of Prof. Dowden's *Schwärmerei* of manner; yet he is not very far from his conclusions. To our mind it is easy to draw from Prof. Dowden's facts a different set of impressions. The weakest spot in Shelley's character is, plainly, in his relations to women. "The excess of ideality in him," says Mr. Woodberry, "disturbed his judgment of women." This is surely a very tender way of summing up his illusions and disillusions from Miss Hitchener down to Emilia Viviani; in these matters he lost his head for the time, he said, and acted absurdities. He found in feminine friendships, intimate and platonic, that freshness of inspiration, that renovation of emotional experience, which is so valuable to the poet and so trying often to the poet's wife. He was no sensualist, however. The only part of his career which is open to serious criticism is that which has to do with his first marriage, and the fate of his first wife, Harriet Westbrook.

The facts of that tragedy would seem to be a sufficient commentary on Shelley's theory of marriage, and to require no further moralizing. One would think that all would agree frankly that in his youth he committed one great error which is largely atoned for by the rest of his life. One would think it superfluous to prove that it was an error, and superfluous to preach from such a text. The singular fact, however, is that Shelley himself never professed any contrition for this fault; in his letter to his second wife, written immediately after the suicide, he apparently lays the blame on the Westbrook family and their treatment of Harriet. In a letter to Southey, written much later, he solemnly exonerates himself from any share whatever in the blame. The denial is striking, but it really only shows the state of mind he himself had reached. The readers of Harriet Westbrook's latest letters to Mrs. Nugent (published in the *Nation* June 6 and 13, 1889) will not agree with him; they will not agree with his remark, quoted by Mr. Woodberry, "that she had a heart of stone." In an earlier mood he could write to Hogg of his married life, "I am the happiest of the happy"; and to Godwin, "My wife is the partner of my thoughts and feelings"; and to Sir James Lawrence, "Love seems inclined to stay in the prison." It might have stayed in the prison all his life long, we believe, under a more fortunate star. We cannot agree with Mr. Woodberry's inference when he writes, on the testimony of Hogg: "On the birth of her child her intellectual sympathy with him seems to have ended. Afterwards she neither read nor studied." As if the last word were said of a girl of eighteen who had just become a mother; as if, indeed, Hogg does not refute himself immediately by offering us a letter in which Harriet expresses some sentiments that are really charming in their artless nobility.

The fact is undoubtedly that the Westbrook family were vulgar and scheming; that Eliza Westbrook was a meddler and a mischief-maker in Shelley's household. It is quite clear, on the other hand, to any one who reads Harriet Westbrook's letters, that she was far from sharing either the vulgarity or the sordid designs of her family. "She was," as that cool observer Peacock says, "well educated. She read agreeably and intelligently. She wrote only letters, but she wrote them well. Her manners were good; and her whole aspect and demeanor such manifest emanations of a pure and truthful nature, that to be once in her company was to know her thoroughly." She was, in short, what Shelley wrote of Mrs. Williams, "an extremely pretty and gentle woman, apparently not *very* clever. I like her very much." He continued to like Mrs. Williams, and addressed to her his best love poems. He might well have continued to love his first wife. Apart from the mischievous influence of her sister, she had, as women go and as society is made, some reason for coldness and for jealousy of her husband's philandering with the Hitcheners and the Boinvilles. The household tangle required commonplace virtues for its unravelling—commonplace constancy, patience, and firmness—firmness to rout the intruder, patience to retrieve the affection of his young wife. Firmness and patience, for this emergency, Shelley did not possess, or did not choose to exercise. "He disdained to struggle with the sinister influence of his mother-in-law" (says Mrs. Shelley, who thus transforms Eliza Westbrook, in her novel of 'Lodore'), "he did not endeavor to discipline and invigorate the facile disposition of his bride. . . . He yielded her up at once to the world and to her parent." This is exactly true; and yet

many a plain man has found lasting happiness in precisely the course of conduct which Shelley disdained. This much, we think, must be admitted, by all who have followed the history of Harriet Westbrook, that, while she had her husband's love, she resisted and scorned temptation; and if she had retained it, she would not have found occasion, in her desolation of heart, to go astray and to yield to that weakness for suicide which she so often professed.

This much must be admitted against Shelley, that he had a roving fancy, that he had given his wife occasion for coldness, that he dropped her of his own free will, led by another passion, and finally that he had no ground of unfaithfulness against her. The true and valid defence against this black list of errors is his youth, and the fact that he did not accept the binding character of the marriage contract. It is a great deal to say for him, that if he had accepted the ordinary view of marriage, he would certainly have avoided this ugly blot upon his life, for he was truly conscientious in carrying out his principles. Yet it was a sight for Mephistopheles to smile at—this young moralist and reformer following, with some misgivings, the phantom of duty and of a great social principle down the flowery paths of desire; and it is a touch of Sophoclean irony and pathos when we read in Harriet Shelley's artless letters to Mrs. Nugent, "Godwin's children were to come to us; *but our evil genius has stepped in and forbid that happiness*"; and again, "We have seen the Godwins. Need I tell you that I love them all?" She was no mate for Shelley. Possibly not. Where, indeed, could he find his mate? Not even in Mary Godwin herself—not even in the author of 'Frankenstein.' Even with her, Mr. Woodberry can speak of Shelley's loneliness, of misunderstandings, and can write: "It is plain that he felt a lack of perfect sympathy between them; a certain coldness and something like fault-finding with him because of his persistent difference from the world and its ways. He was pained by this and made solitary." And Mr. Woodberry fancies that the fault was Lady Shelley's, and so interprets those tender self-reproaches with which every good woman torments herself over the irrevocable. May we remind Mr. Woodberry that not with impunity did Semele wed an immortal?

DODGE'S CÆSAR.

Cæsar: A History of the Art of War among the Romans down to the End of the Roman Empire, with a detailed account of the Campaigns of Caius Julius Cæsar. With 258 illustrations, consisting of maps, plans of battles, cuts of armor, etc. By Theodore Ayrault Dodge, U. S. A., retired. Boston: Houghton, Mifflin & Co. 8vo, pp. xx., 790.

THIS is the third in Col. Dodge's series of Great Captains, the preceding ones, on Alexander and Hannibal, having already taken established rank among English histories of ancient wars. The author has adhered to his original plan of making each work illustrative of an epoch in the progress of the military art. A brief concluding chapter gives a sketch of the Roman Army organization and methods after Cæsar's time, but the work is distinctively a critical history of Cæsar's campaigns. These are considered with reference to the permanent problems of strategy and tactics, judging Cæsar's grade as a commander by modern standards.

Col. Dodge enlivens his criticisms by occasional reference to similar situations in our civil war. The constant practice of throwing up field fortifications at each change of position of an army in campaign, which was developed in the latter half of our great struggle, had such striking points of resemblance to the Roman method that a comparison could hardly be omitted in any current study of the great Roman general. It led in both cases to defensive tactics in actual conflict, associated with aggressive strategy on the larger theatre of operations. The advantages and disadvantages were essentially the same in ancient campaigns as now; but the method was both then and now an evolution from the existing circumstances, including the organization of armies, the character of the men in the ranks, the nature of the weapons and armor in use, and the physical features of the country. Change any of these and the system must be modified.

The recent archæological researches begun in France by Napoleon III., and so admirably carried out and narrated by Col. Stoffel, have made the study of Cæsar's Gallic campaigns incomparably more instructive than ever before. We are enabled in most cases to identify the fields of battle, and in many to trace the lines of encampment and measure the very ditch and rampart over which the combatants made their attack or defence. The topography of a field is made plain to us, and we pass from hill to hill, or follow a charge down a slope, with a satisfactory comprehension of the reasons which determined the time and place of the manœuvre. We have not such full assistance in the later campaigns of Africa and of Spain, for the aid of Cæsar's own matchless commentaries is wanting, and we are made to realize how much less misleading is the natural egotism of a great man than the loose and incompetent descriptions of an inferior historian.

Col. Dodge has made full use of all modern aids in research, and, as in the case of Hannibal's wars, has made personal inspection of the ground. He is able to make the creditable boast that, with the exception of Col. Stoffel, he is the "only writer on this subject who has followed Cæsar entirely around the Mediterranean basin." Having done this intelligently and industriously, with a mind prepared for the work by war service in our own campaigns when pick-axe and shovel were used as only Cæsar had used them, Col. Dodge was exceptionally well fitted to give freshness to the old story, and to make the soldier of to-day understand and profit by the double task of fighting and of digging which the great Roman imposed upon his legionaries.

In his general estimate of Cæsar as a soldier, the author feels and fully states the wonderful equipoise of qualities which made the Roman not only great, but in some ways "the foremost man of all the world." When Col. Dodge analyzes particular campaigns or battles, he criticises freely, as is his right, but he seems sometimes to give too little weight to the reflection that Cæsar's choice of means and methods of itself raises a probability that the choice was wise. With all the industry we are capable of, we cannot perfectly reconstruct the situation in which he found himself or the reasons that weighed heaviest in his decisions. While, therefore, the critic is quite right in showing the apparent flaws in the great man's judgment, the shrewdest critic may well express himself with hesitation when he doubts the conduct of such a captain. Col. Dodge sums up two elements of Cæsar's military character by saying he was "by turns Quixotically bold and a very Fabius for lack of tactical enterprise." He carries the favors of fortune, for which the great Roman was proverbial, beyond even the popular estimate when he says Fortune "saved him a thousand times when his schemes deserved to come to naught," and that "foolhardiness which in others Fortune would leave to the punishment which ought to follow, in Cæsar she would favor." Indeed, "foolhardiness" is so often attributed to him that the iteration comes to jar upon the reader's nerves, and to force upon us the reflection that it should read *hero-hardiness*, since it was usually out of a case of apparent desperation that Cæsar wrought his most brilliant results.

The truth seems to be that Cæsar was so conscious of his ability to handle an inferior army more rapidly and ably than any opponent he met, that he felt fully justified in venturing with a smaller force into what looked like a *cul de sac*. He saw the points of the game with lightning quickness, and when he seemed to be sacrificing everything, like Morphy at chess, he had only lured his antagonist to his ruin. Why didn't Pompey overwhelm him at Dyrrachium? Because he was not quick enough. Was Cæsar then wrong in calculating on Pompey's hesitation and his own speed? Not a bit. Why was he not destroyed by Ptolemy's army at Alexandria? Because he knew how to fortify himself in a quarter of the city where he could laugh at his enemies and wait till his reinforcements came. Was it only because the goddess had become his slave? No, it was simply that he himself was a terrible combination of brains and courage. For such a man risks were only stimulant, like mountain air to his lungs; but his intellect was still so calm that he never took a single ounce of risk more than he could carry; that, and not "luck," was the reason why he always triumphed.

But we are told his battle tactics were often as weak as his strategy was strong. We know, however, that nobody could show more nobly than he the physical hardiness of the common soldier. "The day he overcame the Nervii" he carried and defended the standard himself where javelins flew thickest and sword-strokes were heaviest. So at Thapsus; so at Munda. On all these occasions he turned the tide by his personal example and valor. When, then, he manœuvred for position and delayed to join battle, we are not authorized to call it lack of enterprise or timidity. We are rather incited to inquire what were the circumstances which made such a master hesitate. The answer seems to be found in the results of the Roman system of discipline and tactics. If his opponent would accept battle only when an entrenched camp was close at his back, behind the parapet of which he could easily retire; if, again, Roman legion against Roman legion, the firm line with interlocked shields and strong helmets could fight three, four, and even five hours, hand to hand, without decisive advantage, as was not infrequently the case, this hustling and crowding and striking, with an expenditure of strength and of wind as great as if each man were continuously swinging a blacksmith's forehammer, reduced the combatants to a physical condition where one might truly say it was a matter of luck which should outlast the other. Here brains did not count, or counted for little, and the great man might well regard this as a last resort, to be accepted only when every strategic manœuvre had been tried and every device to make his adversary attack had been exhausted. Lee learned this lesson in the summer of 1864. Was he the less a general for learning it, and would he have been wiser to continue his tactics of 1862-'63?

The Roman tactics of this period gave the defence a great advantage. Barbaric Germans or Gauls, not understanding it, could be lured into charging up the hill and coming blown and staggering before the waiting legions which hurled their javelins and charged down the slope fresh and strong. The Romans themselves knew better than to put themselves at such a disadvantage, and it was only once in a while that they were exasperated to a point where the line clamored to be allowed to attack, and then Cæsar knew how to double their zeal by great show of yielding only to their hot-headedness.

The system itself had gone to its limit, and on any given battle-field of this sort the great advantage was with the defence; for an army could circle around its enclosed camp on a summit, and face in any direction, much more speedily than could the attacking party move on the outer curve. The oblique attack was practically out of the question, and an attack by wings or concentrically simply resulted in an assault upon the enclosed fort to which the defenders retired. It was time for a new invention; but we can hardly hold Cæsar responsible for not inventing gunpowder. His hesitation, then, was not timidity, nor lack of tactical knowledge, nor epilepsy—it was only thorough self-command, the mastery of his intellect over his own soul.

The book is most abundantly furnished with sketch maps printed in the text, and with one large folding map of the Roman world. The sketch maps are a great help to the reader and most conveniently placed, and yet one would be glad to have two or three maps of provinces in a more careful style of cartography, even if some of those now given were exchanged for them. The cuts of armor and weapons and of ancient war-engines are excellent and authentic. The frontispiece is a photogravure of the bust of Cæsar in the Museum of Naples. Several wood-cuts from other portrait busts are also given. The volume is every way creditable to the publishers as well as to the author.

Genoa the Superb: The City of Columbus. By Virginia W. Johnson. Boston: Estes & Lauriat.

GENOA, having held for more than two thousand years an important position among Italian cities, has a history well worth studying, apart from its connection with Columbus, which, on account of the fourth centenary of his birth, has attracted a momentary attention to this great centre of commerce. Miss Johnson undertakes to tell us of the people who have lived in this city of palaces, what its conditions of life are in our nineteenth century, and especially how the traveller from the western hemisphere feels impressed by what remains of its glorious past and what exists of its busy commercial aspect. Her book is, however, chiefly made up of her own highly colored sentimental impressions, interspersed with many interesting facts which have come in her way, and some of which she has culled from the best authors. The table of contents, divided as it is into four sections—Root, Stem, Flower, and Fruit—beguiles one with the expectation of some order of sequence having been observed; but we soon find that these divisions are merely fantastical, and that Miss Johnson follows an impressionist method, describing what she sees from the point of view of an ardent observer of local color, carrying us back to the past on the wings of her reverie, and diverting us with a little history, poetry, and art, according to the flight of her fancy. No wonder, then, that in her introduction she condemns as out of fashion any precise reference to her authorities, and contents herself with mentioning the standard works from which she has derived her information. Her readers, on their part, are too thankful to be now and then relieved from her gushing and hysterical flow of impressions by any consecutive narrative to be "difficult" as to its authenticity.

Of picturesque description there is no lack, and for this there is every temptation in the extreme beauty of the surroundings of Genoa. Our author remarks that Petrarch's words, which we quote, are as appropriate now as then:

"I see in Genoa not only a city of fine aspect facing the sea, filled with precious temples, high moles, and splendid palaces, but I marvel to behold the town surrounded by such suburbs. No coast is more beautiful and odoriferous than the Ligurian shore, which extends to the confines of France. On one and the other Riviera, in fact, the sweet chestnut flowers on the slopes of the mountains, on the hills the always green olive, on the strand the sacred palm and the suave orange; and between rock and rock rise painted loggie and gilded domes. The gifts of Ceres are neglected, but the wines of Monterosso and of Corniglia are superior to that of Falerno, and the fruit of Pallas grows in the limpid Gulf of Luni more abundantly than in the Piræus."

Miss Johnson evolves "brain pictures" from her coign of vantage, a balcony on a fourth story, while gazing down on Genoa in the moonlight, and gives us a bird's-eye view of its architectural features. She describes a children's masquerade party going on at a Jew banker's in a palace opposite, and guides us to the monument to Christopher Columbus erected by Charles Albert of Savoy at the instigation of Pius IX. She discourses, again, of saints and sanctuaries and deserted cloisters; most interesting, because less known, being her account of the Irish monk Columban (not to be confounded with St. Columba of Iona), who founded the monastery of Bobbia above La Trebia, between the mountains of Genoa and Piacenza, with a hospital attached to it. Of Genoa itself and its relations with Rome, its independence as a republic, its commerce, its transactions with the East, Miss Johnson gives us at intervals some data, along with descriptions of the palaces, churches, and picture-galleries of the city; but unfortunately her method is rather to remind those who know than to inform those who read to learn. Her fantastic habit of finding resemblances between flowers and people is certainly devoid of sense. Her chapter on "The Royal Asphodel," for instance, treats of the Emperor Frederick II., whom she compares, without any reason, to this plant. "He was the asphodelia of the Maremma [!] among Italian rulers, attaining a vigorous growth of power with the delicate blossoms of refined tastes and pursuits, and that rank sap of being drawn from the embittered sources of human wisdom and worldly cynicism. What do we really know of the actual character of this stately Emperor? Little or nothing." All through the book there is an abuse of mystic phrases, of attempts at fine writing, and, what is still more irritating, an incessant asking questions of the reader that cannot possibly be answered. One is tempted to retaliate by asking, Might it not be better for our author to make up her mind on certain knotty points before writing her book? The continual mixing in petty events of actual life passing before her eyes while she is narrating some important historic fact is also a quality not to be commended. She has no sense of the relative importance of things.

We will close our criticism by quoting an example of useless questions and vain imaginings from the story of the origin of the Doria family, who have for so many centuries held so prominent a position in Genoa:

"Ardoino, a count of Narbonne, once visited Genoa en route for Jerusalem, after the manner of French gentlemen of his day. He lodged at the house of a 'gentildonna,' a widow of the house of Della Volta, who had two daughters, and one was named Orizia or Oria. We are not vouchsafed satisfactory explanation of the circumstance. Was it a patriarchal phase of hospitality in fashion that the widow received the stranger into her domestic circle? Did he bring letters of introduction from his native France which led to the step? Was she an ambitious matron, with marriageable and dowerless daughters and designs on an eligible suitor? The guest fell ill, and was tenderly nursed by the ladies of the family. Is there no romance in history? The Frenchman recovered, but, during convalescence, at least began to experience an attachment for the fair Oria. Whether the patient was treated or not by a leech as learned as Master Simon of Genoa, who took journeys to distant lands in the interests of botany, and in Candia made the acquaintance of an old woman learned in simples, who accompanied him up the slopes of Mount Ida, we are not informed. Whether or not a monk renowned for his sanctity was induced to quit the laboratory of some monastery of the town, and bring to the couch of the sufferer the golden and white ointments, the cordials and unguents, the herbs of magical properties, hellebore and pimpernel for melancholy, and absinthe and tarragon for fevers, we may only conjecture. Cupid seems to have been the chief doctor on the occasion. Did Oria mingle a subtle love-philtre with the drink of the sick man, secretly obtained from a wizard or a witch famous in her quarter of the town, and thus weave a spell about his awakening senses? Was any other potion necessary to quicken the current of his blood and awaken fresh hopes in his heart than her own captivating presence? Was she beautiful, this Oria? The cavalier was a Frenchman, and we must infer she possessed bright eyes, the bloom of early youth, or some especial grace of tact and distinction of manner," etc., etc.

La Littérature Russe: Notices et extraits des principaux auteurs depuis les origines jusqu' à nos jours. Par Louis Leger. Paris: Armand Colin & Cie.

PROF. LEGER is already well known as the author of a dozen works upon the Russians and other Slavic races, and it is only a matter of surprise that he should not have earlier turned his attention to the preparation of a text-book on Russian literature. As he remarks in his preface, there does not yet exist in France a history of Russian literature which is worthy of the name. But it is somewhat singular that he should omit all mention of the very satisfactory volume published in 1874 by C. Courrière, entitled 'La Littérature Contemporaine en Russie,' though he cites half-a-dozen fragmentary collections of Russian writings, ranging in date from 1800 to 1861. Prof. Leger, after a very summary preface intended to furnish the links between the selections that follow, and which contains a just tribute to the Russian language, "that harmonious and supple language, one of the finest tongues which have ever sounded on human lips," begins his review with the Metropolitan Hilarion, whose writings date from the eleventh century. Prof. Leger's method is precisely that of a compendium of literature, and possesses all the merits and all the defects of that method. A brief statement of the dates and facts connected with each author is followed by extracts from his work. Some of these M. Leger has translated himself; others he has taken from the translations of other men, with due acknowledgment.

The novelty of his work is contained in the first 110 pages, that is to say, in that part which treats of literature down to the beginning of what may be called contemporary literature, under Catharine II. The authors whose writings are reproduced have previously figured in works of this sort merely as names, and their writings have not received much more than honorable mention. Many a curious page was indited during the eight centuries which had elapsed since the dawn of learning in Russia, and it is well that the public should be given a taste of their quality in this form. But the student who wishes to get a clear view of the development of literary models and styles under the influence of the political and social conditions, must have recourse to Courrière's book which we have mentioned above. In fact, the two volumes should be consulted together, not separately. What each lacks during this period down to Catharine II. the other supplies. During the modern period, it must be confessed that Prof. Leger has not improved upon his predecessor, Courrière. He contents himself with the very great writers, and those who rank just below them. He makes no mention of very many who are adequately noticed by Courrière, and to whose names, characteristics, and qualities the student requires introduction, if he takes the author's advice and acquires Russian for the sake of reading the originals. It is possible that he will make additions if he ever carries out the intention which he expresses in his Preface, to return to the subject. But, with his catalogue method, his work can never be as satisfactory to the foreign student as is that of Courrière, who makes cause and effect clear, presents a finished picture of Russian literature, and gives an even greater number of popular authors than Prof. Leger without neglecting the giants. Among the curiosities which the latter has selected as illustrating the ideas of the last century are extracts from the writings of Von Vizin, the father of Russian drama, which describe his impressions of France and Frenchmen. It is amusing to find the Russian traveller making upon the French the same criticisms for their barbarism, deceit, and sharpness in bargaining which it is the fashion to hurl at Russians during the present century.

In making the above unfavorable comparisons, we do not mean to have it understood that Prof. Leger's book is otherwise than good, in its way, and desirable for all students of Russian literature. There exists an almost insurmountable difficulty in dealing with the literature of Russia before Catharine II.'s day, because of its rigidly national and religious character, and because of its voluminousness. Any book which should do full justice to that epoch, in description, cataloguing, and presentation of representative extracts, would be so overloaded with matter before arriving at the point where popular interest begins that it would be rejected by all publishers. Consequently, Prof. Leger has abridged as much as possible and with much judgment. M. Courrière solved the difficulty in the opposite way, by treating the old writers and their works as pure history, and giving very few examples of their productions, but with good results as to consecutiveness and interest.

The Noble Science: A Few General Ideas on Fox Hunting. By F. P. Delmé-Radcliffe. A new edition, revised, corrected, and enlarged by W. C. Blew, M.A. London: John C. Nimmo.

None of the British sports—except, perhaps, racing—has been followed at such cost of time and money as hunting, and certainly none has contributed so greatly to the vigor and physical soundness of the English country gentleman. As the famous Mr. Jorrocks says, "It's the sport of kings, the image of war without its guilt, and only five and twenty per cent. of its danger." It is calculated that the 330 packs of hounds in the United Kingdom are followed by 33,000 hunting-men and 99,000 horses, and that hunting causes the annual circulation of about £4,500,000. This large sum yields healthful amusement to a large number of the leisure class, and is the occasional recreation of many whose lives are mainly devoted to hard work. Lord Wellington, it is said, found time, during the active military operations of his Peninsular campaigns, to enjoy following the hounds, and there is no learned or sacred profession in Britain that has not furnished noted performers in the chase. Among the best-known treatises on hunting, one, written by the Rev. W. B. Daniell, forms an important part of his 'British Rural Sports.' Somervile, Beckford, Vyner, and many others have put forth able books on the subject, and Leech gathered his choicest laurels in depicting the scenes and incidents of the field. The half-dozen novels by Surtees which this theme has inspired are of high rank, and may be considered among the best stories of English rural life and character apart from their bearing on the "noble science." The book under notice has been through four editions, the first in 1839, and is meant, with its copious notes, to bring the details and minutiæ of hunting up to the present day.

The introduction is a sketch of the Hertfordshire Hunt, which took its rise in the last century, when the Marchioness of Salisbury, grandmother to the present Marquis, not only kept the hounds, but hunted them for many years, gaining the name of the hardest rider in the field. The management and characteristics of hounds occupy two chapters, and their breeding and treatment may now be said to have reached the stage of an exact science. Mr. Hugo Meynell, the Leicestershire squire whose name is revered by every fox-hunter, and whose grotesque portrait is to be seen at page 16, when he first went into the country he made famous never took out fewer than one hundred couples of hounds. He found, however, after a time, that this great number proved a useless encumbrance, and the model pack now is eighteen to twenty-six couples matched in speed and stanchness. Of a typical bitch he owned, Baneful, Mr. Delmé-Radcliffe says: "To see her swimming a river at the head of the pack, throwing her tongue at every stroke, is, to use a quaint expression of Boxall's, 'enough to make the dead leap from their graves to look at her.'" The proper care of hounds is indeed a discouraging subject to attempt to compass. They are more delicate than human beings, or even fine horses, and, from birth, require the most assiduous attention to their feeding and "walks," *i. e.*, the various farms where they are kept after weaning, until at ten months of age they are put into kennel to prepare for the real business of life. The puppies are likely to be decimated by distemper, their dispositions ruined, or their proper growth and development stunted by want of care on their walks, and withal Mr. Delmé-Radcliffe says that if the master is disposed to be fastidious, there is not more than one in five of the young hounds submitted for inspection as they come to the kennels that will be accepted. Those rejected are killed or otherwise disposed of. After this culling has been done, there is a further rejection of hounds that develop with use various vices and weaknesses, so that the formation of a first-class pack is a work of great trouble and expense. The feeding, exercising, and care of them are hardly less so. One recommendation made would seem rather hard to carry out, namely: as soon as the pack is in kennel after returning from hunting, before being fed, every hound should be immersed in a warm bath of pot liquor; the temperature of which is kept up by continual supplies from the boiling-house. "The advantage of pot liquor over hot water is, that it induces the hounds to lick themselves all over, and the healing properties of a dog's tongue are far superior to any other application for wounds or sores." There are many other interesting instructions as to the "system of kennel" which want of space forbids our noticing.

The chapters on horses and riding to hounds are excellent, and full of useful information even to those who do not hunt. The author is strongly of the opinion that the better bred a horse is, the more manageable as well as the more lasting he is generally found; and that the thoroughbred is naturally the most intelligent and temperate of all horses. Of course, there are exceptions to this, which are all the more noticeable from the fact that the tempers of thoroughbreds are very likely to be spoiled by the training to which most of them are subjected in testing their capacity for racing. The proper training of the horses for the hunting season is a task of time and ability, and is dwelt upon at length. In fact, there is scarcely a point in the care and preparation of horses and hounds and their use in the field that is not carefully and thoroughly considered. One of the recipes given as a specific for the dangers of overreaching, in which not only the fore shoe is torn off by the hind one, but severe wounds are often inflicted on the fore foot, and the horse sometimes thrown, is as follows: "The overreach being caused by the inside edge of the hind shoe, this edge, as well as the outer one, should be well bevelled off, so that the toe of the hind shoe should present only a blunt convex surface." Mr. Delmé-Radcliffe says that during the seven years he had taken this precaution he had not one case of overreach, while before then they were of frequent occurrence. He also advocates the use in all stables of salt-water bandages on the legs of horses in work, wetting them frequently, for the preservation of good legs and the freshening of stale ones.

A story is told (p. 87) showing the partiality of the cloth to the "science" which may be introduced. The Rev. Robert Lowth was being talked over by some of his clerical brethren in presence of his diocesan, and, after his sporting propensities had been thoroughly discussed, it was stated by one of the clergy that he was actually going to ride a match at the county races. "Is he, indeed?" said the amiable old Bishop. "Then I'll bet half a crown he wins." There is also much timely advice to those about to hunt on riding to hounds, and on "hands," that most important element in a good horseman, which is often said to be entirely a gift of nature—like "the hand of a cook for crust"—though the editor thinks good "hands" are to a great extent capable of being acquired.

The book concludes with the biographies of three distinguished heroes of the hunting field —Mr. Hugo Meynell, Mr. C. Loraine Smith, and Mr. John Truman Villebois. It is illustrated with ten hand-colored steel engravings and numerous excellent wood-cuts. It carries throughout its entire contents the spirit of the sport it describes so well, and one feels sure after reading it that the author, to recur to

Mr. Jorrocks, knew well how to "make the foxes cry, Capevi." His readers will heartily join him in the well-known hunting toast on the frontispiece, "Floreat scientia."

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of

Horsford's Acid Phosphate,

"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other Medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

Descriptive Pamphlet free on application to

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

For sale by all druggists.

"*In criticism, the event of the year 1892 has been the enlargement of* THE DIAL, *and its transformation from a monthly to a semi-monthly magazine.*"—Chicago Tribune.

THE DIAL.

A Semi-Monthly Journal of Literary Criticism, Discussion, and Information.

"THE DIAL *has been well conducted from the start, with a serious purpose, and with much learned and intelligent collaboration, and we have had frequent occasion to praise it and to wish it a long life.*"—The Nation, New York.

THE DIAL

Has been established twelve years (since May, 1880), as a monthly journal devoted to Literary Criticism only; but lately (September 1, 1892), by its change to semi-monthly publication, and by enlargement of its scope so as to include the broader interests of Literature, of Education, and of Higher Culture generally, it has entered upon a new career of influence and prosperity. An efficient editorial staff, and a list of contributors representing the faculties of some *thirty* universities and colleges, including many of the foremost American scholars and specialists, guarantee the high quality of THE DIAL'S contents, and justify the distinctive position accorded it as the foremost "Journal of Literary Criticism, Discussion, and Information" in America. Its elegant typography and paper especially commend it to people of taste and refinement, and combine with its carefully prepared contents to make it at once an agreeable literary companion and an indispensable practical aid to all who would keep abreast of the rapidly moving literary current of the time.

"*The look and bearing of* THE DIAL *is refinement itself. . . . Seriousness, fearless care, and a right instinct in letters help to make* THE DIAL *the best review we have.*"—The Independent, New York.

THE DIAL is published on the 1st and 16th of each month. Terms (including postage), $2.00 a year, in advance. Single copy, 10 cents. Address

THE DIAL, 24 Adams St., Chicago.

A VERY SPECIAL OFFER.

In pursuance of a policy looking to the material enlargement of its field during 1893, and as a direct and effective way of introducing it to a new constituency, the publishers of THE DIAL have decided to make the following offer:

They will send their journal for two months (four numbers) to any responsible person (not already a subscriber) who will signify a desire for it and will enclose six 2-cent stamps for postage. This offer is of course intended only for those likely to be *interested* in a *high-class literary journal*, and who feel that such a journal, if of the character represented, would really appeal to them. It is desired that such persons everywhere shall have opportunity to see THE DIAL, and to see it often enough to become acquainted with it and really judge its merits, which cannot be done from a single sample copy. Hence, in place of our usual offer, "a sample copy sent on receipt of ten cents," we now say, *Four sample copies, covering two months, sent prepaid on receipt of twelve cents for postage.* We would be glad if applications would, when agreeable, mention the profession or occupation of the sender; but this is not obligatory, nor is there any obligation whatever beyond a genuine intention to give the journal a fair examination.

College professors and teachers generally, clergymen and other professional men, literary students and book-lovers—in a word, all persons who possess literary tastes and desire to keep in touch with literary events, may properly and profitably avail themselves of this unique offer.

"THE DIAL *seems to me to preserve a higher critical standard, as regards literature, than any other American journal with which I happen to be acquainted.*"—Edmund W. Gosse, London, England.

AMERICAN STATUTE LAW

VOLUME II.

Corporations, Private, Business, and General.

BY F. J. STIMSON.

The first volume of Mr. Stimson's work, which appeared in 1886, has long since established itself as a permanent aid to the practising lawyer and the jurist. A Supplement appeared in 1889, and the second volume, just issued, will immediately be followed by an *entirely new edition* of the first volume, brought down to 1893, and including all later legislation. Of this book

CHIEF JUSTICE WAITE of the U. S. Supreme Court said: "*Its great value becomes more apparent as it is used.*"

JUSTICE BRADLEY said: "*It has a permanent value.*"

JUSTICE O. W. HOLMES of the Mass. Supreme Court said: "*I have followed Mr. Stimson in his work with entirely exceptional interest and admiration.*"

THE N. Y. NATION: "*Few practising lawyers will find it possible to dispense with this excellent guide.*"

THOMAS ERSKINE HOLLAND, writing from Oxford, England, says: "*How invaluable to the study of comparative law is Mr. Stimson's otherwise also invaluable Digest of the results of the legislative activity of the United States.*"

LORD COLERIDGE, Chief Justice of England, DR. KÖNIG, of Berne, and MR. BRYCE, who used the work throughout the preparation of his American Commonwealths, wrote in similar terms.

The second volume, now ready, is of almost greater use to the practising lawyer, as it contains what has never before been attempted—the COMPLETE GENERAL CORPORATION LAWS OF ALL THE STATES AND TERRITORIES.

Vol. II. Price, $6.50 net. Price on Vols. I. and II. together to be announced later, or obtained on application to the Publishers,

Beecher's Bible Studies.

Readings in the Early Books of the Old Testament (*Genesis to Ruth*), with Familiar Comment; given in 1878–79. By HENRY WARD BEECHER. Edited from Stenographic Notes of T. J. ELLINWOOD by JOHN R. HOWARD. 438 pp. 8vo. *Garnet cloth*, $1.50.

"A prophet foretells . . . because he sees more clearly than his fellows the nature of truth, the movements of Providence, and so the tendencies and probable fruition of events. Of these principles a remarkable and interesting illustration is [here] afforded. . . . These sermons to a considerable extent anticipate the results of modern criticism, and at the same time indicate the method in which those results can be practically employed . . . for spiritual ends."—*Editorial in the Christian Union.*

CIVILIZATION AND PROGRESS.

By JOHN BEATTIE CROZIER.

Revised and Enlarged, and with New Preface,
More fully explaining the Nature of the New Organon used in the solution of its problems.

"The book is worthy of careful study, and is a genuine contribution to sociological science.... The book is a most excellent one."—*Popular Science Monthly.*

"The ability of Mr. Crozier consists in a remarkable clearness of detail vision, singular acumen of distinction—the power, so to speak, of seeing through millstones, of being in a manner clairvoyant....This accurate and subtle thinker. . . ."—*Academy.*

"This is the most remarkable and important work of the last twenty years. It is not too much to say that Mr. Crozier can enter the lists with men like Carlyle, Comte, Herbert Spencer, and John Stuart Mill, all of whom he treats sympathetically, and hold his own."—*The Rev. H. R. Haweis, M.A.*

"The book of a very able man . . The testimony which we are compelled to give to the high ability of this ambitious work is completely impartial . . Full of original criticism....Great literary faculty....A book far less superficial than Mr. Buckle's."—*Spectator.*

"No one can rise from the perusal of this work without the conviction that its author has established a claim to stand high among the most profound and original thinkers of the day. . . He has set himself an ambitious task, and he has very narrowly indeed escaped entire success....Will repay perusal and reperusal."—*Knowledge.*

LONGMANS, GREEN & CO., 15 East 16th Street, New York.

School Trustees,

Principals,

Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especialy ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

NEW BOOKS.

Through Christ to God.

A Study in Scientific Theology. By JOSEPH AGAR BEET, D.D. Demy 8vo. Pp. 373, $1.50.

Dr. Beet, one of the most eminent of living theological teachers, gives in this volume "(1) a statement in part of the Gospel of Christ and of his teaching about himself and God, and (2) an argument proving that this statement reproduces correctly the actual teaching of Christ, and proving that his teaching is true." He thus combines what the Church believes (systematic theology) with the "why" of belief (apologetics). The statement is crystal clear, and the argument fair and convincing. That the author has not assumed the infallibility of the Bible or of the Church gives the volume especial fitness to the needs of the present day. For its argument is not affected by theories of Church order, or by recent "higher" Biblical criticism. It reveals an independent and real foundation of the Christian hope, and must be of interest and use, not only to students and preachers, but to all intelligent men and women who desire to know all they can about the great realities of the Christian religion.

Mexico in Transition.

By WILLIAM BUTLER, D.D. 1 vol., 8vo, illustrated, $2.00.

An inside view of the internal condition of "our nearest neighbor," by an experienced observer. His exposition of the life-and-death struggle for political and religious liberty in Mexico has grave lessons for all loyal Americans.

Quest and Vision.

By W. J. DAWSON, Editor of *The Young Man.* 1 vol., 12mo, 90 cents.

Seven essays upon literature and life, discussing problems of intense interest in the brilliant style for which the author is famous in England and America.

The Church of To-morrow.

By W. J. DAWSON. 1 vol., 12mo, $1.00.

The author is still young and imbued with the intense human feeling of our times. His opinions are suggestive and expressed with courage and ability. "The Socialism of Jesus" and "The Democratic Christ" are characteristic essays in this volume.

BRENTANO'S, 31 East 17th St., New York.

Owing to an unexpectedly increased demand, the second edition of

"CALMIRE"

has been out of print about two weeks. The third edition was sent to England The fourth will be published in a few days (12mo, $1.50).

Few anonymous books have received as extensive criticism, and few books of any kind, as diverse. Some critics have condemned it for sailing under false colors, calling it a treatise on morality under the guise of a novel. Perhaps if the basis of its morality had been more on popular lines, the alleged deception would not have been regarded as so reprehensible. The author, however, did not intend any deception at all. He writes to the publishers: "I tried to sugar-coat my prescription because I had no idea that those I hoped to help would take it unless I did. But I very much doubted whether that made the book a novel; and, you remember, I declined to have it called a novel on the title-page, included in a novel series, or even bound as novels usually are. That it is a novel, however, seems to be settled by the critics, and it is the only point on which they are unanimous."

They are not unanimous, however, for the SPRINGFIELD REPUBLICAN *says that it is* "not a novel at all," *while the* BOSTON ADVERTISER *declares it* "by far the most powerful novel that has appeared within the year" ['92]; THE INDEPENDENT *says it is* "the greatest novel in many respects that has appeared within the decade," *and the* BROOKLYN EAGLE *says it is* "perhaps the greatest novel of discussion ever written."

Nevertheless the REPUBLICAN *backs up its opinion by saying that it is* "as heavy and dull as November," *while the* CATHOLIC WORLD *also accuses it of* "unmitigated dullness"; *and* HARPER'S MONTHLY *says it is* "tedious." *On the other hand* LIFE, *which is not generally fond of stupid things, says it is* "a remarkably fine story," *and contains* "a situation which is dramatically conceived and solved sensibly"; *the* BROOKLYN EAGLE *says:* "Through its phenomenal display of general knowledge runs an excellent love story, and much powerful dramatic incident, description, and characterization"; THE INDEPENDENT *says it* "has that charm of blended romance and realism, that captivating verisimilitude, and that nameless power to haunt one with its shame-tinged sorrow and happiness which testify unmistakably of genius"; *and the* BOSTON HOME JOURNAL *perhaps accounts for all the discrepancies of opinion by saying:* "No thoughtful person—and it was evidently written for none other—will begin it without becoming deeply interested in following it to the end."

Perhaps the contradictions between the critics are still farther accounted for by the fact that the unfavorable criticisms of the book's literary quality have all come from those who disapproved its theological character; nevertheless other theological opponents have been liberal enough to enthusiastically praise its literary quality.

The English critics, as far as heard from, have been as much divided as ours, but on somewhat different lines. Their education has been less modernized, they have less interest in the ideas of the book, and they are not generally partial to new American authors. Some of the liberal ones, however, praise it highly.

MACMILLAN & CO.,

112 Fourth Avenue, New York.

SCOTT'S WAVERLEY NOVELS.

Edited by ANDREW LANG.

NEW LIMITED EDITION OF 1,000 COPIES.

Sir Walter Scott has stamped his genius on an entire country and language, and by many is considered to stand first of all the world's great novelists.

The Waverley Novels are read by millions, and in every civilized country in the world, but hitherto they have never been properly illustrated.

This edition will be enriched, at a cost of over $40,000, with proof impressions on imperial Japanese paper, of 300 original etchings from paintings by celebrated artists, among whom are many members of the Royal Society for the promotion of Fine Arts in Scotland, and such masters as **Sir J. E. Millais, R.A., R. W. Macbeth, R.A., Lockhart, Gordon Browne, Pettie, Lalauze, Lefort, Teyssonnieres,** etc., etc.

It will be edited by **Andrew Lang,** the greatest English critic and Bibliographer, who will furnish critical introductions, glossaries, and notes to each novel, supplementing the author's own notes and prefaces.

Mr. Lang was granted access to Scott's private library at Abbottsford through the courtesy of the Hon. Mrs. Maxwell Scott, to whom this edition is dedicated.

This is the most magnificent edition ever made of the works of any novelist.

The type will be large and new, set in a fine open page; the margins ample, and the paper a beautiful natural tint. The volume will be a small 8vo, easy to handle, and the binding vellum cloth, gilt tops, slightly trimmed. Complete in **48 volumes,** issued at the rate of about 2 volumes per month, at **$2.50 per volume.**

Also, 500 copies printed on Holland hand-made paper, with 50 additional illustrations, making a total of 350, and bound in half leather, gilt tops, at **$5.00 per volume.**

[EXTRACT FROM THE LONDON TIMES.]

"It would be difficult to find in these days a more competent and sympathetic editor of Scott than his countryman, the brilliant and versatile man of letters who has undertaken the task.

"The illustrations by various competent hands are beautiful in themselves and beautifully executed, and, altogether, this edition of the Waverley Novels bids fair to become the classical edition of the great Scottish classic."

Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

ESTES & LAURIAT,

PUBLISHERS,

BOSTON.

**** Also, a few sets still remain unsold of our limited editions, uniform with above, of Thackeray, in 30 vols.; Dickens, 48 vols.; Bulwer, 32 vols.; Victor Hugo, 30 vols.; Dumas, 40 vols., which are offered at an advance above the original price of publication.*

READY FEBRUARY THIRD.

Vol. X. of the New

CHAMBERS'S Encyclopædia.

Completing the Work.

A Dictionary of Universal Knowledge.

Concise, simple, clear, accurate, and easy of reference. Over 11,000,000 words; 17,560 columns of reading matter.

Twenty years later than any other Encyclopædia in the market.

CHAMBERS'S ENCYCLOPÆDIA is in use as a book of reference wherever the English language is known. The first edition was completed in 1868. From this point for over twenty years a process of correction and revision was continued from year to year, thus bringing the information down to the latest possible date.

But this process of revising and altering could not be carried on indefinitely. Many articles called for an entirely different treatment. New subjects of interest demanded admittance; while some have lost their claim to the prominence given them twenty-five years ago. The publishers have therefore issued **a thoroughly new edition** of the Encyclopædia.

The work has been under the editorship of Mr. David Patrick, who, with a literary staff, has been for several years engaged in preparing this new edition. The contributors constitute a large body of eminent specialists representing the best scholarship in their respective countries.

An alphabetical list of the important articles in each volume is given, with the names of the authors.

AMERICAN SUBJECTS.—Special regard has been given to American and Colonial subjects. The more important articles on matters connected with America have been written by American authors expressly for this edition. In subjects where the American view or practice diverges from that of the United Kingdom, a special paragraph has been added from American sources; and in legal articles, where the law of the United States differs from that of England, a paragraph is given on the American law.

EXTENT OF THE REVISION.—Most of the articles have been entirely re-written, to adapt them more perfectly to the present position of the science or branch of knowledge to which they belong. The others have been carefully revised, and in many cases re-written to such an extent as to be virtually new articles. **No old article has been retained without scrupulous verification by competent authorities.**

By the exercise of a rigid economy of space, continued throughout, room has been found for **several thousands of articles not contained in the old edition.** These articles comprise Biography, Geography, History, Science, and all other departments of knowledge.

ILLUSTRATIONS AND TYPOGRAPHY.—The illustrations are new, accurate, and artistic. A large number are from photographs. Those on plants and animals deserve special mention, as many have been engraved from photographs taken for this work. All cuts and illustrations stand in the text, and are referred to by letters, *a*, *b*, *c*, etc., or figures, 1, 2, 3, etc. **The type is new, clear, and distinct.**

MAPS.—If issued by themselves, the maps would make a most valuable atlas. All the countries on the globe are represented by beautiful, recent, and accurate colored maps, backed by carefully executed physical maps. All the subdivisions of both Hemispheres, including each State and Territory of the United States, are also represented by new colored maps. There are also many historical maps and physical maps of the ocean, ocean currents, trade winds, etc.

Price per volume: Cloth, $3.00; Sheep, $4.00; Half morocco, $4.50.

For sale by all Booksellers.

Specimen Pages sent on application.

J. B. Lippincott Company,

715-717 Market St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 2, 1893.

The Week.

THERE has been no public man in the United States whose character and career have undergone such searching analysis as those of James G. Blaine, who has passed away since our last issue. Any extended notice of them in these columns, therefore, seems unnecessary, particularly as he has left no mark either in legislation or, beyond his 'Twenty Years of Congress,' in literature. He seems, indeed, to have added little or nothing to his general culture after he left the office of the country newspaper in which he made his début as a politician. His acquaintance with political economy, and even with the mechanism of foreign trade, was to the last hardly rudimentary, and he committed in speech and in writing the most extraordinary blunders regarding both, without the smallest embarrassment. His diplomatic experience, short as it was, brought out in an equally striking way his want of familiarity with history and law. His denouncing reciprocity (and foreign trade in general) in his letter from Paris in December, 1887, when Mr. Cleveland proposed it, did not prevent his appearing as its true author in 1890, and urging it on the Republican party with considerable sarcasm. These defects, however, apparently were not the smallest hindrance to his popularity. In fact, they were of some use in illustrating the wonderful influence of his personality on the great bulk of his party.

Probably no such triumph of personal traits as his has ever been achieved in public life. His cheery, bluff manners, his kindly ways, his vivid and cultivated recollection of obscure people, his readiness in repartee and in anecdote, and his somewhat boisterous and often fantastic expression of that longing for the spread of American influence and domination abroad, known as "Americanism," which constitutes the conscious patriotism of large bodies of the less thoughtful voters, more than compensated for all his shortcomings as a statesman. The nearest parallel to him among foreign politicians of recent date is Lord Palmerston, whom he strikingly resembled in temperament and in manners, and whose influence, as a type, on the rising generation in England was very like his own here. That is, he became here, as Palmerston became in England, the head of what may be called the "jingo" school in foreign politics, and labored to make foreign politics the most absorbing politics of the nation. To him the foreigner was the one enemy, to be euchred in trade, bullied in diplomacy, and made to knuckle down in every species of intercourse. In efforts to improve internal administration, or to take thought for home morals, he displayed but little if any interest. His chief joy was found in the conflicts of party, in which he was no mean foe. His skill as a polemical orator was great. His quickness and dexterity as a parliamentarian were perhaps unequalled in our time, and his confidence in the power of appeals to popular prejudice often reached the point of audacity. The misfortunes of his career, which were great, were doubtless due, like those of several of his contemporaries, to his appearance in the political arena in the period of fierce wealth-getting which followed the close of the war. He was not a man to be content with moral and intellectual victories. He shared to the full extent the excitement of the game of money-getting into which the country plunged after the tremendous losses of the rebellion. Large fortunes were to him the best outward and visible signs of worldly success, and the laurels of the great financiers and speculators of the day would not let him sleep. And so it came about that long before he died, and shrewd and "smart" as he was universally esteemed, he had a larger list of real failures and disappointments to record than falls to the lot of most outwardly successful men.

In the year 1875 a treaty of reciprocity, so called, was made between the United States and his Majesty the King of the Hawaiian Islands, the principal feature of which was the admission of Hawaiian sugar free of duty to this country. As the islands could not produce more than one-tenth of the sugar imported by us, the remission of the duty to them exclusively was equivalent to a bounty of two cents per pound on all they could produce. The sugar industry became very flourishing and passed into the hands of a few rich people in San Francisco. They managed to send us from 200,000,000 to 250,000,000 pounds per year. In 1889 our importations from Hawaii were 243,000,000 pounds. The bounty to the producers for that year was nearly $5,000,000. There was constant complaint among the people of the Pacific Coast during all this time that they got their sugar no cheaper than before, but that on the contrary they were required to pay the market price of the East plus the freight charges for all that they used. This was not the only complaint. The Eastern refiners (before the days of the Sugar Trust) alleged, and no doubt, truly, that Mr. Spreckels was enabled to lay down sugars in the Mississippi Valley in unfair competition with them, since he got his raw sugar at two cents per pound less than they were required to pay.

It would be useless now to discuss the wisdom or unwisdom of the Treaty of 1875. Other considerations than those of sugar-planting entered into it. For better or for worse, the treaty ran along until the McKinley tariff was passed. The repeal of the duties on raw sugar put the Hawaiian Islands once more on the same footing as other foreign countries. Their bounty was cut off. To stop a regular income of four or five millions of dollars from a little group of islands, or rather from a small coterie in that group, is a serious matter. Something was sure to happen in consequence, and something has happened. There has been a "revolution." The "Queen of the Sandwich Islands" has been overthrown. Tyranny is in the dust. The people (about 50,000 natives and 3,000 Americans and Europeans) have asserted the sacred right of self-government. There are nearly as many Chinese coolies, called "contract laborers," on the islands as there are natives of the Hawaiian stock. Of course these have had nothing to do with the revolution, nor, for that matter, have the natives. The upheaval is in the American quarter altogether. It is a revolution on a strictly cash basis. When the McKinley tariff put raw sugar on the free list, it gave a bounty of two cents per pound to the producers of sugar in the United States. This was sufficient to revolutionize the Hawaiian Islands any day. The sugar-planters want that bounty. They have a delegation, or an embassy, or whatever it may be called, en route to Washington city now to place the sovereignty of the kingdom at our disposal and the sugar bounty at their disposal.

The importance of Hawaii lies in the fact that it is a stopping-place in a great waste of waters. It is a rendezvous for coal and supplies of all kinds for those who go down to the sea in ships. We have now, and have had from the earliest times, every facility of this nature that we could possibly desire. If we had owned the islands, we could not have had greater privileges there, although our responsibilities would have been greater. In fact, Americans have governed the islands during most of the time since we have had possessions on the Pacific Coast. We have been spared the trouble of fortifying them and keeping a large naval force in those waters and settling their private quarrels. Since 1875 we have had a treaty with the islands which expressly forbids them to grant any lien, power, or control over any part of their territory to any other government. But if there had been no such treaty, we should still have forbidden any such lien, power, or control. As other nations have respected our wishes in the matter in the past, they would respect them in the future all the more as our power to command respect increases with revolving years. The situation heretofore has been exactly to our

liking, and we may well ask why it should be changed.

Secretary Foster's report on the condition of the Treasury, present and prospective, made to the Committee on Ways and Means, is in irreconcilable conflict with his annual report submitted to Congress last December, and also with the monthly Treasury statements. Where he has had to increase his estimates of expenditures—as in the pension and river-and-harbor items—he has correspondingly and hopefully pushed up his estimates of receipts. No attempt is made to get a balance of income over appropriations, but only over the amount to which the Secretary can screw down the absolutely necessary payments. Mr. Foster admits that if he had complied with the requirements of the law in regard to the sinking fund, he would have been many millions to the bad. It also appears from the report that contracts for public buildings authorized by Congress, to the amount of $6,000,000, have not been let. Then, Pension-Commissioner Raum has put in an estimate of an extra deficiency of $3,335,000. This made matters look dangerous for the Secretary's balance of $2,000,000, which was the most he could claim, but he was equal to the emergency, and suddenly discovered that the internal revenue was going to be just $3,335,000 more than he had previously supposed. With such special providences at his command, it is no wonder that our Micawber in the Treasury Department maintains that he will pass over the finances to his successor in good condition, and that, if there is any trouble afterwards, it will be owing to the bad management of some other fellow.

The death of Justice Lamar of the United States Supreme Court occurred within less than six weeks of the end of President Harrison's term. There is naturally discussion as to whether the retiring President will attempt to appoint his successor, and as to his choice in case he should decide to make the attempt. Mr. Harrison has already filled three vacancies upon the Supreme bench. A marked characteristic of his action in each of these cases has been its extreme deliberation. Take, for example, the last. Justice Bradley died on the 22d of January, 1892—a year almost to a day before Mr. Lamar. The nomination of his successor, Shiras, was not sent to the Senate until the 19th of July following—a period of six months; this, too, although the court had been in session nearly all this time and in urgent need of the assistance which a new appointee could render. It would therefore be quite out of line if Mr. Harrison were now to name a man for the existing vacancy offhand. There is no excuse for such indecent haste in the condition of judicial business, as the court will shortly adjourn for the annual February recess, and will not meet again before the expiration of Mr. Harrison's term. No public interest, therefore, will suffer if Mr. Harrison fails to take action in the matter.

The Anti-Option Bill has passed the Senate by a vote of 40 to 29. The affirmative vote consisted of 27 Republicans and 13 Democrats; the negative consisted of 9 Republicans and 20 Democrats. So far as party politics can be imputed to the measure, it would seem to have a Republican tinge, yet no bill can be called a party measure which passes both a Democratic House and a Republican Senate. Still, it is a measure avowedly for the benefit of a class, and therefore it allies itself with Republican policy. It affirms that the laws of trade, as they have worked themselves out, are oppressive to certain persons and interests. The power of the Government is accordingly invoked to redress the balance under the guise of an exercise of the taxing power. It is sought to suppress the vocations and livelihood of certain persons by imposing upon them a burden not shared by the community in general. This form of proceeding, although not unknown to our statute-book, is unconstitutional in spirit. Senator Vest of Missouri has placed himself on the high level of the late Mr. Lamar (in reference to the Silver Bill) by voting against the Anti-Option Bill although his Legislature had passed resolutions of instructions in favor of it.

The Kansas Populists have gone through the form of electing a Senator, their choice being Judge John Martin, a prominent Democrat who, during the recent campaign, favored the fusion policy. Whether the election is valid is a question which will be immediately transferred for decision to the Senate itself, the vacancy in question being that caused by the death of Senator Plumb, whose seat was filled by the Governor's appointee only until the Legislature should make a choice. A quorum of the Legislature consists of eighty-three members, and there were cast for Martin eighty-six votes, while six were given for other men. But nine of the eighty-six are men who have been arbitrarily seated by the Populist House since the opening of its session, and who, it is claimed by the Republicans, had no right to vote. Without these nine, Martin had but seventy-seven votes; and if a man must receive the votes of a quorum, and these nine are thrown out, he is not entitled to the seat. But, on the other hand, it is claimed that only a majority of a quorum is necessary to an election, and that, as a quorum of eighty-three members with undisputed certificates voted on January 25, Martin's title is good, without any reference to the nine disputed seats. The Senate will doubtless have a long discussion of the case, with a strong likelihood that the division may be along partisan lines, in which case Martin will not be admitted before the 4th of March.

Wisconsin will have two Democratic Senators after the 4th of March next for the first time in nearly forty years. The State was admitted to the Union in 1848, and the same year voted for Cass for President and chose two Democrats to the Senate. The Republicans first carried the Legislature in 1854, just as the term of one Democrat was running out, and they secured the other seat as the result of the election of 1856. Except for the period that Doolittle, twice chosen as a Republican, supported the Democrats during the Johnson Administration, there were two Republicans all the while until Mr. Vilas took his seat in 1891. Five weeks hence, and for at least four years to come, there will be two Democrats in the Senate from Wisconsin. This is the first time that one of the old Republican States in the West has been represented only by Democrats in the Senate since the election of Lincoln. Should the Cleveland Administration realize the hopes entertained of it, no reason appears why Wisconsin should not continue, as in the last two elections, a Democratic State.

The Legislature of North Carolina has gone to work to pass a law for the issue of State bank-notes as though Congress had already repealed the ten per cent. tax. The idea has got abroad, especially in the South, that the next Congress will repeal the tax, and hence that it is only necessary to pass some kind of a law to regulate such issues, in order to be ready when the door is thrown open. There is no very good reason for supposing that Congress will repeal that tax. There is still less reason for supposing that Congress will repeal it unconditionally. Although the Democratic national platform contains a plank in favor of the repeal, it was not a real issue in the campaign except in a few places, and in these it did the party more harm than good, since it introduced a new subject for discussion and put the Democratic speakers and newspapers on the defensive. It is safe to say that Congress will not pass any bill to repeal the ten per cent. tax until it has a pretty clear idea of the probable consequences, and it is equally safe to predict that the President-elect will not sign any such bill without absolute assurance against the kind of wild-catting and red-dogging that was rife before the war.

Now, it is to be observed that North Carolina has started on the wrong road with the two bills under consideration—the very road that led many States into the ditch in the ante-war period—*i. e.*, banking on miscellaneous securities. One of these bills authorizes the issue of circulating notes on the deposit of United States bonds; State, county, and municipal bonds issued under the laws of North Carolina; bonds of any State having a marketable

par value, drawing interest, or railroad mortgage bonds—the Governor, Attorney-General, and State Treasurer to determine their value. This is pretty much the same thing as the Wisconsin Free Banking Law of 1853, the results of which are an abomination and a stench in the nostrils of all the people of that State and the adjoining States whose memory goes back so far. The people of Indiana, Illinois, and Wisconsin lost $5,000,000 out of a total issue of $13,000,000 through this sort of banking, or about 40 per cent. of the whole.

The other bill before the Legislature of North Carolina is a little worse because it allows the issue of circulating notes on mortgage security as well as on State, municipal, and corporation bonds. There have been two examples of this kind of banking in our history. One was in the State of Michigan. Here, in fact, the idea of bank-note issuance against deposited securities had its legislative beginning. A law was passed by the State of Michigan in 1837 authorizing the issue of bank-notes on the deposit of approved bonds and mortgages in the hands of State officers. For a short time affairs went on swimmingly and the people seemed to have plenty of money; but when Eastern debts had to be paid and it became necessary to present the notes for redemption, those banks had no ready money, although they had, or supposed they had, plenty of security. As soon as doubt was cast on the goodness of the notes, a run began, and the whole system went down with a crash. Then began litigation over the "securities," and the Supreme Court of the State benevolently quashed the whole by declaring the Banking Act unconstitutional. The State of New York adopted the same policy one year later, and not without mournful consequences, as Comptroller Flagg reported in 1846 that the loss of note-holders of insolvent free banks had been nearly 39 per cent. The New York Bank Law still authorizes the issue of circulating notes on the deposit of real-estate mortgages, and the only thing that prevents the issue of such notes is the 10 per cent. tax.

The New York Constitutional Convention Bill, as finally approved by the Governor, provides practically for a convention composed entirely of Democrats and Republicans. The provisions of the preceding bills for minority representation were all abandoned, and none of the minority parties—Prohibition, Labor, or other—is likely to have any voice in the convention. As it stands, the bill provides for the election of 175 delegates; 160 to be chosen by Senate districts, 5 in each district, and the remaining 15 to be chosen by the whole State as delegates-at-large. Each elector will be entitled to vote for five district delegates and fifteen delegates-at-large, and those receiving the highest number of votes will be elected. The election is to be held in November on the same date as the general election. Whichever political party carries the State will, in all probability, control the convention. It is unfortunate that the delegates could not be chosen, as was first proposed, at a special election in which no other issue was involved. There would then have been some chance that the voters would discriminate among the candidates, without regard to political divisions. As it is now, the names of the delegates will be printed on the official ballots with the names of the candidates for minor State and legislative offices, and the tendency of the great mass of voters will be to cast their ballots on straight party lines, paying little or no heed to the comparative merits of the convention nominees.

Mr. David Dudley Field improves the occasion of the present talk about consolidation of New York and Brooklyn to urge, in the columns of the Brooklyn *Eagle*, the adoption of a new name for the former city, the name of Manhattan. His reasons are numerous and meritorious, or at all events plausible, and would undoubtedly prevail if the world had not got its head set on New York, in the same way that it has got its head set on the word America instead of Columbia as the designation of this hemisphere. Mr. Field maintains that the word New York is a badge of colonial dependence. True. So are New Jersey, New Hampshire, New Haven, New London, Delaware, Georgia, Louisiana, Louisville, St. Louis, Boston, Baltimore, Charleston, Manchester, and a hundred others. It will be a hard job to shed all these colonial integuments. The name of New York never was a fit one for this city, says Mr. Field, because it bears no resemblance to the old York, which is a sleepy inland town, while this is a great commercial seaport. True again, but resemblances are never taken into the account in giving names either to towns or to children. Moreover, says Mr. Field, the name of New York is identical with that of the State, and this is an inconvenience and leads to confusion. Emphatically true. Would that it were otherwise. "The change would be easy," Mr. Field thinks; it would only be necessary for people to change their letter-heads. The objection that the city is known to all the world as New York is, he thinks, of little consequence.

Gov. Werts of New Jersey has begun the practical elevation of the character of the appointive judges of the Court of Errors and Appeals of that State by his nomination of Mr. William Walter Phelps to fill a coming vacancy, and Mr. Phelps will do his part in the work of elevation if he accepts the appointment. There is no constitutional provision requiring the Governor to fill these places with incompetent laymen, selected only because they have some political "pull," and if once the custom comes to be to make the positions honorable by the selections made to fill them, the office will become attractive to men whose nominations will be a credit to the judiciary. Gov. Werts has also distinguished himself by reappointing Prosecutor Winfield of Hudson County. Mr. Winfield earned the hearty hatred of the Jersey City ring by sending the ballot-box-stuffers to prison, and his reappointment was bitterly opposed. He is a man of great legal ability and force of character, and should be kept where he is until the political atmosphere of Hudson County is a good deal clearer than it is at present. The Governor had proof on Monday that courage tells. The objectionable bill curtailing the appointing power of the Mayor of Jersey City because he is a Republican was recalled from the Governor's hands by the introducer, to save it from the condemnation of a veto.

Mr. Thompson, the "American Minister of Marine," who, M. de Lesseps said, had charge of the interests of the Panama Canal Company in this country, has made an explanation about the $2,400,000 of the fund which has been traced to this country. At first he said he knew nothing, or next to nothing, about any funds except his own salary—$25,000 a year. Then he averred that a good deal of the money—$200,000—went for "dredges, cars, and locomotives"; he himself having "bought 500 cars in Terre Haute alone." Now he says that, in looking over his papers, he discovers that the exact number of cars was 300. Moreover, he cannot remember the cost of the dredge made at San Francisco, but he is sure it was the "largest dredge of its kind ever made and cost a lot of money." The books of the company, he says, will give all the items, adding: "We have nothing to cover up; and I think that when the facts are known, it will be found that the American committee has nothing to fear from an investigation of the strictest sort." Mr. Thompson also appeared once before the Committee on Foreign Affairs in 1881, and once before the Interoceanic Canal Committee subsequently, and convinced both bodies that it was for the interest of the United States that the canal should be made with French money, in opposition to the contention that a canal thus constructed would run counter to the Monroe Doctrine. Mr. Thompson further says that all the Panama money spent in this country passed through the hands of three banking-houses in this city, Seligman & Co., Winslow, Lanier & Co., and Drexel, Morgan & Co. This makes the task of discovering what became of it very easy. These highly respectable houses will respond to a subpœna from a committee of inquiry, and we shall then know whether the money was all spent in locomotives, cars, and dredges.

THE CONSTITUTIONALITY OF FEDERAL QUARANTINE.

THE Board of Health of Louisiana has addressed a somewhat passionate petition to Congress against the establishment of Federal quarantine, on both constitutional and economic grounds. The economic argument it is difficult to meet seriously. It consists, in the main, of an assertion, copied from a paper of ex-President Holt's of the Louisiana Board of Health in 1886, that a national board of health would be used in the interest of Eastern capitalists and traders to injure the Valley of the Mississippi, and particularly the port of New Orleans. Here is the way in which they would carry out their diabolical purpose:

"The great seaports of Norfolk, Baltimore, Philadelphia, New York, and Boston, the whole system of transcontinental railroads, would send a swarm of agents every summer into Louisiana with microscopes and chemicals, hunting for germs; the telegraph wires playing day and night transmitting startling accounts of suspicious discoveries, and the public mind of the whole country whipped into a fever of anxiety, as a prelude to shutting up our port, ostensibly for yellow fever, really in the commercial interests of rivals."

We shall only remark on this that it furnishes another illustration of the extent to which the high-tariff men have succeeded during the last twenty years in filling the popular mind with the devilish doctrine that in commercial intercourse one country can flourish only at the expense of some other country, and even one part of a country at the expense of some other part; that the money which one man makes in trade some other man loses. That the ports of the Eastern coast, and the owners of the transcontinental railroads, have, or think they have, such an interest in the impoverishment of the Mississippi Valley that they would resort to any fraud or falsehood to bring it about, seems on its face a notion worthy of a lunatic asylum; and yet it is a legitimate outcome of the attitude taken up in the late canvass by the McKinleyites towards England and other foreign countries. The children in our schools ought surely to be taught that every modern State has the keenest interest in the prosperity of its neighbors, because, to take the lowest ground, it is in trade with the prosperous, and not with the impoverished, that most profit is made. The moral government of the world has not been so arranged that the misery of one set of men shall be a necessary condition of the happiness of another set.

The constitutional objection of the Louisiana Board of Health to Federal quarantine is, we are glad to say, more serious. It is based mainly on the language of Judge Marshall in the famous case of Gibbons vs. Ogden (9 Wheaton), where he speaks of quarantine laws as "component parts of a mass of legislation" over which no direct power is granted to Congress, and "which consequently remain subject to State legislation." But this only shows the danger of brief quotations from long opinions. Further on Judge Marshall clearly explains that State quarantine laws are valid and constitutional only so long as Congress does not choose to override them in asserting its power to regulate commerce, and all the authorities are agreed that "commerce" includes "intercourse." Judge Marshall says:

"The acts of Congress, passed in 1796 and 1799, empowering and directing the officers of the general Government to conform to and assist in the execution of the quarantine and health laws of a State, proceed, it is said, upon the idea that these laws are constitutional. It is undoubtedly true that they do proceed upon that idea; and the constitutionality of such laws has never, so far as we are informed, been denied. But they do not imply an acknowledgment that a State may rightfully regulate commerce with foreign nations or among the States; nor do they imply that such laws are an exercise of that power, or enacted with a view to it. On the contrary, they are treated as quarantine and health laws, are so denominated in the acts of Congress, and are considered as flowing from the acknowledged power of a State to provide for the health of its citizens. But, as it was apparent that some of the provisions made for this purpose and in virtue of this power might interfere with and be affected by the laws of the United States made for the regulation of commerce, Congress, in that spirit of harmony and conciliation which ought always to characterize the conduct of governments standing in the relation which that of the Union and those of the States bear to each other, has directed its officers to aid in the execution of these laws, and has, in some measure, adapted its own legislation to this object, by making provisions in aid of those of the States. But, in making these provisions, the opinion is unequivocally manifested that Congress may control the State laws, so far as it may be necessary to control them, for the regulation of commerce."

If State quarantine laws were impregnable against Federal interference, the State of New York could for all practical purposes suspend intercourse with Europe through this port for an indefinite period, on the pretence that it was exercising a legitimate police power. Jenkins could, in fact, ruin the shipping merchants on the pretence that he was "keeping out cholera," for there is no State control over him. The power to regulate foreign commerce must connote the power, *if Congress pleases*, to regulate quarantine. Story so understood it. He makes the power to regulate commerce cover "quarantine laws, and pilotage laws, and wrecks of the sea." In the case of Morgan vs. Louisiana (118 U. S.), Justice Miller, admitting the intent of Congress to adopt State quarantine regulations and to recognize the power of States to pass them, says:

"But it may be conceded that whenever Congress shall undertake to provide for the commercial cities of the United States a general system of quarantine, or shall confide the execution of the details of such a system to a National Board of Health, or to local boards, as may be found expedient, all State laws on the subject may be abrogated, at least so far as the two are inconsistent. But until this is done, the laws of the State on the subject are valid."

Mr. Hornblower, discussing the quarantine question before the Society of Medical Jurisprudence in this city in November last, based on this opinion the assertion that there is "no doubt of the constitutional power of Congress to act." In truth, all the authorities concur in the opinion that quarantine is a matter left by the Constitution within State jurisdiction *only* so long as Congress approves of State legislation and does not consider it unreasonable or an interference with commercial intercourse. To surrender quarantine to exclusive State control would be a complete surrender of the power to regulate commerce, and would, in fact, enable any local Tammany or Jenkins to levy prohibitory shipping tolls on foreign vessels. Justice McLean, delivering judgment in Smith vs. Turner (7 Howard), says: "By the Fourteenth Article of the Treaty of 1794 with England, it is stipulated that the people of each country may freely come with their ships and cargoes to the other, subject only to the laws and statutes of the two countries respectively. *The statutes here referred to are those of the Federal Government, and not of the States.* The general Governm nt only is known in our foreign intercourse." That is, England knows nothing legally of Jenkins, and therefore is not bound to submit her ships and passengers to his regulations should a dispute arise. Of course this may be got over by making Congress approve of Jenkins and adopt him; but the Judge's dictum shows that Jenkins has no inherent, endogenous sanitary powers.

COMPURGATIVE BANQUETS.

THERE is probably no organization of a public nature in the world which has had so many charges made against it as Tammany. Its history for twenty-five years has been largely made up of accusations of dishonesty, inefficiency, and ignorance against its leading men. But not one of these charges has it ever met by denial and proof. Its system of defence consists wholly either in silence, or in the production of witnesses who did not see them do it. This system of meeting witnesses who saw by a larger body of witnesses who did not see, old as it is, has never been so successfully worked by any other culprits. It is, of course, a very ancient system, and probably had its origin in the "Compurgators" of the common law, but it is now deeply rooted in American politics, and has been improved upon. The old common-law Compurgators were apt to be kinsmen of the accused, or members of the same guild, and they came into court to swear that they did not *believe* him to be guilty. The modern political Compurgator covers more ground, for he swears that the accused *is* not guilty, and rebukes the accusers as slanderers. The "old pastor" who appears in support of candidates in times of trouble is probably the best Compurgator of our day, because he not only meets the special charge of the hour, but covers a large portion of the defendant's life with a certificate of blamelessness. In the matter of compurgation, the defence has, of course, an immense advantage over the attack. The

public imagination is easily impressed by numbers and by authority, and there is no limit to the number of witnesses who can swear that they did not see the offence committed, and there is no station in which witnesses of this description may not be found. The humblest thief, under this system, might summon the President of the United States or Bishop Potter to testify in his behalf.

In Tammany defences, the Compurgators, the witnesses who did not witness, are usually produced at "a banquet." They are careful, however, not to meet any particular charge, or even to mention it. They compurgate either by a general eulogy on the accused, laying particular stress on the virtues in which he has been said to be wanting, or by a general denunciation of "slander," with a possibly very vague allusion to certain slanders of comparatively recent date. If, for instance, a Tammany man has been accused of drunkenness, the Compurgator dwells with emphasis on his love of tea and coffee and lemonade; if of licentiousness or disorder, on his attention to his religious duties and his fondness for the home circle; if of official corruption and increasing wealth, on his untiring industry and skilful investments in real estate. Of the fact that specific offences have been alleged against him, one gets no glimpse whatever, or only a very remote one. The only approach to it is an intimation that the slanderers and backbiters are particularly busy about this time, as, indeed, they were in the time of Washington, and are making official life increasingly difficult for pure and high-minded men. Oakey Hall's compurgation of the Ring, by dwelling on the lofty character and high social position of the gentlemen who audited Connolly's accounts, and comparing them to Connolly's assailants, was perhaps as skilful a piece of work as was ever done in this field. When he cried, "Oh, what a difference there is" between Marshall O. Roberts and Stewart L. Woodford, he did not say one word of direct defence of Connolly, and yet it somehow seemed to raise Connolly far above Woodford, and to put him beside his Compurgator, Roberts, as a spotless financier.

Compurgation, as we have said, is apt to be done at "banquets," first because the audience is select, and is made to consist solely of friends of the accused, and, secondly, because Compurgators go to banquets far more readily than to meetings. Many a one who would like to escape a meeting goes joyfully to a dinner, and feels flattered by being asked to speak at it. Dr. Jenkins has found this out, of course, and is just now "putting up a job," to use a vulgar phrase, of compurgation of remarkable merit. He is to have a "testimonial banquet and reception" at Jaeger's on February 11, and in the circular admits that it is "tendered to him by a grateful people for the great and efficient services that he rendered during the past year in saving his country from cholera." But, curiously enough, the only two Compurgators out of "the grateful people" whom he cites in the circular—namely, the Speaker of our House of Representatives and the President of the Mexican Board of Health—are very remote from the scene of his labors.

Now, the skill of all this, as a bit of compurgation, lies in the way in which the report of the leading sanitarians on the spot, who actually witnessed and examined Jenkins's work, is ignored and will be ignored at the banquet. Not a single mention will be made of their testimony against Jenkins nor of the unanimous vote of the Chamber of Commerce. The testimony produced will be that of witnesses who did not witness, of the large and highly respectable throng who kept away from the Quarantine when Jenkins was administering it. Neither Speaker Crisp nor Dr. Liciega was within one thousand miles of Jenkins when he was grappling with the cholera, and therefore they are filled with gratitude to him; and in truth the gratitude of a Compurgator and his ability to "voice" it are usually in the inverse ratio of his knowledge of the facts. We are bound to say, however, that here in the city the number of possible Jenkins Compurgators has greatly diminished. Last summer he was able, after his most flagrant mismanagement, to send out runners and get piles of testimony from doctors who knew nothing whatever about the matter except what he had told them. Not one of these gentlemen will venture to open his mouth for compurgative purposes since the report of the doctors who went down the bay and actually saw Jenkins wrestling with his malignant foe.

PHILLIPS BROOKS AND THE MODERN PULPIT.

Of Phillips Brooks it can be said, more truthfully than of any other clergyman of his generation enjoying anything like his fame, that his career and success were those of a preacher. In an age when it is universally agreed that the pulpit has declined, he was able to attain in it an eminence and a power as great as any man could desire. Such a figure as his in the Christian pulpit of the last half of the nineteenth century may well give pause to those who are affirming that modern conditions have for ever broken the power of the old-time preacher. To those, on the other hand, who say that modern conditions are all wrong, and that the thing to do is, with Cardinal Newman, to wish that the world might again become bigoted and superstitious, so that religion and its official expounders might be restored to their old place—to such bewailers of the good old times the career of Phillips Brooks in the better new times ought also to furnish food for thought. They ought to be led by it to ask themselves whether the wise way is to seek in vain to bring back what is now in the irrevocable past, or to adjust themselves to the present.

This is what Brooks did. He furnishes no proof whatever that an old-time preacher can flourish under modern conditions as well as a century ago, for the simple reason that he was not an old-time preacher. Whatever genius he had, lay in his perception that the men of his generation can no longer be reached by the methods of the past, and in his power to speak the language of the present. His example does not show that it is still possible for the pulpit to hold its old place, but only that it is still possible for the pulpit to make for itself a new place. How that new place can be made may be seen by a glance at some of the qualities which gave Phillips Brooks his influence.

His liberality was sincere and boundless. It did not consist, as in too many cases, of a grudging recognition of the fact that opinion can no longer be controlled by ecclesiastical or civil law, and so find its main expression in calling freedom of thought freedom to damn yourself by false beliefs. Nor was his liberality mere indifference, as if all truth were pretty doubtful anyhow, and all you had to do was to choose your party or your church and then stick to it. His convictions were profound and intense, but so, he clearly saw, might be other men's who differed from him. His method, therefore, was not to denounce others, or to seek to impose his beliefs on them, but to join hands with all earnest men everywhere in the search for truth and righteousness.

Obviously such a man could have no sympathy with anything that was merely sacerdotal. The forms and conventions of his church he used with ease, and doubtless with pleasure, as Emerson said that a man of native strength and skill of handling could succeed even under the oldest and mouldiest conventions; but when men attempted to bind him with them he snapped them as Samson did his green withes. Professional airs and priestly assumptions were abhorrent to him. He was always horrifying the "unco guid" of his own denomination by his carelessness of clerical privilege, and by the frank terms of equality on which he placed himself with all honest and benevolent men. Even the robes of a bishop could not make an ecclesiastic out of him, and only a few weeks ago a fellow-bishop, whom it is charity not now to name, published a long protest to the Church at large against the scandalous conduct of Phillips Brooks, an Episcopalian bishop, in consorting with Congregational publicans and Unitarian sinners.

Of still more importance in securing him his sway over men was the perfect sincerity which always marked his bearing and his speech. He never gave the impression of keeping back anything, of "looking this objection full in the face,"

as a preacher said once in unconscious confession, "and passing by on the other side." It is not probable that he was a great student, or deeply read, but he knew what men were thinking of, and he had the gift of speaking to their real and present needs. Religion was in him near to Matthew Arnold's famous definition of it as "morality touched with emotion," and his greatest flights as a preacher were those in which he glorified the common round and daily task of mortals with the light of eternal principles and hopes. Wall Street crowding Trinity Church at noonday meetings for a week to hear Phillips Brooks speak on righteousness and truth and judgment gave striking testimony to the power of his honesty and manly faith.

His life proves, in short, that if the pulpit has declined, the trouble is with the pulpit and not with the times. It is a great mistake to suppose that the opportunity of the preacher has passed or is rapidly passing. What has passed is the notion that a sermon, as such, is a channel of grace; that an illogical harangue is not an illogical harangue when delivered from the pulpit; that a man whom his college mates know to be of no more than average ability becomes suddenly endowed with supernatural wisdom and authority upon entering the ministry. All that is dead and gone. But what has not gone, what will never go as long as human nature remains what it is, is the willingness of men to hear gladly the preacher who can put an ideal interpretation upon their lives, and quicken all their nobler aspirations, and strengthen them in all their worthier resolves. For such a preacher the time is always ripe, and for lack of him too many churches are in the condition of the one where Carlyle went to hear Sterling preach—where, he said, it would be possible to let off a musket in any direction without danger of hitting an auditor. Phillips Brooks has no better lesson to teach the ministry of to-day—and he was emphatically a preacher's preacher—than the lesson that the surest way to reëstablish the pulpit in the respect and affection of the people is to make it tolerant, unaffected, progressive, and, above all, transparently honest.

THE NEW IRISH HOME-RULE BILL.

THE synopsis of the forthcoming Irish Home-Rule Bill transmitted by telegraph on Sunday probably contains all the important features of the measure. The list of powers reserved for the Imperial Parliament follows the Constitution of the United States almost on all fours, as indeed did the bill of 1886. The additions to these reservations in the present scheme are the imposition of any legislation affecting customs duties or excise duties, and the control of the Imperial Parliament over the land question for a period of five years. These last are doubtless meant to meet the objections to the last bill drawn from Parnell's utterances in favor of protection for Irish industry, and from the numerous denunciations of the whole landlord class by most of the Irish leaders.

The positive prohibitions are also the same as those of 1886, with some few additions, suggested by Tory criticism. For instance, the prohibition of 1886 directed against interference with the right to establish denominational schools, is made to cover interference with the right to establish denominational institutions of charity, and the right of children to attend public schools without receiving religious instruction therein.

The most important change in the new measure is, however, the separation of the two branches of the Legislature. Under the bill of 1886 the two "orders"—Peers and Commons—were to sit together; an arrangement which would probably in practice have resulted disastrously by producing daily rows. Under the present bill they sit apart, or, in case of disagreement, appoint a committee of conference very much as we do. If unable to agree, they go to the country on the special question in dispute, after the Swiss fashion. This introduction of the referendum into British politics, if carried out, cannot but have far-reaching results, but the late Tory commitments have been such that it is hard to say where they will find arguments to resist it. The upper house or "order" is to contain, as in the bill of 1886, 103 members, of whom 75 are to be elective, and the remaining 28 to consist of the twenty-eight representative peers who now sit in the House of Lords. The elective members are to be possessed of an income of £1,000 a year from real and personal property, and after thirty-eight years the non-elective peers are wholly to disappear, and the whole body to become elective. The qualification for electors of the upper house is the ownership or occupation of land of the net annual value of £125 a year. The lower house remains unchanged—204 members to be elected by existing constituencies, while the upper house is to be elected by new and equal electoral districts.

The new feature in the present bill which will excite most discussion, is the provision for the continued presence of 103 Irish members in the Imperial Parliament elected as at present, who will vote on all the questions reserved from the Irish Legislature. This will doubtless be the chief point of attack to the opponents of the bill. It was the failure of the bill of 1886 to provide for the continued presence of Irish members at Westminster which, according to their own account, drove most of the Liberal Unionists into secession—it looked so like the concession of Irish independence. But when they came to consider the possibility of retaining the Irish members, they declared that a proper arrangement for that purpose was beyond the wit of man. We do not know, of course, what the details of the present arrangement are, but the chief difficulty which appears on the surface is this: The great bulk of the questions reserved from the Irish Parliament will be, for England and Scotland, domestic questions. Should an adverse majority, worked by Irish members sitting for Ireland, be allowed to turn out an English Ministry on such matters, for instance, as coinage, customs duties, navigation, quarantine, copyright? Suppose, too, that the Irish were engaged in a wrangle with the English Ministry in power, what would prevent the 103 in the Imperial Parliament from punishing the Ministry as now by a close alliance with the Opposition, in complete indifference to the merits of the dispute? In other words, this section of the new bill apparently maintains that one of the inconveniences of the present Union which has done most to reconcile the Liberals to its abrogation. But it can hardly be discussed fully without seeing the text of the bill.

The proposed financial arrangements are important, as they cut down the Irish contribution to the Imperial Exchequer considerably. The bill of 1886 called on Ireland, for various purposes, for $23,000,000 annually. The present bill calls for only $11,505,000. This result has been brought about by very able examination of the comparative taxation of the two countries, which has been carried on during the last seven years by Home-Rulers, both English and Irish, whose names appear but little on the surface of the agitation. The Judicial Committee of the Privy Council is to continue to be the Supreme Court to which all constitutional questions are to be referred, as in the bill of 1886. But whether it is to be in such cases a court of first or of last resort only does not appear. How citizens who find themselves injured by unconstitutional legislation on the part of the Irish Parliament are to be kept out of the ordinary courts, we, so far, do not see. With us an unconstitutional law is no law, and an officer or individual who attempts to act under it to another man's detriment does so at his peril, and may be haled before a court of competent jurisdiction therefor. If the Irish minority have no such remedy, it is difficult to see how the Irish Parliament can be kept within its powers. Under the present bill the Crown is to have a veto on Irish legislation, which was not granted in 1886, and the control of the judiciary is to remain for five years under the control of the Imperial Government.

The principal changes are the retention of the land question, of the police and of the judiciary for five years by the Imperial Parliament; the continued presence of the Irish members in both houses of Parliament; the positive prohibition of customs duties; the division of the proposed Legislature into separate bodies; the disappearance of the peers from the upper house within a fixed period; the veto of the Crown; and the reduction of the Irish

contribution to the National Treasury. As to the value of these new features in abating English hostility to the bill, it is difficult to form an opinion. But it is obvious that each new precaution furnishes materials for a fresh attack, because every political arrangement whatever contains some reasons for thinking it cannot be successfully carried out. Every constitution that was ever put on paper was open to the general objection that the human nature—always the unknown quantity in political problems—of those who were to live under it, would prevent its success; and a prophet cannot be refuted.

Correspondence.

BRAINERD'S INDEX TO VON HOLST.

To the Editor of The Nation:

Sir: With some reluctance I request you to print a few lines from me on T. H. Brainerd's Index to my 'Constitutional and Political History of the United States.' Some people may consider my opinion of it but an *ex-parte* testimony, and, therefore, I am loath to intrude it upon the public. But I do not feel at liberty to consult only my own wishes. I consider it my duty towards the indexer to state that the severe strictures on his work in No. 1438 of the *Nation* are, in my opinion, calculated to produce a wrong impression. Mr. Brainerd has not adopted the usual plan, and I can easily understand that the course pursued by him is highly objectionable to a rigorously systematic mind. If, in the sub-entries, he had simply marched up the volumes in their regular order, beginning with i. and ending with vii., he would have saved himself much time and trouble, and no objection would have been made, because it is the usual way. Those, however, who are to use the Index would very often have lost a great deal of time. It will suffice to give one instance by way of illustration. To go over all the sub-entries under *Jefferson* down to vii., 340, to get at his views concerning the inherent Federal right of coercing States, would be rather hard; under the sub-heading "State Rights," they are found at a glance.

But, if I understand the critic correctly, this arrangement by volumes and number of page is not what he would have wished. He pleads for a "topical and chronological" grouping. But can that be carried out with perfect clearness and consistency, if the Index is to be, at the same time, complete? I have never yet seen it done, and to my mind it seems, in the nature of things, impossible to do it. That, I think, ought to be kept in mind in passing judgment on the "confusion" with which Mr. Brainerd's arrangement is charged. That Mr. Brainerd could not expect to meet with general approval as to every detail, where he found it impossible to adopt the alphabetical order, goes without saying. Upon a close inspection one will, however, soon become convinced that also in these parts he has not proceeded in quite a hap-hazard way, but laid down some leading ideas as guiding lines, which he tries to follow as closely and consistently as the case will allow.

The opinion that "the alphabetical order is of no value whatever, as a rule," I do not share. To me it does not seem "purely subjective"—if I do not mistake the meaning which the critic intends to convey by this term—but in a high degree "topical." At all events, I find it very "*übersichtlich*," and it is a great saving of time to me. But, whatever the objections may be to which Mr. Brainerd may have justly laid himself open, to me he has rendered a great service. Thus far the Index has never failed to render me the help I required of it, and I trust that those who do me the honor of referring now and then to my work—the critic of the *Nation* included—will likewise find it a most valuable aid. I thank the critic sincerely for the compliment implied in his opinion that I ought to have been better served; but that cannot prevent me from considering myself well enough served to feel profoundly grateful to Mr. Brainerd.—Very respectfully,

H. von Holst.

Chicago, January 24, 1893.

[Our confessed reluctance to criticise at all, together with our ever-present sense of lack of space, kept us from enlarging upon the defects of Mr. Brainerd's Index, but we thought we gave an example that was conclusive against his systematic ability, at least on the side of chronology. We by no means should have approved "marching up the volumes in their regular order," and it is the prime merit of Mr. Brainerd's work that he discarded anything so mechanical; our complaint is that he did not know how to use his freedom.

As regards the alphabetical arrangement of the sub-entries, let us open at random to pp. 112, 113 (*Forsyth—Free Soil Party*). Not one of the six longer titles shows this arrangement perfectly carried out, and only one (*France*) shows it attempted, and here we actually have the letter A (Aix-la-Chapelle) at the very end. The same title illustrates what we meant by purely subjective alphabetizing, for the first (and it is a dislocated) entry is "strained relations under John Adams," while half-way down, in its proper place, is "relations with, Pinckney, Marshall, and Gerry fail to reëstablish." No indexer of the present day ought to be told that "relations" and "strained relations" should form but one category—Relations. For further examples see, under *Franklin*, "in Federal convention"; under *Free Press*, "ingrained in American mind"; under *Free Soil Party*, "does not poll the Free Soil vote": such entries, which are quite suitable to a logical or chronological arrangement, have no reason at all for being alphabetized. As a matter of fact, Mr. Brainerd has not tried to alphabetize them, but neither has he disposed them logically. Let us recast one of the titles in question, omitting the numerical references. Mr. Brainerd's jumble is this:

Free Press, and slavery incompatible.
constitution insures.
poem on southern opposition to.
ingrained in American mind.
Jackson assumes to protect.

We propose, with a saving in space, as well as a gain in logic and in elegance:

Free Press, ingrained in American mind; Constitution insures; Jackson assumes to protect; incompatible with slavery; poem on Southern opposition to.

The rubric *Jefferson*, to which Dr. von Holst refers approvingly, is a striking illustration of Mr. Brainerd's faults. The first thirteen entries are not alphabetized; all the rest are. Among the former, "character" and "covert fighter" are separated by another entry ("Rousseau's influence on"), and we meet with such inept entries as "error and reason" and "freedom requires bloodshed." In the alphabetized portion occurs "embargo," with this secondary entry, "wise in Napoleon's eyes," which is of doubtful pertinency under *Jefferson*. Still, it ought to be found under the main rubric *Embargo*, but it is not there, nor under *Napoleon*.

We forbear. Whether the index we had ideated is possible or not, no school of librarians would award Mr. Brainerd a diploma for his index.—Ed. Nation.]

THE LORD'S DAY IN THE PRIMITIVE CHURCH.

To the Editor of The Nation:

Sir: Your correspondent "H." truly says that, "in the early Church, Sunday and the Sabbath were never confused." But it is equally true that the Lord's Day was constantly regarded as the analogue and successor of the Sabbath. Ignatius, one of the earliest writers referred to (Mag. 9), brings out this truth emphatically when he speaks of Jewish converts "*no longer* observing Sabbaths, *but* living according to the Lord's Day." What less can this mean than that they are to observe the Lord's Day instead of the Sabbath?

So in the Epistle of Barnabas (c. 15), the author, commenting on the message of God by Isaiah (i. 14), says: "Ye perceive how He speaks: Your present sabbaths are not acceptable to me; but that is which I have made, (namely) when giving rest to all things, I shall make a beginning of the eighth day, that is, a beginning of another world. Wherefore, also, *we keep the eighth day* with joyfulness, the day on which Jesus rose from the dead." Here the observance of the eighth day, or the first day of the week, is made the complement of the rejection of the seventh. The exposition may be faulty, but the writer is competent to testify to the usage and teaching of his own day.

Irenaeus expressly teaches that the Decalogue, in distinction from "the law of bondage," or the national law, is of universal obligation, but with an extended interpretation, such as our Lord Himself gave to the Commandments. Thus he says (Against Heresies, iv. 8), "The Lord Himself did speak in His own person *to all alike* the words of the Decalogue; and therefore in like manner do *they remain permanently with us*, receiving, by means of His advent in the flesh, *extension and increase*, but *not abrogation*." In what sense could the IVth Commandment be of moral obligation, in his view, unless it was applied to the Lord's Day?

Origen is perfectly explicit in applying this principle of interpretation to the IVth Commandment. In a Homily (23) on Numbers, he says:

"It behooves every one of the saints and every righteous person to celebrate also the festival of the Sabbath. But what is the festival of the Sabbath but that of which the Apostle says, 'There will remain, therefore, a sabbatism,' that is, an observance of the Sabbath, 'to the people of God'? *Leaving*, therefore, *the Jewish observances* of the Sabbath,

let us see what ought to be *for a Christian* the observance of the Sabbath. On the Sabbath day, nothing of all the actions of the world ought to be wrought. If, then, you cease from all secular works and carry on nothing worldly, but occupy yourself with spiritual works, go to church, lend your ear to the divine lessons and homilies, and think of heavenly things, exercise care for the future life, have before your eyes the judgment to come, look not to the present and visible things but to the invisible future—this is the observance of *the Christian Sabbath*" (Migne II., 358).

It is in vain that Hessey has endeavored to explain away this passage. Origen was not so foolishly transcendental as to make an ideal Christian cease for life from all secular works, and occupy himself only with spiritual works and going to church and the like. He is not peculiar in the idea that the Lord's Day is virtually a Christian Sabbath, though he is the first to use the term. The testimonies we have already given point in the same direction. If to some minds there is a seeming contradiction in the term, the idea was fully sanctioned in the Primitive Church.

Eusebius speaks very plainly to the same purpose. In his commentary on the "Psalm of Song for the Sabbath day" (title, Ps. 92), he writes:

"Wherefore those things [the Levitical regulations] having been already rejected, *the Logos* through the New Covenant *transferred and changed the festival of the Sabbath* to the rising of the sun, and delivered to us an image of the true rest, the salutary and *Lord's Day* and first day of the light. . . . On which day, . . . we ourselves coming together after an interval of six days, and keeping as festival *holy and spiritual Sabbaths*, we that from among the Gentiles have been ransomed *throughout the whole habitable world*, accomplish according to the spiritual law the things ordained by the law for the priests to do on the Sabbath" (Migne V. 1191, C).

What can be plainer? But he only says substantially what others said before him.

The Ante-Nicene Church, then, to go no further, agreed in teaching that the Lord's Day, as the very name implies, derived its authority from the Lord Jesus Christ, through His Apostles, and rested upon the fact of His resurrection; and that the Fourth Commandment, as a part of the moral law, and as interpreted by Christ and applied to the Lord's Day, is universally binding. E. P. G.

Baltimore.

ACCREDITED SCHOOLS AND THE UNIVERSITY OF CALIFORNIA.

To the Editor of The Nation:

Sir: In *School and College* for November, President Eliot is reported as having said, at the October meeting of the New England Association of Colleges and Preparatory Schools, that "In California the inspection of approved schools is better than elsewhere in the country; but there each school is visited but once in three years, and at best by but one or two examiners for a day."

Is it the system of accrediting practised by the University of California that is here referred to? And if so, has President Eliot been misquoted, or did we fail, in March last, to give him correct information concerning our system of accrediting, or has he inadvertently mixed some of the ingredients of other systems with ours? Any statement purporting to describe the frequency and scope of the examinations of secondary schools as conducted by the University of California should read somewhat as follows:

In California every accredited school is visited every year, and by a number of examiners equal to the number of important subjects, or groups of subjects, taught in the school. Thus, to a school asking for full accrediting, whether for the first time or through the required yearly reapplication, is regularly sent one examiner (a specialist, of course) in each of the following subjects: English, Mathematics, History, Latin, Greek, Science (Physics and Chemistry). In rare cases, but for adequate reasons acceptable to our standing committee on schools, an examiner has based his report to this committee upon the examination of a previous year.

An extended account of the University of California system, its methods of procedure and its results, is contained in the December issue of the *Overland Monthly*, pages 594–599.

Irving Stringham, Dean.

University of California, Berkeley, January 23, 1893.

CH'NAI—SNY.

To the Editor of The Nation:

Sir: In his discussion of the word *Snibar*, in No. 1438 (January 19, 1893), p. 50, Dr. Elliott Coues concludes that "chenai" is "a misprint for *chenal*, slough." I cannot agree with him, for the following reasons:

(1.) Though the index to the 'Account, etc.,' of Long's expedition (Philadelphia, 1823, 2 vols.) has "Chenal au Barre," I find at page 102 of the first volume this passage:

"Four miles from this place they crossed the Little Tabeau, and at evening pitched their tent on a stream called the Little Chneij au Barre, about a mile and a half from the Missouri. Here is a good mill seat. The Great and Little Chneij au Barre are two creeks entering the Missouri about a mile and a half from each other. Before the mouths of these two creeks is a large island; the slough or *chneij* dividing this island from the shore received the additional name of Au Barre from a hunter known by that appellation, who was lost here for some time, successively ascending the two creeks, which he mistook for the Missouri; hence the name of Chneij au Barre island, Great and Little Chneij au Barre creek, etc."

(2.) The French-Canadians of northeastern Ontario and those on the Quebec side of the river Ottawa habitually term the channel dividing an island from the shore a *ch'nai* or *ch'nail*, which is recognized as being identical with French *chenal*.

(3.) The English-speaking population of the district just referred to have taken the word *ch'nai* into their vocabulary in the form *sny*, with the meaning unchanged.

It would seem, therefore, that in writing *Chneij*, Long was but endeavoring to reproduce the *ch'nai'* of the old French-Canadian voyageurs and traders, who have left tokens of their presence by hill and stream in the Northwestern States—names which find their ready explanation from the study of the dialect and topography of French Canada. The investigation of French Canadian topographical names has scarcely been begun, but what little has been accomplished already proves that the subject is one of great interest historically and linguistically. Alex. F. Chamberlain.

Clark University, Worcester, Mass., January 23, 1893.

Notes.

J. B. Lippincott Co. have nearly ready the tenth and final volume of the new 'Chambers's Encyclopædia.'

Charles H. Sergel & Co., Chicago, are about to issue the second volume in their "Latin American Republics Series," the subject being Chili, and the author Anson Uriel Hancock; and an authorized edition of Paul Bourget's 'Cosmopolis,' to which, however, Tait, Sons & Co. in this city also lay claim.

'Hume,' by Prof. J. H. Hyslop, is the forthcoming volume in Ginn & Co.'s "Ethical Series."

Burr-Brothers, 114 Nassau Street, New York, will publish a limited edition of 'The Life and Works of Alexander Anderson, M.D., the First American Wood Engraver,' by Frederic M. Burr. It will make a large octavo volume, printed from type, and illustrated. Twenty-five of the 750 copies will be on parchment vellum.

Mr. Francis Darwin has compressed into one volume the 'Life and Letters' of his father, under the title, 'Charles Darwin: His Life told in an autobiographical chapter and in a selected series of published letters' (Appletons). This task has been skilfully performed with an eye to the general reader, by omitting the more purely scientific letters and retrenching others in the same class. The incomparable autobiographic chapter has of course been left intact, and we regret that Mr. Francis Darwin's own reminiscences have been curtailed even to the slight extent that they have. There is a portrait of his father in his old age after a photograph by Mrs. Cameron. A handsomer and not less legible page could have been made by the use of smaller type. In fact, though this is by no means a flagrant instance, we have here an illustration of the mischievous working of the manufacturing clause of the Copyright Act: the absence of international competition in good bookmaking compels Americans to put up with the cheapest and poorest that the American publisher offers them.

'Dod's Peerage' for 1893 (London: Whittaker & Co.; New York: Macmillan) marks its fifty-third year, and shows a slight increase in bulk due to necessary additions which are to be detected in every part of this standard publication.

The Castle of Vincigliata in the environs of Florence is one of the best-known sights to tourists, since it is a brand-new restoration upon the old feudal lines and in the old feudal spirit of construction and decoration, and contains, besides, a notable collection of antiquities. This monument owes its existence to a rich and enthusiastic Englishman, Mr. Temple Leader, and has been made the subject of a descriptive catalogue. Fragments of statuary, etc., from the neglected Orti Oricellari within the city limits having made their way to the castle, "Leader Scott" (Mrs. Baxter) was led in January of last year to publish an historic sketch of these gardens, certainly one of the most famous spots that Florence can boast, and the former seat of that Plato Academy which drew together the wit and learning and fashion of the Republic from 1462 to 1522, and among other products gave birth to Italian opera. Her sketch served, doubtless, to fix public attention on the gardens, and, when these were on the point of being cut up for building purposes, the Government interposed to declare them a national monument. The sketch is now handsomely reprinted, with a plan of the gardens, together with an enlarged catalogue of the antiquities in Vincigliata Castle ('The Orti Oricellari,' etc.; Florence: G. Barbèra). The typography is remarkably free from errors, and the presswork noticeable for the exact register of the rubricated border.

We have been unavoidably delayed in noticing 'In and Out of Three Normandy Inns,' by

Anna Bowman Dodd, which is issued by Lovell, Coryell & Co. in a limited *édition de luxe* of 500 copies with white illuminated cover and red sheath, good paper and print, and many half-tone illustrations after Reinhart and other artists or from photographs. It is a pleasant piece of the modern, impressionistic-descriptive style of writing, and is likely to afford considerable enjoyment of a mild kind. The author's search for effect sometimes leads her into curious inconsistencies, as when within five pages the same person's hair is described as black and as of the color of butter (pp. 21, 26), or when another figure is described, within nine lines, as clad in a "close jersey" and in "an unbleached chemise, widely open at the throat" (p. 39).

Dietz's 'Italie—Espagne' (Paris: Armand Colin) is, according to its title-page, a history of Italian and Spanish literature, with biographical notes and illustrative extracts; but it is more a text-book or compendium for a *lycée* than a serious work on the history of literature. Compared with others of its class, however, it is by no means bad. The narrative is clear, the extracts usually well selected, and there is a good index for each of the literatures concerned. Now and then M. Dietz makes bad blunders—as when he credits the inauthentic chronicles of Matteo Spinello and Ricordano Malespini with sundry antique virtues of style and thought, or states that Cecco d'Ascoli was burned alive for speaking lightly of Dante; but as a whole the book is not inaccurate, and gives a fairly good bird's-eye view of the entire field.

Ronca's 'Cultura medioevale e poesia latina d'Italia nei secoli XI. e XII.,' in two volumes (Rome: Società Laziale), is certainly not a final statement of the peculiar characteristics of life and culture in Italy in the last of the middle ages, but it at least puts into the hands of the student, either of comparative literature or of the rise of Italian literature, a larger body of information about the period in question than has probably yet been contained in any one work. More than a third of the first volume concerns mediæval culture and literature in general; the remainder treats of the culture and literature of Italy in particular, from the point of view not only of content, but also of grammar, vocabulary, and prosody. The second volume is a bibliographical dictionary of the authors mentioned. The whole work, unfortunately, though in detail clearly written, is somewhat weak in its larger structure and sorely needs a topical index.

A posthumous volume of unusual interest is Victor Hehn's 'De Moribus Ruthenorum: Zur Characteristik der russichen Volksseele' (Stuttgart: Cotta). It consists of leaves from the diary kept by Hehn during his sojourn in Russia from 1857 to 1873, and is a record partly of personal experiences and observations, but still more of philosophical reflections and ethno-psychological studies, pursued under very favorable circumstances, and showing remarkable keenness of insight. It is written in a pungent and paragraphic style, and contains more quotable things than any other book recently published in Germany.

It seems somewhat strange that only now appears a second edition of the authorized German translation of Darwin's 'Journal of a Voyage' ('Reise eines Naturforschers um die Welt,' Stuttgart).

The first volume, containing 'Gabriel Conroy,' of a new Danish translation of Bret Harte's complete works has recently appeared in Copenhagen. The translator is Fr. Winkel Horn, an industrious laborer in the English-Danish field. The early press notices give every indication of the success of the undertaking.

The publishing-house of Luigi Battei at Parma announces a new periodical, *Rivista critica e bibliografica della letteratura dantesca*. The new review will be issued monthly under the direction of Prof. G. L. Passerini; its contents, as its name indicates, will be entirely critical and bibliographical. The price of subscription is eight *lire* a year. Another periodical, covering somewhat the same ground, *L'Alighieri*, has been in existence for several years. Its founder and editor, Signor F. Pasqualigo, has recently died, but the publishers announce that the journal will be continued under able direction.

The quarterly *Archæologia Oxoniensis* (London: Henry Frowde) appeared last year in an undated Part I., of which the two leading papers relate to prehistoric Oxford, and are accompanied by illustrations of pottery and a map of the town. F. Haverfield begins a series of "Materials for Romano-British Epigraphy," and the pre-Norman and other early work lately discovered in Christ Church Cathedral is discussed by J. P. Harrison. The news department is not confined to Oxford in its survey of recent archæological discoveries. Extracts from the proceedings of societies, with lists of additions of relics to the Ashmolean Museum and of archæological and architectural books to the Bodleian Library, conclude the contents.

The *Geographical Journal*, as the official publication of the Royal Geographical Society is now called, opens with Dr. Nansen's paper descriptive of his bold scheme for crossing the North Polar region, to which we have already referred. The discussion which followed the reading of the paper before the Society is interesting as giving the views of several eminent Arctic explorers. Among these were Admiral Sir L. McClintock, who spoke rather favorably; Sir George Nares, who believed that wind would be more likely to drift the *Fram* to the west than the current to the north; Sir E. Inglefield, who gave a striking instance in his own experience of the rapid current drift from Siberia to the North American Coast; and Sir George Richards, who was very sceptical as to the existence of a northern current. Sir Allen Young thought that the great danger to contend with would be the land in nearly every direction near the Pole, while in Sir Joseph Hooker's opinion, "the success of such an enterprise would not justify the exposure of valuable lives for its attainment." The remainder of the *Journal*, which, considered with reference to its increased size and broadened scope, is slightly disappointing, is taken up with a description of the principal New Zealand glaciers, a brief account of Lieut. Ryder's East Greenland expedition, several short articles, and a record of geographical information and literature.

The condition of the university students of India has been made the subject of a recent minute by Sir Charles Elliott, the Lieutenant-Governor of Bengal. The three great universities of Calcutta, Madras, and Bombay, which control the higher education of the empire, are simply examining bodies after the model of the London University system. While exerting a profound influence upon the character of the educated classes, they acknowledge no responsibility for the conditions, whether good or evil, amid which the student acquires the knowledge to enable him to pass his examinations. In Calcutta, for instance, Sir Charles says there are 4,000 students for whom "not so much care is taken of their living in healthy and decent surroundings as is taken by Government for the pilgrims to Jagannath." The great problem to which he invites the attention of all interested in the subject is how to make university influence and university responsibility go hand-in-hand. He urges especially upon every professsor and teacher of the Government colleges and schools the acceptance of this principle, "that his relations to the students should not begin and end in the lecture-room, but that he should endeavor out of school hours to acquire their confidence and obtain an influence over them which should last through their lives."

Since the National Weather Bureau was placed under the direction of the Department of Agriculture, the publication of bulletins, suspended for some years past, has been resumed. Five have thus far been issued: The Climate of Death Valley, Cal., by Prof. Harrington, Chief of the Bureau; Magnetic Observations, by Prof. Bigelow of the Bureau; Relations of Soil to Climate, by Prof. Hilgard of California; Physical Properties of Soils, by Prof. Whitney of the Maryland Agricultural College; Movements of Ground-water, by Prof. King of Wisconsin University. The last two are the most novel of the series. The degree of fineness of soils is shown to have a controlling influence on their behavior under agricultural operations, and the method of treatment of unfavorable textures is foreshadowed. The report on the movements of ground-water is based on a series of carefully conducted experiments, and reveals among other matters a surprising sensitiveness to changes of atmospheric pressure, by which the yield of wells and springs is to some extent found to be determined. In connection with the first-named Bulletin we can recommend for instruction and entertainment 'Illustrated Sketches of Death Valley and Other Borax Deserts of the Pacific Coast,' by John R. Spears (Rand, McNally & Co.).

It is but a short time since fossils of the birds were of the most rare. Twenty years ago a fossil feather was quite sufficient to create a sensation among ornithologists. Gradually, however, the number of known forms has been increased until the list has now reached a considerable length. A late publication by Dr. R. W. Shufeldt, in the Journal of the Philadelphia Academy of Natural Sciences, vol. ix., "A Study of the Fossil Avifauna of the Equus Beds of the Oregon Desert," enumerates and describes about fifty species, of some twenty-five genera. Two gulls, a goose, a brant, a heron, a flamingo, three grouse, two hawks, a blackbird, and a crow are said to be new to science. Excepting a few types that became extinct, and comparing the fossil with the recent, the author decides that the birds of the later tertiary time were simply the direct ancestors of existing genera and species of birds; the latter having, in most instances at least, made little, if any, osteological departure. Separately the essay is a quarto pamphlet of thirty-six pages and three plates.

"A New Cretaceous Bird Allied to Hesperornis," *Coniornis altus*, is described and figured by Prof. O. C. Marsh in the *American Journal of Science*, vol. xlv., January, 1893. In the same number also this author has an article on "The Skull and Brain of Claosaurus," a cretaceous dinosaur, in which descriptions and figures are given of skull, brain, and teeth; and in the February number he has a "Restoration of Anchisaurus," a dinosaurian reptile that may have made some or many of the so-called "bird tracks" of the Connecticut River sandstones.

The report (December 5, 1892) of General

Casey, Chief of Engineers, U. S. A., on the state of construction of the new building for the Library of Congress is accompanied by a large photographic view taken from the northwest corner on November 8, 1892. From the progress anticipated during the coming year, one might suppose that partial occupation would be possible in 1895.

At the election of officers for 1893 by the Graduate Association of Yale, the vice-president and three of the executive committee chosen were women. Such action is a prompt and logical endorsement by the students themselves of the extension of post-graduate privileges to women.

—"The Women's Suffrage Calendar for 1893" (London) supplies some suggestive information, in compact shape, regarding the work and activities of the present generation of English women. Glancing through its pages, we are reminded that, in this year of grace, the well-born English maiden whose aspirations soar beyond the county-belledom and London-season triumphs of her compeers, finds open to her several well-beaten paths of personal honor and public usefulness. Under limitations doomed to speedy extinction, she can share with her brothers the educational advantages of the leading universities of Great Britain and Ireland, and can, with public approval, serve her fellows as professor, doctor, trained nurse, poor-law guardian, school commissioner, etc. We are reminded that the local ballot is in the hands of all rate-paying women, and that within a year the bill to extend the Parliamentary franchise to such women was lost by a very small majority—the leaders of the historic Conservative party being found among the members of Parliament voting "Aye." The list of "gains" in 1892 for the woman's cause records the election of women school commissioners in Canada, the extension of parish suffrage to women in Guernsey, the first appointment of a woman (and she an American) as lecturer on law at the coeducational University of Zurich, the opening of the Scotch universities to women, their admission to the Ancient Order of Foresters, to the Royal Geographical Society, and to the British Medical Association, their appointment as Government medical officers in the Austrian provinces of Bosnia and Herzegovina, and finally the passage of a woman-suffrage bill by the New Zealand Legislature, although the original bill was so handicapped by "conditions" in the Legislative Council that it was, as amended, rejected by the lower house. When we remember that it is barely a decade since the municipal franchise was generally extended to women in Great Britain, that women were only admitted to the Cambridge Tripos Examinations in 1881, and to the Oxford Locals in 1884, and that Sydney University did not confer a degree on a woman until 1885, we can better gauge the growth in popular British opinion shown by the following appointments of women during the year ending October, 1892: as assistant physician to the Workhouse Infirmary, Manchester; resident physician, Smallpox Hospital Ship, London; physician to the Edinburgh School Board; resident physician, Victoria Hospital for Children, Hull; visitor to three lunatic asylums, Cape of Good Hope Colony; meteorologist Hong Kong Observatory (Government appointment); three associate professorships in the coeducational institutions, the Royal University of Ireland and the University of Sydney; and the addition, by the Home Secretary, of four women as assistant commissioners on the Labor Commission created by the last Parliament. Several of these innovations have been already announced in our columns.

—A somewhat rambling essay by the late Theodore Child introduces Clara Bell's translation of Firenzuola's dialogue, 'Of the Beauty of Women' (London: Osgood, McIlvaine & Co.; New York: Charles Scribner's Sons). Firenzuola was a typical Italian man of letters at the period of the later Renaissance—versatile, witty, and graceful, with a superficial but genuine admiration for antiquity and a marked contempt for all mediæval notions. He won distinction in criticism, in both branches of the drama, in poetry, in the *novella*, and in translation, as one of the ripest and most cultivated spirits of his time. The dialogue before us, which shows him at his best, is one of the most interesting of the half-dozen treatises on feminine beauty that are so characteristic of the time. The author, under the thin disguise of a certain Celso, discusses the various "points" of beauty which the ideal woman should possess, first with a band of youths and women, in the garden of the Abbey of Grignano at Prato, and afterwards with the same pleasant company at the house of a certain Madonna Lampiada. The first discourse concerns Plato's theory of beauty and love and certain of its applications, and gives a general outline of the subject and a discussion of the signification of the terms most frequently used in connection with feminine beauty. Love is the quest of beauty, the beauty of women "an earnest of heavenly things, an image and simulacrum of the joys of heaven." Wherefore, says Celso, in order "not to go up there [to heaven] and seem like a rustic when first he seeth a town, and not to have then to learn the contemplation of things beautiful, I exercise myself here as best I may, by gazing on these fair faces." The second discourse considers in detail the eyes and the eyebrows, the eyelashes, the ears, the neck and bosom, the shoulders and arms, the chin, the teeth, the gums, and even the tip of the tongue. The whole treatise thus throws light on the ideals of beauty then in vogue, and is a suggestive commentary on contemporary painting as well as the other arts. The brilliant and vivacious style of the original is, on the whole, satisfactorily reproduced in the translation.

—Referring to an extract in our recent review of Blades's 'Books in Chains,' a correspondent writes: "Blades says: 'When a book was given to a mediæval library, it was necessary, in the first place, to employ a painter to *write the name and class-mark across the fore-edge*.' But no such necessity is apparent except to persons acquainted with a very peculiar and long-forgotten bibliothecal custom, namely, that of ranging books with their backs against the wall. During a Spanish tour in 1867, the writer saw this custom still predominant in the library of the Escorial—where he also saw a crowd of monks still praying for the soul of Philip II. The names of books were written either on clasps running across the fore-edges or on labels, sometimes projecting from leaves on which they were pasted, or dangling from strings which would also serve as book-marks. The oddity of this arrangement led the tourist to take down a volume. Facing outward, it was ready for opening as soon as drawn from the shelf, and needed no turning around. This style of placement, which seems at first absurd, may be, after all, better than that now in vogue. It may have been devised by a lazy monk, but it is clearly labor-saving, and may be worth reviving in modern libraries where the volumes demanding consultation are more and more multitudinous. No obstacles which can be removed ought to be left to obstruct the highways and by-ways of research."

—"Some time after the visit above mentioned to the Escorial," continues our correspondent, "the strange reversal of what had come to be considered the natural position of books on a shelf was several times discussed in the London *Notes and Queries*. An Austrian ambassador, when interviewed at Athens, spoke of the volumes in the Escorial as standing with their cut edges towards the spectators. Then a British writer, while incidentally admitting this fact, aimed chiefly to discredit other statements of the Austrian. Further research showed that the Escorial placement was of long standing, probably dating from the building of the palace, the most costly pile, according to Prescott, ever finished by one man. An Italian visitor in 1650 wrote that the gilt-edged leaves of the tomes (not much thumbed perhaps) 'made the hall where they were stored look as if clothed with gold from roof to floor.' It was further discovered that the Escorial arrangement was a survival of a fashion once prevalent far and wide. Engravings contemporary with Calvin and other scholars of various countries in their libraries showed their books with their backs to the wall. Not a few volumes in ancient libraries, especially in Birmingham and Ripon, showed plain tokens that they were intended to stand, as we should say, wrong side before. Carvings in stone and ever-during brass were found which pointed the same way. One was in York Minster. It is noteworthy how a custom dominant for ages will vanish so as to seem absurd and incredible to most men, while still flourishing in a kingdom where it is proverbial that Adam, if he were to rise from his grave, would find everything just as he left it. Such disclosures are the zest of Spanish travel. In the sixties that zest was still keener than now."

—It is not very likely that so deliberately repulsive a writer as M. J. K. Huysmans (in spite of all his vigor and learning) often is, has found many American readers. But the curious few who have read 'À Rebours' and 'Là-Bas' will hear with a certain interest of the recent death, at Lyons, of the Abbé Boulan, the "docteur Johannès" of the last-named novel. The Abbé, in his earlier years, was appointed director of a convent of nuns whom he led into the devotions and practices of the highest mystical theology. The usual results followed: some of the nuns became inspired, and some bewitched. Boulan was condemned, first by his Archbishop and afterwards by Rome, and, upon contumacy, was excommunicated. He returned to France and devoted himself to the study and practice of occultism for benevolent ends. He found, however, that the world was no more sympathetic than the Church, since it sent him to jail for the illegal practice of medicine. He seems to have been a hypnotist born out of due time. He undoubtedly wrought many cures by his occult force, or by his patients' faith in it. In severe cases he resorted to a sort of benevolent parody of the Christian sacrifice—a sort of White Mass, one might call it, in contradistinction to the Black Mass of the Kabalists. It was, in fact, to the White Magic that he devoted his life, and he believed himself to have been often assailed by the men and demons of the Black Art. There is nothing very harmful in such mild insanities as these, except to the subject of them, and the

Abbé Boulan, when one considers his sincerity, shows not unfavorably when set beside the absurd modern Mages, and Sârs, and Brothers of the Rose+Croix.

—Lunar photography, begun by the elder Draper in 1840, continued by his son Henry and by Rutherfurd in New York, and more recently at Harvard, has culminated in a splendid series of negatives procured with the thirty-six-inch telescope of the Lick Observatory. Many of the originals (of nearly six inches in diameter) are technically perfect enough to bear enlargement to six feet, while Mr. W. Prinz of the Royal Belgian Observatory has made photographic amplifications of the lunar crater Copernicus from these negatives to a scale on which the moon's diameter would exceed thirty feet. These fine photographs, rivalling the classic handiwork of Maedler, Schmidt, and Lohrmann, are secondary only in this, that the very small craters are sometimes indistinctly registered by photography. The Lick negatives of the moon have been industriously studied by Prof. Weinek of Prague, who has discovered new rills and craters, and elaborated a beautiful series of enlarged drawings which, reproduced by heliogravure, form the most perfect detail pictures of lunar scenery yet produced. The moon's ordinary surface and structure, apparently volcanic in the main, is best seen at or near the time of quadrature, under oblique illumination. But the lunar rills or streaks, difficult to observe when the shadows of the mountains are most conspicuous, and very prominent when the shadows are imperceptible, demand a front illumination for their visibility. Theoretically, the material of the streak surface must, as pointed out by Dr. Copeland, Astronomer Royal for Scotland, be made up of multitudes of surfaces more or less completely spherical, but either concave or convex; and he therefore regards the streaks as produced by a material pitted with minute cavities of spherical figure, or strewn with minute solid spheres. Prof. W. H. Pickering, on recent critical investigation of the rill systems (with a thirteen-inch telescope at an elevation of 8,000 feet at Arequipa, Peru), finds that the streaks of the system surrounding Tycho and other craters radiate, not from the centre of the ring mountains, but from a multitude of craterlets upon their rims. Also, there are not, as heretofore supposed, any streaks hundreds or even thousands of miles long, but their usual length varies from ten to fifty miles, while they seldom exceed one-quarter mile in breadth at the crater. In the volcanic region surrounding Arequipa, the roads are in some places partially covered with a white pumice-like material, and its behavior under different inclinations of the line of illumination to the line of vision has led Prof. Pickering to a conclusion quite identical with that of Dr. Copeland, that the general appearance of the streaks is most readily explained by the hypothesis of a light-colored powder extending away from the craterlets. The only farther step necessary to a completely satisfactory explanation of these mysterious markings is a reasonable elucidation of the process by which this powder has come to be radially disposed.

ALLAN'S ARMY OF NORTHERN VIRGINIA.

The Army of Northern Virginia in 1862. By William Allan, A.M., LL.D., late Principal of McDonogh School, Maryland, formerly Lieutenant Colonel, &c., A. N. V. With an Introduction by John C. Ropes, author of 'The Army Under Pope,' etc. Boston: Houghton, Mifflin & Co. 8vo, pp. x, 537.

One of the most gratifying features of the historical discussion of the civil war is the fair play which is allowed to writers on both sides. A new book by a Southern writer is cordially welcomed by the most earnest Northern men and finds its way into Northern libraries, public and private, without delay. This new history of the campaigns in Virginia and Maryland in 1862 comes before the world with a most cordial introduction by Mr. Ropes, himself the historian of an important part of the same period. Mr. Ropes, with a spirit of broadest liberality, vouches for the ability and the honesty of the Southern writer, though the latter combats vigorously some of his own published conclusions. He says of Col. Allan: "Allowance must always be made, even when considering the views of the most judicial minds, for the bias which inevitably results from adopting heartily and earnestly one side in a great conflict of opinion and of arms. But the Northern reader will find in the pages before us an impartial spirit and a love of the exact truth characterizing the entire performance of the work."

The differences between National and Confederate writers have greatly diminished with the progress of time, and especially with the progressive publication of the official records of the war. The evidence on many points is so much more complete than it was a few years ago that no reputable author can ignore it, and the influence of the "bias" which Mr. Ropes speaks of is greatly narrowed as to its field. It is still possible to accept the testimony of our own side in preference to that of an enemy, where the two are contradictory, or to select the most favorable of several possible theories when we discuss the conduct of our friends. In questions of numbers we may use the smallest given by respectable authority to our own forces and the largest admitted by our opponents as to their own. We may see the acts of our heroes through the rosy medium of our loving admiration, and be ready to take the worst view of a leader on the other side, especially if our cause has suffered by his blows. These are perennial blossoms of human nature, and it will take centuries to develop an absolutely judicial investigation.

Col. Allan died before his book was published, and, judging by the foot-note references to authorities, he did not have the advantage of some recent books of capital importance in forming a sound historical judgment of the campaigns he describes. He had evidently analyzed with care the movements of the divisions and brigades of both armies as they are revealed in official reports, and was honestly industrious in trying to avoid conjecture and to base himself on authenticated fact. The points a Northern critic would discuss with him are therefore comparatively few, and we can join heartily in the general praise which Mr. Ropes gives his book. Yet the book is distinctly and manifestly written from the Confederate standpoint, and shows on almost every page the "bias" peculiar to the author's education and sympathies.

The instances which will make this clearest are found in his treatment of McClellan, Lincoln, and Pope. Southern writers are always good "McClellan men," and pretty uniformly back that general in the differences which arose between him and Lincoln's Administration. It is but a little while since a strong party among the old officers and men of the Army of the Potomac did the like; but increased knowledge of the facts has worked a marked change in Northern sentiment. We all know now that the Government gave to McClellan an army greatly superior in numbers, in equipment, in weapons, and in supplies to that which was opposed to him, and that the soldiers, man for man, were every whit as good as Johnston's and Lee's. It was right, therefore, to hold the General responsible for success. Every pretended cause of complaint, on his part, has melted into thin air before these simple and hard facts, and all who are at all intelligent in regard to the war now know it. Our Northern people have taken their bearings accordingly, and we hear no more of the injustice of Lincoln and Stanton towards the General.

Southern writers (even so candid a one as Col. Allan) find it hard to correct their judgment according to this truth. They seem to have a kind of vested interest in McClellan and in the respectable and dignified way in which he was getting our armies regularly beaten, so that they can hardly look upon it as anything less than cruelty to the Confederacy for Mr. Lincoln to remove him from command. We were going so smoothly and decorously through the steps which led, inevitably, to the surrender on our part and the establishment of the independence of the South, with the accustomed stately compliments for the heroic courage and skill shown on both sides, that Lincoln's interference with it all proves his badness of heart! It surely is time that so puerile a way of treating the subject should be put aside.

In Col. Allan's case the incongruity is the more apparent because his fair recognition of all the facts in the premises makes the absurdity of the conclusion stand out in all the stronger relief. He states as clearly as any one that McClellan was, through his whole career as a commander, under the incredible illusion that his opponent's army was more than twice its actual size, and acted upon this belief. Yet Col. Allan enumerates, as showing that "there can be no question that he was badly treated," (1) that he was peremptorily ordered to begin in February, 1862, a campaign which he ought to have begun in September, 1861; (2) that he was relieved of the command of the Western armies so that he might give his whole mind to leading that of the Potomac; (3) that McDowell's corps was retained to defend Washington and repel Jackson, who was let loose in the Shenandoah by the utter feebleness of McClellan's advance in the Peninsula. These complaints became obsolete when the war records disclosed the fact that McClellan not only had his hands full in conducting his own campaign, but that he was held at bay and finally defeated by a much inferior force. Southern writers have yet to learn what we have learned, that Mr. Lincoln was right in all this, and that the only marvel was in his patience, consideration, and kindness in his dealings with his subordinate.

The Southern treatment of Pope is a corollary to that of McClellan. As Pope opened the way in the changes which finally led to the transfer of Grant from the West to the command of all the armies, and especially of the Army of the Potomac, Pope had to bear the brunt of the indignation and disappointment at McClellan's removal. Here also the change which has come in Northern judgment has not reached Southern writers, and Col. Allan goes, perhaps, beyond the average in his depreciation of Pope. He does this, too, although he had under his eye Mr. Ropes's book on that campaign, in which a sounder and much more judicial treatment of the subject is found.

Northern men now understand that Pope, with half the numbers that McClellan had before Richmond, and these partly raw recruits, was driven back upon Washington by the same army (substantially) which had driven McClellan from Gaines's Mill to Harrison's Landing; the same army against which McClellan refused to resume the aggressive unless thirty thousand more men could be added to his already superior forces. Nobody now doubts that Pope's fighting, from Cedar Mountain to Chantilly, was bold and vigorous. When this has been learned, it has become ridiculous to exalt McClellan and to speak contemptuously of Pope. Yet Col. Allan ignores these simple facts, with Mr. Ropes's sound conclusions from them, and rings all the old changes upon Pope, from "braggart" to "blockhead." To do so now is an anachronism.

We have been taught corrections, also, in regard to Pope personally, which Colonel Allan had evidently not learned. Mr. Ropes had exploded the amusing myth about his announcing "headquarters in the saddle," but Col. Allan faithfully repeats it. As to Pope's "bombastic" orders, a simple comparison with a few issued by other officers, South as well as North, will prove that the literary taste of military war orders must be subjected to generic and not specific criticism. For one of his orders, however, Pope was "outlawed" by the Confederate President, though the rapid progress of the campaign prevented its having any practical effect; but as Mr. Ropes has admitted that this one was in conflict with international law, Col. Allan has good support in condemning it. The order was one which directed all male citizens to be sent beyond his lines who would not take the oath of allegiance, and declared that they should be treated as spies if they returned without permission. The order was meant to meet the notorious fact that the systematic and industrious communication with the enemy by citizens made these practically spies. What the laws of civilized warfare tolerate when the hostility of citizens becomes annoying to an army is by no means easy to settle. The practice of armies is much severer than the rules laid down by theorists. Interesting light is thrown on this subject by a very recent book written by Lieut. Birkhimer of our army, and it is fairly debatable, in view of this, whether Pope transgressed the rules recognized by European armies of the present day.*

Since Col. Allan wrote his criticisms, probably, the Life of Stonewall Jackson, by his widow, has appeared; and the fact there revealed that Jackson advocated fighting under the "black flag" and giving no quarter to invaders, will silence all criticism of Pope by Southern men. The practice of Confederate officers in districts which they regarded as rebellious to their Government, *e. g.*, East Tennessee and West Virginia, was quite as harsh as anything complained of by them. In that same year, 1862, the Confederate forces were for a short time in possession of the Great Kanawha valley, and George Summers, known before the war as one of the foremost men of all Virginia, was forced to take the oath of allegiance to the Confederacy by the threat that he would be tied to the tail of a wagon and marched over the mountains on foot to Richmond. An elderly and rather corpulent man, he regarded it as a sentence of death, and took the oath to avoid it. Such things are not lovely to recall, but, if told, they must be told of both sides.

*See Birkhimer's 'Military Government and Martial Law,' chap. viii. (Washington, 1892.)

Another constant discrepancy between Northern and Southern writers is in their statements of the forces engaged. It runs through the whole history of the war. Col. Allan notices in one place the fact that Palfrey, in his history of the Antietam campaign, says that the Confederate accounts exclude their officers in giving numbers, making a difference of about 10 per cent. This, however, has not led him to examine the grounds on which the assertion is made, and he follows the custom of making estimates that will not stand a test. Let us take the battle of Antietam as an example. McClellan failed to crush Lee because he delivered his attacks piecemeal, sending in smaller columns than those which Lee could unite to meet them. His success was, therefore, only partial and incomplete, though we know that his forces were superior. But Col. Allan is not content with this, and repeats the common error of exaggerating the difference. He says, "It was the assault of an army of about 80,000 troops upon one of 35,000."

If we analyze the evidence we have, we find that on the 22d of September, four days after the battle, in the tabulated morning report of Lee's army there were reported 36,416 present for duty. But from this report the cavalry and the reserve artillery are expressly excluded, and two regiments which were in the battle and afterwards detached are also omitted. The casualties at South Mountain and Antietam officially reported were 13,964. These figures enable us to reconstruct the table of Lee's army in the battles as follows:

Report of September 22	36,416
Add cavalry (official report, Oct. 10)	5,761
Reserve artillery (report Sept. 30)	764
Two regiments not reported, say	600
Casualties, South Mountain and Antietam	13,964
Total on September 18	57,505

Of the troops thus included, every regiment and battery is represented in the casualty list, and nothing is estimated but the two regiments of which we find no report of their strength.

It thus turns out that Lee had in Maryland nearly 60,000 men instead of 35,000, as Col. Allan states. The discrepancy is too great to be accounted for in any satisfactory way, as the figures are nearer one-half the force than its true strength. Gen. Palfrey has given in his history strong reasons for putting McClellan's available strength at 70,000 instead of 80,000, which would make the ratio between him and Lee about seven to six; but whether seven or eight, it was a sufficient preponderance if the troops were rightly handled, though not an overwhelming one. Straggling cuts a considerable figure in Col. Allan's as well as in other Southern estimates of Lee's forces, but this was incident to both armies, and cannot properly be made a ground for reducing the figures of either. If either army suffered most from it, it would be McClellan's, for Lee's was retiring in presence of its enemy, and the fear of capture would keep men in the ranks.

As to the official returns of the opposing armies, it certainly seems that an end might be put to controversy. It was the custom in both armies to make reports of strength three times a month, upon blanks furnished by the Adjutant-General's Department. That of the National army was a form containing some fifty ruled columns divided into groups comprising separate statistics of (1) officers and men "present for duty"; (2) present, sick, or in arrest, or on duty taking them out of the ranks, as clerical work, etc.; (3) absent, with or without leave; and (4) aggregates. The last column of the group, "Present for duty," was an "aggregate" of both officers and men in all the other columns of the group.

The Confederate army forms were intended to be an improvement on ours in statistical fulness, and the blank contained some sixty columns, similarly grouped. The group "Present for duty" (a sample is before us as we write) contained, for an army return, thirty-two columns, but no "aggregate" column like that mentioned above, nor is there anywhere upon it a summary of officers and men present for duty. If we pass to the right in the voluminous form, beyond the group of columns for "sick," etc., we find a column marked "effective total," but this contains only the total of men in the ranks, including sergeants and corporals actually carrying muskets, and excluding all commissioned officers and the non-commissioned staff. If the last column of the "Present for duty" be taken as the army strength by a historian examining the returns, he will have only the privates in the ranks, and if he takes the column marked "Effective total" he has only added the non-commissioned officers in the ranks. Let us see what difference this will make. The case before us happens to be the return of Hardee's Army of Tennessee, December 10, 1863. Condensing the columns under "Present for duty," we get:

Officers at army headquarters	230
Officers with divisions and brigades	4,124
Non-commissioned staff	547
Artificers and musicians	655
Sergeants and corporals	7,874
Privates	35,220
Aggregate present for duty	48,650

But, as we have said, this aggregate nowhere appears on the return, and the investigator must make it for himself by adding the footings of thirty-two columns, as we have done. Yet it is the equivalent of the last column of the return "Present for duty" in the form used in the National army. If we run the eye along to the column marked "Effective total," we find the figures to be 43,094, which will be found to be the sum of the last two items only, in the table given above. The difference between this number and the aggregate present for duty as computed by the national form, is 5,556, or nearly 13 per cent. of the "effective total" given in the Confederate returns, which must therefore be increased in that ratio to make an accurate comparison with the National ones.

As everybody knows, most of the archives of the Confederate Government were destroyed, and it is only from remnants accidentally preserved that we can get light. The sample analyzed was obtained from the War Office for another purpose, but we believe it is a perfectly fair sample of such returns. Gen. Hardee was one of the most accomplished and accurate of the Confederate officers. He had been Commandant at West Point before the war, and was the author of the standard 'Tactics' then used in the army. It is therefore safe to say that at his headquarters the army forms were understood and properly used. The controversy has been very often referred to, but we do not know that a detailed analysis of the matter has been published.

While the points thus discussed color the whole of Col. Allan's book, far the greater part of his story is made up of details in regard to which there can be no debate, and where we can follow his clear descriptions and enjoy his calm and temperate tone with unmixed satisfaction. With the exception named, he treats the officers on the National side with courtesy and respect. He is not extravagant in his laudation of his own friends, but shows discrimination in his estimates of them.

In one respect the book has marked supe-

riority: the maps, printed in colors, are far above those we ordinarily see. They are on a good scale and are sufficiently numerous to illustrate the text well at every important point in the campaigns narrated. That the book is well printed need hardly be said when the imprint of the publishers is noticed.

WOODBERRY'S SHELLEY.—II.

The Complete Poetical Works of Percy Bysshe Shelley. The Text newly collated and revised, and edited with a Memoir and Notes, by George Edward Woodberry. Centenary Edition. In four volumes. Boston: Houghton, Mifflin & Co. 1892.

If we ask why it is that Mr. Woodberry persists in gently finding fault with everybody else, and in seeing excuses everywhere for Shelley, the answer is very simple, and is the highest compliment to Shelley. It is that the better we know Shelley, the more we read of his life in general, the more we are disposed to love and admire him. In the larger part of his life, his conduct was really angelic; it is impossible, without reading the details of Prof. Dowden's book, to conceive to what an extent the poet was magnanimous, long-suffering, generous, and just. He was not only capable of a noble disinterestedness and of great self-sacrifice for the sake of principle, as when he refused to give his consent to the entailing of his estate, but he was ready constantly with the small change of daily kindness and courtesy which counts up higher, in the long run, than the heroisms and the thousand-pound notes. He was always planning for others, working for others, impoverishing himself to pay other people's debts. His behavior towards Godwin, towards Hunt, to Keats, to Miss Clairmont, is beyond praise. "In natural piety, in purity of motive, in conscientious and unselfish action, Shelley was exceptionally conspicuous." This is Mr. Woodberry's verdict, in one of his essays, and we are quite willing to accept it. No one could help falling in love with the writer of that letter to Mr. William Baxter, a worthy gentleman who, under the frown of his son-in-law, had written to Shelley declining further intercourse between the two families. The courtesy, the friendliness, the charity, the sweet reasonableness of Shelley's reply would in themselves form a sufficient testimonial for any saint or rishi. No one could have written such a document who had not, as the Hindus say, "his passions under complete control." No bishop, no cardinal could have exhibited more perfectly the flower and the graces of Christian charity.

Shelley was, in truth, under exile for his opinions. No poet of his time had to such an extent the courage of his opinions. Coleridge and Wordsworth began with the same radical sentiments, and wavered and changed. Shelley was too serious in his mission for hesitation or change. "I go straight on," said he, "till I am stopped; and I never am stopped." He was in opposition to some rooted sentiments of the society in which he lived. He never liked the study of history, and he had no sense of the meaning and forces of conservatism—of those slow organic processes by which society moves toward a distant goal, and will not be hurried. He felt as if, on the contrary, society were a blank page for him to write his creed on. He belonged to the "Church of the Rebels," as Swinburne said, and it was a church militant. In "Queen Mab," in the "Revolt of Islam," in the "Prometheus," he hurled himself again and again against "the fort unbreachable of the long-battered world"; and he fell back, as might have been expected, bruised and lacerated. He fell under the ban, and hence, in part, his singular destitution of honorable friends, his increasing alienation from English sentiments and ideas. "Pity me," he says, in writing to Peacock, "for my absence from those social enjoyments which England might afford me, and which I know so well how to appreciate. . . . I am regarded by all who know me as a rare prodigy of crime and pollution, whose look even might infect."

A banishment to Italian skies and the museums of Florence was certainly for him the mildest of ostracisms—we owe to it his highest inspiration and his most wonderful pictures; but it is likely that he lost by it not only the comfort and stimulus of high-minded friends, but also some strings from the lyre of his poetry, some chords that are oftenest sounded in the experience of homely English life. Mr. Matthew Arnold calls him a "beautiful and ineffectual angel, beating in the void his luminous wings in vain." The phrase is so melodious that we feel it must be felicitous, yet it is really an unfair and incomplete characterization. For it must be remembered that this angel vanished from our sphere while he was still trying his wings and preparing for his greatest flight. He tried them not so much in the void as in an ethereal region of imagination and description where few, if any, had ascended, and where he alone almost was puissant and at home. Even in the "Prometheus" and in the "Cenci" he was still trying his wings, and yet what a unique achievement each of them represents in the poetry of this century! The "Cenci" was meant, as he said, to be popular; it was weighted, however, from the outset by the monstrosity of the subject and of Count Cenci's character. The pathos and the horror of tragedy rest always on our conviction that we ourselves, under certain circumstances, are capable both of the crime and of the misfortune. When both of these are abnormal, our interest weakens. *Macbeth* we can understand, and *Othello* and *Agamemnon* and even *Medea*—their evil is mixed with relentings and with the shadows of good—they are men and women of like passions and motives with ourselves; but the sheer deviltry of Francesco Cenci lies too far out of our experience and our imagination—it is not merely revolting, it is incredible; and this is the main artistic blemish of a play which provokes no unworthy comparison with Shakspere, and which, with the fine fragment of "Charles the First," reveals unexpected powers and possibilities in one whose genius seemed supremely lyrical.

The "Prometheus Unbound" provokes no comparisons because it is, in some respects, incomparable; it is, as we have said, unique and characteristic in the domain of imagination to which its machinery and its pictures belong, and also in the cause which it advocates. Shelley is, perhaps, the one poet who has written, with inspiration, verses that touch on the new problem of humanity, and that satisfy its altering needs and creeds. It is likely that he had some part in bringing about the reformation of social ideals which we see going on about us; it is likely that in this regard he struck the keynote of the coming century rather than of our own. While Clough and Matthew Arnold and even Browning represented stages of conflict and restlessness and discussion about fading forms and sanctions and creeds, Shelley bounded over all these and attempted to substitute a positive religion of humanity. He had so much faith in this that he became something better and more powerful than an iconoclast. If he could have finished the century, he would have seen the churches taking up the very mission which he preached, joining the movement for labor and equality, and hastening to swim with the current of the century by heading the democratic tendency and leading it towards socialism. And if the Christian churches, in this action, recur to the example of their founder, it is none the less true that primitive Christian socialism has long been practically forgotten in the dazzle of the empires of this world which the Church grasped at Rome and Byzantium, not without falling down and worshipping the Spirit of the Temptation. The Church, it is true, had offered some things which were not dreamed of in Shelley's philosophy: it had furnished a home for the soul about which clustered its most sacred affections; it had promised a home in the hereafter for that *animula vagula blandula* which, without Christianity, must go forth naked to wander or disappear among the kindless elements of the Cosmos. There lingered about these, as about earthly homes, something of selfishness as well as the tenderest sanctities. Their refuge and their sanctities did not appeal to Shelley, who was curiously emancipated from some of the commonest needs and feelings of humanity. To him the elements were not kindless. Alone of the poets he could say without affectation and without figure of speech:

> "Earth, Ocean, Air, beloved brotherhood";

could call "bird, insect, and gentle beast" his brethren and his kindred. He did not replace the Church's ark in his vision of the future, nor indeed do any of the new ethical religions replace it, much as they try to build some raft which will safely bear the timid spirit out upon the sea of the unknown. But no vision, no "charm of wise words" which they have evoked or framed, is more consistent, more inspiring, than the "Prometheus Unbound." Under its spell we are enraptured and transported, we forget the limitations of things—we forget the relic in us of the ape and the tiger, that old Adam which masquerades now as Nero, now as Ravachol; we forget Mr. Huxley's iron facts and his pessimism; and we believe, for a moment, in the perfectibility of nature and of man—we are persuaded

> "to hope till Hope creates
> From its own wreck the thing it contemplates."

Surely this is no "ineffectual angel" who can thus transfigure us with enchantments that are the opposite of Circe's.

The "Prometheus" has certainly found a wider circle of readers than Shelley anticipated; it was written, he said, for half-a-dozen only, for the συνετοί. The fact remains that much of the finest of his poetry needs, as it deserves, illustrations. Oftentimes he does not deal in flesh and blood. He is like his own skylark, "an unbodied joy," soaring out of sight above the heads of the multitude.

Mr. Woodberry's notes are not intended to illustrate or criticise the poems, or to give their sources, but simply to furnish the history of the circumstances and the mood in which they were created. Incidentally they include Shelley's own criticisms, which are most valuable and clear-sighted. There remains, then, one important service which Mr. Woodberry can render, and for which we have almost his promise, and that is an illustrative and critical commentary. It need not be quite on the scale of Mr. Rossetti's "Adonais"; and yet, on the other hand, we hope that Mr. Woodberry will not presume too much on the understanding of his readers, and will condescend to be a guide where so many would gladly follow.

The Ainu of Japan. By the Rev. John Batchelor. Fleming H. Revell Co.

It is somewhat provoking, to those who are sticklers in maintaining the infallibility of English orthography, to have to change "Aino" into "Ainu." Nevertheless, the Ainu are men, and the term Ainu is a genuine word which has a linguistic, ethnological, and historical basis. Ainu suggests science. Aino is a mongrel of unknown origin, and carries in it prejudice, bigotry, race hatred and contempt. Aino is the Japanese nickname allied with *inu*, dog, or *ai-no-ko*, hybrid or dog-born. Ainu is the pure vernacular, meaning men, and should everywhere displace the second-hand, foreign, and mistaken term Aino.

As in so many other instances in ethnology, we now have definite knowledge of the Ainu from the Christian missionary. A few explorers, tourists, and navigators have more or less accurately described them, but the Rev. John Batchelor of the English Church Missionary Society has lived among them for years. He has mastered their language, made grammar and dictionary of and for it, collected the Ainu folk lore, made excavations and explorations, and furnished a mass of material which has already cast a great light on the early history of Japan. Indeed, it is now perfectly clear that hundreds of local names in Hondo, from Kioto to the Straits of Tsugaru, the etymology of which has so long baffled natives and foreigners, are of Ainu origin. In their present form they are nothing more than the resultant of Ainu words more or less mispronounced by Japanese, and covered up by Chinese ideographs, themselves also mispronounced. Mr. Walter W. Skeat, who, in his 'Etymological Dictionary of the English Language,' never wearies of showing "the enormous influence which spelling has exerted upon pronunciation," changing old Saxon and Dutch words into a form unrecognizable by a Frieslander or other Teuton, has a notable illustration of his theory in Japan. The *kana* of the Mikado's domain has helped to metamorphose the old Ainu geographical names, as surely as it to-day makes the telegraph say *tin-poo-rā-to* for tin plate.

The Ainu are in the main gentle, peaceable, drunken, and dirty savages, now inhabiting Yezo, Saghalin, and the Kuriles. Before the days of their subjugation by the Japanese, they were a race of hardy fishermen and hunters, inhabiting the upper half of Hondo, the main island of Japan. It is more than probable that those who remained on Hondo were assimilated. Now, after ages of intermarriage and the daily use of the hot bath, the descendants of these prehistoric Ainu tribes have become part of that very mixed ethnological stock termed "Japanese." The Ainu who were driven across the Straits of Tsugaru, remaining isolated, have better preserved their original traits and features. They are undersized, have abundant beards and head-coverings, and much exceed the Japanese in the amount of hair upon their limbs and bodies. They have eyes set at right angles to the nose. In mental capacity and mode of life they are pronounced savages. They are courageous bear-hunters, and patient and faithful as servants and laborers. The Japanese Government seems desirous to protect the possible twenty thousand or so of this fragment of humanity, and to elevate the Ainu by education; but, against the Japanese fur-trader and his whiskey, the decimating diseases, and the concubinage which multiplies weakly half-breeds in a severe climate, there is not much hope for the future of the Ainu as a distinct people.

Mr. Batchelor's book, besides its eighty trustworthy illustrations, its careful editing and arrangement by some friendly hand in London, and its excellent index, is replete with information of all sorts about the Ainu men, women, and children. Almost every phase of their physical and metaphysical life has been studied and carefully noted. Several interesting specimens of folk lore are given. Three of the Gospels have been translated into the Ainu tongue, and a little congregation of Christians has been gathered. In other ways the seeds of Christianity are being sown. It would, indeed, be of the highest interest in the history of Japan if one full-blooded Ainu were to be intellectually fitted to wield a personal influence, or to commit to literature the perishing memorials of a dying race.

Jean Baptiste le Moyne, Sieur de Bienville. By Grace King. [The Makers of America.] Dodd, Mead & Co.

Among the makers of America, Bienville was by no means the least. He was one of the party who first discovered the mouth of the Mississippi from the south in 1699, seventeen years after La Salle had reached that point from the north. This discovery being made on Mardi-Gras is perhaps the ground of that day's becoming the grandest festival of all the year in New Orleans. Nineteen years after he first saw the Mississippi, Bienville founded New Orleans. No one can wonder it was not founded with less delay who traces its founder's career.

Born in 1680 in Montreal, and landing at Biloxi in 1699, he was a subaltern of his brother Iberville, who came in charge of the first French colony which was able to establish itself on the Gulf of Mexico. Found faithful in many trusts and equal to every emergency, he rose step by step to the Governorship of Louisiana, and continued in public service there for twenty-five years before returning to France. On the first voyage up the river in 1699, the future site of New Orleans was ascertained to be the one spot on its banks that was not overflowed at high water. The site commended itself to Bienville as marked by the hand of nature to be chosen for the colonial capital. As early as 1702 he commanded in the principal Mississippi fort, yet his hope of removing the capital from Biloxi was long deferred. Biloxi was a better station for filibusters and contraband dealers with Spaniards, and their influence was long supreme. It was also contended that ships could not cross the bar at the mouth of the river, and it was long before Bienville could refute this notion by sending a ship over that fancied obstacle.

There was a triangular or four-fold fight for the Mississippi. The English and French ships started for that goal in the same month, each without the knowledge of the other. Bienville bluffed off the English at a point just below New Orleans that has ever since been called the English Turn. The Spaniards, who had landed in Pensacola four months previous, were indignant at the French as interlopers. Bienville, however, saw them to be men of unbounded stomachs, yet with nothing to fill them, and obeyed to the utmost of his power the precept, "If thine enemy hunger, feed him." Similar was his strategy in dealings with Indians, and in both cases his gastronomic success was such as men deserve who are willing to go hungry themselves that their enemies may be full-fed. His wisdom in this regard was proved for a generation by his baffling the Spaniards and keeping the Indians at peace—the very savages who, soon after he left the country, massacred every Frenchman in Natchez. Louisiana is a typical specimen of the contrast between the colonizing methods of France and England.

The grand features in Bienville's career swell into fair proportions in the monograph of Miss King. She fascinates us so much that our interest is continuous and grows to the close. Indeed, we wish her book longer when we find that her researches have brought to light nothing concerning Bienville's last five and twenty years save his will and his endeavor to lay before the King a pathetic petition from New Orleans. We wish we could see more to commend in the make-up of Miss King's book. Errors abound, often typographical, and as often those betokening carelessness or imperfect knowledge. The same captain is called Banks (p. 80) and Barr (p. 130). Words occur un known to Webster or, we think, to any dictionary, such as destituted (p. 277), doleances (p. 289), abortionate, responders. Other words occur in strange senses, as almoner for chaplain, apotheosis for destruction (p. 232), transcribed for described, remitted for transmitted or resigned (p. 287). Odd phrases are the *deperdition* of population (p. 317), and the words "seven leagues" (p. 64) out of connection with any clause before or after. We meet with needless Gallicisms, as batture formations (p. 89), pieu and pieux for posts or palisadoing (p. 213). The index fills less than two pages in a work of three hundred and thirty. The dates are a beggarly account, and that not correct. Thus, it is said (p. 83) that before Twelfth-night, 1700, "a new century was ushered in," as if the hundredth year in a century did not belong to it as much as the first, and as much as the hundredth cent belongs to a dollar. But in treating of the same matters Maurice Thompson speaks of 1699 as "the *last* year of the seventeenth century." The land-grant to Law of the Mississippi bubble is said to have been of four square leagues, and three hundred settlers are described as voyaging to it, while the grant was conditioned on the coming of fifteen hundred. Thus each of the fifteen hundred would have a farm of only fifteen acres. A reader would therefore say that the grant must have been not four square leagues, but four times as much; that is, four leagues square. And so say Thompson, Martin, and Gayarré, as well as common sense.

Garden Design and Architects' Gardens. By William Robinson, F.L.S. London: John Murray; New York: Charles Scribner's Sons. 1892.

Six successive sentences ending with exclamation marks or sarcastic question marks—this was the present writer's first reading in this prettily made book. For such an infliction of hysterics no daintiness of printing, binding, or illustrating can atone; nor can the misleading title of the book be easily forgiven. There is no sober discussion of "design" in these strange pages. The author, who is the distinguished editor of the *Garden*, and the writer of 'The Wild Garden' and other valuable books, has been stabbed to the heart by the young writers of that other pretty book, 'The Formal Garden in England,' described last year in these columns. 'The Ejaculations of a Badly Wounded Horticulturist' is what this latest of his books should have been called.

A single passage will suffice to show the manner of the whole book. On page 25 a sentence is quoted from 'The Formal Garden,' and then Mr. Robinson records his pain and disgust as follows:

"A passage full of nonsense! The true use

and first reason of a garden is to keep and grow for us plants *not* in our woods and mostly from other countries than our own! The yucca, we are told by the authors, is a 'plant out of scale and character among the modest foliage of our English trees'! The yuccas of our gardens are natives of the often cold plains of Eastern America (*sic*), hardy in, and in every way fitted for, English gardens, but *not* amidst English trees. Is the aim of the flower-garden to show the 'modest foliage' of English trees when almost every country house is surrounded by our native woods? According to such childish views, the noble cedars in the park at Goodwood and on the lawn at Pain's Hill are out of place there! What is declared by Mr. Blomfield to be absurd is the soul of true gardening—to show, on a small scale it may be, some of the precious and inexhaustible loveliness of vegetation on plain or wood or mountain. This is the necessary and absolutely only true, just, and fair use of a garden!"

The style of this fragment speaks for itself, while its substance is the best argument for that careful shutting away of gardens which the men whom Mr. Robinson regards as his assailants have advocated in their book. If a garden is a collection of beautiful vegetable growths, it cannot appear in the midst of ordinary landscape without injury to unity and breadth of effect; and, if it is to be made a concealed or enclosed place, its specimen plants can generally be best tended and most effectively displayed in a framework or ground-plan of a formal type—particularly if the space dedicated to its lovely collections lies close to a building the lines of which are formal of necessity.

The style and the logic of the rest of the text of the book are about equal to those of the passage just quoted. The pictures, however, present an argument of their own, and lend a real value to the volume. Not that they prove that formal gardening is abominable, and "wild" gardening only admirable. That the informal type of planting may be ugly in itself, as well as fatally incongruous with its surroundings, is shown by the picture opposite page 50, under which is printed the following inconsequential but seemingly approving line: "Avenue in Paris. Showing that even in a land of clipped trees, clipping is not essential."

The best things in the book are the pictures of the English mansions of West Dean, Goodwood, and Broadlands, with their backgrounds and side scenes of great trees and their central expanses of turf; though just why these very simple park scenes should be inserted in a book which treats of "gardens," and particularly of gardens as treasuries of plants, does not appear.

Christophe Colomb devant l'histoire. Par Henry Harrisse. Paris, 1892. 8vo, pp. 121.

THE time has hardly arrived for grading opinions upon Columbus and his work which this commemorative period has elicited; but Mr. Harrisse has set himself to the task. In knowledge no man is better prepared for scaling a judgment, but in temperament no man could be less fit. There are few of his fellow-students in his own field whom he has not spurned; and in the present essay he gives the first public intimations of the break which he has had with the Italian Government, after it had employed him to edit a great memorial publication of Columbian documents. This work has, in the sequel, been enlarged so as to include the documents illustrative of her other distinguished Italian seamen of the period of exploration, and though it will, unfortunately, not have the benefit of Mr. Harrisse's assistance, it will still have the supervision of scholarly hands. The best statement of what it will contain appears in the new Italian serial *Toscanelli*, to which we recently referred. This publication, by the way, seems to have for its purpose the gathering up of documentary and other material relating to the part Italy took in American discovery, which could not readily be brought within the scope of the greater memorial publication, with its fourteen volumes.

Mr. Harrisse is neither a wit nor a humorist, and there is something elephantine in his gambols in the earlier pages of the book, when he pokes fun at the Chicago Committee for their pretensions in proposing to illustrate the fame of the great Admiral by personal relics and portraits. Even the Chicago *Herald* comes in for a jibe by virtue of its expedition to build a monument on Watling's Island to mark the historic landfall. There is something rather droll in the way in which Mr. Harrisse rules out of court all theories of the landfall, including his own, on the ground that the great harbor which Columbus speaks of as sufficient to hold all the world's navies is nowhere to be found in any of the spots where it is alleged that the banner of Spain was first unfolded in the new regions.

It is not quite apparent whether Mr. Harrisse has the most disdain for what the Spaniards or the Americans have done in these current elucidations of the discoverer's career. Castelar, Fernandez-Duro, and Asensio excite his derision, and it may be admitted that what the Madrid Academicians have been doing of late is not beyond criticism, though so good a student as Mr. Markham has called Asensio's Life of Columbus by far the best which had yet appeared. Mr. Harrisse, if we understand his reference, seems to think that his own investigations have been used by this Spanish biographer without due acknowledgment. Of the Americans, Mr. Winsor, whom he oddly enough calls "an American publicist," is very far from being to his mind. Mr. Harrisse's uneasiness seems to be further increased by the fact that this gentleman has used Mr. Harrisse's results, and has fairly acknowledged it too! Mr. Fiske does not escape a due share of his disdain.

There is little in the book worth dwelling on. It adds neither to our knowledge nor to the author's credit. It is a pity, we may say, in closing, and in all friendliness, that it is Mr. Harrisse's peculiarity to insist upon the use of original documents solely as the basis of historical writing, as if the interpretation which historians put upon such documents does not make the historical record as the world understands it, which succeeding writers must adopt or confront according to new interpretations. If he had all along been better acquainted with the intelligence that his contemporaries had brought to the unravelling of original sources, he would less often have been obliged, between his successive publications, to turn somersaults in his opinions.

The Commerce of Nations. By C. W. Bastable, LL.D., Professor of Political Economy in the University of Dublin. London: Methuen & Co. 1892.

THE main subject of this little volume, the fifth in a series entitled "Social Questions of the Day," is Protection. Discussions of the tariff question are apt to differ from each other chiefly in manner, but in the present work there is new and suggestive matter. About seventy-five pages are devoted to an historical sketch of the prevailing tariff systems of Europe, America, and the English Colonies, brought down to the close of the year 1890. Nowhere else, so far as we are aware, is this material so clearly and compactly set forth. It is the absence of such historical material and the neglect of the comparative method in the tariff controversy which accounts for the astonishing ignorance prevailing in regard to foreign tariffs. Probably a majority of American protectionists believe that all Europe is living under free trade, and that this is the reason why wages are higher in the United States than in Europe. This is the only supposition that explains the wide acceptance of the absurd opinion that the foreigner pays the tariff. As soon as a person realizes that England is practically the only country enjoying free trade, and that the rest of Europe and America, without exception, levy tariffs on English goods, and can be induced to estimate the amount of taxation which would on this hypothesis be levied upon England by the civilized world, this favorite dogma of McKinleyism vanishes into thin air. For more thoughtful readers, Prof. Bastable's sketch brings out two very interesting considerations of the greatest importance in any attempt to explain the slow progress of free trade and the tenacious hold of protection on the popular mind. The history of the various tariff systems establishes a close relation of cause and effect between protection ism and war, and, what is even more sugges tive, between protectionism and that moral force which has so dominated political movements during this century—the spirit of nationality. Ten years after the publication of 'The Wealth of Nations,' in 1786, France and England by treaty reduced duties. The French tariff law of 1791 was drawn on liberal lines, and Pitt "was credited with a plan for abolishing both custom and excise, and thus making Great Britain a 'free port.'" The long period of war, which soon followed, counteracted this tendency by increasing the needs for revenue and arousing the spirit of nationality.

"As protectionism naturally arises in a period of warfare, so it is likely to be continued when that period has passed." Striking illustrations of this generalization can be found in the tariff history of the leading States. After the Napoleonic wars, the English tariff was enormously high; but although the work of reform was begun in 1820, and carried on with unremitting zeal, no sweeping reductions were secured until a quarter of a century had elapsed. In France, after the wars, a high tariff prevailed until 1860; but the change was then short-lived, for, after a brief decade, wars, financial needs, and national feeling revived the protectionist policy, which has since been maintained. In the United States, through the embargo and the war of 1812, the people became accustomed to a sharp restriction of foreign trade. When peace was restored, pressing demands were made for protection, and the tariff was gradually increased until 1828. Violent opposition from the South then checked the movement, and, after remaining stationary for five years, the tariff entered upon a period of reduction which lasted, with the exception of the years 1842–1846, until the civil war broke out. That gigantic struggle, like the Napoleonic wars in Europe, fastened a high protective tariff on the country, which has since received little modification. It is pretty clear to the careful student of the period 1846–1860 that anything like the present tariff could never have come into being in times of peace. It now begins to look as if the United States, like England, would roll off the tariff burden of its great war after the lapse of a generation. The recent tariff treaties on the Continent are the first indications that the protectionist influence of the wars of 1866 and 1870 is becoming spent.

The second part of the present work is a compact review of the various arguments for protection. Prof. Bastable's fair statement of these arguments and his temperate tone of criticism render his work suitable for the class-room, and will encourage protectionists to give him a fair hearing. So far as we have noticed, he does not analyze the different effects of a protective tariff on production according as the Law of Diminishing Returns or the Law of Increasing Returns is operative. The English Corn Laws illustrate the former case, and the parts of our tariff protecting high-grade manufactures illustrate the latter. Many of the popular arguments for free trade, inherited as they are from the Corn Law struggle, ignore the difference. Some protectionists have a vague inkling of the difference, but do not give a correct analysis of it, and usually exaggerate its effects. In the production of commodities, where the Law of Diminishing Returns operates, any agency like a tariff which restricts the foreign sources of supply tends to increase the amount of home production; but each increment of home production is secured at an increased cost. Hence, in this case, the normal effect of the tariff would be to increase prices (the demand remaining constant) to the amount of the tariff. A tariff on wool must always increase the cost of wool to the consumer. If, however, the tariff is levied on high-grade manufactures like tools, sewing-machines, or watches, in whose production the law of Increasing Returns operates, each increment of home production, after a certain point, would be secured at a slightly diminishing cost. Hence in this case, where domestic competition is free, prices will tend to fall and will show no assignable ratio to the foreign price plus the tariff. If the Law of Increasing Returns acts sharply, as in the application of new machinery, the domestic price might fall lower than the foreign price, for the domestic article has a different and less cost of production. Until economists reckon with this analysis, and define the limits of this case, they will fail to convince protectionists of their understanding of the problem of production.

For a manufacturing country to protect its agriculture may be a far more costly process than it is for an agricultural country to protect manufacturing. Our own experience, however, during the last twenty-five years, has shown that in most cases where the Law of Increasing Returns has been effective, there has been a movement to convert the gains into monopoly profits by regulating domestic competition through Trusts or other means so as to prevent or retard a fall in prices. So far as the tariff, by diminishing foreign competition, promotes and protects this process of converting gains in production, which should have accrued to consumers, into monopoly profits, it acts directly as a tax upon the community for the benefit of the protected capitalist. In our present industrial organization monopoly profits play a great rôle. It is not possible, perhaps it would not be best, to eliminate this feature of business life which so stimulates every energy, but few would defend legislation to render this feature more pervasive. It is one of the ironies of popular government that the people so generally, at the present day, should be demanding legislation that either increases the cost of commodities or increases monopoly profits at the expense of consumers.

A Treatise on the Mathematical Theory of Elasticity. By A. E. H. Love, M.A., Fellow and Lecturer of St. John's College, Cambridge. Volume I. Cambridge, Eng.: University Press; New York: Macmillan. 1892.

Elaterics, or the science of elasticity, consists of a purely physical investigation (called, especially with reference to its ruder determinations, the doctrine of the strength of materials) and an elaborate mathematical theory designed to bring the fundamental facts to bear upon questions of applied mechanics; and this mathematical part might very well be called stereostatics. This name would hint at its intimate alliance with hydrodynamics. The two theories alike suppose the solution of complicated partial differential equations with boundary conditions; and the equations of many problems in the one are identical in form with those of problems in the other. They are sister studies, too, in their exceeding economical and philosophical importance. Hydrodynamics has to direct hydraulics and ship-designing; stereostatics to govern almost every operation of engineering, from the vastest erections down to the fashioning of a horse-shoe or a snaffle. The two theories are, finally, in one and the same pickle, in that nearly all the questions that are put to them are beyond the power of our mathematics satisfactorily to answer. Although a wealth of thought of all but the finest quality has long been lavished upon them in a geometrically increasing yearly outpour, so that none of the physical sciences shows greater advances than do the departments of mathematics which may be expected to aid elaterology and hydromechanics, still the practical problems we should wish to solve remain unsolved, and in all likelihood will so remain for a long time to come. Mathematicians, when they cannot solve the problem that real facts present—and this is what always happens—substitute for the real problem a simpler one, as near like the former as they can manage, and are guided by the solution of that. This is that method of abstract or analytical thought which Hegel and his countrymen obligingly teach us is mere futility. This is the style of thinking which makes English political economy so ludicrous to the superwise. They never tire of laughing at the two or three men on a desert island by the study of whose conduct political economists propose to regulate the policy of nations. Yet the contrast between such a little community and a modern State is, after all, certainly not so great as the contrast between any real, practical problem in hydrodynamics or stereostatics and the problem that the engineer succeeds in solving. The resemblance between the actual motion of water in any case and that represented in the pure hydrodynamical solution is so very slight that some study would be required to detect its existence. The contrast between the stresses in a real structure and those in an engineer's diagram are so enormous that for safety he is obliged to allow that they may amount to from five to ten times the latter. If the deriders of abstract thinking would only reflect that theories thus miserably imperfect have nevertheless sufficed to "possibilitate" (as a Spaniard would say) all the great engineering works of our age, they might, in their turn, learn something. Ships and bridges constructed after the directions of concrete historical thought would hardly be likely to prove much cheaper or much safer.

Mr. Love goes so far as to say, "The only logical way would be to use, instead of the elastic equations, others in which set is properly taken into account, and these are, unfortunately, unknown"; but this is exaggerated, for in most cases it is not merely rupture that we desire to avoid, but the passage of the limit of elasticity. But let the reader fancy what the fairy grace of the structures of the future shall be when the theory of stereostatics shall really have been mastered! How gross and stupidly costly ours will appear in comparison, which make the gazer think only of how much money they cost, instead of singing, as those will do, the pæan of triumphant mind. Even to-day, great steps were altogether practicable could a mathematician of real genius be engaged in the task.

Mr. Love's treatise cannot fail to hasten the blessed advent of structural truth. Of late, engineers who have really understood their business have been dependent upon such works as Müller-Breslau's treatise, upon the French edition of that of Clebsch, brought out by the veteran elastician Barré de Saint-Venant, and upon the same eminent author's edition of the 'Leçons de Navier.' But now the whole subject, with the actual state of the most important of the open questions with which it is infested, is lucidly set forth in almost its most modern developments. The reader, for example, has the advantage of Betti's process of integration, though that is hardly twenty years old; but the still more recent methods of Castigliano, Mohr, Fränkel, and others we look for in vain. It must, however, be admitted that some of these are objectionable—one of them decidedly so. The latest things we have noticed in the book are a discussion published by Boussinesque in 1885, and something by Mr. Chree, who read the proofs.

Mr. Love assumes, with Green, that there are 21 independent elastic constants, and does not, with Cauchy, reduce them to 15. This is at present the assumption best supported by observation, even if it be not demonstrated by Voigt's determinations. A very fair account of the whole controversy is given. Mr. Love denies the inference of Sir William Thomson, Lord Kelvin, that because the tidal "effective" rigidity of the earth is intermediate between the rigidities of steel and glass, but nearer the former, therefore the earth's interior cannot be fluid. Certainly, the argument that because the earth does not yield much in a day or a fortnight, it would not yield to a slight force in thousands of years, never did have much force with most minds.

The notation appears to us the most stupid of all the notations, none of them very good, which have ever been proposed for the subject. The first solecism we meet with is that P, Q, R, S, T, U correspond respectively to e, f, g, a, b, c. This is truly British; and this is the general style of the whole.

Sir Henry Maine: A Brief Memoir of His Life. By the Right Hon. Sir M. E. Grant Duff, G.C.S.I. With some of his Indian Speeches and Minutes. Selected and edited by Whitley Stokes, D.C.L. Henry Holt & Co. 1892.

It is rather surprising that in these crowded days the memoir of even so great a man as Sir Henry Maine should be delayed for five years after his death; but we should have been willing to wait longer if it would have brought us something better than this. No one can question the good intentions of this biographer, or his capacity to estimate Maine's constructive work in India; but more than this is necessary to the writing of a successful memoir. In the case of Sir Henry Maine, it may, perhaps, be said that boyish adventures and youthful errors could not be appropriately introduced; that the interest of his personality was so exclusively intellectual as to make it indecorous to disclose the

fact that he possessed human affections or yielded to human passions. Upon this principle, possibly, his biographer sums up his matrimonial relations in one line—"In 1847 he married his cousin, Miss Jane Maine, who survives him," and adds only that two sons also survived, one of whom has since died. Yet, if family matters were not to be obtruded, the man had friends, and must have sometimes written a letter that was not of the nature of a *procès-verbal*. But if he did, Sir M. E. Grant Duff fails to disclose it, and to his frank confession that he had "never come across any one who was intimate with Maine in his early days at Cambridge," we feel like adding, "or at any other period." Under these circumstances, we have turned frequently to the fine portrait which is prefixed to this memoir as the only means of reviving the fainting conviction that its subject once existed in the flesh.

Regarding Maine as merely an intellect working upon material of a special character, we may pass a more favorable judgment upon this memoir, but even from this point of view it is entirely inadequate. How came the man by his style, unsurpassed in the field which he cultivated? What gave his mind its bent in this direction? At what moment did he discover his own powers, and under what circumstances did his brilliant generalizations flash upon him? These are the questions which we would have answered, but upon which only a few rays of light are thrown by this biography. They are not idle questions, for we take it that Maine's position is secure, and that he will always be looked upon as a great master, whether his conclusions as to the origin of institutions stand or fall. The observations of an entirely competent expert, Sir Frederick Pollock, seem to us perfectly just. He declared that the impulse given by Maine to the intelligent study of the science of law in England and America can hardly be overrated, and that at one master-stroke he forged a new and lasting bond between history and anthropology.

"Maine," he said, "can no more become obsolete through the industry and ingenuity of modern scholars than Montesquieu could be made obsolete by the legislation of Napoleon. Facts will be corrected, the order and proportion of ideas will vary, new difficulties will call for new ways of solution, useful knowledge will serve its turn and be forgotten; but in all true genius, perhaps, there is a touch of Art: Maine's genius was not only touched with Art, but eminently artistic, and Art is immortal."

It is only fair to say that the successive steps in Maine's career as a writer, as a public officer, and as a professor are very well set forth by Sir M. E. Grant Duff, and he quotes a number of appreciations of Maine's genius and labors that are of value. The most feeling of these is from the *Saturday Review*—a journal that Maine had much to do with starting—presumptively written by his pupil and intimate friend, Mr. Frederic Harrison. Its closing words, "There are persons to whom the world can never have the same aspect again as it had when he lived in it," show that mere intellect was not the whole of Maine, while the estimate of his books is eminently just.

"Their author," this writer declares, "had a power of seeing the general in the particular which we do not think has been equalled in literary history. His works are full of generalizations which are as remarkable for their clearness and sobriety as for their intrinsic probability, and which were reached, not by any very elaborate study of detailed evidence, but by a kind of intuition. He seemed to see things 'in their quiddity,' and to reconstitute them from fragments with the genius of Owen or Cuvier."

Of the collection of speeches and minutes upon Indian jurisprudence and legislation, which make four-fifths of this volume, we can only say that they reveal the splendid powers of the author, but it is according to the proverb *ex ungue leonem*. To the ordinary person they are as unreadable as Sanskrit, but to the jurist they are a mine of sagacious and well-reasoned judgments. There is scarcely a subject of interest to the modern law-giver that is not here treated with such learning and insight as to afford valuable suggestions. Whoever will study these papers may learn the secret of the wonderful success of the English in governing other races, for perhaps nowhere else is there to be found such an exemplification of the methods of framing laws that would be followed by Aristotle's ideal governor, the wise and benevolent despot.

Finger-Prints. By Francis Galton, F.R.S., etc. Macmillan & Co. 1892.

EVERY one has had occasion to observe and at times to be annoyed by finger-marks left upon clean surfaces by sooty or greasy hands; and although the delicacy with which the ridges and furrows of the skin are thus reproduced frequently attracts attention, yet few of us are aware how interesting and important is the study of these minute details of the structure of the skin. In the volume before us the author not only presents a careful summary of previous investigations, but fairly makes the subject his own by a much more exhaustive study than has been heretofore undertaken of the various patterns (conveniently classified as *arches*, *loops*, and *whorls*) to be observed on different finger-tips. The subject is studied from the point of view of heredity, and the patterns shown to be transmissible by descent. In this hereditary transmission the influence of the mother seems to be stronger than that of the father. In another view, the patterns seem to be in no way indicative of race or temperament.

To the general reader the most interesting portion of the book is that which treats of the use of the finger-print for purposes of personal identification. From the study of the finger-prints of fifteen different persons, taken, in each case, at intervals of many years, the author concludes that the patterns are persistent through life. Moreover, each individual pattern presents distinctive points enough to justify the statement that "a complete or nearly complete accordance between two prints of a single finger, and vastly more so between the prints of two or more fingers, affords evidence requiring no corroboration that the persons from whom they were made are the same." When we consider "that this evidence not only is applicable to adults, but can establish the identity of the same person at any stage of his life between babyhood and old age and for some time after his death," it is evident that we have in the finger-print the most perfect known method of personal identification, far surpassing in its accuracy and ease of application the photographic and anthropometric methods in common use.

The author lays no claim to originality in proposing to use the finger-prints for this purpose, though he has furnished the most conclusive proof of their value. He shows, on the contrary, that the plan has been repeatedly suggested both in this country and in Europe, and that the method has been officially employed by Sir Wm. Herschel during more than a quarter of a century in Bengal, and has been found to be of the greatest value in frustrating attempts to repudiate signatures, and in preventing fraudulent personation of pensioners whose apparent longevity had been a source of embarrassment to the Government. It is certainly remarkable that a method which experience has shown to be at once so simple and so perfect has not been generally adopted wherever it is desirable to secure evidence of personal identity.

It should, perhaps, be mentioned that finger-prints can, in the author's opinion, be best made by pressing the fingers first upon a polished sheet of copper covered with a thin coating of printer's ink, and then upon a smooth white card. Copies of prints thus made of the author's ten digits appropriately ornament the title-page of the book.

Sketches of Life and Character in Hungary. By Margaret Fletcher. With illustrations by Rose Le Quesne. Macmillan & Co.

TRAVELLERS may be divided into two classes: those who travel to see, and those who travel to be seen. To the second, women, as a rule, belong. What, asked Miss Fletcher, the minute she arrived in Budapest—what are Hungarians going to think of two young women travelling alone? She carried a hunting-knife at her waist; she and Miss Le Quesne were never without sketch-books in their hands. Their book is the story of the sensation they created while journeying in Hungary.

Hungarians are among the most hospitable people in the world. "We are not the last among civilized races, but the first among barbarians," Magyars say of themselves, and certainly something of Attila survives in every Hungarian host. "We do not think our guests have enjoyed themselves if, when they rise from the table, they can walk quite straight," the Magyar will tell you, if you refuse his Tokay or Szomorodni. We hope leniency was shown to the two unprotected English girls when they were passed on from district to district, from town to town, a banquet being spread for them in each station by the way. They were made to visit the vast Alföld, and to stop at Debreczin, where they were sent out driving in the Mayor's coach-and-four, for the drive in the municipal carriage is an inevitable part of every tourist's Hungarian programme, to be marked with a star in a revised Baedeker. They were escorted to Transylvania, and made to "do" its springs, its gold and salt mines; in fact, all the resources of the country, except, fortunately, its bear hunts, they were forced to test. In the record of their triumphal progress it would have been impossible not to give the impression of boundless hospitality in the Magyars; just as in the drawings it would have been hard indeed not to suggest the infinite picturesqueness of the people's dress.

But beyond this the book has little to tell of one of the most interesting nations of Europe—nothing of that strange meeting of East and West, that strange combination of old and new, of civilization and barbarism, which renders Hungary so incomprehensible to the foreigner. There is not a word of the wonder of finding, in towns built upon the most improved modern plan, men and women wild, unkempt, and scantily clad as savages; not a word of the fierce race problems of Transylvania, where in one village is the Rumanian who refuses to understand the language of the Magyar or the Saxon in the next, but a few kilometres away. Perhaps it is as well that Miss Fletcher did her best to keep to her own personal experiences and to steer clear of facts.

When she ventures upon them, accuracy is not her strong point. It would have been better to say nothing of the Szeklers—the little group of Hungarians who boast of being direct descendants of Attila's Huns—than to call them Catholics when really they are ardent Unitarians; better to listen in silence to the music of the gypsies than to endow them with an unlimited freedom which has long since been restricted, than to give them a place in the heart of the Magyar, who treats them as if they were but dirt beneath his feet. The illustrations might be better, but nowadays worse are often published. There is movement in the figures in the full-page drawings, which, however, technically, have little distinction.

Short Stalks. By E. N. Buxton. G. P. Putnam's Sons.

In the author's preface are to be found an admission, and an accompanying apology, which are good indications of the spirit of this work. "I freely admit," says Mr. Buxton, "that it is a pity, but I cannot deny, that, to most of us, the pursuit of creatures which are hard to catch, whether butterflies or buffaloes, is very pleasant. . . . I may at least urge, in mitigation, that in all these journeys, spreading over more than a quarter of a century, I am personally responsible for the death of less than eighty four-footed animals." These words reveal the true sportsman, who does not kill for the mere sake of killing, but would venture everything for a rare trophy of skill and endurance. Mr. Buxton's ambition has taken him far from the beaten track, for he has hunted in the rarely visited parts of four continents, Europe, Asia, Africa, and America. His narrative has, accordingly, the interest of freshness, while just enough space is given to commonplace regions to vouch for the truthfulness and accuracy of the reporter. There is the added charm of straightforwardness and simplicity in the style, importing actual experience; and a modesty rarely found in so egotistic a work as the relation of one's own exploits. The descriptions are concise, each chapter being the complete story of some shooting trip, often shortened almost to journal form. One cannot help wishing that an author who has so much interesting to tell, had been a little more copious, and, if necessary, left some of his hunting adventures for another volume. That Mr. Buxton has fully appreciated what has fallen under his observation, is evident from stray bits here and there, but he always checks his disposition to enlarge, as if for want of room, and returns to the pursuit of the business in hand and the quarry. The book is handsomely illustrated.

BOOKS OF THE WEEK.

Atkins, T. DeC. The Kelt or Gael; His Ethnography, Geography and Philology. London: T. Fisher Unwin.
Bates, H. W. The Naturalist on the River Amazons. With a Memoir of the Author by Edward Clodd. Illustrated. Appletons.
Byr, Robert. The Cipher Despatch. Worthington Co.
Champneys, A. C. History of English. Macmillan. $1.25.

35 cents a number; $3.00 a year (monthly excepting July and August).

HENRY HOLT & CO., N. Y.

Economic History Since 1763.

Selections illustrating Economic History since the Seven Years' War. Compiled by Benjamin Rand, Ph.D. Second edition, revised and enlarged. 8vo, pp. 567, $3.00.

"The production of this book may be said to mark an epoch in the teaching of political economy in this country, and to make possible a new branch of study in the curriculum of the Universities of America."—*Halifax Herald.*

JOHN WILSON & SON,
UNIVERSITY PRESS, CAMBRIDGE, MASS.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 Piccadilly, London W.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travelers' Credits, available in all parts of the world.

ALEXANDRE DUMAS'

ROMANCES.

New Limited Edition of 1,000 Copies.

The most complete and only finely illustrated edition ever issued of the principal romances of this great French writer, newly translated by eminent scholars. Dumas's novels are mainly sketched with a historical background, covering the romantic period of French history, including the time of Richelieu, Louis XIV., XV., XVI., the French Revolution and Napoleon. His '**Three Musketeers**' *and* '**Count of Monte Cristo**' *have become world-famous.*

This edition is embellished with over two hundred superb etchings and photogravures, mainly by French artists, such as **De Neuville, Leloir, Emile Bayard, Flameng, Lefort,** *and others, supplemented by landscapes and portraits from authentic paintings of the sovereigns and their favorites, ministers, generals, etc.*

The manufacture of this edition is perfect.

All of the illustrations will be proof impressions on Imperial Japanese paper.

This edition is printed from entirely new plates, set from new, large type, in a small page with ample margins, and will be complete in **40 octavo vols.,** *bound in English vellum cloth, paper titles, gilt tops. It will be issued by subscription only, at the rate of about 2 vols. per month, at* **$2.50 per vol.**

Prospectus and specimen pages showing type, page, and paper, with sample illustration, sent on application.

FEB 10 9 AM 1893
REC'D

The Nation

VOL. LVI—NO. 1441. THURSDAY, FEBRUARY 9, 1893. PRICE 10 CENTS.

The London Times, Jan. 6, 1893, in a review of Capt. Mahan's new work,

THE INFLUENCE OF SEA POWER UPON THE FRENCH REVOLUTION AND EMPIRE, *says:*

"Capt. Mahan, if not the founder, is at any rate the most eminent living expositor of what may be called the philosophy of naval history. No historian and no writer on naval warfare has displayed so profound a grasp of the true meaning of sea power as a determining factor of human affairs. For the first time, so far as we are aware, in historical literature, he has shown us the true significance of the naval history of Great Britain. . . . Of the way in which this great theme is treated we need say little; no living writer is so well qualified to do it justice as Capt. Mahan, and certainly the true significance of the tremendous events of these momentous years has never been more luminously or more instructively displayed."

The Influence of Sea Power Upon the French Revolution and Empire.
By Capt. A. T. Mahan, U. S. Navy. With **13 Maps and Battle Plans.** 2 vols., 8vo, cloth, gilt top, $6.00.

*** *In the same style:*

The Influence of Sea Power Upon History. **With 25 Charts of Naval Battles.** 8vo, cloth, gilt top, $4.00.

LITTLE, BROWN & CO.,
PUBLISHERS,
254 Washington St., Boston.

Under King Constantine.

Three Idylls, from a new poet, of the post-Arthurian days of English chivalry, two telling how the good knights "San Peur" and "Kathanal" show love that overcomes and rises above passion, the third telling how the knightly boy, "Christalan," being crippled and so deprived of knighthood, saved the life of the King Constantine to his own deadly hurt, and dying was made knight "valiant and true."

12mo, Large-Paper, White Vellum Cloth, Hand-Made Paper (this edition limited to 500 copies). $1.50.

*** Sent by mail on receipt of price.

The Publishers have pleasure in calling attention to these poems as a genuine contribution to good literature. Distinguished by a wholesomeness of tone, in marked contrast to not a little of the poetry of to-day, they are proof that purity of treatment is not incompatible with high literary quality.

For information apply to the SECRETARY, No. 32 East 33d Street.

THE BOSTON SCHOOL OF ORATORY. —The Leading School of Expression in America. First to teach the system of Delsarte. Send for Catalogue. MOSES TRUE BROWN, M.A., Boston, Mass.

Tait, Sons & Co.'s
NEW BOOKS.

Alfred, Lord Tennyson.

A Study of his Life and Work. By ARTHUR WAUGH, B.A., Oxon. With portraits and 21 illustrations from photographs specially taken for this work. One vol., octavo, cloth, gilt top, uncut edges, $3.00. (*Second Edition.*)

"Probably the most judicious and discriminating study of Tennyson's whole work that has yet been made."—*The Dial.*

"The entire volume deserves to be studied carefully. It is the ripe judgment of a scholar which is expressed in these pages, and the views of a thoroughly sane critic."—*New York Tribune.*

The Parsifal of Richard Wagner.

Translated from the French of MAURICE KUFFERATH. Exquisitely illustrated. 12mo, cloth, ornamental, $1.25.

This volume is charmingly illustrated with half-tone reproductions of photographs of the principal characters and scenes from the opera "Parsifal." The entire work is carefully analyzed and discussed in a manner which will be most fascinating to all lovers of the Wagner music, and must of necessity be interesting even to its opponents. The work is dedicated to Anton Seidl, and its general treatment has met with his approval.

The Grand Chaco.

By GEORGE MANVILLE FENN, author of "The Weathercock," "The Dingo Boys," "In the Wilds of New Mexico." etc. Profusely illustrated. Large 12mo, cloth, ornamental, $1.50.

"We do not know whether Mr. Fenn has ever gone sporting or botanizing up a tropical river, but he certainly writes as if he had. It would not, indeed, be easy to find a more vivid and effective piece of local coloring. . . . Mr. Fenn's tale is just what such a story should be. There is no sentimentality and no bloodshed; and these two things are more and more the prevailing faults of literature."—*The Spectator.*

Who is the Man?

J. SELWIN TAIT, author of "My Friend Pasquale," "The Neapolitan Banker," etc. Illustrated. 12mo, cloth, $1.25.

"In 'Who is the Man?' Mr. Tait has given to the reading world a novel whose dramatic power, clear, pure style, and unbroken interest entitle him to a leading place in the ranks of fiction writers of the day."—*Public Opinion.*

Stories and Sketches.

By GRACE GREENWOOD, author of "My Tour in Europe," "Queen Victoria, Her Girlhood and Womanhood," etc. 12mo, cloth, gilt, $1.00.

Time appears to give but added force and brilliancy to Grace Greenwood's touch. This collection of stories and sketches abounds with examples of true humor, pathos, strength, and imagination which have long been identified with this brilliant woman's name. No one will pick up the book to lay it down with a cursory glance, and, once read, many lines and scenes will linger persistently in the memory.

A Republic Without a President.

By HERBERT D. WARD, author of "The Master of the Magicians," "The New Senior at Andover," etc. 12mo, cloth, $1.00.

"A Republic Without a President" is the title story of a volume which illustrates with particular briskness the crisp and vigorous style of Mr. Herbert D. Ward. The final story in the volume, entitled "Colonel Oddminton," is a sequel to "A Republic Without a President," and as such makes a most pleasing finale to an enjoyable book.

Sold by all booksellers, or sent, postpaid, on receipt of price by the Publishers.

TAIT, SONS & COMPANY,
31 Union Square, North,
NEW YORK.

CASSELL PUBLISHING CO.,

HAVE JUST ISSUED:

HEINRICH HEINE.

THE FAMILY LIFE OF HEINRICH HEINE.

One hundred and twenty-two family letters of the Poet, heretofore unpublished, from his college days to his death. By his nephew, Baron LUDWIG VON EMDEN. From the German by CHARLES DE KAY. With four portraits. 1 vol, 12mo, cloth, $1.50.

In these letters, addressed chiefly to his mother and sister, one gets a new and more familiar view of the German poet. That their publication, therefore, must be regarded as an important literary event will be evident to all who duly appreciate the genius of their gifted writer.

A DIARY OF THE SALISBURY PARLIAMENT, 1886-1892.

By HENRY W. LUCY, author of 'The Disraeli Parliament (1784-1880),' 'The Gladstone Parliament (1880-1885).' With many humorous illustrations by HARRY FURNISS, and a complete Index. 1 vol., 8vo, extra cloth, gilt top, pp. xii, 530, $5.00.

In common with its predecessors by the same author, the present volume has a vivacity in its sketches of political amenities and hostilities which gives to the book a charm always wanting in a mere chronicle of facts and figures. The illustrations by Mr. Furniss are in his usual apt and vigorous style.

BY JULES MICHELET.

ON THE HIGHWAYS OF EUROPE.

By JULES MICHELET. Translated from the French by Mary J. Serrano. 1 vol., 12mo, cloth, gilt top, $1.50.

To any one who is acquainted with the writings of M. Michelet it is unnecessary to say that the present volume is most captivating in style and matter. It is a book that every traveler will read to refresh his memory and every stay-at-home will read because it is the next best thing to a tour abroad.

BY G. MANVILLE FENN.

NURSE ELISIA.

A Novel. By G. MANVILLE FENN, author of 'Commodore Junk,' etc., etc. 1 vol., 12mo, extra cloth, $1.00.

In this story Mr. Fenn makes a trained nurse his heroine and a young doctor his hero. The author's well-deserved reputation is amply sustained in this new and thoroughly original production of his pen.

BY JOHN SEYMOUR WOOD.

AN OLD BEAU,

And Other Stories. By JOHN SEYMOUR WOOD, author of 'Gramercy Park,' 'A Daughter of Venice, etc., etc. 1 vol., 12mo, cloth, $1.00.

Mr. Wood, although one of the youngest of American writers of fiction, has already won flattering recognition. Writing as he does of the scenes and subjects of to-day, his stories have a contemporaneous interest that is very attractive.

BY "LAURA DEARBORN."

AT THE THRESHOLD.

A Novelette. By LAURA DEARBORN. 1 vol., 16mo, unique cloth binding, 50 cents. *The "Unknown Library."*

A poetic story of intellectual exaltation, strong in imagery, bold in subject, and masterly in treatment. Philosophy, the arts, the sciences, the relations between the sexes and kindred subjects are treated from an after-death standpoint, with marvelous speculation and felicity; while, through all, a broad human love pervades the book, which enthralls alike the casual novelist and the student of social and domestic problems.

BY RENÉ BAZIN.

A BLOT OF INK.

A Novel. Translated from the French of RÉNE BAZIN by "Q" and Paul M. Francke. 1 vol., 12mo, cloth, 75 cents; paper, 50 cents. *Cassell's Sunshine Series.*

"Q" might have written this story himself, so much does it possess of his own dashing style.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Company,
104 and 106 Fourth Ave., N. Y.

G. P. Putnam's Sons,

NEW YORK AND LONDON,

WILL PUBLISH THIS WEEK:

An Agnostic's Apology. By LESLIE STEPHEN, author of 'Science of Ethics,' 'Hours in a Library,' etc., etc. Octavo, $2.50.

Studies by a Recluse. In Cloister, Town, and Country. By AUGUSTUS JESSOPP, D.D., author of 'Arcady,' 'The Coming of the Friars,' 'The Trials of a Country Parson,' etc. With Frontispiece, octavo, gilt top, $1.75.

The Iliads of Homer. Translated from the Greek by GEORGE CHAPMAN. With the full series of Illustrations from Flaxman's Designs, and certain additional designs from the Greek Vases. (No. 40 in the Knickerbocker Nuggets Series.) 3 vols., $3.75.

American Railroads as Investments. By S. F. VAN OSS. With seven Maps, printed in colors, showing competitive lines of Railway in different parts of the United States. About 550 pages. 8vo, $4.00.

Prisoners and Paupers. A Study of the Abnormal Increase of Criminals and the Public Burden of Pauperism in the United States; with a Consideration of the Causes and the Remedies. By HENRY M. BOIES, M.A. 8vo, fully illustrated, $1.50.

INDEPENDENT NOVEL SERIES.

The Shifting of the Fire. By H. FORD HUEFFER, author of 'The Brown Owl,' 'The Feather,' etc. 12mo, $1.00.

A Phantom from the East. By PIERRE LOTI. Translated by J. E. Gordon. 12mo, $1.00.

Jean De Kerdren. By PHILIPPE SAINT HILAIRE, author of 'Colette.' Translated by Mrs. Waugh. 12mo, $1.00.

Poor Lady Massey. By RUTHERFORD RUSSELL. 12mo, $1.00.

RECENTLY PUBLISHED:

The New Exodus. By HAROLD FREDERIC, author of 'The Young Emperor,' etc. 8vo, illustrated, $2.50.

Short Stalks; or, Hunting Camps, North, South, East, and West. By EDWARD NORTH BUXTON. With numerous fine illustrations by Whymper, Lodge, Wolf, etc. Limited letterpress edition. 8vo, $6.00.

The Story of the Tuscan Republics. By BELLA DUFFY. (No. XXXV. in the Story of the Nations Series.) 12mo, illustrated, cloth, $1.50; half leather, gilt top, $1.75.

Whist Nuggets. Papers about Whist and Whist Players. Compiled by W. G. MCGUCKIN. (No. XL. in the Knickerbocker Nuggets Series.) $1.00.

Alcoholism and Its Treatment. By J. E. USHER, M.D., Fellow of the Royal Geographical Society of London. $1.25.

*** Notes on New Books, a quarterly bulletin, prospectus of the Story of the Nations and Knickerbocker Nuggets Series sent on application.

MACMILLAN & COMPANY'S

UNIFORM EDITION OF

F. MARION CRAWFORD'S NOVELS.

12mo, Cloth. Price ONE DOLLAR EACH.

NOW READY:

CHILDREN OF THE KING.

A Tale of Southern Italy.

12mo, cloth, $1.00.

MACMILLAN & Co. take pleasure in announcing that they have made arrangements to add the following volumes (with the author's latest revisions) to their uniform edition of the Works of Mr. F. Marion Crawford, thereby enabling them to issue a complete edition of all his novels:

A ROMAN SINGER. (*Just Ready.*) New Edition, revised and corrected.
TO LEEWARD. (*February, 1893.*) New Edition, revised.
PAUL PATOFF. (*March.*) New Edition, revised.
AN AMERICAN POLITICIAN. (*April.*) New Edition, revised and partly rewritten.

"Mr. F. Marion Crawford is," as Mr. Andrew Lang says, "the most 'versatile and various' of modern novelists. He has great adaptability and subtleness of mind, and whether dealing with life in modern Rome or at the court of Darius at Shushan, in the wilds of India or in the fashionable quarter of New York, in the Black Forest or in a lonely parish of rural England, he is equally facile and sure of his ground; a master of narrative style, he throws a subtle charm over all he touches."

F. MARION CRAWFORD'S NOVELS.

NEW UNIFORM AND COMPLETE EDITION.

12mo, cloth. Price, $1.00 each.

Children of the King.
Don Orsino, A Sequel to 'Saracinesca' and 'Sant' Ilario.'
The Three Fates.
The Witch of Prague.
Khaled.
A Cigarette-Maker's Romance.
Sant' Ilario. A Sequel to 'Saracinesca.'
Greifenstein.
With the Immortals.
To Leeward.
A Roman Singer.
An American Politician.
Paul Patoff.
Marzio's Crucifix.
Saracinesca.
A Tale of a Lonely Parish.
Zoroaster.
Dr. Claudius.
Mr. Isaacs.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 9, 1893.

The Week.

THE most creditable act of President Harrison's Administration is his nomination of Circuit Judge Jackson of Tennessee as Lamar's successor on the bench of the United States Supreme Court. Judge Jackson is a native and lifelong resident of Tennessee; he has always been a Democrat; he served under the Confederacy during the civil war; and he is in every respect so representative a Southern Democrat that Mr. Harrison's Democratic predecessor selected him seven years ago to fill a vacancy on the bench of the Circuit Court. He is a man of the judicial type, and his excellent service on the Circuit bench not only has vindicated the wisdom of his choice by Mr. Cleveland, but justifies his present promotion by Mr. Harrison. His appointment is the perfect application of the Mugwump theory, that, in filling the office, the President should not consider the chance of snatching a partisan advantage through the accident of death, but should inquire what sort of an appointment would be best for the interests of the nation, in view of the fact that the authority and standing of a national court can be best promoted by a fair representation upon it of both parties and all sections. Mr. Harrison's action is a deserved rebuke to such hide-bound Republican organs as the Cleveland *Leader*, which maintained that he ought to appoint a Republican, because "the Republicans ought to see that they have control of the Supreme Court as long as possible." It is also a slap in the face for such editors as the one who has been urging in the New York *Press* that Mr. Harrison should select a man "who recognizes that the civil war ended the doctrine of State rights," for Judge Jackson is a thorough believer in that doctrine.

Senator Sherman enunciates the theory that no bill, however meritorious, should be called up and urged upon the Senate unless a private canvass should first show that it was certain to pass. That is why he has refrained from calling up the bill from the Finance Committee for the repeal of the silver purchases. He himself thinks that bill of the utmost importance, and it now has a good majority of the Committee in its favor, but his private information leads him to believe it cannot pass, and therefore it would be a great mistake to urge it. The force of political timidity could no further go, and yet Senator Sherman sees nothing discreditable in his position, but frankly avows it in open Senate, and praises it as the acme of political wisdom. The vote in the Senate on Monday on the question of taking up the bill need not discourage its supporters either in or out of Congress. The movement was not very well timed, and Mr. Hill was not the man to lead it, although he is to be commended for moving if those who ought to lead hold back. We say that he was not the man to lead the movement because his own position heretofore has been extremely dubious, and is not much cleared up by his speech, although his vote is satisfactory this time. Although Mr. Hill's motion failed, it had the gratifying result of showing twelve Democratic Senators in the affirmative. There is good reason to believe that the bill will soon pass the House in the form in which it has come from the Banking Committee, in which case there will be a crucial test in the Senate. If it fails again in that body, President Cleveland will undoubtedly call an extra session, and it is to be hoped that he will do nothing, except name his Cabinet, until this stumbling-block to national finance and the national prosperity is removed. If the Treasury is saved from insolvency till the 4th of March, that is as much as we can hope for. It would be insolvent now (even without reckoning the sinking-fund payment as a legal claim), but for the withholding of money actually appropriated by Congress. Mr. Cleveland and his Cabinet can probably make better use of their time in devising ways and means to stave off bankruptcy than in listening to the claims of office-seekers, whose pressure is becoming intolerable to Democratic Congressmen.

Our Mr. Bland would seem to be out of harmony with our Mr. Jones touching the great subject of both their lives. In the February number of the *North American Review* Mr. Bland speaks lightly, yea, irreverently, of the Brussels Monetary Conference and the members thereof, more especially the American members. "Able and affable gentlemen met in debate," says Mr. Bland, "suggested vague and impossible plans, had a good time, and finally adjourned, expressing the hope that *the junketing farce* may be repeated in May." The idea that grave and dignified Senators and college presidents, like Mr. Jones and Mr. Andrews, "had a good time" in Brussels, and that they are looking forward to another "junketing farce" in May, is really shameful on Mr. Bland's part. We would wager a buzzard dollar that both Mr. Jones and Mr. Andrews would hail with joy any dispensation of Providence that would spare them the necessity of going back to Brussels in May, or ever going there on a like errand. As for the Conference, which has already closed, we venture to say that the social festivities which Mr. Bland alludes to under the contemptuous phrase "a good time," were a very poor sauce to the confessed failure of the objects which took our delegates across the water. That it would be a failure Mr. Bland knew beforehand, and he is not sorry that it was such. He says that the result was "no disappointment or surprise to any one." But this is not the worst. Mr. Bland surmises that our delegates at Brussels were nothing but gold-bugs in disguise. How else are we to interpret the following passage in his article?

> "At last our astute diplomats become very grave and serious and pretend to get mad; they tell these ignorant foreigners that the United States will no longer try to hold the monetary world up by the tail, but will immediately cut the Gordian knot in this caudal appendage and let the world drop with a leaden thud. The unsophisticated foreigner smiles, our gold-standard delegate smirks; both understand that such a conclusion is precisely the thing they have p otted for."

This means that the Conference was a plot to find a plausible reason for repealing the Sherman Silver-Purchase Act. And of course Senator Jones was in it, or, if not in it, he was made an unconscious instrument for executing it. Who would have believed it?

The thoughtful people of the United States, after the experience they have had and are having of the trouble they have brought on the country by trying to oblige the silver interest, are by no means eager to plunge into more trouble to oblige the sugar interest by annexing Hawaii. One such experiment is enough in a century. About the addition of some 28,000 Japanese and Chinese, 9,000 Portuguese, and 42,000 natives to the voting or non-voting population of the United States, they feel very much like the Arkansas man who said: "God knows I've had trouble enough without putting water in my whiskey." They remember that we have absolutely no system or plan of governing possessions like the Hawaiian Islands except as either States or Territories. "Crown colonies" are unknown to us. And those who desire for the republic greater variety of races, and especially more color in our population, would do well, if they have the stomach for it, to read the account, on Thursday last, of the burning and torture of a negro in Texas. That shocking story is a sufficiently awful illustration of the power of race hatred to convert Anglo-Saxons, at least, into devils incarnate. Do we want more material to feed this apparently inextinguishable passion?

It must be a hopeless feeling in regard to securing any reform of our pension system under this Administration, rather than any indifference on the subject, that has caused so little attention to be paid to the action of the House Committee on

the Pension Bill a fortnight ago. The sub-committee which had the subject especially in hand made several recommendations which would have stopped leaks in the present system. One proposal was that no "soldier's widow" should receive a pension unless she had been married to a soldier prior to 1870. This certainly seemed a late enough date at which to establish claim to such a widowhood, but the full Committee cut out the amendment. The same fate befell other recommendations that the sub-committee made, such as that a person receiving a pension under the act of 1890 must be disabled from manual labor and in receipt of an income of less than $600 a year. When a Democratic committee will not listen to recommendations of this kind, it is evident that pension reform must be made something more than a party question.

Mr. Edward Atkinson has published in the Boston *Herald* a long and able review of the financial situation of the United States, with special reference to the possibility of reforming the tariff without cutting into the Government's revenues too seriously. His first contention is that all outstanding arrears of pensions, which the Commissioner estimates will all be audited before the end of 1894, should be treated as "a part of the existing public debt," and provided for by the issue of exchequer bills at 3 per cent. interest. This would at once ease off the Treasury by about $48,000,000, and $10,000,000 more could be put on the credit side by the repeal of the sugar bounty. Then another $3,000,000 could be saved in drawbacks if the duty on tin plate were abolished. In addition to this, Mr. Atkinson expects a considerable saving from the enforcement of the same standard of economy in Mr. Cleveland's coming Administration that marked his last. During Mr. Cleveland's four years the expenditures for all purposes amounted to $4.43 per capita, while under President Harrison, including the Treasury estimates for the present year, they will have amounted to $5.16 per capita. Allowing for a reduction of 50 cents per capita, a yearly saving of about $34,000,000 would be effected. In these various ways a Treasury surplus of $80,000,000 could be counted upon at the end of the fiscal year 1893-94, which obviously leaves a much freer hand for reforming the tariff than would be the case if the present narrow margin were all that could be depended upon.

On the pension question Mr. Atkinson makes some suggestions which are highly important, though they are only what common sense and business principles call for. The first is the appointment of a skilled actuary to bring order and clearness out of the present obscure and confused system of pension accounts. As things are now conducted, it is impossible to make an accurate or intelligent forecast of necessary expenditures, and the Commissioner has to keep on coming in with his belated deficiency estimates. The whole should be on a basis as sure and easily understood as that of a life-insurance business. Then the audit of pension claims and accounts should be public, and the list of pensioners should be open to press and public, both at Washington and at all pension agencies. There seems to be no doubt of a general demand that the whole pension business be taken vigorously in hand by the next Administration. Mr. Cleveland had an extraordinary support from old soldiers, and there can be no question that they and all honest veterans would welcome any reform which would weed out the undeserving recipients of pension benefits. Mr. Atkinson's plan is a very moderate one, yet it would mark so great an advance over present methods that it would seem almost like a sweeping reform.

The sad news comes from Kentucky that, in the recent contest in the Legislature of that State over the choice of a successor to Mr. Carlisle in the United States Senate, the Hon. Henry Watterson was once more compelled to "march through a slaughter-house to an open grave." There were several candidates for the position, including ex-Judge William Lindsay, who was the representative of honest money, decent politics, and other similar issues which have come to be recognized in the party as the principles of Cleveland Democracy; and ex-Congressman John Young Brown and Congressman J. B. McCreary, who represented machine politics, cheap money, and the heterogeneous mass of objectionable principles which are peculiar to the anti-Cleveland Democracy everywhere. Mr. Watterson and his newspaper, the Louisville *Courier-Journal*, which is the machine organ in the State, opposed Judge Lindsay, and fought for Brown, McCreary, or anybody else of that kind who could be elected. Judge Lindsay was elected triumphantly, and there can be no doubt that his success is as notable a defeat of machine politics as has been seen anywhere in recent times. He is about fifty-five years of age, has been on the Supreme Court bench, and is at present a very successful practising lawyer. He is in thorough sympathy with Mr. Cleveland at all points, and will be a most valuable aid to him in the Senate in carrying out his policy as President. He is not a politician in the machine sense of the word, being on the contrary a "theorist" and "visionary" of an aggravated type. His election marks the downfall of one of the most obnoxious political machines that could be found anywhere outside the State of New York.

A bill has been introduced in the Minnesota Legislature providing for an amendment to the State Constitution which shall limit the right of franchise to citizens of the United States, the rule to take effect five years after the adoption of the amendment. The practical effect of this would be that no man of foreign birth could vote in Minnesota until he had become fully naturalized, which requires that he shall establish to the satisfaction of a court that he has "resided within the United States five years at least, and within the State or Territory where such court is at the time held one year at least." Under the present system in Minnesota an alien, upon declaring his intention of becoming a citizen at some future time, may vote, provided he has resided in the United States one year and in the State four months. Other Western States are even more liberal, Kansas and Nebraska, for example, granting the suffrage to a foreigner who has been in the State six months, and in the country no longer, if he declares his intention of becoming a citizen. The most ignorant Italian or Pole who landed in this city last April was therefore capable of voting for President in Kansas and Nebraska last November. This is simply to put a premium upon the debasement of the suffrage, and it is an encouraging sign that Western people are beginning to perceive the absurdity and danger of such a system.

The new Apostolic Delegate goes on his way staying the hands of bishops, and saying unto archbishops, "What doest thou?" The celerity and finality of his judgments make the current ecclesiastical trials of Protestants seem more than ever like a feeble imitation of their original model. Archbishop Satolli is showing them how to do it. We hear nothing of appeals or arguments three weeks long, or "back talk" in the pulpit. Even the inspired interviews with "a leading ecclesiastic" or "a close friend of the Archbishop" have almost disappeared from the press as the rapid and inexorable machine has gone on grinding out its decisions. There is nothing like having an infallible judge right on the spot. He may be ignorant of the language of the country, as Monsignor Satolli is, but when he speaks, it is the voice of Rome, and the controversy ends. This shows that there was something, after all, in Steele's famous distinction between the Catholic Church and the Church of England. The former, he said, claimed to be infallible, but the latter would not assert anything so preposterous as that, and would content itself with the modest claim of being always right. All Protestant churches are obliged to maintain that they are always right, but the process of determining what is the opinion that is right is often long and painful. It takes an infallible church to have opinions on tap, which are always right and always immediately enforceable. It must be said, also, that the Delegate's decisions, so

far as made public, make his title to be considered a benevolent despot a very good one, with so firm a hand has he put down the nice little intrigues and cabals which have been arraying the Catholic Church against some of the most fundamental principles of our Government.

The news from Paris on Sunday, that instead of 12,000,000 francs being sent to this country by the Panama Company the real amount was 22,000,000, has made it necessary for ex-Secretary Thompson to begin the task of explanation all over again. The accountant who examined the company's books for the French Government now declares that 12,000,000 were sent over prior to 1884, at the outset of the Panama scheme, before any bonds were issued, and were received by other persons than the committee of which Mr. Thompson was President and Mr. Appleton was Secretary. Who these recipients were, the books of the company do not reveal, but the accountant is positive that the money was sent to the United States, and that none of it was used for the purchase of supplies, or tools, or salaries of the subsequent committee, or in payments to American contractors. These expenses were paid from the remaining 10,000,000 francs which Mr. Thompson's committee received. The accountant says that in the public accounts of the company the American expenses are entered in a lump under the head, "Expended for offices in New York and Panama, 42,000,000 francs," and that the Panama expenditure amounted to about 20,000,000 francs, leaving the balance for the United States. Mr. Thompson reiterates, in view of this latest information, that he and his committee "expect to make a showing that will explain all the transactions in detail." It will be, in the language of the late Horace Greeley, "mighty interesting reading."

Criminal lawyers seem to have much the same gift the world over for inventing fine phrases to fit great crimes, and M. Barboux, the counsel for De Lesseps, made a most happy stroke in his peroration. Admitting that his client might have made mistakes, and even committed what a strict interpretation of the law would call misdemeanors, he maintained that all had grown out of the fact that De Lesseps was an "optimist," and he added grandiloquently, "The world belongs to optimists." There can be no doubt that optimist is a much pleasanter term than swindler or gambler, and it ought to have a great run. To take a more cheerful view than the law does of obtaining money under false pretences, and to look on the bright side of legislative corruption, is characteristic of many a man who has had very ugly names applied to him, but who ought hereafter to be known merely as an optimist —one who makes mistakes sometimes, it is true, but who ought to be forgiven them on account of his hopefulness and his good nature. Thus far M. Barboux has done very well, and deserves the thanks of all who believe in speaking gently to and of the erring; but we fear he will betray them into a fatal confidence by assuring them that "the world belongs to optimists." The truth is that the natural home of such optimists as he describes is a jail, and there are thousands of them at this moment exercising their faculty for looking on the bright side of things by studying the dark side of prison walls.

The daily scenes in the British House of Commons may help to give some idea of what is coming when both parties settle down to discuss the Home Rule Bill, which has not yet made its appearance. The Conservatives and Liberal Unionists are very much in the state of mind about this bill in which the Irish were about the Coercion Bill—that is, they believe almost any means of preventing its passage to be lawful. The ferocity of Col. Sanderson, an Irish Tory, and the difficulty of getting him to change the epithet "murderous ruffian" (applied to a priest), on the suggestion of Mr. Balfour, into "excited politician," give some idea of what is coming. Sanderson sits opposite the Irish Home-Rulers, and is as warlike as they, so that, seeing the state of mind he is in now, it is not unreasonable to expect that long before the second reading is reached he may come into physical collision with his hereditary foes. The prospect would be more alarming than it is if it were not that the Liberals are now armed with "the closure," with which the late Mr. Smith did such execution among the Gladstonians and the Irish in 1887–8. The boot is now on the other leg, and it is reasonable to expect that the Grand Old Man will make as short work of obstruction as they did, when the bill comes to a second reading; but the struggle, even if he can hold his forces together, will be tremendous. He has never in his long career needed youth so much as now, and his lieutenants, Mr. Morley and Sir William Harcourt, are not in first-rate physical condition. The rising hope of the party is Mr. Asquith, who is in the flower of his years, and has already given strong evidence of having a bitter tongue and a ready wit, and may be the coming man, though for real rough-and-tumble debating no one can approach Harcourt.

Barcelona is preëminently the artisan city of Spain, and as such has long been a hotbed of republican and revolutionary sentiment. Sunday's rioting there brought about a union of forces between Anarchists and Protestants which is not really so strange as might appear. All Spanish traditions of law and order are so bound up with Catholicism that religious innovators, like the Protestant missionaries, necessarily seem insurrectionaries. As such, the Barcelona Anarchists hailed them as brothers, and not at all on religious grounds. If Protestantism were in control, and stood for an orderly government, they would at once lose all sympathy for it. A visitor in Geneva, under Calvin's reign, exclaimed in praise of the "lovely liberty" to be enjoyed in that city. He was overheard by a peasant woman, who retorted: "Lovely liberty, indeed! Formerly we were compelled to go to mass, and now we are to go to sermon." The Barcelona Anarchists are perfectly willing to fight for the sermon against the mass, but would prove the most restless and insubordinate of auditors if by any chance the sermon should succeed in taking the place which the mass now has in their country.

Switzerland for some years has been experimenting with a system of graded taxation, its development varying in the different cantons. A recent despatch to the British Foreign Office reports the rejection of the system by the Canton of Berne, on a referendum, by a very large majority. The decision of the citizens of Berne was apparently influenced by the experience of Vaud, where an elaborate application of graduated taxation was started in 1886. There realty is divided into three classes, viz., that under $5,000 in value, that between $5,000 and $20,000, and that over $20,000, the amount of mortgages being deducted before classification. The tax rate is fixed yearly, being at present $5 per $5,000 in the first, $7.50 per $5,000 in the second, and $10 per $5,000 in the third class. Personalty, or income derived from capital, is taxed on its capital value, the strict income-tax being confined to pensions, annuities, salaries, and wages. These incomes are divided into seven classes, the tax per $500 on the several classes rising from $10 to $40. Thus, while a man with a salary of $250 would pay $5, and one with $2,500 would pay $150, a salary of $10,000 would be mulcted $800. The population of Vaud is about 250,000, and under this new system the revenue increased some $30,000. The radicals point to such increase as proof of the success of the plan; more conservative observers claim that the gain in receipts is more than offset by a "progressive injury to local trade, and particularly by the depreciation in the value of land." A certain proportion of wealthy families have moved out of the canton, others evade the tax by shutting up their houses for a part of the year, while a smaller quota of foreigners seek homes in Vaud than formerly; one reported result is, "that some properties have depreciated 50 per cent." Inquisitorial or unequal schemes of taxation devised by Socialist "experts" affect capital and its owners very much as brigandage "outrages" affect travellers and settlers: the communities where either form of violence thrives are avoided.

HAWAII.

THE failure of England to "protest," and the tranquil acceptance by the Government in London of American protection for British subjects and property interests in Hawaii during the present crisis, are a serious damper to the agitation for immediate action. It is quite plain, therefore, that unless Sir Julian Pauncefote should receive his passports for his insulting silence, we shall now have time for calm consideration of the situation and of the proposals made for dealing with it.

In the first place, it must be remembered that our treaty of 1875, extended in 1887, as Mr. Bayard pointed out the other day, has still two years to run. That treaty gives us everything we want—free trade with the islands, a coaling-station, and complete protection against every description of foreign intrusion. Our troops are now in possession of the capital. The treaty is just as binding on the revolutionists now in possession of the Government as it was on their predecessors, both in fact and in law. There is, therefore, not the slightest occasion for any kind of precipitate action. We could not by annexation at this moment gain anything which we do not now possess except the privilege of paying the expenses of the Hawaian Government, which might have been of value to the Billion-Dollar Congress, but cannot possess any attraction for Mr. Cleveland's Administration. The remarks we are about to make will, therefore, since England declines to interfere, have little interest for persons afflicted with the mental trouble known as "Americanism," because they bestow no attention on political problems which do not contain materials for a row with some foreign Power, their patriotism being entirely bellicose.

We address only the sober-minded lovers of their country and their Government when we ask what we shall gain by substituting annexation for simple protection. The only way now known to our system of government of annexing the islands is their conversion into a Territory, with representation in the House and a Governor appointed from Washington, and a Territorial Legislature sitting at Honolulu. This might be a harmless arrangement enough as long as it lasted, but how long would it last? Judging from recent experience, about four years, or, at all events, only until one party or other wanted two more Senators of the kind now sent from Nevada, Wyoming, and Idaho, which are already in the Union, and would be sent from Utah, Arizona, New Mexico, and Oklahoma, for the admission of which preparations are on foot. Not one of these communities is fit to be in the Union. The population of some of them is ridiculously small and unsettled; that of others scanty, ignorant, superstitious, and foreign-tongued. The only reason for letting them in, or proposing to let them in, is the desire to influence party legislation—some of it, like the McKinley Bill or the Silver Bill, of the most corrupt character. Every one of them has lowered or would lower the character of the Senate. In not one of them can the work of persuasive discussion, which is the basis of American government, be carried on, in preparation for an election. In every one of them votes are as purchasable as any of their other products. If, therefore, the Sandwich Islands were a Territory, it is as sure as any future event in politics can be, that the agitation for its admission as a State would begin at once; and that this agitation would probably succeed very soon, the total disregard of the moral and political quality of the population evinced during the last ten years in the admission of Wyoming, Montana, Nevada, and Idaho, fully warrants us in expecting.

What sort of government would the State government then be, with its power of deciding our Presidential elections in case of a close division of the Electoral College? The population now consists of natives, recently emerged from savagery, speaking foreign tongues, Japanese, Chinese, and Portuguese. The natives, Gen. Armstrong says, are dying out at the rate of 1,000 a year. Their places will be taken, as now, probably, by Chinese, Japanese, and Portuguese. There would be no American immigration into the islands of any moment as regards numbers. The constituency would, therefore, be either very ignorant and foreign or very small. It would be as unreachable by the American press and platform as it is now. So that the State Government would almost inevitably fall into the hands of a Sugar Boss or of some other great speculator, who would fill the Legislature with his own creatures, and cause his own election to the Senate in company with the kind of subordinate known as a "Me-too." On the kind of contributions such a man would make to our legislative and political morality, we need not speculate.

We ought, therefore, all things considered, to feel much indebted to the British Government for having, by its failure to protest, given us time for cool reflection, not on the importance to us of controlling the Sandwich Islands, for that seems admitted on all sides, but on the best mode of doing it. The best mode undoubtedly seems to be the mode now in operation—that is, a simple protectorate. The proper answer to the Commission now in Washington, therefore, would seem to be: "Gentlemen, you say you are in possession of the Government, and that your Government is vastly superior to that which you have overthrown. We are very glad to hear it, because we have a treaty with your predecessors which has two years to run, is equally binding on you, and gives us everything we want from you and gives you everything you can fairly ask from us. It secures you, as you see to day, exactly the same protection from foreign invasion or domestic violence, and gives you the same freedom of trade with the United States, which you would have were you a member of the Union. You have United States troops on your soil now, and if it would make you feel easier, we will leave them there permanently, but we do not care to undertake the task of governing your very motley population, on condition of allowing it to help to govern us. We have now about seven specimens among us of the new species of ruler known as a 'boss,' and fear you would send us another before we had succeeded in finding a proper place in our system for those now in existence. Go on, therefore, sending us your sugar and other tropical products, and sitting under your own fig-trees, in the full assurance that none will dare to make you afraid.'

THE TREASURY GOLD.

IT is conceded by all financiers that the monetary condition in Europe is abnormal: the scramble for gold is acute and universal. Nations with good credit, alike with nations whose currency is on a paper basis, join in the efforts to get gold and to hoard it. London is the money clearing-house for the commercial world, and London, watching the battle now going on among Continental nations, has been carefully guarding her metal treasure. The Bank of England, anticipating a draft upon its stock in case of a change of currency policy on the part of the United States, and also because of the demand from Austria, has striven to maintain a more than usually ample reserve. The Bank's present percentage of reserve to liabilities, 48 per cent., is a high one. More than that, until week before last, when a reduction to 2½ per cent. was made, the interest rate of the Bank was kept at 3 per cent., though the loss of business to the Bank from this cause must have been severe, since the ruling discount outside the Bank was but 1 per cent., with a maximum of 1¼ per cent. for three months' loans. The Bank of England, it should be remembered, no longer controls the rate of interest in London. The great joint-stock banks, the rich private houses, and the heavy capitalists, such as the Rothschilds, have so much money to lend that the officially announced discounts of the Bank no longer bind them. The Bank of England in the money market has fallen from the position of master to that of leader, whose orders are not obeyed, but whose prestige is yet great.

The Bank of France, it is expected, will use the new note circulation to increase its stock of gold. For a number of years the increase in the Bank's note circulation has been followed almost exactly by an increase in its supply of gold. We may reasonably expect a continuation of the same policy for the future. Aside from this general purpose, the Bank of France has special reasons for accumulating gold. The unsettled state of affairs in France, the Egyptian episode, the bank troubles in Italy, and, more than all else, the importance of a large supply of gold in time of

war, an importance now acutely felt, lend a commercial as well as a martial impetus to the Bank's pronounced policy. The Bank of England emits notes only when covered by deposited gold. On the contrary, the Bank of France, with no legislation affecting its issue of bank notes except that limiting the total amount, emits the notes first and buys the gold afterwards. When the bill increasing the limit of note issue was before the Chamber of Deputies, M. Léon Say (as reported in the Paris letter to the London *Economist*) deprecated a public discussion, on the ground that it would be difficult to maintain the present exceptionally favorable situation, since, when foreign countries hear that the gold they allow to go to France will never be returned to them, but will be imprisoned there, they will cease to send it.

The currency situation in Austria is such as to make absorption of gold by that Government imperative. In May last the Austro Hungarian Government was empowered to raise an entirely new loan of $100,000,000 for the purpose of providing the necessary gold to carry resumption into effect. On January 11 the arrangement was concluded between the Austrian Minister of Finance and the Rothschild syndicate by which the necessary gold is to be obtained. In addition to the new loan, the syndicate underwrites the conversion of the Austrian 5 per cent. paper rente into 4 per cent. gold, besides undertaking some railway and other national bonds. The new 4 per cent. loan will be offered simultaneously in the Continental bourses, but not in Paris or London, it is said. Upon this loan the London *Statist* remarks:

> "We have quite enough demands upon this market [London] already without helping to find gold for Austria-Hungary, more particularly as nobody seriously believes that the sole object is to resume specie payments. The Austro-Hungarian Government, very wisely and properly from its own point of view, desires to have a war chest."

The increasing importance of gold in time of war, and the part which accumulations of that metal are expected to play in the next European campaign, are leading all the nations of Europe to desire war chests; for while learned societies are discussing the silver question and bimetallists are ascribing all national ills to the demonetization of the white metal, the practical statesmen of those same countries, in their preparations for a future emergency, will have nothing but gold. Even Russia, famine-stricken and impoverished, has such a chest. The last Russian budget asserts that "$450,000,000 of gold is at the full and entire disposal of the Government." This battle for gold in Europe does not, of course, mean that a general war is imminent, but it does mean that every known art of the financier or merchant will be tried to secure for each nation a larger supply against the time of need. The United States, though not concerned in European affairs, cannot escape from the effects of such a scramble. We may expect gold to be taken from us at every opportunity, whenever trade will allow it and even if there be a small apparent loss. That our silver policy is playing directly into the hands of the gold-gathering European, is clear upon the face of things.

At the close of last month the Treasury gold reserve fell to much the lowest point reached since the resumption of specie payments—barely over $108,000,000. At the close of July of last year it had gone down nearly as far, to $110,000,000; but a new low-water mark has now been recorded. How long will it be before another is reached? The indications are that the drain of gold from the Treasury has by no means ceased, and the question will soon have to be faced what to do with the $100,000,000 set down as the reserve to redeem legal tenders. The decline in the gold reserve has been accompanied by another change which has received less public attention, but is more significant because it is unexampled. This is the complete collapse of the gold receipts for customs duties in the port of New York. Never before, at this season of the year, has the Sub-Treasury here failed to receive the larger part of the payments for duties in gold. But here also the record has been broken: December and January have gone by, and the Sub-Treasury is receiving legal tenders and silver certificates almost exclusively—practically no gold.

To understand the significance of this change, it must be borne in mind that until within the last two or three years the customs receipts at New York were almost exclusively in gold. With the exception of a break in 1885-'86, when a redundancy of silver certificates caused for a few months a check to the gold receipts, there was not a time, from the resumption of specie payments in 1879 to the passage of the Silver Act of 1890, when gold did not form at least 60 or 70 per cent. of these receipts. Since 1890 there has been a marked change. In 1891 there was already an ominous decline. As was noted in these columns at the time, the proportion of gold sank to 60, 40, 20, and in midsummer of 1891 even to 12 per cent. In the fall of 1891 there was a recovery, such as the closing months of the year might be expected to bring, and such as, until this year, they never have failed to bring. In the autumn months the demand for currency for shipment to the West and South carries off the various forms of paper money from the financial centres, and especially from New York, and gold certificates are left for use in customs payments. Hence at the end of 1891 the Treasury receipts showed an improvement. In December, 1891, and in January, 1892, two-thirds of the customs receipts were again in gold. As 1892 wore on, however, and as the usual back-flow of currency to New York set in, this improvement ceased. After the first month or two of the year, gold receipts fell off and never rose to 20 per cent. of the total. And the striking thing is that the months of December and January had for the first time brought no gain. In December only 4 per cent. of the customs receipts were in gold, in January less than 9 per cent

The simple cause of this breakdown—for such it must be called—is the great volume of legal tenders held by the banks of this city; and the simple and obvious cause of this again is the steady issue of legal-tender Treasury notes under the act of 1890. Here also the change in the situation during the last two years has been marked. Before 1890, the New York banks held usually between fifteen and thirty millions of legal tenders in their vaults, the rest of the reserve being specie—that is, practically all gold. Sometimes their holdings ran into the thirties, and even to forty millions, during the spring and summer months of accumulation. But in midsummer of 1891 they held over fifty millions, and during 1892 the holdings of legal tenders were at no time under forty millions, and rose at their highest to over sixty millions. The last statement showed that the banks now hold sixty millions. This means simply that the issue of four millions of fresh legal tenders each month under the act of 1890 is more than the community can absorb. The signs of redundancy are unmistakable.

So far as the Treasury is concerned, the immediate result is only that its business is conducted on a paper basis, and not, as before 1890, chiefly on a specie basis. Instead of taking gold in for customs receipts, and paying it out to the banks to meets its debits at the Clearing-house, the Treasury takes in paper and pays out paper. The legal tenders pass to and fro between the Government and the banks. But when a drain of specie for export sets in, it falls on the Treasury. The banks have a good supply of gold, but naturally prefer not to part with it. The Treasury is called on to furnish it, and it has no longer a steady inflow of gold wherewith to make up its losses. The Government, as is well known, offers every inducement for getting gold turned into the Treasury, and indeed its methods sometimes come close to offering a premium for gold. Nevertheless, the gold reserve has sunk from over $180,000,000, the amount at the time of the passage of the act of 1890, to its present low level. At this rate it will not be long before the suspension of gold payments by the Treasury will have to be squarely faced.

THE GERMAN COAL-MINERS' STRIKE.

THE most suggestive aspects of the great strike of German miners in the Saar basin have not been adequately reported in the accounts sent by cable. Though the number of workmen involved has been great, approximating 30,000, though resort to violence was had by the strikers, egged on by their wives, who seem to have been

fiercer and more furious than the men, and though troops had to be called out to suppress the rioting, it is in none of these alarming, though now familiar, features of a great strike that the student of social problems will see its greatest significance. He will find this in the light thrown by the strike on the favorite modern theory that Government control would be a sure remedy for labor troubles. How often did our Collectivists remind us last summer, at the time of the Homestead strike and riots, that the only way permanently to avert such lamentable evils was to put all industry in the hands of the Government. Now, the fact is that the disturbances in the Saar region constitute a most instructive experiment, on a huge scale, which goes to show that the system which was to prevent all strikes is precisely the one to bring on a strike of the most indefensible and outrageous kind.

The Saar coal mines are worked by the Government. Nowhere has that offhand reformer of the world, the Emperor William, had a better chance to have his labor boards and official inspection and all the other machinery of Government production put on exhibition. And he has improved the chance. The whole industry was organized like an army, with chiefs and subalterns in beautiful gradation. The brightest graduates from the School of Mines were sent down to introduce new methods, and bring all the blessings of science as well as paternalism to bear on the fortunate miners. Moreover, the Emperor has had many tangible signs of success to point to. When the great strike in the Ruhr mines broke out three years ago, the workmen in the Government mines at Saarbrück remained quiet, and it was promptly remarked at Berlin that here was already a great triumph for the Collectivist principle. Even more striking has been the increase of wages. The average daily wage in 1888 was 76 cents; in 1892 it had advanced to $1.15. The demonstration seemed perfect.

But the strike came along in due time, and was occasioned by exactly that governmental control which was to make a strike impossible. It was not a question, primarily, of wages, or hours of labor, or recognition of a trades union, but of precisely those regulations and methods which the superior knowledge of a benevolent Government was going to enforce to the general happiness and contentment. A correspondent of the *Temps*, writing from Saarbrück last month, recounts some of the interviews which he had had with the striking miners, which throw a flood of light on the way the workingman takes to the control of a bureaucratic Government when the thing is actually tried. The miners said that flesh and blood could not stand the superior way in which they were ordered about by Government officials. It was altogether "too Prussian," as they expressed it, and was a thing which the "men of the Rhine" could not stomach. In particular did they take deep offence at those young fellows, just out of the scientific schools, who came down from Berlin with their heads stuffed full of new notions, which they sought to impose upon men who had grown gray in the business, and whom they proposed to order about like a lot of school-children.

The immediate occasion of the outbreak was the new system of rules for the miners drawn up by the Government. It was a splendid system on paper, precise and detailed as a manual of arms, and was no doubt the handiwork of the best organizing talent at the command of the most highly organized Government in the world. But, alas! it rode roughshod over time-honored privileges of the miners, laid new restrictions and vexations upon them in the name of discipline, and cut down wages which were too high and raised those which were too low—all in most beautiful accord with social theory, but in most hopeless conflict with human nature. Then, too, the miners found that their representatives on the various boards directing the operation of the mines had only illusory powers. All real authority was lodged in the members who spoke for the Government, and who grew more and more impatient at the suggestions of the workingmen, and voted them down with less and less consideration. As one of the miners put it: "The authorities treat us like so many recruits instead of free citizens, and we do not propose to submit to their indignities."

We do not suppose one Collectivist in all the world will be the less enamoured of his theory on account of this failure of it in practical operation. It is of the nature of bad reasoning, remarks George Eliot, to seem good reasoning to the bad reasoner, and that is why all exposures of its badness are wasted on *him*. He will always be able to say that the scheme he has in mind for the regeneration of the world will be free from all the defects and failures which may be pointed out to him in the actual schemes nearest his ideal one. But, leaving him to the comfort of his dreams, it ought to be clear to the ordinary mind, after this Saar experiment, that a fundamental fallacy in most of the plans for industrial reorganization now so much in vogue is to suppose that workingmen themselves have, or are likely soon to have, the mental and moral qualifications necessary to the success of those plans. Make your governmental direction a very model of scientific benevolence, and the rude and jealous democracy of the laboring man will resent and repudiate it at a thousand unexpected points. If he stood stubbornly for his own way, though demonstrably inferior to the Government's way, even in autocratic Germany, what hope would there be of his showing sweet reasonableness in a country like ours? Human nature is an ugly affair, and workingmen are very human. They may one day rise to the height of approving industrial methods simply because they are scientific or for the general good; but so far they are wonderfully like the rest of mortals in preferring what is agreeable to what is scientific, and what is for the good of number one to what is for the good of the greatest number.

BANK TROUBLES IN ITALY.

ITALY, January 22, 1893.

"ALL knots come to the comb," and the Giolitti comb has got entangled in a number at the same time. Ever since the forced circulation of paper money, the banks of issue, especially the Tuscan and the Roman, have had their troubles which have been from time to time staved off. There are two distinct parties in Italy on banking questions, the one advocating a single bank, the other that all banks be allowed to issue notes on their own account and responsibility. As late as 1888, Branca, an authority on such questions, proposed that any society with a capital of ten millions, with five millions of paid-up shares at 500 lire, should be allowed to issue notes—this when those already existing were known to be in a sorry plight. Twice have I written on this subject in the *Nation*, so that a brief recapitulation will suffice to make the situation clear. Up to 1866 no Italian bank could issue notes save in the proportion of two to three uncovered by a coin reserve. In that year the Italian National Bank had a circulation of 41,680,000 lire, but the Government, on the eve of the Italo-Prussian war against Austria, borrowed from it 11,011,110 lire, authorizing that bank alone to issue notes at will and to suspend specie payment. Shareholders became millionaires; the State went on borrowing to the extent of 35,500,000 lire in two years. Then came the *consorzio:* the six existing banks formed a confederation; the old notes issued by the national banks were cancelled, and new ones to the amount of 80,000,000 were issued, bearing the inscription, "Confederate notes—forced currency," and signed by a delegate of the Government and the delegate of the confederation. Each of the six banks, the National, the Roman, the Sicilian, the Neapolitan, the National Tuscan Bank, and the Tuscan Bank of Credit, was authorized to issue legal-tender notes on its own account to the amount of two-thirds of the paid-up capital, bound, of course, to exchange them at sight for the inconvertible notes of the confederation on the demand of the holder.

When, in 1884, the country returned to specie payments, or appeared to do so, every one who chose could get gold or silver at all the banks, the Government having paid its debts to the confederation of banks in gold. But this golden age soon disappeared. The gold went out of the country, and, especially after the rupture of commercial relations with France, there was simply none to be obtained without paying a heavy *agio*. People grumbled and bore their griefs patiently—for a time. Then came the famous *riscontrato*, by which all holders of any bank-notes could change them for those of any other. But rumors were afloat that two at least of the banks were in a bad way. During the Crispi Government in 1889, a private inspection was intrusted to Senator Alvisi, lately dead, who, with Commendatore Biagini, found the Roman Bank in the utmost disorder. It was known that the legal issue of 45,000,000 had reached 70,000,000, but excuses were found for its illegality in the fact that it had lent largely to the Roman speculators during the building craze, and, as it held mortgages on the unfinished buildings, it was

presumed that it might make ends meet; but 9,000,000 of notes had been illegally fabricated. They were signed and stamped, however, in legal fashion by the governor, the cashier, and the censor. But the seal and the notes were found in a chest of which only the governor had the key; the loans were made for terms exceeding the legal limit, and bills for enormous sums renewed. Biagini proposed a series of remedies: that the paper for future notes should be secured; that the enormous sums lent for long periods should be guaranteed; that fresh capital should be reserved to balance the excess of issue; that the bank should assist real commerce instead of mere speculation; that the vice-director should be appointed and the full list of officials be completed.

It should be remembered that Signor Giolitti, the present Premier, was Minister of the Treasury during a portion of Crispi's term of office. He proposed, with Crispi's assent, a fusion of the banks after due inspection; but, owing to dissensions with the Minister of Finance, Giolitti resigned. Such was the faith of the Government (and, indeed, of all parties and the general public) in the governor, the "benevolently despotic" director of the Roman Bank, Com. Tanlongo, in his honesty and financial ability, that he was given in the autumn of 1890 until March, 1891, to "set his house in order"; but Crispi made no secret of his intention to propose the fusion of at least the two Tuscan and the Roman with the National Bank. The report of Senator Alvisi and Com. Biagini was not made public. In January, 1891, the Crispi Government was overthrown. The Rudini Ministry proposed simply to renew the privilege of issue to all the banks for fifteen years. Signor Luzzatti abolished the *riscontrato*, so that each bank had once more to stand on its own bottom. He seems to have had a special spite towards the Roman Bank, as in Sicily, during the Exposition, its notes were refused at the telegraph and all Government offices, and only Mr. Stillman's fierce denunciations in the London *Times* secured a temporary suspension of that inexplicable measure. Signor Giolitti, bent on a thorough inspection of the banks, proposed a six years' continuation of their privileged issue. But, like all his colleagues, he had blind faith in Tanlongo, and proposed him as Senator. The King signed the decree and Tanlongo took the oath. But certain members of Rudini's party, to spite Giolitti, acquainted Deputy Colaianni, a Sicilian and a noted member of the Extreme Left, with the contents of the Alvisi report, and when the President of the present Ministry proposed, subject to Government inspection, to prolong the privilege of issue for six years, the Left protested, quoted the report, and demanded a parliamentary inquiry. Then Crispi and the partisans of the present Ministry rose in arms and talked of insult to the Government; and Colaianni, one of the purest-minded and cleanest-handed men in Italy, was accused of attempting to damage the Roman Bank in the interest of the Sicilian. Note that Colaianni, once a wealthy owner of sulphur mines, on being grossly robbed by his factor, gave up everything he possessed to his creditors, and only last year resigned his seat, being too poor to live in Rome. His electors refused to choose any other deputy, and no candidate ever presented himself.

Signor Giolitti took the matter very seriously to heart, and, naming six inspectors, *had all the banks inspected on the same day*—this to prevent any collusion, lending of reserves or money by one bank to another. On the day of the inspection, the "highly respected" director of the Roman branch bank of Naples decamped with two millions and a half of lire, leaving a receipt for the same with the treasurer, Alessandro. The director, Cuciniello, has been held in such high account that, but for political opposition, he would have been appointed governor in chief of the Central Bank of Naples. At the same time it should be recorded that his eldest son was implicated in the robbery and peculation of the Bari branch of the Neapolitan Bank, and came off by the skin of his teeth. The suspension of the inspectors and of the director-general of the Bank of Naples led to a belief that all the two millions and a half were not taken on the day in question, but rather that the sums had been taken at intervals, and that the defalcation had not been discovered, because, on the ordinary days of inspection, the Roman Bank had lent the amount—at once returned.

While the Roman and Neapolitan world was aghast at the news that Cuciniello had decamped, that his house in Rome and that of his family in Naples were being searched and watched, ugly rumors anent the Roman Bank were afloat. The issue had reached the sum of 134,000,000; everything was in disorder; everybody rushed to withdraw his deposits, the municipality of Rome withdrawing a million; and though the National Bank had proposed and accepted "fusion," it was noted that the houses and persons of the governor, Tanlongo, and the cashier, Baron Cesare Lazzaroni, were watched night and day. The Ministers, the director of the Neapolitan Bank, Com. Consiglio, with the inspectors, passed a day and a night in consultation. Tanlongo had purloined 21,000,000, Lazzaroni 19,000,000, it was said. The information was given to the judicial authorities, and at eight A. M. on the 20th instant the inspectors of police presented themselves at the bank with orders for the arrest of both Tanlongo and Cesare Lazzaroni. The former protested his immunity as Senator; but as his nomination has not been ratified, that august body declines to recognize him as a colleague. At present, Lazzaroni is in durance vile; his nephew, Baron Michele, counsellor of the Roman Bank, offers, it is said, his entire fortune of 18,000,000 to supply the deficit. Tanlongo is, or feigns to be, too ill to be removed from his house, and his bedroom is watched by inspectors of police. All his papers and effects are sequestrated, but his private archives, which he removed from the bank as soon as the inspection was announced, cannot be found. Rumor hints that they are deposited in the Vatican, where the Commendatore is in high repute.

The sensation is, of course, immense, though the public will not suffer, as the notes of all the banks are guaranteed by the Government up to next March. It is the personality of the culprits that astounds the public. Cuciniello belongs to an old family of patriots, and has borne hitherto an unblemished financial reputation, though his private life is scandalous. The Roman Bank was founded in 1834 by a Frenchman, who was its first governor during the pontificate of Gregory XVI., with a capital of 100,000 scudi (dollars), and a bank-note circulation of 150,000 scudi. In 1846, the depositors, fearing a revolution, withdrew their capital. The brother of Cardinal Antonelli, Filippo, was named governor in 1850, and Signor Sella in 1870 begged him to retain his post, but he refused, for "family reasons," and Giuseppe Guerrini succeeded. In 1871 the direction of the National Bank and of branches of the banks of Naples, Sicily, and Tuscany, had their seats in Rome, and the Roman Bank, which hitherto had had the privilege of sole issue in the Roman provinces, agreed to share it with the other banks on receiving five millions of lire. On the death of Guerrini in 1881, Tanlongo, well known to Bombrini, the director of the National Bank, and owner of four thousand shares in the Roman, was named director. "Sor Bernardo" had been a well-known figure in Rome ever since the days of Pio Nono, when he organized a battalion of the National Guard. He afterwards retired into private life, became a *mercante di campagna—i. e.*, a lease-holder of one of the great *latifondi*. He attended personally to his business, rising at three to visit his farms, wine cellars, and dairies, lived frugally, and spent seven hours daily at the bank. Cavour had summoned him to Turin to treat with Antonelli; he was a great friend of Cairoli, who spent some time in his house at Rome, where the dead patriot's portrait, with an affectionate dedication, hangs; he was on good terms with Nicotera, but came to grief with Crispi—violently opposing the fusion of the Roman with the National Bank—and was never tired of relating the "scenes" he had with the not over-patient Premier, adding, "Never, in Sor Bernardo's time, will the Roman Bank be sucked into another." He delighted also in narrating how he bought off the brigands to allow him to visit his farms in peace. Of late he has been moody and less irate at the idea of fusion, and, though maintaining his allegiance to the Pope and attending mass every morning, gladly accepted the offer of a seat in the Senate. And now he is unmasked—under arrest, with an inspector of police by his bedside.

It is a bitter business, and we do not yet know the whole. It is useless here to allude to the terms of fusion offered by the National Bank, because the House, which meets on the 25th, will have a great deal to say. The interpellations already announced are numerous. Bonghi fumes and rages—affirms that it will be sheer impudence for the Premier and the Minister of Finance to present themselves, forgetting that had his party (Rudini-Luzzatti) remained in power, there would have been no inspection, no discovery; and that for another fifteen years the banks would have gone on in the bad old way. The Left, or rather the Extreme Left, will still insist on a Parliamentary inquiry previous to the discussion of any project of fusion; they demand that the entire state of each bank shall be laid before the House. Who hold the bank loans? are they solvent? Who hold the enormous amount of *sofferenze* (renewed bills)? Has the Government, past or present, had loans for electioneering purposes? They will be unwise if they try to overthrow Giolitti, especially as he seems resolved not only to deal resolutely with fraudulent bankers, but also with brigands set in high places. But lately there has been a raid in and around Viterbo, and a goodly haul of *manutengoli* (aiders and abettors of brigands) has been made, among them an assessor of the Municipal Council and a secretary, besides factors and agents of the princely houses of Rome.

Old Silvio Spaventa, the "galley-slave" of Bomba, the arch-conservative who, with Agostino Bertami, voted against the railway convention "job," a friend and believer (till now) in both Cuciniello and Tanlongo, one of the last Ministers of the Conservative party, said publicly the other day: "If Giolitti goes forward on the path he has entered, he will attain an eminence that no other Minister has dared to approach. Standing on a pedestal of granite he will dominate parliament and country, because all Italians are athirst for justice." Bad as is the state of things, it is ridiculous to talk

of an "Italian Panama." Not a single Italian statesman has ever been accused of peculation; all have died poorer than when they entered office—some in absolute poverty. Neither have the misdeeds of two or three bankers cast thousands into misery, as have the Panama speculators—as did the failure of the Glasgow Bank for £12,000,000 sterling—or as now the missing directors of the Liberator. One thing is certain, and that is that banking operations will henceforward be carried on in a quite other manner than heretofore, whether the single-bank or the plural-bank system be adopted.

J. W. M.

SECONDARY EDUCATION IN FRANCE.

PARIS, January 20, 1893.

INSTEAD of getting cleared up, the Panama affair becomes more involved every day. Although it is still a matter of doubt how far its real importance—the question of persons apart—is in proportion to the feeling aroused, so great is the feeling that at the present time nothing else is talked of. All other matters have been lost sight of, notwithstanding that some of them are important, as, for instance, the budget for the year, which is not yet voted, and the tariff-war with Switzerland. These are forgotten, and we have only Panama. Amid the dramatic incidents that follow each other while ministries are made and unmade in a brief lapse of time, it is impossible to obtain a perception of things that is in any degree clear; and moderate and reflecting people, whose sentiments I have lately endeavored to portray, can now do no more than wait on circumstances. Their example is good to follow; and since, outside of the Panama affair, nothing seems just now to interest France, the best thing to do is to turn to matters which, though not what may be called "actuality," are nevertheless of real importance.

A book has recently been published in London which possesses for us French a paramount interest. It is a reprint of certain studies made by Matthew Arnold on education in France under the Second Empire.* In reading this book we can obtain an idea of the progress made since then in a branch of practical legislation to which the Third Republic has paid particular attention. It need hardly be said that the Republic has always attached great importance to the educational question. Its action, it is true, has been most manifest in the matter of primary education; but numerous changes have also been carried out in the secondary or higher education; and sweeping reforms, to say nothing of modifications of programmes, have followed one another continually. To notice all of these would require too much space and would scarcely be interesting; nor is such a proceeding necessary in order to understand the course that has been pursued. By dealing solely with the question of secondary education—that, indeed, with which Mr. Arnold more particularly concerned himself—and by considering only two or three of the subjects treated of, we can get an adequate notion of prevailing tendencies, and discover how these latter are related to those observable in the purely political sphere of action.

There is one fact on which Mr. Arnold insists at great length. He seems to have been struck, in the course of his visit, with the facilities afforded in France for the obtaining of secondary education. Both the number of educational establishments and the low fees paid by the pupils open the door to a very large number of people, and help in a way to stamp a democratic character upon our secondary education. Mr. Arnold had very justly pointed out, as a prime cause of this state of things, the fact that secondary education was almost entirely under the control of the State, which did not attempt to make profit out of it. In this respect there has been no change. The State is still trying, with greater insistence if possible, to get the whole of the education of the country into its own hands, and to take possession, where opportunity offers, of the various private schools that have managed to establish themselves. On the other hand, democratic tendencies are asserting themselves more and more every day, and it is sought to place instruction in all its degrees within the reach of every one. But if, from Mr. Arnold's time up to the present, the shell, so to speak, or general system of secondary education remains the same, the spirit in which it is given has been slightly modified.

In order to render our ideas more precise, let us take as an example the classical side of education. When Mr. Arnold wrote, the study of Latin and Greek was the basis of this kind of instruction. The pupil commenced the former of these two languages immediately on entering a public school—*i. e.*, at about eight or nine years of age—and Greek some two years later; and in certain respects these languages maintained their first importance all through the curriculum. Between 1870 and 1880, however, a marked reaction set in. It was in vain that the partisans of the prevailing system, falling back on the traditions of the previous century, when the study of classical antiquity was made the basis of all education, declared that the knowledge of classics and the classical masterpieces alone could impart a real intellectual culture; the reply was, that it was possible to obtain the same result from different studies, that it was unreasonable to spend so much time upon a dead language and literature, and that in the educational curriculum the first place should be given to the study of French. In addition to this it was said that, if the study of the mother tongue were found to be insufficient to develop the pupil's mind, it would be far better to have recourse to modern languages to supply the deficiency. In fine, the party professing these opinions carried the day, and the educational programme was modified. The study of Latin and Greek was confined to narrower limits, and a larger place was assigned to French and modern languages.

In this the utilitarian tendencies began to make their appearance; and henceforth, instead of people looking upon secondary education as a means of intellectual development, the obtaining of practical results began to be regarded as its most important aim. The dead languages having no longer any practical interest, the time devoted to them is comparatively diminished, and such branches of the study of them as cannot be shown to be helpful to immediate educational results have been pruned away. The composition of Latin verses has been suppressed because under no circumstances in life has any one any need to write them. The translation of French into the dead languages has likewise been suppressed, on the pretext that the scholars will never be called upon to compose in these languages, while it is completely overlooked that such exercises are necessary, not so much in order to be able to express one's self in Greek or Latin, as to be able to know these languages thoroughly and read them with ease. So, in the case of modern languages, the study of them is no doubt an excellent thing, whatever point of view be taken; but the vogue they have obtained is in large part an after effect of the war of 1870. If any proof is needed of this statement, it will be found in the fact that German is the modern language most studied. The same utilitarian tendency appears in the gradual introduction of scientific studies of all kinds into the curriculum of letters. It would seem as if the constant aim were to give the pupils notions and smatterings of everything which may be useful to them in life, and to enable them to leave the public schools furnished with an encyclopædic baggage, and lacking nothing except the possession of the special knowledge needful to their individual professions and trades. It is for this reason that lectures on the history of language, philology, comparative grammar, and physiology are given to them—in fine, lectures on all the subjects which in reality belong far more to university than to school education.

On account of the increase made in the number of subjects taught, there has resulted a school code enlarged to such an extent as to be difficult to carry out. In order to do justice to the curriculum, pupils had to work harder and harder; and, as M. Jules Simon justly wrote, "unfortunately, a day had only twenty-four hours in 1872 as before in 1802, and children had the same need as ever of rest and sleep." Then the question of overwork cropped up. It was affirmed, both in speeches and in writing, that scholars were working too hard, and that their brains were being crammed—a thing which, from a hygienic point of view, could give nothing but bad results. Matthew Arnold had already asserted in his book that at French public schools physical education was neglected. "I do not believe," he wrote, "that the confinement, the scanty recreation, and the long school hours of a French school-boy are without some unfavorable effect on his health and development." An attempt was made to remedy this state of things, but those responsible for the change went at once to the opposite extreme. The reaction did not show itself so much by a lightening of the programme of studies, as by importations of foreign games—especially English ones. English out-door exercise has become the fashion. Field clubs of all kinds have been formed, with international matches as an outcome of them; and a private school, the École Monge, has given an additional impulse to the movement by devoting a good many hours every week to promenades in the Bois de Boulogne. Last, but not least, football and boating are fast becoming established institutions. It would seem, therefore, that, through excess of zeal and the wish to remedy a bad existing state of things, the reform has been pushed to an exaggerated extent. The available hours in the week were already too limited for the scholars to be taught all they had need to learn; and now that a certain number of them are taken away in order that the various out-door games may be indulged in, there remains still less time for work, the pupils are still more overworked, and a new cause of deterioration has been added to others affecting the course of studies.

In fact, it is asserted by many who, at least some of them, may be considered authorities in the matter, that there is a considerable falling off in the average school work. This, indeed, is evident enough in the classical part, the dead languages being, as I have shown, somewhat sacrificed. But the point to be noticed is, that this falling off is not compensated for by a more thorough knowledge of modern languages or by the acquisition of really scientific notions. This lowering of the standard in secondary

* 'A French Eton.' New York: Macmillan.

education cannot fail to react upon our university education. Not that it must necessarily produce a falling off in the latter, for, as a matter of fact, our young men may acquire after leaving school the instruction that should have been given them while there; but from this postponement certain disadvantages are sure to ensue. I do not wish, however, to enter into the question of university education, as to do so would necessitate a consideration of other matters, such, for instance, as the military service which is binding upon all, and which, by its incompatibility with certain studies, interferes at the present time with the plans and careers of a great many young men. Questions of this kind want a special treatment, and, besides, it is not from a pedagogic point of view that I desire to draw conclusions in reference to the facts I have indicated. I might have adduced many others, but those I have mentioned suffice to draw attention to certain tendencies worthy of note. First of all, if French secondary education is, as I admitted at the commencement of this letter, in common with Matthew Arnold, essentially democratic by being accessible to all, it is so in other ways also. Thus, while in a measure pedagogic reasons influenced the change whereby Latin and Greek were begun later, viz., at an age when the pupils' minds were riper for the study of them, there was also another reason for the congratulations expressed by certain writers, to wit, that the change was a democratic one, since henceforth the bulk of French boys would receive a more analogous instruction, and there would no longer be a privileged class pursuing a different course of studies.

It is perhaps a consequence of this same democratic spirit which has given the directly utilitarian character that I spoke of earlier. The democratic spirit, as it exists among us, has always been essentially practical, positive in its applications, though at times carried away by chimeras, unfriendly to lofty speculation, and little disposed, therefore, to favor in a course of study what simply aims at producing a thorough culture, attainable only by the few, while the majority will never obtain any *visible* benefit from the education they have received. Thence also comes, and for the same reason, the importance assigned to scientific instruction in classical education. On this point Mr. Matthew Arnold, indeed, makes a very ingenious observation. Speaking of a university reform that was made in 1809, he says: "It restored to Greek and Latin their old preponderance in this instruction, effacing a mark which the Revolution, by the prominence given to scientific and mathematical studies, had left upon it." To-day, as is well known, the spirit of the Revolution is regaining ground in France every day. It is curious to see how, without there being any voluntary imitation, this influence is making itself felt in widely different fields of action. It is a demonstration, not very important, perhaps, but yet sufficiently characteristic, of the manner in which all things are connected together, and shows how a transformation of thought with regard to one point necessarily involves an analogous transformation with regard to all others. Thus, therefore, it comes about that questions apparently foreign to politics, as, for instance, are those of educational programmes, confirm and complete the observations we have been called upon to make in the purely political domain.

S.

POETRY IN FRANCE.

PARIS, January 19, 1893.

WHO remembers now the poets of the First Empire and those of the end of the seventeenth century, with the exception of Chénier? We feel almost ashamed to think that such men as Dorat, as Legouvé, were called poets in their time. The Romantic revolution which began after the downfall of Napoleon gave to France an immortal trinity of real poets—Lamartine, Victor Hugo, and Alfred de Musset. It is useless to compare them—comparisons are odious; it is enough to say that they will, all three, live as long as the French language shall live. They form in the firmament of French literature a constellation which shines with an almost dazzling light. Somebody was once asked what was the difference between glory and popularity, and answered that popularity was glory "en gros sous." Ever since our three great poets left us, we have only poetry "en gros sous"; we must be content with small change.

Innumerable, almost, are our poets: there is hardly a review, a weekly paper, which does not furnish us with verses, on all subjects, in all possible rhythms. There is a publisher in the Passage Choiseul who brings out all our modern poets, generally at their own expense; his name is Lemerre. He is the Providence of the young men who wish to enter into the modern Pleiades, and are content to be stars of the tenth magnitude in the poetic heavens. But who, you will ask, are the stars of the first magnitude? If we are to believe in the infallibility of the French Academy, it is natural, in order to answer this question, to name the poets who have been admitted among the Immortals. There are three at the present moment, Leconte de Lisle, Coppée, and Sully-Prudhomme. Whenever there was an Academical election, Victor Hugo, who never took any part in the intrigues which precede and accompany all elections, used invariably to write on his bulletin "Leconte de Lisle," till Leconte de Lisle was elected. He had recognized in him a brother poet, and I believe his judgment to have been correct. It seems to me that Leconte de Lisle stands higher on Parnassus than his two confrères, Coppée and Sully-Prudhomme.

The poetical work of Leconte de Lisle is almost a paradox of our time. The Romantic movement was idealistic, though some of the Romantics professed to pay the greatest attention to what is called local color. Lamartine's poetry is highly and purely idealistic; all human sentiments and passions found eloquent expression in Victor Hugo and Musset. These true poets were not devotees of the theory of "l'art pour l'art"; and, in fact, this theory marked the decadence of the Romantic movement. Théophile Gautier and Théodore de Banville were admirable versifiers rather than poets; they played with words, with rhymes; they were dilettanti in an art which is to real poetry what a pantomime is to a drama. Leconte de Lisle belongs more than we should like to the school of "l'art pour l'art"; he is the head of the Parnassians (we give this name to the poets who stand in the highest regions of Parnassus, wholly indifferent to what is going on in the sublunary regions, who are always repeating to themselves the words of Horace, "Odi profanum vulgus et arceo"). These artists in words seem not to care for any of the thoughts which embarrass us; they seem not to feel the troubles, doubts, and perplexities of passion; they almost ignore love—they profess only to worship beauty, and they worship it in the inorganic as well as in the organic world; their poems are a constant hymn to nature; they have a sort of hieratic calm and sublime indifference.

If I wished to give somebody a true idea of the Parnassian method and style, of the usual state of mind and soul of Leconte de Lisle, I think that I could not do better than to cite one of his happiest and most perfect poems, called "Midi":

Midi, roi des étés, épandu sur la plaine,
Tombe en nappes d'argent des hauteurs du ciel bleu.
Tout se tait. L'air flamboie et brûle sans haleine;
La terre est assoupie en sa robe de feu.

L'étendue est immense et les champs n'ont point d'ombre,
Et la source est tarie où buvaient les troupeaux;
La lointaine forêt, dont la lisière est sombre,
Dort là-bas, immobile, en un pesant repos.

Seuls les grands blés mûris, tels qu'une mer dorée,
Se déroulent au loin, dédaigneux du sommeil;
Pacifiques enfans de la terre sacrée,
Ils épuisent sans peur la coupe du soleil.

Parfois, comme un soupir de leur âme brûlante,
Du sein des épis lourds qui murmurent entre eux,
Une ondulation majestueuse et lente
S'éveille, et va mourir à l'horizon poudreux.

Non loin, quelques bœufs blancs, couchés parmis les herbes,
Bavent avec lenteur sur leurs fanons épais,
Et suivent de leurs yeux languissants et superbes
Le songe intérieur qu'ils n'achèvent jamais.

Homme, si, le cœur plein de joie ou d'amertume,
Tu passais vers midi dans les champs radieux,
Fuis! la nature est vide et le soleil consume!
Rien n'est vivant ici, rien n'est triste ou joyeux.

Mais si, désabusé des larmes et du rire,
Altéré de l'oubli de ce monde agité,
Tu veux, ne sachant plus pardonner ou maudire,
Goûter une suprême et morne volupté,

Viens! le soleil te parle en paroles sublimes;
Dans sa flamme implacable absorbe-toi sans fin:
Et retourne à pas lents vers les cités infimes,
Le cœur trempé sept fois dans le néant divin.

Absolute perfection of form—such is Leconte de Lisle's ideal; and where could such perfection be found better than in the world of Phidias and Praxiteles? Leconte de Lisle is nowhere more at home than in this Hellenic world; he is familiar with all its gods and goddesses; they are his idols. His "Poèmes antiques" seem like an echo of Theocritus, of Homer, of Hesiod, of Sophocles, of Euripides; he has given us translations from the great Greek poets, and he has scrupulously given the true Greek orthography of all the names. There is a little too much affectation in this servile reversion; there is also a like affectation in the apparent indifference (an indifference which sometimes borders on contempt) to the purely Christian ideal of life. In the poem called "Hypatia" the early Christian is called "le vil Galiléen." He says to Hypatia:

"Dors! l'impure Laideur est la reine du monde,
Et nous avons perdu le chemin de Paros.
Les Dieux sont en poussière et la terre est muette;
Rien ne parlera plus dans ton ciel déserté.
Dors! mais vivante en lui, chante au cœur du poète
L'hymne mélodieux de la Sainte Beauté."

La Sainte Beauté! that comes from the very soul of Leconte de Lisle, and his worship of beauty is always grave and hieratical. Since André Chénier, nobody has written such beautiful verses on Hellas and its gods; but there is sometimes in Chénier a touch of sensuality—of the sensuality of the eighteenth century—which you will not find in Leconte de Lisle. He is a priest of nature, and nature is to him a sort of living organism. It is no wonder, therefore, if he has entered as naturally into the world of Brahma and of Buddha as into the world of Olympus and the Greek divinities. He has read the Vedas: "Bhagavad," "The Death of Valmiki," "The Bow of Siva," "Sunah-Sephas," "The Vision of Brahma," transport you to the regions which no French poet had ever visited. The sentiment of these poems will appear in these few lines:

"Mais, dans l'inaction surhumaine plongés,
Les Brahmanes muets et de longs jours chargés,
Ensevelis vivants dans leurs songes austères,
Et des roseaux du Fleuve habitants solitaires,
Las des vaines rumeurs de l'homme et des cités,
En un monde inconnu puisaient leurs voluptés."

The poetical trilogy of Leconte de Lisle is composed of the "Poèmes antiques," the "Poèmes barbares," the "Poèmes tragiques." The "Poèmes barbares" remind you at times of Victor Hugo's "Légende des siècles." They begin with a poem on Cain, who is called Gaïn, as Jehovah becomes Jehvah, and Eve Héva; Abel alone remains Abel. A professor of Hebrew would have nothing to say, but we, the *profanum vulgus*, are ill at ease among these names. There are many wild and some beautiful passages in these "barbarous" poems; they carry us back to the middle ages, among the Sigurds, the Elfs, the rude sites of Brittany, of Scandinavia—to India again—from place to place, over the wide sea, to the distant stars. I prefer to the long poems some of the shorter ones; they are less pretentious, and give a form to simpler ideas.

On reading, as I have just done, all these poems, I was struck by their strangeness, their total indifference to all modern national or even human preoccupations. The poet seems to have nothing to do with his time or his age; he does not allow us to have the slightest vision of his own life, of his own sufferings; he is impersonal; he is not one of us. He cannot count upon any popularity; he will never be much appreciated in a time which has given itself entirely up to realism and naturalism. We can hardly understand Leconte de Lisle and Zola sitting in the same Academy. As our painters paint only what they can actually see, our writers describe only what is moving around them. They are all borne along on the great rapid and turbid current of life. Leconte de Lisle lives in unrealities; he sees only the invisible, he describes the untold; he is not an actor, he is a dreamer. His work produces on the mind the effect of opium; he gives us dreams of Hellas, of India, of unknown and impossible regions. The splendid music of his verses acts upon us as a monotonous song that puts a child to sleep. He is the poet of Nirvana.

Correspondence.

SOCIALISM IN PRACTICE.

To the Editor of The Nation:

Sir: In your editorial of January 5 upon "The French New Year," reference was made to the rapid gains of Socialists in many communes throughout France. These events have much more than ordinary interest and deserve, perhaps, some further comment. Who would have believed, some five years ago, that the Socialists would in 1892 have gained definite political power in above eighty communes? It is true there are about 36,000, but at least twelve of these communes are important centres, like Marseilles, Roubaix, and Montluçon. In several towns the Mayors are Socialists, and in several the City Council is wholly under the control of the Socialists. This power has come almost suddenly, and it would be an unusual experience in political history if no absurdity showed itself. Of the special freak with the police to which your editorial referred, I asked one of the most active and instructed Socialists as to his opinion. He replied: "Mais c'est trop bête, c'est trop bête." None seemed more intelligently to disapprove this step than the cooler heads among the Socialist groups. It is also fair to add that in several of these communes the very fact of the Socialist victories aroused the most violent local passions.

Yet the point of chief interest is the light which is likely to be thrown upon obscure but very important issues connected with Socialism, whose influence not only is spreading in the most influential centres in Europe, but has at last got a sort of Government recognition which is of a wholly new character. The French Government was savagely blamed for coquetting with the Carmaux strikers, but, as the Deputies have all the power there is, they had to recognize any political pressure that was *strong* enough. This influence the Socialists had, and it could not be ignored. Since the change of the law in 1884 giving free rein to the trade unions, these groups have increased from 68 to nearly 1,300, and they are growingly Socialistic. These unions are the object of the only organized and systematic propaganda that ever has been made in France, and the result has been as swift as it has been surprising. So large a city as Marseilles, distinguished by sixty-seven "self-help" institutions, with a membership of above 32,000, is, in spite of this fact, fairly given over to Socialist government. Other towns as considerable as Toulon, Roubaix, Narbonne, Montluçon, and St. Denis are nearly or quite Socialist, while definite members of city councils have been elected in seventy-four other communes. There are now nearly fifty papers and periodicals and a large number of libraries for the spread of the literature. I was told by the man in charge of the central Socialistic library in Paris that the new councillors were stocking the libraries of their communes with Socialistic books. Clémenceau's paper, *La Justice*, is one of the ablest papers in France, but one feels often in reading it that he has in hand a distinctively Socialist sheet. The stronger papers in Germany have for a dozen years been more and more compelled to reckon as seriously with Socialists and their organs as with any party in the country. In France this change has come with a rapidity which is perhaps the surest proof that Socialism has secured a new kind of power. The *Temps* now deals as regularly with Socialist issues as does the *Frankfurter Zeitung*. The leading Conservative papers have been driven to this recognition for precisely the same reason that the Government had to mix in the Carmaux strike—because Socialism has come to be an organized political force. It has, at any moment, such possible affiliation with the Radical party as to make it a most formidable opponent.

Whatever may be thought as to the dangers of this new power, the source of its influence is also the source of social security. While the German movement centres in Parliament, the French Socialists decentralize their action, and work upon the towns. No word is oftener on their lips than *l'autonomie*. They have at last got their chance to experiment with commonplace municipal problems. They will not stop making phrases, but the endeavor to make a success of the city control of gas, horse-cars, charity and poor-relief administration, the markets, etc., is an enterprise of such sobering quality that it offers probably the safest possible outlet for revolutionary fervors that could be devised. These attempts are now in their actual beginnings. They must be tried one by one under widely varying circumstances. They must go on under the constant criticism of a public that will daily become more competent to judge the results of communal control. In two of these communes they are already trying their hand at the question of poverty and poor-law relief. It is incomparably more difficult than the management of practical monopolies like city gas-lighting, horse-cars, bakeries, etc. I have seen a letter from one of the Socialist mayors, who, after a few weeks' experience, gives it as his opinion that measures must be taken to keep the deadbeat element from coming into town merely to enjoy superior advantages. "Nous ne pouvons pas soigner tout le monde." The fourth estate gets social responsibility, and immediately there is a fifth estate to make the old trouble. I do not offer this as an argument against Socialism, for it is not, but to show that exigencies will compel them to deal with human nature in no radically different way from the best present methods. The kind of power, in a word, which they can keep in the communes will force them to act practically and along the line of social advantage.

There is one remarkable sign of this. The German Socialists have thus far power chiefly as parliamentary critics. They, therefore, to a man, hold passionately to an abstract and dogmatic theory. The Marx legend will continue just as long as they are confined to criticism and shut out from practical contact with the kind of problems which town business and politics impose. The ablest English Socialists have already cut loose from the famous "surplus-value" theory, and in France the editor of their best periodical says: "We don't care whether Marx was right or not." This signifies, not less faith in the possibilities of a communal control of the "means of production," but rather that the energies are directed at last towards plain business tasks. They now boldly enter the field with their method of social, as distinguished from individual, management of city interests. It is the safest conceivable trial of the claims they bring. Whose opinion has any value as to the limits of these two forms of management? If the Socialists can lessen poverty and house the laborer's family with more decency, if they can furnish a better and cheaper bread and meat, we shall hear the news willingly. We shall see, at any rate, that Socialism as an irresponsible theory and Socialism restricted and disciplined by merely different forms of the same old problems—pitilessly practical as ever—will show us two faces of such different character that we shall be in some confusion as to their identity.

Yours, etc., John Graham Brooks.

Freiburg, Baden, January, 1893.

THE LORD'S DAY IN THE PRIMITIVE CHURCH.

To the Editor of The Nation:

Sir: My letter in No. 1439 of the *Nation* alleged a widespread confusion as to the claims of Sunday observance upon Christians. It attempted to account for this confusion by tracing our Sunday customs to their origin in the Puritan identification of Sunday and the Sabbath. And it further asserted that none of the Church Fathers or Christian writers before Alcuin grounds the obligation to keep Sunday upon any text having reference to the Hebrew Sabbath.

In the next number of the *Nation* appeared a letter on "The Lord's Day in the Primitive Church," signed by "E. P. G." He quotes from five early Christian writers, and draws this conclusion: "The Ante-Nicene Church, then, to go no further, agreed in teaching that . . . the Fourth Commandment, as a part of the moral law, and as interpreted by Christ and applied to the Lord's Day, is universally binding." The issue between us is therefore clearly defined.

If an agreement in applying the Fourth Commandment to the Lord's Day existed in the

Ante-Nicene Church, evidences of such application will surely abound in the writings of the early Christians, and may be expected to appear with peculiar explicitness in all five of "E. P. G.'s" proof quotations. Is this so? The first and second quotations do indeed imply, as "E. P. G." suggests, that the Lord's Day was observed by Christians instead of the Sabbath. But do they show that it was observed for the same reason and in the same manner, namely, in accordance with the Fourth Commandment? On the contrary, they show distinctly that the observance of the Lord's Day was different from the observance of the Sabbath. In explaining his next quotation, "E. P. G." attempts to show that Irenæus applied the Fourth Commandment to the Lord's Day; and asks in what other sense it could, in Irenæus's view, be of moral obligation. The answer to this question is given by Irenæus himself in the very chapter quoted—which, by the way, is the sixteenth, not the eighth, chapter of his fourth book against Heresies. After explaining that circumcision and the Sabbath were given as a sign between God and the children of Abraham, Irenæus continues that the former taught man to circumcise the hardness of his heart, "but the Sabbath taught that we should continue day by day in God's service." The fourth of "E. P. G.'s" quotations, from Origen, there is no need to "explain away," as Dr. Hessey is said to have done, for it is perfectly clear that Origen is not speaking here of the Lord's Day at all, but from first to last only of the Sabbath, the day preceding the Lord's Day. When Origen means Lord's Day, he says Lord's Day, as any one should know after glancing through his pages.

In the fifth quotation Eusebius, so far from speaking, as "E. P. G." avers, "substantially what others said before him," says something entirely new. There is here, unquestionably, a distinct progress towards the later conception. But Eusebius is far enough from basing either the ground or the method of the observance of the Lord's Day upon the Fourth Commandment. On the contrary, in justifying his application of the Ninety-second Psalm to the Lord's Day at all, Eusebius points out, in the very commentary from which "E. P. G." quotes, that this psalm does not (like the Fourth Commandment) speak "of the resting of God, nor of his cessation from work, as the Jews think," but of delight in the work of his hands; for, "if this psalm referred to the Jewish Sabbath, it ought to have spoken of delight in the resting of God and in His cessation from His work." Now it is precisely of the resting of God that the Fourth Commandment does speak; and its provisions, therefore, Eusebius can have here no thought of applying to the Lord's Day.

If in all the literature of commentary and homily and canon of the first three Christian centuries "E. P. G." can find no clearer statement than this of observance of the Lord's Day in obedience to the Fourth Commandment, it will seem, I fear, to most of his readers a long jump to his conclusion that "the Ante-Nicene Church" *agreed in teaching* "that the Fourth Commandment as applied to the Lord's Day is universally binding," unless, like "E. P. G.," by inserting the qualifying phrases "as interpreted by Christ, and applied to the Lord's Day," they beg the whole question. H.

A LETTER OF WASHINGTON'S.

To the Editor of The Nation:

Sir: Hidden away among a miscellaneous lot papers of the old Continental Congress, in the Department of State, is a letter of Washington's, which was not included in the printed collections of either Jared Sparks or Worthington C. Ford. The letter is as follows:

"Camp at White Marsh Nov. 11-1777.

"Sir. I have before me your favours of the 6th & 7th Inst.—The inconveniences arising from the allowance of Substitutes are severely felt & I fear will encrease. I will attempt some mode to detect Deserters now in service under that denomination. The public Arms furnished the Virginia Militia were directed to be put into the Hands of a member belonging to this State who joined Genl Potter at the time of their dismission—and whatever exceeded their supply, the officers were enjoined to have deposited at Lancaster in their return home. This I hope has been done.

"I am extremely sorry to find we have no prospect of obtaining supplies of Cloathing, except by forcing them from the Inhabitants. Such a procedure, I fear, would not relieve our wants, & at the same time would greatly distress the people & embitter their minds. I have had several officers employed in this State in collecting, but the quantities gained are trifling. There are some out now upon the Business. It appears to me, since our public Imports are so small & precarious, owing to the numerous Fleet, I presume, which lines our Coast, that no measure will be more likely to give us Aid, than the establishing of proper Agents in each State to buy every Species of Cloathing they possibly can for the Army. The supplies derived from hence, may be of infinite service, & in addition to those immediately imported by Congress will extend considerably to lessen our wants. The Agents, I think, should be active, suitable Men appointed by the Legislative or Executive Powers of their respective States. I have addressed Congress upon the subject.

"I am, Sir
"Your most obedt servant
"(Signed) G. Washington."

This letter is addressed to Richard Peters, Esq., Secretary to the Board of War, and is endorsed on the back "General Washington to the Board relative to clothing." It is important as another evidence of the straitened condition of the army in the dark days just preceding the darker ones at Valley Forge. In his letter to Congress, of the same date, Washington enters somewhat into detail concerning the appointment of agents, but of "Substitutes" and "Deserters" he says not a word.

Very truly yours,
Herbert Friedenwald.

Washington, D. C., January 30, 1893.

TINTORETTO'S ST. MARK.

To the Editor of The Nation:

Sir: Permit me to point out to Mr. Stillman and his Venetian friend that, in the answer of December 14, they prove themselves to be "still more widely astray" than I at first imagined. The intention of my first letter was to prove that Mr. Stillman had failed to see one of the most important masterpieces of the artist whose work he was reviewing. His answer proves that he has not seen three of these masterpieces, which, for a man who writes about Tintoretto, is much the same as if a Shakspere critic had never read "A Midsummer Night's Dream" or the "Two Gentlemen of Verona."

The point in dispute is whether, of the pictures Jacopo Tintoretto painted for the Scuola di San Marco, two are, as I stated, in the Royal Palace at Venice, and one in the Brera. This Mr. Stillman in his answer denies; but as he himself, in his article on Tintoretto, says that "'The Embarkation of the Body of St. Mark at Alexandria,' fine in color and architectural composition, is in the old Nicene Library, with the 'Rescue of a Sailor from Drowning by the Saint,'" it turns out that he is unwittingly in accord with me as to the first two pictures. The trouble evidently is that he is unaware that the old Library has for the last seventy years formed one of the halls of the Royal Palace. Although he enters into the merits of one of the pictures, he apparently did not take the trouble to look them up, or he could not have failed to know that the only way to see them is by applying to one of the flunkeys of the Royal Palace.

As to the third picture, which he described as being at Murano, he grants that it is not by Jacopo Tintoretto, but he is still unwilling to admit that the one I mentioned at the Brera is the one which completes the series. Turning to the Brera catalogue, where it is now entered under the number 234 *bis*, I see it expressly stated that this picture comes from the "Scuola grande di San Marco in Venezia." Turning to Ridolfi (vol. ii., p. 14 of the original edition), I find a description of the picture which corresponds in every respect with the Brera picture, as also does Vasari's description (Sansoni edition, vol. vi., p. 593). It is hard to understand Mr. Stillman's grounds for refusing such evidence.

It seems incredible that Mr. Stillman should have made in good faith the statement that the "Apparition of St. Mark in the Church of St. Mark" (at Venice) is the same subject as the "Finding of the Body of the Saint at Alexandria," when on the very same page (69C.) Boschini, whom he cites in his support, describes the two pictures separately, giving the former to Domenico and the latter to Jacopo. Mr. Stillman, in his answer, further tries to make it appear that these pictures formed one series, and were painted together. The truth is that the series by Jacopo, which made his reputation, were painted before the birth of Domenico, which occurred in 1562. The picture by Jacopo has not, to my knowledge, ever been at Murano, and the one by Domenico now there is, as Boschini proves, of another subject. As to the error of confounding the paintings of Domenico and Jacopo Tintoretto, which Mr. Stillman makes so light of, it is, of course, no greater blunder in the history of Italian art than it would be, in the history of American literature, to confound the writings of Julian and Nathaniel Hawthorne.

I am, sir, your obedient servant,
B. Berenson.

Florence, January 21, 1893.

[We can print no more letters on this subject.—Ed. Nation]

Notes.

J. B. Lippincott Co. have in preparation 'Major-General Wayne and the Pennsylvania Line in the Continental Army,' by Charles J. Stillé, uniform with this author's Life of Dickinson; a third edition, revised, of Bigelow's Autobiography of Franklin; 'The History and Theory of Money,' by Sidney Sherwood of the Wharton School of Finance and Economy; and 'Essays and Sketches, Educational and Literary,' by Julia Duhring.

The Life of Lowell for the American Men of Letters Series has been intrusted to Prof. Woodberry.

'Plato and Platonism,' by Walter Pater, is in the press of Macmillan & Co., as is also an anonymous argument for a future state, called 'The Unseen World.'

In advance of the speedy expiration of copyright in Donald G. Mitchell's 'Reveries of a

Bachelor' and of 'Dream Life,' Charles Scribner's Sons will issue popular editions of both these works. They further announce 'Froebel,' by H. Courthope Bowen, in the Great Educators Series; 'The Duchess of Berry and the Revolution of July, 1830,' in the series called "Famous Women of the French Court"; 'Tropical America,' by Isaac N. Ford; 'Stories of a Western Town,' by Octave Thanet; 'The People's Money,' by Col. W. L. Trenholm, Comptroller of the Currency under President Cleveland; 'Art for Art's Sake,' by John C. Van Dyke; and 'Calvinism, Pure and Mixed: A Defence,' by Dr. W. G. T. Shedd.

Forthcoming works with the imprint of Houghton, Mifflin & Co. are the late T. W. Parsons's translation of the 'Divine Comedy,' comprising all but a portion of the "Paradise"; Horatian Echoes,' translations by the late John O. Sargent; 'Bear Camp Water,' by Frank Bolles; and 'Socialism,' by the Rev. Nicholas P. Gilman.

Ginn & Co. will publish this month a volume of selections from Chesterfield's Letters, compiled for the young by Edwin Ginn.

A Rochester book of 1828, now seldom seen or heard of, 'History of the Indian Wars with the First Settlers of the United States, etc.,' is to be reprinted by George P. Humphrey of that city, and brought out on March 1.

A volume on the 'History of Elections in the American Colonies,' by Cortlandt T. Bishop, is among the spring publications contemplated by the University Faculty of Political Science, Columbia College.

While it would not be difficult to challenge here and there Dr. W. H. Payne's abridged translation of 'Rousseau's Émile,' in the International Educational Series of the Messrs. Appleton, it is on the whole exceptionally intelligent, correct, and idiomatic. We could have wished that Dr. Payne had disregarded the paragraphing of the original; and for its own sake the omission of the Savoyard Vicar's profession of faith is felt as a loss. There are three prefaces—Rousseau's own, which is sure to propitiate the curious reader; the translator's; and one by Dr. W. T. Harris, the editor of the series. Dr. Payne's is especially to be commended, and we should criticise it only with respect to its failure to intimate Rousseau's indebtedness to Locke, and still more to show, by citations from his correspondence, Rousseau's opinion of such of his friends and contemporaries as sought to follow in practice the lines of Émile's bringing up. Such evidence of Rousseau's really practical nature would have been worth more than the appendix of latter-day judgments of Rousseau by his countrymen. Finally, a slant at the higher education of woman may be detected on p. xxxvii. Dr. Harris's remarks seem to us of little worth, and to betray a scant familiarity with his author. It is naïve to write, as he does, "*Some of his biographers* relate the story that when the Academy of Dijon, in 1749, offered a prize," etc.

There can be no question about the correctness of the title, 'Eminent Persons,' selected for biographies reprinted from the London *Times* (Vol. I., 1870–75, Macmillan). Mazzini, Manzoni, Napoleon III., Guizot, Montalembert, Dickens, Lytton, Lever, Kingsley, Grote, J. S. Mill, Babbage, Landseer, Macready, Wheatstone, Murchison, Sir John Herschel, Liebig, Dr. Livingstone—such are some of the names comprised in the table of contents. Sometimes we have the *Times's* obituary, sometimes its leading article, and sometimes both: the notices are now brief, now elaborate, of uneven quality, and marked by the customary defects of journalistic biography and judgment of contemporaries. Up to the letter M, the English lives of this group are now accessible in the 'Dictionary of National Biography,' the latest and best authority, in which, for example, the mother of Sir John Burgoyne is named, whereas his illegitimacy is left anonymous by the *Times* writer, and in which his movements in Spain and Portugal during the Peninsular Campaign are set down with strict accuracy as to dates and order, whereas the *Times* writer confuses both on p. 45 and elsewhere. On the same page, by the way, the proof-reader has let "Messana" pass for Masséna. On p. 44 we read "chiefs" when Sir John Moore is intended; and these instances show that a second source of error has to be guarded against by the reader of this reprint.

The ninth volume of Prof. Henry Morley's "English Writers" (Cassell & Co.) is devoted to the age of Spenser, and proceeds upon the same general encyclopædic plan noticed in its predecessors. The dramatic side is mainly reserved for the next volume, which will be given to the group of Shakspere. The work is an invaluable compendious collection of literary information, well ordered and easily consulted, and its usefulness for schools and colleges probably reaches its climax in this portion and the issues immediately to succeed.

Students of Browning owe to Mr. Estes, the chairman of the Boston Browning Society, the reprint of what must be regarded mainly as a literary curiosity, the 'Life of Strafford' (Boston: Estes & Lauriat), in prose, written by the poet for his friend John Forster, under whose name it has hitherto been known. Forster had engaged to write the 'Life' for Lardner's 'Cabinet Cyclopædia,' but, being ill, was helped out of his difficulty by Browning, who took Forster's papers and did the task. To what extent Forster edited the volume is a matter of conjecture. It was published in 1836, and was unclaimed by Browning except in private conversation with his friends. It is of interest in connection with Browning's play on the same subject and as an example of prose style, but Mr. C. H. Firth has found it necessary to add an introduction to bring it up to date as a piece of biography. Browning himself did not enter upon historical investigation of the subject beyond what was needful to afford the basis of a passable biography, adequate to the popular purpose of the series of which this volume was one; but the work, within the limits set, was an honorable piece of hack-work.

A very full and charming selection from the whole field of English poetry, exclusive of the work of living poets, appears under the title 'A Paradise of English Poetry.' It has been arranged by H. C. Beeching in two beautifully printed volumes (Macmillan). The anthology includes not only lyrics and short poems, but excerpts from the longer works of English literature in poetry, and the contents are classified under headings of "Love," "Man," "Art," "Death," and the like. A very considerable body of the best of our literature is thus brought into a convenient form, and made available for persons with short purses.

The edition of Landor's works edited by Charles G. Crump is continued in two more volumes, 'The Longer Prose Works of Walter Savage Landor' (London: J. M. Dent & Co.; New York: Macmillan), of which the first contains the "Citation and Examination of William Shakspere" and "Pericles and Aspasia." We have already spoken of the admirable taste of the edition, which is annotated, and is in all respects a desirable one.

Miss Vida D. Scudder edits a school edition of Shelley's 'Prometheus Unbound' (Boston: D. C. Heath) with the usual aids to study. The 'Introduction,' which was published last summer in the *Atlantic*, was noticed by us then. Miss Lucy H. Smith furnishes an excellent comparison of the text with the drama of Aeschylus, with which Shelley's poem has affinity in some details; and the important modifications of the Greek conception and of the lyrical-dramatic method made by Shelley are clearly shown. Notes on the text, which, we are glad to observe, is purer than in Forman's edition, are added, and the stock criticism of Rossetti, Thompson, Swinburne, and others is freely drawn upon to develop the allegory and assimilate Shelley's more creative with Browning's more expository method—unnecessarily, as it seems to us. The volume, however, shows, as a whole, a painstaking and well-informed study of the subject, and is a creditable piece of work.

Mr. Richard Henry Stoddard collects, with the title 'Under the Evening Lamp' (Scribners), a baker's dozen of essays on the more unhappy and obscure literary men of the century, concerning whom he affords out-of-the-way information, and to whom he gives a tempered appreciation and much cordial sympathy. The names of the "contemporaries of Burns" will never be better known; and Motherwell, Bloomfield, Clare, Elliott, David Gray, and George Darley are but one degree above their unremembered kindred of the craft; Gifford, Hogg, Hartley Coleridge, Beddoes, Peacock are of another class, and Fitzgerald holds a surer tenure than these; but how Lord Houghton, whose name stands last, got into such society is puzzling, for he was neither unhappy nor obscure, and though he would have had all of them to breakfast at one time or another, he would hardly be reckoned one of their family. Mr. Stoddard's volume is pleasantly written, and has the pathos inseparable from such lives as were the majority of these.

Mr. H. W. Mabie's new volume of criticism, 'Essays in Literary Interpretation' (Dodd, Mead & Co.), is partly made up of papers in magazines and partly of old work revised and amplified. The subjects are somewhat vague and broadly treated, and in general it seems to us that the thought would submit more easily to condensation than to amplification. The serious aim of the writer errs in the direction of solemnity; his tendency is toward "the spirit of modernity" in all things, as a literary shibboleth; but, notwithstanding such elements of weakness, the core of his volume is sound, and the influence he desires to exert is on the side of right reason and high appreciation.

Volumes of sympathetic encouragement to the young and talented should receive delicate handling, for it is something more than ungracious to disparage a kindly and cordial, though mistaken, spirit of helpfulness; but it must be acknowledged that one is sorely tried by such a book as Mr. Robert Waters's 'Intellectual Pursuits; or Culture by Self-Help' (Worthington), which seems meant to inculcate in the young man's confiding bosom the belief that he is a genius. "Genius" is the subject of the author's story. Its "homes and haunts," "what it is," its "indications," examples of it "overcoming difficulty"; whether "poverty smothers" it; its character in "debate," "other conceptions" of it; how it is "awakened," how "developed"; whether it is "hereditary"; what circumstances are "most favorable" to it; how its works "originate" — winding up with "Colonel Ingersoll's Method of Preparation"—such are the headings of these chapters. Doubtless all this is meant in kindness, but, as the

heart of the author swells with sympathy, the head of the youth, *pari passu*, swells with something that will never be "self-help" and rarely issues in "culture." "Genius," like love, "will find out a way," without such a complete Bradshaw of its turnings. One sentence in the volume is worth quoting, not as a sample, but as a curiosity: "Not far from Boston is a long, red brick building, with open fields and a long avenue of trees before it, called Harvard College." This does not occur in the section on "the homes and haunts of genius."

A second edition in one volume of the English translation of Strauss's 'Life of Jesus' (London: Sonnenschein; New York: Macmillan) has a valuable introductory essay by Prof. Pfleiderer, who shows clearly what were the great and lasting merits of Strauss's work, and what its inevitable defects, and traces out the corrections and expansions which the studies of the past half-century have brought to the early results of the daring Tübingen scholar. The first edition bore the modest name of Marian Evans as translator; the present one bids for attention by substituting that of George Eliot.

'Whist Nuggets,' compiled by William G. McGuckin (Putnams), is made up of papers illustrating the development and practice of modern whist, with certain selections relating to the humor of the game which Sarah Battle thought should know nothing but rigor. The history is not brought down later than 1871, since which date "American leads" have won most of their triumphs, though this is perhaps sufficiently indicated in the actual playing rules quoted from Dunbar; and the humorous selections have no great range. In fact, the humor gives point to Mr. Burnand's remark that, considering how clever whist-players are, it is astonishing how dull they are. The volume naturally takes its place in the "Knickerbocker Nuggets" series.

'Rob Roy' is the fourth and latest issue in the Dryburgh Edition of the Waverley Novels (Macmillan). Mr. Lockhart Bogle's illustrations do not fall below the level of his predecessors'.

After repeated and determined, but ineffectual, efforts to read 'The Life of Christian Daniel Rauch,' by Ednah D. Cheney (Boston: Lee & Shepard), we are forced in self-defence to the conclusion that it is unreadable. A book at once so dry and so confused it has seldom been our fortune to meet with. Most of the material for it is confessedly taken from the German 'Life,' by Dr. Eggers, published in five volumes; and if there is nothing more entertaining in the original than in this abridgment, the book must be appalling. It probably has at least one advantage in that the original German is more intelligible than what passes for translation in the present volume.

Little need be said of the current issue of Mr. Marcus Huish's 'The Year's Art' (London: J. S. Virtue & Co.), of well-established repute for usefulness. Fresh portraits are 69 in number, all chosen among the "outsiders," *i. e.*, artists not connected with any society or institution. Our countryman F. D. Millet figures in this series. Then there are the usual select memoranda of notable pictures at several provincial and colonial exhibitions. To the British legal decisions affecting art are appended the case of Eyre & Spottiswood vs. the N. Y. *Recorder* Co., under our Copyright Act, in which justice was done the English proprietors of the plagiarized mezzotint engraving after Sant's "Little Lord Fauntleroy." Besides the indispensable Directory of Artists, there are records of art sales for 1892, a list of engravings published last year, etc., etc.

The forty-third year of the 'Bankers' Almanac and Register and Legal Directory' brings us the January edition for 1893 (New York: Homans Publishing Co.). The title speaks for itself, and the age of this publication answers for its worth to the class especially interested in it.

Garden and Forest for 1892 comes tastefully bound to our table, as Volume V., very fully indexed under one alphabet, and showing to advantage the sum of the choice weekly illustrations of tree, flower, and landscape. Mr. J. B. Harrison's notable series of letters on the shore-towns of Massachusetts overlaps this volume. Other serials have been Notes from West Virginia and from a summer journey in Europe, while the Harvard Botanic Garden and the Arnold Arboretum have furnished their regular supply of items. The varieties of chrysanthemum demand more space than is allotted to any other flower. The death of Sereno Watson heads in importance the obituary list of the year.

Miss Emma F. Ware's folio 'Family Genealogical Record' (Boston: W. B. Clark & Co.) is a compact arrangement for exhibiting ten generations of the owner's direct ancestry; but it seems to us to fall short of Mr. Whitmore's 'Ancestral Tablets,' of which the middle pages show eight generations in one view, and in which the ancestors provided with separate pages reveal themselves through holes. Miss Ware has to make use of numerical references for this purpose.

Janitschek's 'Die Kuntslehre Dante's und Giotto's Kunst' (Leipzig: Brockhaus) is a reproduction of his inaugural lecture on assuming his duties as Professor of the History of Art at the University of Leipzig. The interest of the pamphlet lies not so much in the author's somewhat Germanic ideas on the influence which the study of the history of art may or must have on modern production, as in his suggestive comparison of the parts which Dante and Giotto played in the reawakening of the human spirit. Dante's theory of art was substantially that of Thomas Aquinas, which he did much to make popular. Art was to him no longer mere handiwork but an inspired expression of the artist's self. Dante's "sweet new style," so finely described in the twenty-fourth canto of the 'Purgatory,' was, then, virtually identical with the new spirit of self-expression—in contrast with the hieratic and conventional style of the preceding school—with which Giotto laid the foundation of Italian painting.

Hamburg, as our readers know, mindful of her commercial importance and the benefits she had received from the discovery of America, purposed to celebrate the Columbus anniversary with a four weeks' exhibition of books and objects relating to the discovery, public meetings in the morning and evening of October 12, and the publication of a memorial volume of learned essays. The ravages of the cholera compelled the abandonment of the scheme, except the essays. These have appeared in two volumes, entitled 'Die Entdeckung Amerikas,' and published by L. Friederichsen & Co. In the first, after an introduction by G. Neumayer, there are disquisitions by S. Ruge on the history of the discovery of the New World; E. Gelcich, on the instruments and scientific aids to navigation at the time of the great continental discoveries; E. Baasch, "Contributions to the History of the Trade Relations between Hamburg and America"; and H. Michow, on Caspar Vopell, a mapmaker of Cologne in the sixteenth century. This volume is also illustrated by two maps, showing the eastern and western hemispheres according to Vopell's globe of 1542, and by a plate of his astrolabe of 1543. In the second volume H. A. Schumacher writes (a posthumous work) of the enterprises of the Augsburg Welsers in Venezuela, and of Juan de Castellanos; and L. Friederichsen gives nine pages to an account of Sir Walter Raleigh's chart of Guayana *circa* 1595, with a copy of the chart. The volumes are tastefully printed, and bound in white buckram, with Juan de la Cosa's compass card in colors, from his map of 1500, on the front side of each volume.

From G. Hedeler, Leipzig, we receive the second part of P. Richter's 'Verzeichniss der Bibliotheken, etc.,' or list of public libraries having 50,000 volumes and upwards. This part deals with Scandinavia, Holland, Belgium, France, Spain, Portugal, Italy, Greece, Servia, Rumania, Russia, Asia, Africa, Australia, South and Central America, and Mexico. Each library is characterized in terms more or less definite, from "miscellaneous" ("aus allen Fächern") to a dozen lines of particulars. We understand that Part i. is out of print. A list of American private libraries is in preparation by the same publisher.

The death of Mrs. Martha J. Lamb has been followed by the consolidation of the *Magazine of American History*, which she edited for so many years, with the *National Magazine*, the acquiring periodical forfeiting its own name in favor of the acquired, and the editorship being vested in Gen. James Grant Wilson. The magazine is enlarged and the price lowered; the place of publication is 132 Nassau Street. The February number contains a brief sketch of the life and writings of Mrs. Lamb—her 'History of New York City' being the most considerable—and indicates that the magazine will continue to be edited in the interest of antiquarianism rather than of history in the higher sense of the term.

The Archæological Institute of America announces that hereafter its official organ, the *American Journal of Archæology*, will be sent free of expense to every member of the Institute, life or annual. It desires to promote local affiliated societies and thus to extend its influence. The corresponding secretary is Mr. William C. Lawton, Bryn Mawr, Pa.

The third number of the State Library Bulletin, which records and classifies the legislation of the several States during the past year, has just been issued for 1892 at Albany. It is a work of the greatest utility, and deserves a place in every library.

The widespread and silly prejudice against tomatoes, a superstition for which the exploded doctrine of signatures is responsible, ought now to have received its death-blow. Writing to the London *Times* on behalf of the Medical Committee of the Metropolitan Cancer Hospital, its Chairman, Dr. Alexander Marsden, states that he and his colleagues, during the last two years, have been inundated with letters of inquiry as to whether tomatoes are an exciting cause of cancer. The answer, which he publishes for the behoof of such as are anxious on the subject, is, "that tomatoes neither predispose to nor excite cancer-formation, and that they are not injurious to those suffering from this disease, but, on the contrary, are a very wholesome article of diet, particularly so if cooked."

—The current *Century* continues its series of musical articles, which have hitherto been characterized by timeliness and special merit.

The timeliness of the article on Liszt, by Saint-Saëns, lies in the fact that Saint-Saëns, the most profound musician France has ever produced—the "French Bach" he might aptly be termed—is to pay us a visit next summer, on his way to Chicago, and in the circumstance that we have at present in Mr. Paderewski the greatest interpreter of Liszt that has ever crossed the ocean. Saint-Saëns's article on Liszt is an admirable specimen of musical criticism, more full of food for thought than even his chapter on the same composer, in his book entitled "Harmonie et Melodie," which was reviewed in these columns a few years ago and is now in its fifth edition—a rare success for a collection of essays. Like Dvorák, and, in fact, like most great musicians, conductors, pianists, and the public at large, Saint-Saëns is an enthusiastic admirer of Liszt's music, which has now, indeed, conquered the whole musical world. Saint-Saëns points out the pedantry and prejudice in the scorn which some people affect for Liszt's operatic fantasies, in which there is "more talent and real inspiration than in many compositions we see produced every day more serious in appearance, but of empty pretentiousness. . . . The ingenuity of his pianoforte combinations is simply prodigious, as the admiration of all who cultivate the piano testifies; but I think perhaps the fact has not been sufficiently noticed that in the least of his arrangements the intelligence of the composer makes itself felt; the characteristic 'earmark' of the musician is apparent, if only for an instant." In the Rhapsodies, again, "we find a reconstruction, and, if we may say so, a civilizing, of a national music of the highest artistic interest." "He never makes virtuosity an end, but always a means." Liszt's songs, too, are admirable, but his greatest works are his symphonic poems and his church music. In the symphonic poems "the mould of the ancient symphony and the hoary overture is broken, and he proclaims the reign of music freed from all rules except those only which the author himself makes to fit the environment in which he has chosen to work." Nowhere do we find a purer form than in his "Faust." "But it is in the exactitude and intensity of his expression that Liszt is really incomparable." In this sentence Saint-Saëns echoes the opinion uttered by Wagner in his essay on "Liszt's Symphonic Poems" shortly after their appearance. Liszt has been accused of a lack of ideas. Saint-Saëns, on the contrary, tells how "he scattered lavishly and at random the pearls and diamonds of his overflowing imagination." "His music bubbles over with melody," and the richness of melody is "balanced by as great a richness of harmony. In his bold search in the world of new harmony Liszt has far surpassed all that was done before him. Wagner himself has not attained the audacity shown in the prelude to 'Faust,' written in a hitherto unknown tonality, yet containing nothing to wound the ear, and in which it is impossible to change a single note." The article also contains extracts from letters of Liszt to Saint-Saëns which show his usual eagerness to praise colleagues, and his determination to continue composing whether it pleased the contemporary world or not. The complete letters are issued in the two-volume collection of 'Liszt's Briefe' just issued by Breitkopf & Härtel.

—The *Century* also contains a notable paper entitled "A Voice for Russia," in which the Secretary of the Russian Legation at Washington, Pierre Botkine, undertakes the defence of his country against the attacks on its humanity and civilization based on what is known of its Siberian exile system, its persecution of the Jews, and its oppression of other religious communions than the State Church. The argument is brief, is no more than a word. The ecclesiastical question is submitted to the process of diminution, or whittled down, as we say, so as to lessen the impression of its importance; the Jew question is represented as a purely economical one, or, so far as it has another phase, as springing out of the necessity of protecting the recently emancipated serfs from the rapacity of the money power in those who deal directly with them. The Siberian system is lightly touched on, and its horrors are described as inherent in any punitive system, or as incidental to the situation, or as over-charged by Mr. Kennan. The core of the article is in the sentence, "The principle we contend for in Russia is home rule." This was what the South contended for in the question of slavery. The answer is that questions of humanity at large are not like those of internal policy in local affairs, though the locality be an empire covering half of Europe and Asia, but are proper subjects of interest, criticism, memorial, and public appeal in all civilized nations. Mr. Botkine makes a direct remonstrance with us, and reminds us, as a people, of ancient friendship and of great services done us by Russia; he asks for a slow and just judgment, and certainly the appeal is of a high order. It is an extraordinary compliment to the national intelligence that such a paper, almost official, should be issued in this way, but it is a more marvellous sign of the times that the Russian Government should virtually be brought to plead before the bar of public opinion in America, as the result of discussion in a free press. The paper will doubtless receive wide attention, and may temper popular judgment for a while; but in this place we can only indicate its importance without examining its case. Other exceptional papers in this rich and varied number are those upon Tennyson and on the Turkish art movement—the latter by Dr. J. P. Peters, and beautifully illustrated.

—Mr. Parkman's second paper in the *Atlantic*, on "The Feudal Chiefs of Acadia," would of itself give distinction to a literary magazine. The other contributions are singularly alike in color—quiet, fireside pieces that recall the English congeners of the *Atlantic*, such as the old *Cornhill*, delightful to the literary-minded. The besetting danger of such a style in periodical literature is that the quiet should drop into the commonplace or possibly the somnolent; and though a pleasant manner may save a dull topic, or, in turn, a curious topic hold its own against a dull manner, one cannot expect so delicate an antithesis always to maintain its balance—the two kinds of dulness have a fatal affinity for each other. Then it is extraordinary what a number of subjects there are that really ought to be of interest but are not. The title is excellent, the expectation of interest (no small matter) is lively, "the thing" (as the editor often has said to himself) "ought to go"; but after the first paragraph the dismal failure begins to come in like the fog on a May morning. These remarks are by no means altogether anent this number of the *Atlantic*, though they germinate in the air of the room where one peruses it. The authors write of the reading habits of people in Ireland, of winter in the English Cambridge, of Count Rumford, of courage in soldiers, of the likelihood of the felling of the White Mountain forests, of Thomas William Parsons; but whether the dulness is in the topic or the writer, if in either, or whether the quiet style, neither commonplace nor somnolent, but just what it should be, is not hit in the bull's eye (if so violent a metaphor may be tolerated), by all these papers, the reader must be constituted sole judge, for the standard is necessarily a personal one.

—In *Scribner's* the Marquis de Chambrun, whose reminiscences of Lincoln we mentioned last month, writes of Sumner in much the same strain of cordial appreciation and profound respect. He brings out the essential strong point of Sumner, his moral energy; and, by setting the parts of his career that were questionable from a political point of view in the simple light of his moral convictions, and by illustrating how intellectual and merely political opinion tended to become moral feeling in Sumner, the writer presents the character of the independent and self-trustful Senator most favorably and most justly to himself. Two papers on Italian art are of interest, largely through their illustrations; and two papers of foreign travel, with Mrs. Burnett's "The One I Knew Best of All," complete the main contents of the number.

—In *Harper's* the memorial papers of Whittier, by Mrs. Fields, and of Curtis, by the Rev. John W. Chadwick, set forth the personal traits and habit of life of these two men, each of whom had the secret of winning that peculiar regard from his readers which is, perhaps, the best-prized reward of authors, and constitutes the just ground for publishing some account of their private lives. Mrs. Fields succeeds in giving, by way of anecdote and brief passages from letters, an impression of Whittier's temperament as well as his behavior among his friends, and she shows the literary interests that were most felt by him—the books and the things that he really valued—with a breadth that gives full play to his strong individuality. His intellectual life was not that of a scholarly or learned man, or of a much-discriminating mind, but resembled that of many an American home, in which serious and good books are welcomed, and acquaintance with them is an interesting event, without too much scrutiny of the gift, which often is a humble offering; it suffices if the volume be good enough to help maintain reading as a part of the order of family life. The account of the poet's first visit to Boston is a fine glimpse of past conditions of New England, so far away as to seem as foreign as Scotland. Mr. Chadwick's success in delineating the figure of Curtis at Brook Farm, Concord, and Ashfield, and in rendering the friendly courtesy of his voice and manner among guests, is equal to that of Mrs. Fields in her kindred task. He writes with a mingled warmth and respect, and an enthusiastic admiration well tempered by a deference that is rather felt than expressed. His word is more a tribute than a revelation, but it is paid to Curtis in his hour of leisure, in the main, and is delightful in the reading.

—One of the saddest signs of the undeveloped state of logical thinking among even scientists at the present age of the world is the lack of criticism with which the writings of many of the popular modern Italians are received. The article by Prof. Ferrero in the last number of the *Monist* is an instance of a silly, wishy-washy, inconclusive, and pretentious style of writing which one is surprised at seeing printed in all quarters without comment. The subject of the article is "Cruelty and Pity in Woman," and the substance of it consists in a detailed account of a large number of individual instances of those emotions (as an example, a case of a young Russian peasant woman who,

having become a queen of brigands, used her former lover as a kind of living foot-stool), from which instances the remarkable conclusion is reached that pity and cruelty coexist in women, and that, in the progress of civilization, pity is gaining the upper hand over cruelty. As regards a comparison between men and women in respect of these emotions, this writer begins by saying that Herbert Spencer is not quite correct in affirming that among savage nations the women are as perverse as the men, and by asserting, on the contrary, that, "generally speaking, woman, even at the very beginning of human evolution, is less cruel than man"; but a few pages farther on, he forgets that this is his thesis, and, led astray by his own "instances," he writes: "But again we find a series of contradictory facts which bear witness that the sentiment of pity *also* is much keener in woman than in man." It need hardly be said that this second series of facts is equally incompetent with the first to establish the conclusion that woman is either more or less or equally pitiful with man. As regards cruelty, nothing, of course, would be easier than to write down a far longer list of instances of far more atrocious cruelty on the part of men than those here described; one has only to glance into Letourneau's 'Evolution of Marriage' to see what unimaginable things men have done to wives.

—One cannot but wonder, again, what kind of psychology this writer professes which leads him to find anything "contradictory" in the fact that some women are cruel and other women are pitiful, or even that the same woman may be cruel to her enemies and tender-hearted to her friends. After mentioning that many of the fiercest heroines of the Paris Commune had been trained nurses during the war, he says: "Contradiction in feeling is so often a psychical law that a great Italian philosopher, Robert Ardigò, has said that man is not a logical being." Cruelty and pity are not identical sentiments, it is true, but that any one can suppose that there is anything "contradictory" in feeling now one and now the other of them, is indeed some evidence that "man is not a logical being." Prof. Ferrero's argument, while utterly inconclusive, does nothing, of course, to *disprove* the common belief that women are, on the whole, less cruel and more tender-hearted than men, which is merely a part of the larger conviction that they have, on the whole, a higher moral development than men. It is wrong to suppose that it is not worth while to castigate in the public prints such specimens of unreason as this of Ferrero's. Man's chief hope for securing a better existence for himself in the future than he has had in the past lies in the gradual perfecting of his powers of reasoning, and it is to the rigid methods of reasoning that prevail in science that he looks for guidance for all the more difficult and more urgent questions of public and private life. It is therefore particularly to be regretted when a scientific audience relaxes its vigilance and takes the show of reasoning for the real thing.

—The interesting third annual report of the College Settlement Association confirms a (not unfriendly) common criticism of this work, *i. e.*, that its impulse is subjective, seeing that the Association classifies the workers as graduate-students and not as philanthropists. Although but three years old, eleven colleges (Wellesley, Vassar, Smith, Bryn Mawr, Wells, Packer Institute, Cornell, the Harvard Annex, Swarthmore, Elmira, and Mount Holyoke) are officially represented in the work and government of the Association, with promise of other colleges to join. By aid of two settlements in active operation and a third just opened—with widely different local problems in each settlement—the student of sociology is promised "ample material for her investigations." This year, also, two fellowships, of $300 each, have been awarded, one for work in New York and Boston, the other in the Philadelphia settlement and at Hull House, Chicago. Against 219 subscribing non-collegiate members there are 540 collegiate members, 17 of these being graduates of colleges not yet formally affiliated, such as Barnard, Boston University, Yale, and the University of California, from which last institution the New York settlement has drawn its present "head-worker." It is undoubtedly a good sign that college women feel that this work demands their best activity and support, as "no small part of the value of settlement life lies in its educating influence on the workers"; and "hence it is in this training of college women to an intelligent and sympathetic interest in the great problems before the world to-day that a strong reason for the settlement is found." So far the Association has "no statistics to record, no tabulated additions to economic science to deliver." Sooner or later, however, the public will, not unreasonably, look for some such accredited fruit of this commendable form of associated effort. The schedule of the more definite work of the senior settlement indicates a broad and generous coöperation with established philanthropic agencies, and attention wisely concentrated on the juvenile citizen. We doubt whether the best results, either social or economic, can be reaped without modifying a system which makes the average length of "residence" but four months, with an increasing proportion of helpers who are in the house less than four weeks. Of the twenty New York residents for the year ending September, 1892, one only remained through the year; the Philadelphia record shows even a more shifting staff, three of the six having stayed less than one month. In plain terms, the college settlement in the United States up to date is a station of observation, a sociologic picket-post.

—Mr. John Webb Probyn's 'Italy : 1815 to 1878,' has been favorably known for nearly ten years past as the best compendium in English of the history of Italy from the fall of Napoleon to the death of Victor Emanuel II. This book has now appeared in an Italian translation by Sofia Fortini-Santarelli (Florence: Barbèra), with additions in the concluding chapter which bring the record of events down to 1892. So far as we have compared the translation with the original, it is sufficiently exact, allowing for the habit of all but the best Italian writers of using intensifying adjectives. That Mr. Probyn's work should be deemed worthy of translation is a proof of its usefulness, for it has to compete with a constantly growing number of native short histories of Italy's unification. Its characteristics are clearness in general outline and a commonsensible selection of the principal outward events in Italy's long struggle. We do not recall any striking display of ability in his account of any of the many diplomatic entanglements in which, for more than fifty years, the Italian cause was involved, nor should we look to Mr. Probyn for keenness in discerning the finer shades of political development. To take a single instance, he fails, we think, to give the Revolution of 1848–9 its due significance, because he fails to state with adequate emphasis that the frequent changes in the ministries in Piedmont, Florence, and Rome meant much more than a mere change in men. The key to that Revolution is that up to July, 1848, the great majority of Italians expected their redemption to be wrought by their Princes; after Custozza, however, Democracy—the cause of the People—strove to achieve without or even against the sanction of the Princes that which the Princes had failed to achieve. Viewed in this way, the Italian Revolution of 1848 illustrates how in epochs of upheaval the Radicals of one day become the Moderates of the next—a process which, in the ordinary course of political development, is so slow as to escape recognition by all except the most attentive observers. But while we miss these deeper qualities in Mr. Probyn, we can commend his straightforwardness and the skill with which he has condensed much material into a small space. It is a pity that both the English and the Italian editions are unfurnished with references. In lieu of them there is a page-long list of "books read and consulted"; but this is as unsatisfactory as it would be for a botanist to be told that a certain flower grows in Asia; he would hardly be encouraged without more definite information to set out to find that flower for himself.

SIR LEPEL GRIFFIN'S RANJIT SINGH.

Ranjit Singh. By Sir Lepel Griffin. [Rulers of India.] Oxford: Clarendon Press; New York: Macmillan. 1892.

THE name of Sir Lepel Griffin, K.C.S.I., is already known to American readers as that of a lively critic of our manners and customs. When he comes to treat of history and character, we are not surprised to see combined with his vivacity a certain moral skittishness. He evidently cherishes a sympathy with the greatness which sets itself above what he calls the commonplace virtues of the average citizen, including honesty, good faith, and mercy, as well as purity and temperance; forgetting, perhaps, that, as Coleridge has said, a perfectly evil character, from the unity of its motives, has an advantage over characters less perfectly evil, and may thus attain a black kind of greatness. He regards war as necessary to healthy life. While most Englishmen, even of the Jingo order, look back to the great Mutiny with a shudder, Sir Lepel holds that a more fortunate occurrence never took place in India, as it was the means of breaking up a bad army, producing a happy change in the system of government, and displaying the qualities of the ruling race. He speaks with something like complacency of the method of "short shrift and the nearest tree" as the simplest in dealing with delinquents, and does not strongly object to the practice of blowing away from guns on a large scale, provided it is done "in good faith" and with a view to the swift suppression of rebellion. His view of humanity altogether is that of a strong and somewhat cynical ruler of his kind. There can be no religious toleration, he thinks, except that which arises from indifference and selfishness. Altogether, we are led to suspect that if the spirit of Sir Lepel prevailed in the Anglo-Indian Empire, the moral liabilities of the imperial country might be serious. As a high Indian official, however, he is an authority on his subject, and he writes in a lively style.

Ranjit Singh was about the ablest and most successful of the adventurers who, in the hideous anarchy which followed the fall of the Mogul Empire, pushed their fortunes amid blood

and rapine till their career, or that of the kingdoms which they founded, was arrested by the advance of a great power of order in the form of European conquest. The basis of his empire was the Sikhs, a theocratic population of the Punjab, which he organized into a formidable army. The religion of the Sikhs was, as Buddhism had been, a heterodox form of Hinduism. Both alike seem to have had their origin in the desire of deliverance from transmigration; for whatever may be the exact meaning of Nirvana, deliverance from transmigration it must certainly imply. Both movements were also revolts against caste, though in this respect the Sikh revolt was less pronounced than the Buddhist. That Hinduism held its ground against both, and has almost extinguished Buddhism in Hindustan, is a fact to be explained, as Sir Lepel Griffin thinks, by the superior attractions of Hindu ritual and ceremonial, which especially influenced the women. He compares the tenacity of Hinduism with that of Roman Catholicism, which has survived so much logical demolition. Mohammedanism, however, not Brahmanism, was the grand object of Sikh antipathy, and it was against Mohammedans that the Sikh sword was commonly drawn. The doctrine of the Sikh Scriptures appears to be not unlike that into which, under the pressure of our theological perplexities, a good many European and some American minds are beginning to slide. In the 'Granth' it is said:

"(1.) The One is diffused in the many and all-filling. Wherever I see, there is He.
"By the beautiful mirage of the Māya the world is deluded; only some rare one comprehends the truth.
"All is Govind, all is Govind, without Govind there is no other. As on one string there are seven thousand beads, so is that Lord lengthwise and crosswise.
"(2.) A wave of water, froth, and bubble do not become separate from the water.
"This world is the sport of the Supreme Brahm playing about. He does not become another."

The creed may apparently be defined as Pantheism combined with a strong conception of the Deity, and having as its corollary predestination, qualified as usual by the practical recognition of free will. We can understand, though it sounds strange, that there may be, as Sir Lepel Griffin tells us there is, a certain resemblance between the 'Granth' and Walt Whitman. An Eastern religion would be incomplete without dietetic restrictions. The Sikh religion does not expressly forbid the eating of beef, though practically it has bowed to Hindu prejudice; but it forbids the smoking of tobacco. The consequence is, that its votaries have taken to opium and hemp, the latter of which Sir Lepel Griffin says is far more injurious than tobacco. This is a warning, and not the only one of its kind, to such as put their trust in sumptuary legislation.

The Sikhs are a peasantry slow-witted—dull, Sir Lepel Griffin says, as their own oxen—but excellent material for an army, brave, steady, and enduring, able to march for several days at the rate of thirty miles a day. Ranjit made of them his soldiers, while he took his counsellors from the quicker-witted races. As soldiers they proved a match for the British. Having passed under British rule and into the British armies, they are one of the great pillars of the Empire. In character they have undergone a happy change under strict European discipline administered by sympathetic officers, and from ferocious freebooters have become models of military dignity and respectability. Sir Lepel Griffin says that he had many opportunities of observing their conduct during the campaign in Afghanistan, and that no praise can be too high for their patience under privation, and for their orderly behavior towards the Afghans, who were their ancient and bitter enemies. They are available as troops not only in Hindustan, and they volunteer freely for all services, even for that of police in Burmah, from which other natives recoil.

The great Maharajah, as his admiring biographer admits, "judged from a commonplace, ethical standpoint, and measured by a conventional rule, has no moral character at all." He was "selfish, false, and avaricious, grossly superstitious, shamelessly and openly drunken and debauched." In him, as in Cæsar, Alexander, and Napoleon, "intellectual strength was not allied to moral rectitude." If we may rely upon the picture drawn by one who knew the Maharajah, the likeness to Cæsar and Alexander did not extend to the outward man. Ranjit is described by Baron Hübner as short and mean-looking, with one eye closed, the other always rolling and distorted by disease, a face deeply pitted with the smallpox, a short nose swollen at the top, thin and tight lips, a grizzled beard matted under the chin, and a head too large for the body. His appearance was rendered still more hideous by a complete suit of gamboge. He was muscular, however, and, even when affected by paralysis on one side, made a fine figure on horseback. When Baron Hübner saw him, he was past his prime. He must have set out with a constitution of iron, for he had wallowed from his boyhood in debauchery, and he drank every night large quantities of a fierce mixture compounded of corn brandy mixed with the juice of meat, opium, musk, and various herbs. With all this, his nerve or his power of doing business seems never to have failed him.

Like Peter the Great, the Maharajah drew into his service ability from all quarters and all creeds. Bigoted Sikh though he was, Brahmins, Rajputs, and Mohammedans found places at his council board, while his army was organized, in European style, by French and Italian officers, some of whom had been in the service of Napoleon. His army amounted to 80,000 men, and enabled him to pursue a glorious career of rapine. His perfidy and ingratitude in dealings with his neighbors and feudatories appear to have equalled his rapacity. He owed his possession of the famous Koh-i-nur and the equally famous mare Saili to the same method as his other acquisitions. His civil administration appears to have been a rigorous application of the simple Eastern system of extortion through local delegates, who paid themselves by peculation, and who extracted from the cultivator the utmost farthing that could be taken without compelling him to abandon his fields. Sir Lepel Griffin is enabled to assure us that where, out of twelve shillings' worth of produce, the Sikh Government took six from the peasant as rent, the British Government takes only two or one. Yet Ranjit appears to have been rather an object of admiration than of hatred to his people. Even his rule was better than weltering in anarchy or exposure to the murderous raids of the Mahrattas. Out of the twelve shillings it was something to be able to call six your own. Elsewhere in the deluge which followed the fall of the Mogul Empire, towns and villages were deserted, and large tracts of cultivated country lapsed into forests.

Ranjit had the wisdom always to keep on good terms with the British Empire, notwithstanding that it had put a veto on some of his ambitious schemes. He had seen the barbaric powers of Hindustan successively dashing themselves upon it, always to be shivered by its might. But with the great Maharajah his policy and his Government died. His zenana gave birth to no heir of his genius, and soon there was no certain heir of his line. Anarchy broke out in the counsels of the State, and at length the Sikh army crossed the Sutlej, and, without cause of war, in its turn, precipitated itself on the British power. How it fought and into what peril it brought the Empire on the dreadful fields of Sobraon, Aliwal, Chillianwallah, and Ferozshah, no Englishman whose memory goes back to those times is likely to forget. Never was "wild Mahratta battle" so wild or so terrible as the evening of Sobraon. The dearly won victory of the British was inevitably followed by annexation, and in place of the great Maharajah Ranjit Singh reigned the great pro-consul Lawrence. The honors which the Sikh soldiers had won by their gallantry in the long contest, in spite of their defeat, reconciled their pride to the change of standard; they felt that they were welcomed as worthy brethren in arms. From that time there has been peace in India unbroken, save by the great Mutiny, for forty-five years.

Sir Lepel Griffin is not too much of a Jingo to look forward to the day when British empire in India shall have come to an end, and when the conquest shall be taught as ancient history in the board schools of a distant future. It seems, indeed, impossible that the two hundred and fifty millions of India should for ever be governed by a handful of men coming from a far distant country, alien in character as well as in language and habits, and of a race which is incapable of acclimatization. Yet it is difficult at present to divine from what quarter dissolution will come. If Hindustan were a nation, the reign of its conquerors would probably be short; but it is not a nation: it is a congeries of populations which are divided from each other by race and religion, and among which violent antipathies prevail, while nothing like national pride or spirit exists. The long peace, moreover, has tamed the character of races which were once warlike. The native princes, feudatories of the Empire, owe to it, and well know that they owe to it, the security of their thrones and the permanence of their dynasties. When danger threatens it, they promptly come forward with proffers of assistance, and they remained true to it during the Mutiny. Not till, under the educating and harmonizing influence of the conquerors' government itself, unification shall have greatly advanced, is any serious movement against the ruling power likely to proceed from the subject races. Russian invasion is a diplomatic threat, and will probably come to nothing beyond guard-room talk, unless Great Britain, by her hostile policy on the Mediterranean, constrains Russia to create a diversion on the side of Hindustan. Besides, Russia herself is seriously menaced by internal convulsions which would disable her as a conquering Power. The most serious danger which at present threatens the British Empire in India is probably the triumph of democracy in the imperial country. A democracy, whatever may be its internal blessings, is incapable of governing an empire. This is already beginning to appear.

MAHAN'S SEA-POWER.—I.

The Influence of Sea-Power upon the French Revolution and Empire—1793-1812. By Capt.

A. T. Mahan, U. S. N. 2 vols. Boston: Little, Brown & Co.

THESE volumes continue the work begun by Capt. Mahan in his initial volume published a few years since upon the 'Influence of Sea-Power upon History—1660-1783'—that is to say, from the era of the definite establishment of sailing ships to the end of our Revolutionary war. The object announced in this publication was to examine the general history of Europe and America, for the purpose of establishing and making more fully known the effect of sea-power upon the course of that history.

The volumes just published cover the period from the outbreak of the war between Great Britain and France in 1793 to 1812, the year marked in European and American history by the invasion of Russia by Napoleon—the beginning of the end of his empire—and also by the outbreak of our second war with Great Britain. As a consequence, these volumes treat almost exclusively of the wars of the French Revolution, Consulate, and First Empire. They combine naval history with original strategical studies of war upon the ocean, and also a general historical research and philosophical examination that make them of great permanent value and exceptional interest, and in a high degree creditable to our naval service and to the country. They owe their inception wholly, the author declares, to his connection with the Naval War College at Newport, first as Lecturer upon Naval History and Naval Tactics, and afterwards as President. Despite its short career and uncertain fortunes, the War College has given a rich return to the naval service and the Government for the small appropriation required for its support. By threshing out naval problems and discussing and defining the various technical elements which enter into the formation of naval policies and naval warfare, it should save much extravagance of legislation and administration, as well as of misdirected effort.

The introductory chapter of the first of the two volumes under review gives an outline of European events preceding the year 1793 and following the end of our war for Independence, and so bridges the gap in Capt. Mahan's series. In this chapter the examination of the question of the free navigation of the Scheldt from Antwerp to the sea recalls the close interest of Great Britain in this matter, which continues to the present day. The Scheldt is now free and Antwerp a commercial port of importance; and where the Scheldt, the Meuse, the Rhine, and the Thames meet in the North Sea, near the Straits of Dover, now as in times gone by is probably the greatest centre of the world's commerce. Yet Antwerp is not a strong naval station, and Belgium is not a strong Power. Situated as Antwerp is, directly opposite to and at no great distance from the mouth of the Thames, held by a strong Power, it would be a menace to Great Britain's trade and territory upon the North Sea; hence that country's concern regarding the status of Belgium is both immediate and vital.

Treating of the condition of the European navies in 1793, and especially of the French Navy, Capt. Mahan shows in a graphic manner the insubordination and disorganization due to the Revolutionary ferment. Though matters were much improved at a later period and especially during the Consulate and Empire, the service never recovered from the shocks it received at that time. The factors needed for an efficient navy seem never to have been appreciated by the French administrators of the day. Courage and audacity were looked upon as the only essential qualities, Napoleon himself saying that the English would become very small when France had two or three admirals willing to die. The truth which Prof. Bryce calls the greatest discovery ever made in the art of war, that organization and discipline count for more than numbers, had too evidently been lost sight of in the reformation of the French Navy.

"Enough has now been said," summarizes our author, "to show the general state of the French Navy in the last ten years of the eighteenth century. The time and space thus used have not been wasted, for these conditions, which continued under the Empire, were as surely the chief cause of the continuous and overwhelming overthrow of that navy, as the ruin of the French and Spanish sea-power, culminating at Trafalgar, was a principal factor in the final result sealed at Waterloo. Great Britain will be seen to enter the war allied with many of the nations of Europe against France. One by one the allies drop away, until the island kingdom, with two-fifths the population of France and a disaffected Ireland, stands alone face to face with the mighty onset of the Revolution. Again and again she knits the coalitions, which are as often cut asunder by the victorious sword of the French army. Still she stands alone on the defensive, until the destruction of the combined fleets at Trafalgar, and the ascendancy of her own navy, due to the immense physical loss, and yet more to the moral annihilation, of that of the enemy, enable her to assume the offensive in the peninsula after the Spanish uprising—an offensive based absolutely upon her control of the sea."

The combination upon sea and land in 1793 and 1794 against France had caused a great scarcity of food, which, with bad harvests, made recourse to the United States a necessity. One hundred and thirty vessels sailed from our coasts laden with breadstuffs and produce from the French West Indies under the convoy of a French squadron. This led to the first great naval campaign of the war and to the battle commonly known as Lord Howe's action. The fleet under Villaret de Joyeuse sent from Brest to escort to that port the convoy met the English Channel fleet under Lord Howe sent to intercept the convoy, and, after two partial engagements, the fleets, equal in number of vessels, but unequal in the skill and experience of the personnel, met upon the 1st of June, 1794, four hundred miles from the nearest land, and fought the first great naval engagement of the war. The French fleet was defeated with a loss of seven ships of the line, but the remaining vessels reached port safely, and the convoy, the object of the campaign, was saved. Strategically the French were successful, but suffered from the loss of ships and prestige due to a defeat; not such a defeat as they encountered in later years, but sufficient, notwithstanding the incident of the *Vengeur*, to lower still more the tone of the service.

From this time until the battle off Cape St. Vincent in 1797, no great naval event occurred in the war. The English fleets were far from being aggressive, and the policy of keeping the sea constantly and masking in force the enemy's fleets had not yet been adopted by their commanders. The French, in turn, from their disasters, from the inefficiency of officers and men, and from the destitution of their dockyards, also remained in port and accepted their naval inferiority, having recourse to commerce-destroying, always ineffective when not accompanied with the command of the sea. Napoleon accepted this only from necessity, realizing that on sea, as on land, vital results can be obtained only by the use of large forces. In discussing this question, Capt. Mahan, to our mind, indicates the most effective rôle for an inferior navy. As for many years our naval position in the main will be one of inferiority, it may be well to quote his remarks:

"To assume a menacing attitude at many points, to give effect to the menace by frequent and vigorous sorties, to provoke thus a dispersion of the enemy's superior force, that he may be led to expose detachments to attack by greater numbers—such must be the outline of conduct laid down for the weaker navy. But that such a course may be really effective—that the inferior may, as in some of Bonaparte's wonderful campaigns, become ultimately superior—there must be at some fitly chosen point of the sea frontier a concentrated body of ships; whose escape, if effected, may be the means of inflicting a great disaster upon the enemy by crushing one or more of the exposed fractions of his fleet. Unless there be such a central mass, mere dissemination is purposeless. Inferiority carried beyond a certain degree becomes impotence; nor will all the commerce-destroyers fancy can picture restore the balance to the nation hopelessly weaker in ships of the line-of-battle."

With the advent of Bonaparte in Italy and upon the shores of the Mediterranean in 1795 came to those waters Sir John Jervis, the distinguished admiral and naval administrator, better and later known as the Earl St. Vincent. Second only to Nelson in the annals of the times as a naval commander, his character, little known to others than students of naval history, is depicted in a masterly manner by Capt. Mahan. Upon the 19th of August, 1796, Spain entered into an offensive and defensive alliance with the French Republic. This added to the enemies of Great Britain a naval force of over fifty sail of the line, though in a very low state of efficiency and discipline. The evacuation of the Mediterranean was therefore ordered by the English Government, and Sir John Jervis was ordered to take his fleet to Lisbon. Leaving there on the 18th of January, he returned to his station off Cape St. Vincent, his fleet now numbering fifteen ships, and on the 14th of February he fell in with the Spanish fleet of twenty-seven ships, under Admiral Cordova, bound to Cadiz from Cartagena. The battle of Cape St. Vincent followed and with it one of the most brilliant sea victories England has ever had, while to their country and to the world the greatness of Jervis and the genius of Nelson became known for the first time. The Spanish Navy has never fought England alone since that day.

Continuing the story of the Mediterranean in the next two eventful years, the narrative leads us to Napoleon's Egyptian expedition and to the memorable 1st of August, when Nelson, arriving for the second time upon the coast of Egypt, discovers the French fleet at anchor in Aboukir Bay and proceeds at once to the attack with the results so well known. The French Navy never recovered from the blow. Egypt was in time delivered, India put beyond the reach of Napoleon, the Mediterranean made a sea hostile to the French, and another coalition was formed bringing war again to the frontiers of France. Such is the verdict of Admiral Jurien de la Gravière, one of the soundest of French writers, and such is the opinion of Capt. Mahan.

The loss of Egypt and of Malta was a direct, though not immediate, consequence of the battle of the Nile. Their possession to-day makes England mistress of the Mediterranean, so long as she possesses the fleet to command the sea, and Gibraltar (or some other bay in the strait entirely her own) to command the entrance. Malta, from its insular position, and Egypt, from its present insular conditions, outrank Gibraltar in both strength and importance. Malta is the strongest strategic position in the Mediterranean—in the hands of a great naval Power—both from its geographical situa-

tion and from its intrinsic strength; but the relation between an insular position and the fleet is mutual, or nearly so, for the fleet depends less upon Malta than Malta upon the fleet. We have evidence upon our own coasts to the same effect, in the strongly fortified island of Bermuda and the strategically well-placed island of Jamaica: the strength of these positions depends upon the naval predominance of the English upon the North Atlantic and in the West Indies. This predominance exists, and is intended to be maintained.

The first volume closes with a chapter containing an account of Gen. Hoche's expedition to Ireland in 1796. Graphically written, in a clear and vigorous style, it is an excellent illustration of the literary ability of the writer. This expedition, intended to sail in early autumn, was delayed by administrative difficulties, caused by poverty of resources and also by non-arrival of reinforcements, until the middle of December. Unfortunate in its start from Brest and early dispersion, it was fortunate in favoring winds and in avoiding the badly stationed and commanded English squadrons. Inefficient, however, as was to be expected, in its personnel, and encumbered as the ships were with soldiers useless at sea, the principal part of the expedition arrived upon the coast of Ireland and the entrance of Bantry Bay without either Hoche or the naval commander-in-chief. Returning after an unsuccessful attempt to beat up to the head of Bantry Bay, with weather unfavorable and stormy, the expedition met disaster after disaster. Six of the vessels were lost or destroyed by their officers and six captured by the enemy. The wreck of the *Amazon* and the *Droits de l'Homme* dramatically closed the history of the expedition. The failures were not confined to one side. The negligence which, when England was in command of the sea, allowed the escape of the French fleet, reflected strongly upon the English authorities; and when St. Vincent came to the command of the Channel Squadron and to the blockade of Brest at a later date, his methods of masking and watching the enemy at the port of assembly and departure, rather than upon the trackless sea, established a strategic policy which is sound and operative to the present hour.

POPULAR ETYMOLOGY IN GREECE AND ROME.

Keller's Lateinische Volksetymologie und Verwandtes. Leipzig: Teubner.

DURING the last two decades a fondness for the study of vulgar Latin has manifested itself among Latin scholars, and there has arisen in Germany a school having for its object the advancement of Latin philology by bringing to bear upon it whatever light may be gained from a study of the language and of the blunders of the common people. Now the study of popular etymology runs parallel to the study of vulgar Latin, if indeed it does not spring directly from it, for it is precisely the vulgar Latin that exhibits the most and the chief instances of popular etymology and false analogy. Some of the instances of popular etymology in English, as cited by Max Müller and Trench, will serve to illustrate, though it may be in exaggerated fashion, what is meant by the term "popular etymology." One or other of us has heard of the ship known to the sailors as the *Billy Ruffian*, whereas its real name was the *Bellerophon*, or of that other ship called the *Iron Devil* instead of the *Hirondelle*, its real name; or of certain sign-boards to wayside inns, for instance, the "Bull and Gate" instead of the "Boulogne Gate" ("originally a trophy of the taking of Boulogne by Henry VIII."), or of the old Puritan sign-board, "God encompasseth us," which in popular form appears as the "Goat and Compasses." Now the study of popular etymology, as applied to ancient languages, began with Latin, but, as the investigators proceeded, they soon discovered that similar phenomena were to be observed in abundance in the field of Greek also. Popular etymology, as Max Müller points out (Lectures, ii., 576), is the legitimate successor of phonetic decay, exemplifying in language the old law of the natural and spiritual world, that new life arises out of death and decay. Through this decay of words we see occasionally that words originally different both in form and meaning assume the same form.

"Now as there is in the human mind a craving after etymology, a wish to find out, by fair means or foul, why such a thing should be called by such a name, it happens constantly that words are still further changed in order to make them intelligible once more; or, when two originally distinct words have actually run into one, some explanation is required, and readily furnished, in order to remove the difficulty."

In the development of language not only may we note known and formal laws of change, but we become aware that imagination or caprice or accident plays no small rôle, if by accident we mean a chain of circumstances which we cannot understand. Languages vary, as do individuals, in genius or soulfulness; some are more imaginative and playful than others, and the common man is therefore more inclined to create new words by etymologizing in a jesting or playful manner, or by a stupid misunderstanding of given elements, according to the genius of the language which he uses as a tool. The Greeks and the Germans are especially fond of etymologizing in popular fashion. Two circumstances conspire to produce this tendency in a nation: imaginative or humorous endowments observable in the nation at large, and especially the power to make compounds at will. Languages less capable of forming compounds with ease do not present a favorable soil for the popular etymologist, if in addition he lack the mental gifts of humor and fancy.

Another fruitful source of popular etymology is in the foreign words adopted and remoulded by the common people. In Greek such borrowed words present great difficulty because we are ignorant of the languages from which they were taken. For instance, the word "butter" means 'cow cheese,' according to popular etymology, and yet it should mean nothing of the kind, being a word borrowed by the Greeks from the Scythians, according to Hippocrates. We do not know what the original word was, and can only say that it sounded enough like βούτυρον to induce the common man to dub it 'cow cheese,' whether in jest or in earnest. The case is different with Greek words borrowed from Semitic originals, because we do understand Semitic languages, and such words, as we shall see, are often full of interest for us.

The Romans were neither witty nor imaginative; their minds were cast in the heavier, sterner mould. As might be expected, then, we find in Latin few words whose creation was due to a sense of wit or humor in the popular mind, and those few are chiefly obscene words. Such as are not obscene are so few in number that they need scarcely be taken into account, but a good instance is *saccellarius* (from *saccus*), 'guardian of the money bags,' with a play on *sacellarius* (from *sacellum*), 'guardian of the sanctuary.' The Latin is wofully lacking in the power to make compounds; indeed, if we leave composition with prepositions out of consideration, we may say that such power does not exist at all. In consequence of this poverty, a host of mongrel formations are to be observed in Latin, and Greek compounds were incorporated with extreme freedom. Having thus an inexhaustible storehouse from which to draw, the Latin popular etymology occupies ground far different from the position it would have taken if the Roman etymologist had been left to the poor and helpless resources of Latin alone. Indeed, so poor and helpless is Latin unaided by Greek that not infrequently we find incorporated Greek words treated in such a way as to prove that the popular etymologist had in mind not a Latin word in some way similar to the borrowed Greek word, but another Greek word with which he was familiar. Thus, Βόσπορος, when borrowed, became *Bosphorus*, as though the latter element belonged to φέρω; similarly, τρόπαιον became *trophaeum* with reference to τρέφω.

Keller is the most recent writer on popular etymology, though he has had worthy predecessors in Weise ('Griechische Wörter im Latein') and Saalfeld ('Tensaurus* Italograecus'), from both of whom he has taken bodily much of his material. The title of his book gives no idea of the vast field covered. We cannot always accept his views, but in discussing so wide a range of topics it would be surprising if enthusiasm did not get the better of judgment here and there, and not infrequently we feel that the author's *facts* are immature and unproved conjectures. And yet, in the main, the ground he treads is firm, and the results attained are so important and far-reaching that no classical scholar can afford to be unfamiliar with his book.

Keller divides his material, so far as Latin is concerned, roughly into three groups of words, according as they exhibit peculiarities belonging to the archaic, classical, or post-classical periods. The archaic and post-classical periods differ but little in regard to the harshness and rudeness of the etymologies that belong to them, whereas in the classical period one notices a certain unwillingness to overleap linguistic barriers. In the archaic period no offence against the organic development of language was so great that it might not be committed. For instance, comparative grammar proves that *lingua* should be *dingua*, for in all other Indo-European languages it begins with *d*, *t*, or *z* (*th*). And, besides, Roman grammarians tell us that *dingua* was the old form. Popular etymology thought it was connected with *lingere*, to lick, and changed the spelling to correspond. The Latin had no word for 'one-eyed,' and the Greek Κύκλωψ was adopted by the people and made to do new service. The early dramatists, but especially Livius Andronicus, in his translation of the 'Odyssey,' had made the people familiar with the Κύκλωψ, whose distinguishing feature was his one eye in his forehead. Now such a collocation of sounds as *cucl* does not exist in Latin, and so popular etymology had little difficulty in Latinizing Κύκλωψ into *cocles*, of course with the meaning 'one-eyed.' Strictly speaking, the most sacred laws of language could be defied in this way only by the rude and unlettered, whose inelegancies of speech gradually become good and creditable usage. The classical period of

* This very word *Tensaurus* is an instance of popular etymology, coming from θησαυρός, but with a play on *tensus* and *aurum*, the underlying thought being *extensum aurum*, that is, 'a whole mountain of gold.'

Latin presents few creations of popular etymology, and such words are usually instances of perverse or mistaken learning. This is the period in which foreign words were admitted into the Latin *copia verborum* freely and without change. The third, or post-classical period, is the period of decay, and in it the popular etymologist flourished like the green-bay tree.

A few instances of words which are the productions of popular etymology may not be uninteresting.

Medius fidius, the oath, was explained formerly in two ways, either as *me* Διὸς *filius*, a mongrel creation, having, besides, a change of *d* to *l* on the assumption that *dius* stands for *deus* or *divus*. At present the word is explained as the equivalent of μὰ Δία πίστιον. It then goes back to the time when the nominative of Jupiter was still Diovis Pater and still preserved its initial D. *Mē Diovis fidius* means, then, "May the God of truth punish me if I lie." The common people forgot the origin of the phrase, ascribed the first part of it to *mĕdius*, and, of course, shortened the originally long *mē*, the accusative of *ego*.

We have all been *bachelors*, but it may be questioned if all know the origin of the word. In middle Latin the word was *baccalarius*, which was changed in more recent times into *baccalaureus*. In this shape the dominant idea is *laureus:* the fatted calf is being crowned with laurel. This is popular etymology, as in good Latin the word should be *vaccalarius*, and should mean the 'keeper of a dairy,' or else 'cow-herd,' interpretations humiliating enough to the pride of the average college graduate. More peculiar still is the origin of the word *elementum*, which heretofore, as a *dernier ressort*, has been referred in some way to *alimentum* from *alere*, 'to nourish.' It seems, though, that it is a word formed precisely as is the word alphabet (Ἀλφά-βετ-ον), or our own *Abc's*, only the letters *l*, *m*, *n* are preferred to the initial letters of the alphabet. The word, then, is really *el-em-en-tum*, a popular creation intended to supplant in every way the Greek στοιχεῖα. The origin of the word was soon forgotten, and was referred to the long list of words ending in *mentum*, like *documentum*.

Pubeda, a late Latin word that has not survived to our times, means 'a clownish fellow,' or 'clodhopper,' and comes from βούπαιδα (accusative of βούπαις, not cow-herd, but a 'big boy'); indeed, Varro has it in the form *bupaeda*. But the people preferred to refer it to the Latin *pubes*, the dominant idea being the lustiness of youth arrived at the age of puberty. As an instance of perverse or mistaken analogy may be cited *bubsequa* (from βουκόλος), formed on the analogy of *sub-sequus—a—um*. The Greek προβοσκίς means an instrument for providing food, and is usually referred to the trunk of an elephant. The people preferred to regard the προβοσκίς of an elephant as a 'fly-brush,' thinking of *prohibere muscas*, just as they called a horse's tail *muscarium*, and so they changed προβοσκίς first to *promoscis* and then to *promuscis*.

As an instance of the change of a man's name into a woman's name may be cited the name of the venerable seer of Thebes, Τειρεσίας. In Latin it appeared as *Tiresias* and *Teresias*, but among the vulgar the nominative *Teresia* and *Tiresia* is beyond doubt. It is found even in Seneca's "Oedipus." The people, mistaking the gender of the word, gave it to girls, and so it happens that *Therese* is the same as Τειρεσίας.

But let us turn to Greek. The *devil* is a personage interesting to most of us for various reasons, and the origin of the word ought to pique curiosity. We are told in our etymological dictionaries that it comes from διαβάλλειν, 'to slander,' through the noun διάβολος, so that the *devil* is the great *slanderer*, or 'father of lies.' This is all perfectly true, but it does not tell us why a being so gifted with virtues should have his ability to slander singled out as the most appropriate of his many possible epithets. The truth is, the word devil is of Semitic origin, and is an instance of popular etymology in Greek. The Hebrew for it is *Zebul*, a word with which we are most familiar in Beelzebub, whose more correct form is Beelzebul or Baalzebul, and means 'the king, or god, of gad-flies.' And so the latter half of the name of the Syrian god was changed by popular etymology into διάβολος, a word which already existed in Greek, but from this time on became the specific name for the devil. Of course there is a change of *z* to *d*, which need not cause us much sorrow, since such a change is not without parallel in good Greek, *e. g.*, ἀρίδηλος instead of ἀρίζηλος.

From India comes the word Προμηθεύς, which has such a genuine Greek look that we are shocked to have its nationality doubted. But it has been shown by Kuhn that the original word is the Sanskrit *pramantha*, the name for the revolving stick used in India for producing fire. Popular etymology connected the word with προμανθάνω, and ascribed to Prometheus certain powers of forethought which are not suggested by the original word. But the Greek myth tells us that Prometheus concealed the fire in a hollow reed and kept it alive by *swinging around* as he came from heaven to earth. In this story of the swinging of the reed we have a beautiful reminiscence of the meaning of the original word still present in the minds of the mythmakers of Greece.

If Keller has not sifted sufficiently much of his material, he is always suggestive, and by provoking dissent he promotes his science, because he incites his reader to original investigation.

James Gilmour of Mongolia: His Diaries, Letters, and Reports. Edited by R. Lovett. Portraits, maps, and illustrations. F. H. Revell Co. 8vo, 336 pp.

It is now nearly ten years since the publication of that remarkable book 'Among the Mongols,' with its vivid pictures of life on the vast plain lying to the northwest of the Great Wall of China, and dotted over with the dark tents and grazing herds of the nomad Tatars. No one could rise from the perusal of it without feeling that the author was a man of no ordinary type. This impression is confirmed by the story of his life, largely told in his own graphic language. It was a life in some respects singularly monotonous and barren of incident. The son of a well-to-do Scotch mechanic, he received a good education, graduating with high classical honors at Glasgow University. After several years of special preparation, he was sent to China in 1870. Here he spent twenty years—broken by two visits to Great Britain—in mission work in Pekin and in Mongolia, at first among the nomads inhabiting the great plain, and later among the agricultural Mongols who live in the eastern part of the country. He died in Tientsin on May 21, 1891.

Gilmour had but a single aim, to preach the Gospel of Christ. In the streets of Pekin, in the Mongols' tents, at their great fairs, he was to be found standing from morn till nightfall, often in the bitter wind and dust, with his books and his medicines, giving eagerly to whoever would listen the message which he was commissioned to deliver. There was no sacrifice too great for him to make that he might disarm the suspicions of the people. He adopted their dress, ate their food, and lived in their inns and tents. That these were true sacrifices, though he made light of them, is apparent at times, as when, in one of his letters, he refers to heaven as a place where there will be no "indigestible beef and brick tea." On one journey he walked "about three hundred miles in seven and a half days, or about forty miles a day, and my feet were really very bad." The reason of this was "not because I had not money to ride, but to get at the Mongol who was with me." On discovering that his habit of occasionally seeking solitude caused some to suspect that he was trying "to steal away the luck of the land," he abandoned it, and never separated himself from men whose "conversation, like that of most Asiatics, is choked with *doubles entendres*." In spite, however, of this unsurpassed devotion, he had, to outward appearance, absolutely no success. "His avowed converts can be numbered on the fingers." This was partly due to the uncompromising character of the man himself. While offering with intense eagerness a free Gospel with one hand, with the other he, almost grimly, built a barrier which the poor Mongol could not pass. He demanded as a proof of faith that a man should give up the use of opium, whiskey, and tobacco. In this extreme position he stood alone among the missionaries, but his arguments for it were strong. He believed the chief cause of the frequent famines in Mongolia to be that so much of the arable land is given up to the cultivation of tobacco and the poppy, while a very large proportion of the grain goes to the distillery. This so impoverishes the land that the only prosperous establishments are the distilleries and the pawn-shops. "The bank-notes current among the people," he says, "are issued, at but a small percentage, by distillers and pawnshops." His conviction that Christianity and total abstinence should go together was strengthened, possibly caused, by the fact that there is a sect in that part of the empire, which boasts not a few members, whose main practical doctrine is abstinence from these three things.

The editor has done his work fairly well, though he has made the natural mistake of supposing that all are familiar with Gilmour's book. Accordingly, the life and work in Mongolia, which constitute the chief interest in him, are treated with too great brevity, while copious extracts are made from his letters and diaries, which simply show the fervent piety of the man, and in no way distinguish him from many others who are accustomed to write down their religious thoughts and aspirations. Notwithstanding this defect, the striking individuality of Gilmour is clearly manifested, and the reader lays down the biography with a strong sense of personal acquaintance with the subject of it. From the following extract some idea may be formed of Gilmour's descriptive power, as well as of the humorous vein which is frequently noticeable in his writings. He is enumerating the interruptions to which a Chinese congregation are subjected. After mentioning a fight and a funeral, he says:

"When one of the upper ten thousand in China has a marriage, they want to have a great exhibition; and, after they have bought the furniture, they get and hire a great many men, and have them dressed to carry that furniture in procession along the streets and show it to their neighbors. First comes a great wardrobe, and then a little cupboard, a wash-

stand, a square table, and all sorts of furniture. Now when that comes, what are you to do? They have been at the expense of paying for an exhibition for their neighbors to see, and they feel that it would be unneighborly if they did not step to the door and look out and see the things carried past, and there goes your congregation. Sometimes unusual interruptions happen. I remember once a woman put her head in the door. Women do not come to these chapels often—I am very glad they do not. That woman put her head in at the door, and I saw danger. She glared round the place, and then she spied one man, and she shouted out something at him: 'Come out of that!' and, friends, he came out of that, in a big hurry, too. He disturbed us very considerably. It was not the woman so much as the man. We all pitied him as he went out."

Most Reverend John Hughes, First Archbishop of New York. By Rev. Henry A. Brann, D.D., Rector of St. Agnes's Church. [Makers of America.] Dodd, Mead & Co.

It is a liberal construction of the serial subject, "Makers of America," that calls for a Life of Archbishop Hughes, but no more liberal than that which called for one of Bishop White in the same series. Each in turn was an ecclesiastic who did good service to his own particular church. Archbishop Hughes was certainly a providential man, in the sense that he was admirably adapted to the situation in which he found himself. He had great force of will, loved controversy better than his life, and was possessed of a hearty, genial, vehement personality that made him a natural leader of men. When he was made assistant bishop of New York in 1838, the Roman Catholic Church was having its day of small things and internal troubles. In the whole diocese there were only forty priests and twenty churches. But the tide of Irish immigration was running fast, and hardly could any one have done more than Hughes did to economize its force for the turning of his ecclesiastical mill. He interested himself in educational schemes and matters of organization in the liveliest manner. Before his death the Roman Catholic Church was to all intents and purposes the State church of New York city and hardly less so of the State of New York. Meantime there was real service in his strenuous and persistent demand for the division of the school-fund in such a way that the Roman Catholics might have their proportionate part for the maintenance of their parochial schools. He never carried his point, but he did much to force the public mind to the perception that the partisan Protestant position was untenable, and that only on the ground of a complete secularization of the school system could the Roman Catholic claim be fairly met and overborne.

Dr. Brann's Life of the Archbishop is more of the nature of a fulsome eulogy than of a judicious biography. It has no literary value. Sometimes its praise begets the opposite effect to that desired. For example (p. 102), "He was conscious of all his powers, and felt that no antagonist was his superior"; (p. 120) "Such was the Archbishop's confidence in his own popularity and certainty of the fear which even the most desperate radicals had of his courage." Dr. Brann claims for him the honors of an anti-slavery career; if rightfully, his influence on the Irish population was infinitesimal. But in truth his anti-slavery sentiments were of that feeble and apologetic sort which strengthened the pro-slavery party. To exercise political influence he thought "at once endangering and degrading his influence as a priest." He voted only once, and then for Henry Clay. When that was is not clear—Dr. Brann says in 1852, but Clay died in June of that year. It was probably in 1832. Whenever it was, he "voted the more readily," he says, "because his congregation were opposed to him, and some of them had almost threatened him." Dr. Brann's variant is, "in opposition to the wishes and the threats of a whole congregation." There was a time, in 1841, when the Irish people sent over an anti-slavery petition of 60,000 names, with O'Connell's at the head, to their countrymen in America. No one did so much as Hughes, then Bishop of New York, to break the force of that petition, and, by consequence, to make the Irish Catholics of America a pro-slavery body. "I am no friend of slavery," he wrote, "but I am still less friendly to any attempt of foreign origin to abolish it." Dr. Brann writes that, after studying slavery in Cuba and the South, "his views became quite moderate," and we all know what that means. After the outbreak of the war he took the Northern side with so much ardor that he must have done something to encourage a loyal spirit among the people of his charge. When the riots broke out in 1863, Gov. Seymour appealed to him, but he was too near his end to make himself felt to an appreciable degree.

Corot. The Barbizon School of Painters.—I. By David Croal Thomson, author of 'The Life of Bewick,' 'The Life of Phiz,' etc. With fifty illustrations. London: Simpkin, Marshall, Hamilton, Kent & Co. 1892.

The illustrations of this volume, whether half-tones, woodcuts, or etchings, are very good, and give very nearly as much of Corot as is reducible to black and white—not the best of him, but still a good deal. This is the more fortunate as the text affords very little help in understanding his genius. Mr. Thomson seems to have some notion of the quality of Corot's art, but he has not the rare talent of putting into words his knowledge of artistic aims and methods—the talent of translating subtle technical qualities into language—which marks the few true art critics. His criticism is very elementary, and consists, besides the usual remarks about poetry and sentiment, in stating that Corot is hard to understand, while giving little aid to understanding him, and that an education which the author hardly attempts to supply is necessary to the enjoyment of his pictures. Mrs. Van Rensselaer's little essay, in her 'Six Portraits,' is every way better. Corot's simple biography, which she gives in a couple of pages, Mr. Thomson, by dint of a loose, discursive, and sometimes slipshod style, manages to expand to five chapters without adding a single important fact, and he nowhere approaches the merit of her exposition of Corot's painting.

Distinct errors are not uncommon. On p. 16 Mr. Thomson says of the Prix de Rome: "Not that the age for competition is limited, but that few painters over thirty care to compete." The age for competition *is* limited to thirty years, and it has recently been proposed to reduce the limit of age to twenty-five years. Of Corot's panels for the Church of St. Nicholas du Chardonnet in Paris he says: "One represents the baptism of the infant Christ"—surely a new subject in Catholic art! The "Orpheus Greeting the Morn" he calls "Orpheus and Eurydice," and says: "The *figures* occupy the right in the foreground, and the *Elysian fields*, which fill the background, are painted in a silvery tone very subtle and wonderful." The inability of some people to describe a picture actually before them is shown in two other curious instances in this book—once where the author describes Corot's "Wood Nymph" as "a woman seated after bathing drawing on her stockings," there being, as the illustration clearly shows, no stocking at all in the case; and, again, where M. Théophile Silvestre, whom he quotes, describes the scene of the "St. Sebastian" as "the heart of a mysterious wood" and as a "gloomy spot where no prying eye could discover" the executioners. In fact, the saint is represented as lying *in a road*, down which the executioners are seen retreating in the distance, and the "mysterious wood" consists of half-a-dozen large trees growing in rather open order on the hillside.

Two specimens of the English of which Mr. Thomson is capable may as well be given: "Our reproduction opposite will give some idea of *its merit, which*, in Corot's own eyes and in the judgment of many of his friends, *was his finest picture* in the semi-classic style" (p. 40). "The 'Shepherdess Reading,' which was possibly *an effort* in the direction of Jean-François Millet, but one *which Corot did not* fortunately *strive too hard to attain*" (p. 49). Of course the italics are ours.

In reprinting this life from the author's larger work on 'The Barbizon School' it would surely have been worth while to remove such references to matters not included in the volume as those on pp. 17 and 20. The lists of Corot's pictures exhibited at the Salon, and of the "pictures and finished studies" sold after his death, are useful.

The Growth of English Industry and Commerce in Modern Times. By W. Cunningham, Tooke Professor in King's College, London. Cambridge, Eng.: University Press; New York: Macmillan. 1892. 771 pp.

Out of the ferment of what is called "the historical movement" among economists, one most satisfactory result is beginning to make its appearance, and that is an increased attention to economic history itself. And the interest which the subject is attracting is added to by its evident importance not only for the economist, but also for the historians of constitutional machinery and of legal forms. It is coming to be seen that many a question hotly disputed, such as the origin of municipal government in the Middle Ages or the character of mediæval tribunals, involves another and more primary question—that of the nature of the daily life of the men who lived under the institutions. Already at several German universities, notably at Berlin and Strassburg, steady work is being done in the way of research; at two or three American universities regular courses of lectures are being given, and one of them has gone so far as to establish a chair of economic history. In England, with its greater rigidity of academic organization, things have moved more slowly; yet even at Oxford and Cambridge the subject has of late received a certain "recognition" in the regulations for examination, although these regulations, so far, are little more than benevolent aspirations.

Mr. Cunningham has long been the persistent critic of the methods of economic reasoning dominant in Cambridge under the influence of Prof. Marshall. As to the merits of this controversy two opinions are, of course, possible. But Mr. Cunningham has at the same time been one of the most indefatigable teachers of English economic history; he has inspired a number of the younger men and women at Cambridge to do original work—among them Miss Lamond, whose excellent edition of

'Walter of Henley' appeared so shortly before her untimely death; and his own small treatise on 'The Growth of English Industry and Commerce,' issued in 1882, has been most useful as a text-book. This book is the germ of the substantial treatise under the same title, of which the first volume, devoted to the Early and Middle Ages, appeared in 1890, and of which the second volume is now before us. Its appearance is contemporary with Mr. Cunningham's appointment to the Professorship of Economic Science and Statistics at King's College, which was founded in honor of the distinguished statistician Tooke, and filled for many years by Thorold Rogers. Like some other economic professorships in Great Britain, the emoluments of the chair are, we understand, even lighter than its duties; but the governing body has done well to maintain the traditions of historical investigation which have gathered round it.

The work is characterized by great width of treatment. Dividing into epochs the story of English economic activity (and it may be remarked that "industry and commerce" are terms far too narrow for its range), Mr. Cunningham considers in turn in each epoch the progress of agriculture, of manufactures, of trade, and of economic opinion, and, in the later periods, of shipping, colonies, poor relief, and finance. In every part of his subject Mr. Cunningham has, if not an exhaustive, at any rate a very surprising command of the English literature pertaining to it; not, however, of the French and German literature on similar movements abroad. This is certainly a grave defect; for English social development can be properly understood only as part of the evolution of western Europe. But it was perhaps a necessary omission if Mr. Cunningham was to cover his enormously wide field in a moderate number of years. He is not always convincing: there are traces of undue haste; and he sometimes speaks with assurance upon matters on the outskirts of his theme where he is imperfectly acquainted with the evidence. Thus, he describes the removal of the Acadians in language which he would probably not have used had he been acquainted with Parkman's 'Montcalm and Wolfe'; and again, he contrasts the commercial policy of England and Holland in the eighteenth century with a serene disregard of recent inquiries into Dutch commercial history. One cannot help thinking, moreover, that his constant preoccupation with one idea—that of governmental regulation—leads him to lay emphasis on the less important aspects of the phenomena before him, and prevents his drawing with a firm hand the broad outlines of economic organization. This tendency is strengthened by the unduly prominent place among his authorities which he gives to the statute-book. Legislation necessarily deals largely with the new and unusual; the quiet, uneventful progress of established industries passes unnoticed: so that a narrative based chiefly on acts of Parliament is apt to seem jerky and miscellaneous. Still, when every deduction is made, the work is a remarkable achievement. It will put the student on the track of the evidence for each of the hundred and one topics with which it deals; it will present opinions to him which, if far from being final, at any rate deserve attention and stimulate thought; and upon a very large cantle of the ground covered—on the eighteenth century and the early decades of the present—it will for some time remain the foremost authority.

An Epitomized Review of the Principles and Practice of Maritime Sanitation. By Joseph Holt, M.D. New Orleans.

Pestilential Foreign Invasion. An address by Joseph Holt, M.D. New Orleans.

THE rolling year constantly brings to view a new horizon, and that into which we now are advancing seems filled with physical dangers more numerous than common and of fiercer mien. The best defined of these is the threat of cholera, but there is no reason why, as in the past, typhus, infinitely more infectious than cholera, case for case, may not also drift past Sandy Hook, and yellow fever may not seek entrance against the outflowing Mississippi or along the whole South Atlantic and the Gulf. In fact, our entire maritime frontier may be assailed at any, if not at every, port, and our Canadian border may be no barrier against European disease. We have lived under these conditions for years, but the exhibition of the early autumn in the lower bay of New York drew special attention to the plenitude of our dangers and the poverty of our defences.

Active protection against exterior disease, whether the limit is that of a continent or a municipality, is the purpose of quarantine. Formerly this was simple but prolonged detention until the disease had exhausted itself among the susceptible wayfarers, with the possible addition of ill-smelling fumigation. Now its theory implies inspection, the removal and care of the infected, detention to include only the time during which the disease may develop, and especially and particularly the complete purification of all disease-bearing agents, whether lading or carrier, merchandise or ship. New Orleans is our only port intelligently and adequately equipped against the invasion of foreign disease in anything like an appropriate measure. Very curiously, the real cause of this unpreparedness is a question of politics—of politics in its better meaning as statesmanship, and in its inverted sense as spoils. On the ground that it was not expressly delegated to the Federal Government, the States have contended that the authority to regulate affairs of health within their respective boundaries is a reserved right, of the nature of internal police powers. It was held to follow from that that to the State alone belonged the authority to repel foreign disease. From that was deduced the right of the State to lay quarantine charges as an incident of its power to establish quarantine; and this has been held by the United States Supreme Court to be constitutional. (Morgan's Louisiana and Texas R. R. and S. S. Co. vs. The Board of Health of Louisiana, May 10, 1886.) Reasoning *à posteriori*, this decision has been looked upon as establishing the old contention of State sovereignty over the whole matter. On the lower plane of spoils, the States have tried to retain practical control because of the patronage involved, and the spoilsmen because of the fees. And midway may be the traders' fear that a strict quarantine would damage commerce, and that State appointees would be more lenient than Federal officers to business.

On the other hand, the "general welfare" clause of the Constitution would seem to invest Congress with ample initiative and reserve powers. That these have never been employed is due partly to indifference in the absence of danger sufficiently broad to threaten national interests, and to State jealousy just indicated. Everybody's business is nobody's; and the spur of yellow fever has not been sharp enough to stimulate the deep-lying centres of public life. The nearest approach to sanitary action by Congress was in the establishment of the National Board of Health, an advisory body, which, by its organic law, remained in a state of suspended animation until an appeal by State authority for help aroused it into activity. Upon that board were some of the ablest and most incorruptible scientific men, and its work at Memphis alone was a complete justification of its being. But, under the influence of an hostility that could allege no fault, Congress cut off its moderate appropriation, which, indeed, was never to be drawn upon except when the Board was actively engaged. A penniless board is *vox et præterea nihil;* as such, the National Board has a theoretical existence still. In view of its actual character (for its composition was exceptionally happy, and its work in the field and through its reports was brilliant), the opposition was fanatical and ignoble, pretending, among other matters, discrimination against local and especially Southern commerce at the dictation of Eastern capitalists. But, with changing times, men who once assailed all Federal interference, and who attributed contemptible motives to those whom they arraigned, are now imploring Federal aid. The necessity for such service is patent, and the authority of Congress in the premises seems assured.

The Government provides a maritime police, to aid vessels in distress as well as to protect the revenue. It also maintains unquestioned a body of disciplined men, whose sole duty is to save the shipwrecked. As the revenue cutters sail the coastwise seas to relieve those afloat, so the Life-Saving Service holds the shore itself under constant watch and guard. These sentinels of humanity, who keep up a literal and uninterrupted patrol against visible peril, are an adequate precedent for the establishment by the nation of sanitary stations armed against incoming disease. Rescue from the sea affects only the rescued, protection from disease concerns the community. To depend on State quarantines to protect the country would be like expecting of the Confederacy that preceded the Constitution an efficient general Government. Where one State would be vigorous and public-spirited, a dozen might be impotent and unconcerned. Uniform or at least sufficient intelligence and energy at all the frontier posts is necessary for the safety of the interior. These it is impossible to secure under the diverse influences that must prevail. Under the present régime, the quarantine maintained by Louisiana at the mouth of the Mississippi is, we repeat, the only one equal to the requirements.

The quarantine service should be adequately officered on a single and unmixed professional basis, under Federal appointment, with no other local association than acquaintance with the diseases likely to seek entrance to the port. The positions should be held during efficiency, and the salaries, adequate to secure competent men, should be a charge on the country at large. The vast interior should not look to the seaboard States to bear the burden alone. The station that has protected New Orleans for eight years and at the same time has made possible a summer commerce with the West Indies, is evidence that an effective quarantine of disinfection can be maintained at small relative expense of money, labor, and, above all, of time. For this practical demonstration sanitarians acknowledge indebtedness to Dr. Joseph Holt, sometime President of the Board of Health of that State. With the plan pointed out, multiplication of stations should be simple.

Treatise on the Law of Insurance, Fire, Life, Accident, and Marine. By George Richards. 2d ed. Banks & Brothers.

MR. RICHARDS styles himself on his title-page first a member of the New York Bar, and then a lecturer in the Law School of Columbia College; nor is this preference lost sight of by the reader, for not only is the book essentially for the use of New Yorkers, in spite of its historical scope, but it is noticeably the work of a member of the bar rather than a pure theorist. The first chapter contains a sketch of the object, rise, and outgrowth of the law of insurance, which embraces not only the evolution of the different systems of insurance, fire, life, and marine, but of single institutions, like that of the Lloyds, and information as to the principal companies in this country in the various branches of insurance, in a manner most unlike the abstraction of the ordinary law treatise. The man of affairs will be interested to find in this same chapter much very readable information relative to the distinctions between stock and mutual companies; the formation of mortuary tables; the creation of a reserve; and the risk in "benevolent" organizations, responsible, so long as they violate no State law, merely to their own regulations.

The remainder of the book is clear, brief, and orderly, and contains a valuable review of marine insurance, hitherto little touched upon. In addition to the text there is a compendium of leading cases relating to it (the author being of the belief that both case and text-book systems have their merits, and preferring a combination of them), and also characteristic statutes relating to different points of insurance law, taken from the different States, with forms of applications, policies, etc.—all of which gives the close of the book as practical a nature as the beginning.

It is interesting to note that the author has been compelled to restrict himself to the three great branches of insurance (accident insurance being classed with life insurance), and cannot follow its minor branches, which now insure against lightning, tornadoes, hail-stones, boiler explosions, injuries to plate-glass, defaults on the parts of trustees, employees, etc., defects to real-estate titles, and credit in trade. An index, which was wanting in the first edition, has been supplied with the second.

BOOKS OF THE WEEK.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especialy ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to
THE NATION, 208 Broadway, N. Y.

BIGELOW'S

Jarman on Wills.

A NEW EDITION.

A Treatise on Wills, by Thomas Jarman, Esq. The Fifth American, from the Fifth English Edition. By Melville M. Bigelow, Ph.D.

Public Library

Since the publication of the first edition JARMAN ON WILLS has been the recognized authority.

☞ Where other books on wills treat of the old and well-known law, Jarman, with infinite care, goes into details and discusses obscure and unusual points of the complicated Law of Wills, and puts at the service of the lawyer who has this edition the things he does not know, but needs.

The fifth English edition has been prepared with scrupulous faithfulness by L. L. G. Robbins, Esq., barrister of Lincoln's Inn, and by special arrangement with the London publishers the sixth American edition is now published under the International Copyright Act, the composition, press-work, and binding being done in this country.

☞ The American Notes of Mr. Bigelow, prepared with the greatest care, are many of them entirely new and others completely rewritten, a course made necessary by the great amount of new case law.

JARMAN ON WILLS, with the important changes and additions, *is practically a new work, and indispensable to every practitioner. No such work on the subject for accuracy and completeness has ever been offered to the profession.*

Two volumes, thick octavo, law sheep, $12.00 net.

SCOTT'S WAVERLEY NOVELS.

Edited by ANDREW LANG.

NEW LIMITED EDITION OF 1,000 COPIES.

Sir Walter Scott has stamped his genius on an entire country and language, and by many is considered to stand first of all the world's great novelists.

The Waverley Novels are read by millions, and in every civilized country in the world, but hitherto they have never been properly illustrated.

This edition will be enriched, at a cost of over $40,000, with proof impressions on imperial Japanese paper, of 300 original etchings from paintings by celebrated artists, among whom are many members of the Royal Society for the promotion of Fine Arts in Scotland, and such masters as **Sir J. E. Millais, R.A., R. W. Macbeth, R.A., Lockhart, Gordon Browne, Pettie, Lalauze, Lefort, Teyssonnieres,** etc., etc.

It will be edited by **Andrew Lang,** the greatest English critic and Bibliographer, who will furnish critical introductions, glossaries, and notes to each novel, supplementing the author's own notes and prefaces.

Mr. Lang was granted access to Scott's private library at Abbottsford through the courtesy of the Hon. Mrs. Maxwell Scott, to whom this edition is dedicated.

This is the most magnificent edition ever made of the works of any novelist.

The type will be large and new, set in a fine open page; the margins ample, and the paper a beautiful natural tint. The volume will be a small 8vo, easy to handle, and the binding vellum cloth, gilt tops, slightly trimmed. Complete in **48 volumes,** issued at the rate of about 2 volumes per month, at **$2.50 per volume.**

Also, 500 copies printed on Holland hand-made paper, with 50 additional illustrations, making a total of 350, and bound in half leather, gilt tops, at **$5.00 per volume.**

[EXTRACT FROM THE LONDON TIMES.]

"*It would be difficult to find in these days a more competent and sympathetic editor of Scott than his countryman, the brilliant and versatile man of letters who has undertaken the task.*

"*The illustrations by various competent hands are beautiful in themselves and beautifully executed, and, altogether, this edition of the Waverley Novels bids fair to become the classical edition of the great Scottish classic.*"

Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

ESTES & LAURIAT,

PUBLISHERS,

BOSTON.

*** *Also, a few sets still remain unsold of our limited editions, uniform with above, of Thackeray, in 30 vols.; Dickens, 48 vols.; Bulwer, 32 vols.; Victor Hugo, 30 vols.; Dumas, 40 vols., which are offered at an advance above the original price of publication.*

CHARLES SCRIBNER'S SONS'

NEW BOOKS.

The Campaign of Waterloo.

A Military History. By JOHN C. ROPES. 8vo, $2.50 *net.*

"He describes the campaign in all its details, taking up all the disputed points and examining them in the light of newer documentary and historical evidence. It is difficult to see what more could be added, or what could be omitted to make it a more authoritative work."—*Boston Transcript.*

ATLAS OF THE CAMPAIGN OF WATERLOO.

14 maps. 16x22 inches. 4to, $5.00 *net.*

A supplementary volume containing the most complete series of maps of the battlefield ever engraved, showing the varying positions of the three armies during the campaign.

Adzuma: or, The Japanese Wife.

A Play in Four Acts. By Sir EDWIN ARNOLD. 12mo, $1.50.

"Sir Edwin's treatment of his theme is marked by the same qualities which have made his reputation. The poetry is characteristic. It is always graceful, pleasing, and melodious."—*Chicago Tribune.*

The Story of the Atlantic Telegraph

By HENRY M. FIELD, D.D. With portrait. 12mo, $1.50.

Dr. Field here presents in an entirely revised and rewritten form the interesting story of the great international cable enterprise, in which his brother, the late Cyrus W. Field, was the principal actor.

Blackfoot and Pawnee.

Two books giving the stories current among these Indian tribes and accounts of their customs and daily life, told in the exact language of the Indians themselves as the tales were narrated to the author, Mr. GEORGE BIRD GRINNELL.

BLACKFOOT LODGE TALES. The Story of a Prairie People. Cr. 8vo, $1.75.

PAWNEE HERO STORIES AND FOLK-TALES. With notes on the Origin, Customs and Character of the Pawnee people. Illustrated. Cr. 8vo, $1.75.

In the Three Zones.

By F. J. STIMSON (J. S. of Dale). 12mo, $1.00.

Under the above happy title, Mr. Stimson has combined three stories, "Dr. Materialismus," "An Alabama Courtship," and "Los Caraquenos," quite distinct in character and varied in interest, the scenes of which, as the title implies, are laid in three zones.

New Edition of Mr. Stimson's **Sentimental Calendar.** Illustrated. 12mo, $1.00.

Froebel:

And Education by Self-Activity. By H. COURTHOPE BOWEN, of Cambridge. *Great Educators Series.* 12mo, $1.00 *net.*

The lively interest at present taken in the kindergarten movement gives to this book a special value. It is both biographical and descriptive, giving a full account of the life and work of Froebel and tracing the development of the kindergarten movement from its origin.

The Higher Criticism of the Hexateuch.

By CHARLES A. BRIGGS, D.D. 8vo, $1.75.

"Professor Briggs has designedly prepared this work for the general public, and it is marked by lucidity of statement, elaborate and careful reasoning, and satisfactory summaries of all the different lines of thought that lead up to the great central problem."—*Boston Beacon.*

D. APPLETON & CO'S NEW BOOKS.

The Diary of an Idle Woman in Constantinople.

By Mrs. MINTO ELLIOT, author of "The Diary of an Idle Woman in Italy," "In Sicily," etc. With Plans and Illustrations. Crown 8vo. Cloth, $4.00.

"Those who love the romance of history better than its dry facts will probably find 'The Diary of an Idle Woman in Constantinople' a book to their taste. The author has rebuilt and repeopled the romantic scenes of this essentially Eastern city, gathering her information largely from Gibbon, Von Hammer, and similar writers, and remolding its shape according to her own ideas of what is most interesting. Thus details of dynasties and statistics are thrown aside, and she dwells on the beauties natural and human, of a long line of favorite Sultanas, and of Byzantium of old and the Golden Horn to-day. The author gives us material very much more difficult of access in the ordinary way."—*London Literary World.*

"As a 'companion' to any place or country of interest, the traveller needs a volume compiled on this principle. Half, and more than half, the enjoyment of visiting foreign countries, consists in recalling the historical associations connected with the various sites and cities and buildings that we see. Constantinople has of course many such relics of the past to show."—*London Bookseller.*

Charles Darwin:

HIS LIFE TOLD IN AN AUTOBIOGRAPHICAL CHAPTER, AND IN SELECTIONS FROM HIS LETTERS. By his Son, FRANCIS DARWIN, F.R.S., Fellow of Christ's College, Cambridge. With Portrait. 12mo. Cloth, $1.50.

"A delightful volume to every reader interested in the most famous man, scientifically speaking, of the century, or in the details of a life which in the midst of the most profound scientific problems and labors, and under a storm of obloquy as bitter as orthodoxy could pour out, preserved its loving, simple humanity, its cheerful attitude towards all mankind."—*N. Y. Commercial Advertiser.*

"To the person who loves biography we commend this fascinating volume."—*The Critic.*

The Naturalist on the River Amazons

By HENRY WALTER BATES, F.R.S., late Assistant Secretary of the Royal Geographical Society. With a Memoir of the Author by EDWARD CLODD. With Map and numerous Illustrations. 8vo. Cloth, $5.00.

In company with Alfred Russel Wallace, the author in 1848 began an exploration of the Amazons region for the collection of objects of natural history. This volume records the adventures of an eleven-years' sojourn, during which specimens of nearly fifteen thousand species were obtained, and includes descriptions of habits of animals, sketches of Brazilian and Indian life, and various aspects of nature under the equator.

Rousseau's Emile;

OR, TREATISE ON EDUCATION. Abridged, translated, and annotated by WILLIAM H. PAYN, Ph.D., LL.D., Chancellor of the University of Nashville, and President of the Peabody Normal College. The twentieth volume in the International Education Series. 12mo. Cloth, $1.50.

Rousseau's "Émile" may be regarded as the source of social, political, and educational ideas that advocate a return to nature. It is the most radical work of the kind ever written, and not only gave the primary impulse to Pestalozzi and Basedow, but set on fire all Europe, and probably did more than any other book to bring about the French Revolution. No book is more helpful than this to provoke original thought in regard to the grounds of educational theories.

Handbook of Military Signalling.

Prepared by Capt. ALBERT GALLUP, Signal Officer First Brigade, National Guard, New York. Illustrated. 16mo. Flexible cloth, 50 cents.

This manual has been approved by the Signal Office at Washington, and its use has been prescribed for the National Guard of the State of New York.

New Edition of Haeckel's "Creation."

The History of Creation;

Or, The Development of the Earth and its Inhabitants by the Action of Natural Causes. By ERNST HAECKEL, Professor in the University of Jena. The translation revised by Professor E. RAY LANKESTER, M.A., F.R.S. With 46 Illustrations. In two vols., 12mo. Cloth, $5.00.

"The book in its present form cannot fail to interest all who have a taste for natural history. . . . It is a sufficient recommendation for it that it is the statement of the views of one of the most learned, experienced, and honored naturalists of modern times."—*From the Reviser's Preface.*

GREAT COMMANDERS SERIES.

ADMIRAL FARRAGUT. By Capt. A. T. MAHAN, U. S. N., author of "The Gulf and Inland Waters," etc. With Portrait and Maps. 12mo. Cloth, $1.50.

"The life of the great naval commander, abounding as it does in action and heroic deeds, has afforded Capt. Mahan the opportunity of writing a biography which is equally notable for grace and force of style and for the vivid pictures which he gives us of the famous engagements which have contributed so much to the Admiral's fame."—*Philadelphia Item.*

"A careful and conscientious biography of one of the most distinguished as well as picturesque figures of the late war."—*Detroit Free Press.*

GENERAL TAYLOR. By Maj.-Gen. O. O. HOWARD, U.S.A. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

"The life of a great American soldier, written by a great American soldier. It is pointed, honest, graphic, and just. It is biographical, historical, and marks well the manhood and courage and patriotism of the man."—*Chicago Inter-Ocean.*

"The career of 'Old Rough and Ready' is extremely interesting. Gen. Howard takes equal pride and pleasure in offering his salute of honor to the hero of Monterey and Buena Vista. This is good reading for American youth."—*Philadelphia Ledger.*

GENERAL JACKSON. (*Nearly Ready.*) By JAMES PARTON. With Portrait and Maps. 12mo. Cloth, $1.50.

The last literary work of James Parton, completed just before his death, was the preparation of this volume. It is a model miniature biography, possessing throughout all the interest of a romance.

LATEST ISSUES IN APPLETONS' TOWN AND COUNTRY LIBRARY.

No. 111. COMMANDER MENDOZA. By JUAN VALERA, author of "Pepita Ximenez," "Doña Luz," etc. Town and Country Library. 12mo. Paper, 50 cents; Cloth, $1.00.

"There is no doubt at all that 'Pepita Ximenez' is one of the best stories that have appeared in any country in Europe for the last twenty years."—*George Saintsbury, in the New Review.*

"Valera's 'Doña Luz' has the distinction and purity of style that mark all the writings of that Spanish classicist. The story he has to tell almost gains importance by his exquisite manner of telling it."—*New York Evening Post.*

No. 110. STORIES IN BLACK AND WHITE. A volume of short stories by THOMAS HARDY, W. E. NORRIS, MRS. OLIPHANT, GRANT ALLEN, J. M. BARRIE, W. CLARK RUSSELL, MRS. E. LYNN LINTON, and JAMES PAYN. With 27 Illustrations. 12mo. Paper, 50 cents; cloth, $1.00.

No. 109. IN THE SUNTIME OF HER YOUTH. By BEATRICE WHITBY, author of "The Awakening of Mary Fenwick," "Part of the Property," "One Reason Why," etc. 12mo. Paper, 50 cents; cloth, $1.00.

"The story has a refreshing air of novelty, and the people that figure in it are depicted with a vivacity and subtlety that are very attractive."—*Boston Beacon.*

"Miss Whitby is far above the average novelist."—*New York Commercial Advertiser.*

No. 108. A COMEDY OF ELOPEMENT. By CHRISTIAN REID, author of "Valerie Aylmer," "Morton House," etc. 12mo. Paper, 50 cents; cloth, $1.00.

For sale by all booksellers; or will be sent by mail on receipt of price by the publishers,

D. APPLETON & CO., 1, 3, and 5 Bond St., New York.

THE NEW

Chambers's Encyclopædia.

NOW COMPLETE.

Concise, Simple, Clear, Accurate, and Easy of Reference.

TWENTY YEARS LATER THAN ANY OTHER ENCYCLOPÆDIA IN THE MARKET.

Rewritten and enlarged by American and English editors. International in character. Based upon Census Returns of 1890-1892.

COMPLETE IN TEN VOLUMES.

Price per set: Cloth, $30.00; sheep, $40.00; half morocco, $45.00.

CHAMBERS'S ENCYCLOPÆDIA is in use as a book of reference wherever the English language is known. The first edition of this great work was completed in 1868. From this point for over twenty years a process of correction and revision was continued from year to year, thus bringing the information down to the latest possible date.

But this process of revising and altering could not be carried on indefinitely. **Many articles called for an entirely different treatment. New subjects of interest demanded admittance, while some have lost their claim to the prominence given them** twenty-five years ago. **The publishers have therefore issued a thoroughly new edition of the Encyclopædia.**

AMERICAN AND ENGLISH EDITORS.

The work has been under the editorship of Mr, DAVID PATRICK, who, with a literary staff, has been for several years engaged in preparing this new edition. The Contributors constitute a large body of **eminent** Specialists representing the **best scholarship** in their respective countries.

An alphabetical list of the important articles in each volume is given, **with the names of the authors.**

EXTENT OF THE REVISION.

Most of the articles have been entirely rewritten, to adapt them more perfectly to the present position of the science or branch of knowledge to which they belong. The others have been carefully revised, and in many cases rewritten to such an extent **as to be virtually new articles. No old article has been retained** without scrupulous verification by competent authorities.

By the exercise of a rigid economy of space, continued throughout, room has been found for **several thousands of articles not contained in the old edition. These articles comprise Biography, Geography, History, Science, and all other departments of knowledge.**

ILLUSTRATIONS AND TYPOGRAPHY.

The illustrations are new, accurate, and artistic. A large number are from photographs. **Those on plants and animals deserve special mention,** as many have been engraved from photographs taken for this work. **The type is new, clear, and distinct.**

MAPS.

If issued by themselves, the maps would make a most valuable atlas. All the countries on the globe are represented by **beautiful, recent, and accurate colored maps, backed by carefully executed physical maps.** All the Subdivisions of both Hemispheres, **including each State and Territory of the United States,** are also represented by **new colored maps.** There are also many **Historical Maps,** and **Physical Maps of the ocean, ocean currents, trade winds,** etc.

AMERICAN SUBJECTS.

Special regard has been given to American and Colonial subjects. **The more important articles on matters connected with America have been written by American authors expressly for this edition.** In subjects where the American view or practice diverges from that of the United Kingdom, **a special paragraph has been added from American sources;** and in legal articles, where the law of the United States differs from that of England, **a paragraph is given on the American law.**

For sale by all booksellers.

Specimen pages sent on application.

JOHN M. HOLCOMBE, Vice-President. ARCHIBALD A. WELCH, Actuary.

ALEXANDRE DUMAS'

ROMANCES.

New Limited Edition of 1,000 Copies.

The most complete and only finely illustrated edition ever issued of the principal romances of this great French writer, newly translated by eminent scholars. Dumas's novels are mainly sketched with a historical background, covering the romantic period of French history, including the time of Richelieu, Louis XIV., XV., XVI., the French Revolution and Napoleon. His **'Three Musketeers'** *and* **'Count of Monte Cristo'** *have become world-famous.*

This edition is embellished with over two hundred superb etchings and photogravures, mainly by French artists, such as **De Neuville, Leloir, Emile Bayard, Flameng, Lefort,** *and others, supplemented by landscapes and portraits from authentic paintings of the sovereigns and their favorites, ministers, generals, etc.*

The manufacture of this edition is perfect.

All of the illustrations will be proof impressions on Imperial Japanese paper.

This edition is printed from entirely new plates, set from new, large type, in a small page with ample margins, and will be complete in **40 octavo vols.,** *bound in English vellum cloth, paper titles, gilt tops. It will be issued by subscription only, at the rate of about 2 vols. per month, at* **$2.50 per vol.**

Prospectus and specimen pages showing type, page, and paper, with sample illustration, sent on application.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 16, 1893.

The Week.

THE story in Washington despatches that President Harrison "means to settle the whole Hawaiian question, if possible, before he goes out of office," if true, does not reflect much credit on him, because it is hardly possible for him in that period to give the matter due consideration. In the absence of telegraphic communication, even the facts of the revolution in Honolulu can hardly be ascertained within that period. There are two stories before him, one that of the Hawaiian Government, with which we have a treaty of commerce and amity which that government has not broken and which has still two years to run. The other is that of certain foreign residents who have overturned this government by force of arms, on the ground, as well as we can make out, that the sovereign had entered on a policy of "heathen and sorcerous reaction." These two stories are in many respects contradictory, and each side has plenty of motives, as in all such controversies, for perverting, coloring, and misstating. Is it possible to accept either without taking testimony?

It must be remembered that the Treaty of 1875, an extension of which was negotiated by Secretary Frelinghuysen, recognized the independence and competency of the Hawaiian monarchy; no objection was made in the treaty on our side to the religion or customs of the natives. The treaty put restrictions on the power of the Hawaiian Government to "lease or otherwise dispose of or create any lien on any port, harbor, or other territory in his (the King's) dominion, or grant any special privileges or rights of use therein to any other Power, State, or Government, or make any treaty by which any other nation shall obtain the same privileges relative to the admission of any articles free of duty." If the Hawaiian Government had violated any of these stipulations, we should undoubtedly have been justified in interfering by force, if necessary, to prevent such violation. But has it? Nothing of this kind has happened. The treaty contains no other restrictions. It contains no provisions against heathenish or sorcerous practices, or against debauchery or immorality on the part of the Queen in her palace or other public building; and yet it is these practices and immoralities which are put forth by the revolutionists as an excuse for overturning the Government, and proposing the absolute conquest of the Islands by the United States. Are these statements correct? It is no doubt important to have a coaling-station somewhere about Honolulu, but it is far more important that the United States should, especially in its dealings with weaker Powers, show itself law-abiding. Therefore, there should be no haste in this matter, and President Harrison, besides avoiding even the appearance of haste, should avoid imposing on Mr. Cleveland the execution of a policy initiated by his predecessor without the sense of responsibility which is always created by having to carry out one's own plans.

The same partisan motives which prompted twelve Republican Senators who voted against the Stewart Silver Bill last July to vote against the repeal bill on Monday week, prompted a sufficient number of Republicans in the House to defeat the repealing bill there. We shall now undoubtedly have an extra session of Congress. We do not see how it can be avoided. The Treasury exists only from hand to mouth, and it is a question how long it can exist that way. The recent action of certain New York banks in making a call loan to the Government of four or five million dollars without interest, in order to avoid trenching on the greenback reserve fund, was prompted by the feeling that we are all a part of the Government, and that all of us are bound to sustain it according to our ability and our means. This is a noble sentiment, but we think that in the present case it was misplaced. There is no occasion to apply the principles of benevolence to the richest government in the world in a time of profound peace. There is no reason why the banks should lend to the Government without interest when they charge 2, 3, or 4 per cent. to their own customers. We are not now at the beginning of a war of unknown duration, when some men must risk their money and others their lives in order that the Government itself may be preserved. On the contrary, we are at the end, or very near the end, of a period of consummate folly. That which has been foreseen and predicted during fifteen years—the loss of our gold—has come to pass. The Secretary of the Treasury said in a public speech in this city two years ago that whenever that crisis should be reached, he would sell bonds to replenish his stock. Now nothing else could give Congress and the country such a wholesome shock as the spectacle of a Secretary selling interest-bearing bonds to pay current expenses and buy silver bullion with. Nothing else, in fact, is so desirable. But, of course, no Secretary will sell interest-bearing bonds so long as a lot of bankers offer him gold without interest. And, of course, the silver-men in Congress will say that these gold-bug bankers are moved by the selfish motive of preserving the gold standard.

The bill or amendment proposed by Senator Sherman, to authorize the Secretary of the Treasury to issue bonds bearing interest at 3 per cent. and having five years to run, in order to maintain specie payments, ought to pass without opposition, as it merely takes the place of the Act of 1875, still in force, which authorizes the issue of 4 per cents running thirty years, or 4½s running fifteen years, or 5s running ten years. Of course the Secretary ought not to issue bonds for a longer time, or at a higher rate of interest, than absolutely necessary. He ought not to be restricted by a law passed nearly twenty years ago, at a time when the Government could not borrow on long bonds at a less rate than 4 per cent. and on short ones at less than 5. Probably the silver-men will oppose Mr. Sherman's bill or amendment, since it will be a new sanction to the Secretary's right to issue bonds to replenish his stock of gold. So we may have the silver fight opened afresh in both houses within a very short time. Let us hope that it may be so.

Whether or not we shall have a civilized and efficient system of quarantine in this country next summer now depends entirely upon the national Government. Under the bill which has passed both houses of Congress, and which the President is certain to approve, full power to take the matter into his own hands at all ports of the country is conferred upon the Secretary of the Treasury acting through the Marine Hospital Service. The language of the bill is plain and unmistakable. It declares that the "Supervising Surgeon-General of the Marine Hospital Service shall, immediately after this act takes effect, examine the quarantine regulations of all State and municipal boards of health, and shall, under the direction of the Secretary of the Treasury, coöperate with and aid State and municipal boards of health in the execution and enforcement of the rules and regulations of such boards and in the execution and enforcement of the rules and regulations made by the Secretary of the Treasury, to prevent the introduction of contagious or infectious diseases into the United States." In case the State or local authorities endeavor to interpret this provision to mean that by coöperation the law intends concurrence of the national authorities with the State or local authorities, they will discover their mistake when they examine the subsequent provisions of the measure. After decreeing that all rules and regulations made by the Secretary of the Treasury "shall operate uniformly, and in no manner discriminate against any port or place," the bill gives the Secretary authority to establish quarantine at all ports and places which are without it now, and which, in his judgment, ought to have it, and declares, in reference to his authority over ports and places which have a quarantine, that in case the exist-

ing regulations under State or municipal control are in his opinion insufficient, he "shall make such additional rules and regulations as are necessary," and that these

"shall be promulgated by the Secretary of the Treasury and enforced by the sanitary authorities of the States and municipalities, where the State or municipal authorities will undertake to execute and enforce them; but *if the State or municipal authorities shall fail or refuse to enforce said rules and regulations, the President shall execute and enforce the same, and adopt such measures as in his judgment shall be necessary to prevent the introduction or spread of diseases, and may detail or appoint officers for that purpose.*"

Other provisions of the bill, applying to the supervision of immigration at foreign ports, are equally valuable. Every vessel clearing for the United States from a foreign port is required to obtain from the American consular office at the port of departure, or from a special American medical officer detailed for the purpose by the President, a complete bill of health, drawn in accordance with rules and regulations sent out by the Secretary of the Treasury. The President is also given power, whenever he shall be convinced that the public health requires it, "to prohibit, in whole or in part, the introduction of persons or property from such countries or places as he shall designate, and for such period of time as he may deem necessary." Any vessel violating any of the provisions of the law will be liable to a fine of $5,000. The bill as originally drawn contained an appropriation of $1,000,000 to be used by the President at his discretion in its execution. This was stricken out on its final passage, but a smaller appropriation for the purpose is to be included in the Sundry Civil Bill, and this ought to be passed without opposition. Of course if there is no appropriation, the bill will be a practically useless measure.

It is good news that a majority of the House Committee on Appropriations have decided to recommend radical reforms in the administration of the pension system. One of the changes proposed is that hereafter no widow shall receive a pension if she married the soldier more than five years after his discharge. This would put an end to the scandalous custom of young women marrying old ex-soldiers simply in order to draw a widow's pension after the soon-expected and desired death of the husband. In one case recently brought to light a woman of twenty married a veteran of eighty, who was almost on his death-bed. A few months afterwards he died, and now she will be a pensioner at eight dollars a month for the remainder of her life. Another amendment proposes to exclude from pensions under the Disability Act all persons who are not disabled from manual labor and who are in receipt of an income of more than $600 a year. This would end the scandal by which well-to-do and even wealthy men, like a rich manufacturer elected to Congress in Massachusetts last fall, become a burden upon the taxpayers. Other minor reforms are recommended, but the most important change of all is that which proposes to transfer the Pension Bureau from the Interior to the War Department, and to place it in charge of army officers.

The vote in the Committee was along partisan lines, except that Chairman Holman of Indiana joined the Republicans in opposition to the reforms. This is quite in harmony with his habit of advocating a cheese-paring policy on unimportant matters, and refusing any support to measures which would effect great savings in rational ways. Nobody expects that the Republican Senate will agree to the proposed changes if they are endorsed by the House, but there will be no such obstacle to their adoption in the next Congress. Indeed, the Republicans themselves cannot be held solidly against such reasonable propositions. The Washington correspondent of the Philadelphia *Press* reports that a good many Republicans favor the transfer of the Pension Bureau to the War Department, on the ground that it would tend to keep the Pension Office out of politics, which has been one of the worst failings of this bureau in the past.

Senator Mills of Texas deserves equal praise with Senator Vest of Missouri for voting against the Anti-Option Bill in obedience to his own convictions of duty, although the Legislature of his State had instructed him to vote for it. So strong was Texas sentiment in favor of the bill that a resolution of instructions passed the lower branch of the Legislature by a vote of 83 to 29, and yet Mr. Mills not only voted against the measure, but made a most cogent argument against it, full of ridicule of its manifold absurdities. When the news reached Austin, where the Legislature is now in session, a resolution was introduced reciting the resolution of instructions, and declaring that "said Mills has proved recreant to the trust reposed in him," and that "we deprecate and condemn his action." A substitute was promptly offered, declaring that "the members of the House, reposing full confidence in the Hon. R. Q. Mills in all things, commend him for his moral and political courage in the stand taken by that gentleman in the United States Senate," and, after being amended so as to commend the Senator also for his tariff record, it was adopted by the overwhelming vote of 94 to 22. Courage and independence really seem to be proving popular.

The election of a Populist to the United States Senate from Nebraska removes the last lingering hope of any Republican that his party could, by hook or by crook, retain control of the upper branch of Congress. The new Senator from Nebraska will, of course, vote against the Republicans on the organization of the body, and even if they secure the other seats which still remain vacant, they cannot possibly muster a majority. On the repeal of the McKinley Bill there is likely to be a majority of several votes on the right side, as all of the Populists will doubtless vote with the Democrats.

There are many signs that "labor" in and about Chicago proposes to insist upon a large share of the fabulous wealth which the World's Fair is expected to pour upon the favored city. Organizations of one sort and another are quietly preparing to demand higher wages for less work. In particular there is reported a new association of all kinds of railway employees, which is formed, so the organizers say, for the "advancement of wages and the shortening of hours." They regard their position as very strong, since by a strike they can stop the flow of wealth in transit, and keep it off at arm's length until their greedy employers come to terms. The Chicago people may as well make up their minds to face the music at once. Their city is already said to be overrun with the unemployed, drawn thither by the reports of an abundance of easy work at high wages. Indeed, we are told that the managers of lodging-houses and other charities in New York city already miss large numbers of those whom they have been accustomed to help, and who have managed to work or beat their way to Chicago. If any countenance is given to the idea that the Fair is going to make it possible for Chicago workingmen to get wages sensibly higher than those paid for the same work in the country in general, there will be such a rush that way that the city will have an extraordinary number of the destitute on its hands. The thing will work in Chicago just as it has in London, where the increased wages given the employees of the County Council has not only thrown the burden of an extra $30,000 on the city's pay-roll, but has lured in from the country thousands of agricultural laborers, who find no work and have to be taken care of out of the poor-rates. No part of Chicago's exhibition would be more valuable than a firm refusal of the managers and employers to give in to the mistaken idea, now grown too common among workingmen, that there is an inexhaustible fund for the payment of wages, and that all laboring-men have to do is to combine and threaten in order to increase their wages indefinitely.

The Home Rule Bill was introduced on Monday in the House of Commons and will probably make nearly as much excitement as it did on its first appearance in 1886, largely owing to the dramatic effect of Mr. Gladstone's reappearance with it, with seven years added to his age, which was

already great on the former occasion. There is no record of any such exploit on the part of a man of eighty-three as that which he is now attempting. The nearest approach to it is Dandolo's heading the storming party at Constantinople at the age of ninety. Lord Palmerston, who was considered a wonderful example of senile activity, died at eighty-one, and was plainly broken before his death, and no statesman, as well as we can recollect, had before him kept the stage, in either Europe or America, as long as he. Marshal Radetzky came nearer equalling Dandolo's record than any other modern, for he commanded the Austrians in a successful campaign against the Piedmontese in 1849, at Gladstone's age. But no military man leads, except for a short period, the life of burning activity and incessant care which Mr. Gladstone pursues. The result is that he is now reaping a great deal of useful popularity merely as a prodigy. The House of Commons and the whole country, foes as well as friends, are looking on with wonder, which inevitably has a great deal of admiration in it.

Mr. Balfour's speech on the Home-Rule Bill, though reported, of course, only imperfectly, gives a tolerably clear idea of the line the Opposition will take against the bill. It is substantially that which Lord Salisbury takes in the House of Lords. The Conservatives apparently do not propose to spend much time or labor over the details of the measure, but to treat it in its entirety, first as an attack on the integrity of the Empire and on the Imperial Constitution, and then as something which, even if good in itself, could not be carried out owing to the perversity and incompetency of Irish politicians. These tactics naturally compel the selection of the plan of retaining the Irish members at Westminster as the principal point of attack. This is probably also the weakest point, being, indeed, the rock on which the bill of 1886 split. It was the absence of any such provision which furnished Mr. Chamberlain and Sir Henry James and several other leading Liberal-Unionists with an excuse for deserting their party. This was, too, the objection which made most impression on Mr. Gladstone himself, and on even the most faithful of his followers. It was the one to which he recurred most frequently during his seven years of eclipse, and, if we remember rightly, the only one which he openly acknowledged the force of and promised to remove. It gave his bill, in the eyes of Englishmen, the air of a proposal to endow Ireland with complete independence, and tended to reduce her connection with England to that of a mere common allegiance to a constitutional monarch.

He has now endeavored to meet it by providing for the presence of Irish representatives in the British Parliament with limited voting powers, but we fear that in doing so he has raised difficulties even more formidable than the original one itself. These Irish members are to vote only on Imperial as distinguished from purely English and Scotch questions. If these questions were easily definable, which they are not, and if it were easy to provide a mode of defining them, which it is not, Mr. Gladstone would still have to guard against the possibility of having the English Ministry, which would always be identical with the Imperial Ministry, turned out of office by the votes of the Irish members. If they could not be turned out of office on an Imperial question when the majority against them was furnished by Irish votes—that is, if Irish votes were not to count on a division as to who should be the Queen's advisers, say, in foreign policy—it would make the presence of the Irish in the Imperial Parliament as great a mockery for the purposes of Imperial legislation as their presence now is. This is the great difficulty of Mr. Gladstone's scheme. He confesses that it is formidable, and does not pretend that he has successfully met it. If his bill should be wrecked a second time, this will probably wreck it. It is on this point that his opponents are likely to be able to make most impression on the English mind.

The other provisions of the bill are really not open to much criticism from those who concede the expediency of granting any home rule at all. The creation of a new constituency based on a property qualification for the election of the Upper House or Senate, for the protection of the landed class, would be, Mr. Balfour maintains, an illusory scheme, because, in these democratic days, no property barriers can long resist popular impatience of inequality. But then he does not point out how this constituency is to be got rid of without a successful rising against the supremacy of the Imperial Government. Nor does he give any reason for thinking that any other parts of the arrangements would not succeed except the intractableness of the Irish native. The arrangements with regard to the judges, the police, the land question, and the division of financial burdens and liabilities would offer but little material for criticism if they were the results of negotiation between two communities which naturally respected and confided in each other. The objection which is made to this proposed Irish constitution on the Conservative side is the one which has been made to all written constitutions that have ever been framed, viz., that everybody who had to live under it would probably do the very worst things that it made or left possible—that is, exercise every power of obstruction or paralysis of which it had not formally deprived him. As this sort of objection is necessarily prophecy, it is impossible to refute it.

Considerable excitement has been caused in Buenos Ayres by the publication of the accounts of the agent of the Chilian revolutionists who was established in that city in the summer of 1891. Among his expenses was an item of some $4,000 which was set down to "securing telegrams by bribery." It was explained that the telegrams in question were Balmaceda's despatches to his foreign agents, via Buenos Ayres, and their interception was clearly of the greatest value to his opponents. But the Argentine press has taken up the matter with fury, alleging a gross insult to their Government, inasmuch as the telegraph operators supposed to have been bribed are Government officials. The Chilian agent who made the affair public has published a defence of his conduct, which consists in saying that no one can prove exactly how he performed the bribery, and that anyhow he had done only what Balmaceda did, for that dictator, he charged, had also bribed Argentine officials in order to get hold of the despatches of the revolutionists. This was not exactly calculated to allay the patriotic indignation of the Buenos Ayres newspapers, which had thus brought out the fact that the Government operators had been bribed by both sides. For us at this distance, however, the principal value of the occurrence lies in its suggestion of the fine times we should have in heated political contests in this country if the telegraph lines were taken under Government control and made a part of the resources of an Administration to maintain itself in power.

Recent accounts of the municipal meat-markets in Rio de Janeiro tell of things gone from bad to worse. The city is not only enormously taxed for its meat, but is not even getting the meat. The system has been put into the hands of such incompetent officials that it threatens a general break-down. No proper executive ability has been brought to the conduct of the business, so that there is no regularity about the shipping of cattle to the slaughter-houses or about the distribution of meat to the markets. The consequence is that there are days when the city is brought to the verge of famine, though the cattle ranges of the interior are well stocked, and nothing is lacking save an organizing faculty able to get the desired product to the hands of the desiring consumer. As the business is made a monopoly by the municipality, no private initiative is allowed to come to the rescue of the distressed inhabitants. One individual shipper ventured to bring in 370 head of cattle on his own account, but they were promptly confiscated by the city authorities. Resort has been had to frozen meat imported from the River Plate, as it seems foreign trade of the kind can set the municipal monopoly at defiance. The whole incident is one full of instruction for the Bellamy brethren, and they ought to make a serious study of it.

THE BREAK-UP OF PARTIES.

PERHAPS the most important thing about Judge Jackson's appointment to the Supreme Bench has been its reception by the Republican party. Jackson is a representative Southern Democrat, who supported the Confederacy; Harrison is a Northern Republican, who has always been of the strictest partisan school. The place in question is one which gives its incumbent the power to interpret the Constitution of the nation which Harrison supported and Jackson sought to overthrow.

It was, as we said at the time, a statesmanlike act for President Harrison, the Northern Republican, to give this judgeship to a representative of the Southern Democracy. But it remained to be seen how the country, and especially how the Republican party, would take it. This has now been made plain. While a small Bourbon element in the party, of whom Boutelle is the fit representative in the East and Clarkson in the West, condemns the appointment, and denounces the President for making it, the overwhelming majority of Republicans either accept it with resignation or hail it with applause. All candid men recognize that, with six of the eight present judges Republicans, and none of the eight a representative of the South, justice required the selection of a good Southern Democrat for the vacancy. But the average partisan in ordinary times is not apt to be candid, and in such a case as this would be too likely to hold that a Republican President, having the chance to appoint a Republican, ought to improve it. The remarkable thing is that so few Republicans now take this view, and that so many commend Mr. Harrison's course, holding, as the Hartford *Courant* puts it, that

> "Mr. Harrison's last appointment does him immense credit, and strengthens him and the party he stands for before the country. It may please Mr. Clarkson to pose before the country a moment, and to be seen as the critic of the President, passing adverse judgment upon him. But it should be distinctly understood that he speaks for himself, and that he is not the party nor its representative. That sort of statesmanship has had its day that could see no good on the other side, and that preached the old-fashioned doctrine that 'the worst Republican is better than the best Democrat,' or 'the worst Democrat better than the best Republican.' An intelligent and patriotic nation is sick of such twaddle."

The general acquiescence of the Republican party in Mr. Harrison's unexpected act, and still more the commendation of his course by so large a proportion, shows how far the old bitterness of party feeling has declined and how rapid is the progress towards a break-up of old party lines. Such a state of things could not have existed a dozen years ago. The sectional issue was then still too vigorous; the dread of Democrats, and especially of "Rebel" Democrats, was still too real. Four-fifths of the party would then have been honest in "viewing with alarm" such a performance, and would not have been ashamed to maintain, what the *Courant* now so properly ridicules, that the worst Republican should always be preferred to the best Democrat.

"The era of good feeling" which prevailed during Monroe's Administration has become historic. It is hardly too much to say that there is now a nearer approach to a revival of that era than has ever been seen since that day. From the time that the slavery issue became the controlling one, it was inevitable that party feeling should be strong until its final settlement. The utter collapse of the last attempt to maintain that old issue in the shape of the Force Bill has at last convinced the country that this chapter in our national history is closed, and that we have turned over a new leaf. The last Presidential campaign was the least bitter for a generation simply because Republican voters generally felt less interest in the result than ever before, less conviction that the success of their own party was essential, less fear that the triumph of the opposition would cause any harm. It was this which made hundreds of thousands of old Republicans stay away from the polls for the first time in a Presidential election, and which reconciled tens of thousands who perfunctorily cast their ballots for Harrison to the election of Cleveland.

When even Harrison recognizes the revolution that is in progress by closing his Administration with the appointment of a life-long Southern Democrat to the Supreme Bench, it is not strange that Cleveland should show an even keener sense of its significance, by the selection for the first place in his Cabinet of a Northern man who was always until last fall a Republican. Jackson's appointment to the highest bench is right because the judicial questions growing out of the old slavery issue have already been settled upon a basis which he accepts. Gresham's appointment to the State Department is wise because, on the new issues in which the people are now most interested, and especially on the tariff issue, he stands on the right side. The question hereafter is not whether one man was a Union man or a Confederate thirty years ago, but whether he will make a good judge now; not whether the other supported the Republican party in the days when its candidate for President in 1880 declared himself "in favor of a protection that leads to free trade," but whether he now supports the policy for which the people declared so emphatically last fall.

An old era in our politics is ended and a new one has opened. The election of Lincoln in 1860 marked one such change; the election of Cleveland in 1892 signalizes the other. Lincoln built up the Republican party by taking into his Cabinet Edwin M. Stanton, a man who sympathized with Republican purposes, although he had been in Buchanan's Cabinet. Cleveland shows himself possessed of an equally statesmanlike mind when he invites into his Cabinet one who has been a Cabinet officer under a Republican administration, but who sympathizes with Democratic purposes now.

LEGISLATION BY PATRONAGE.

NO President-elect of recent times has had so much reason as Mr. Cleveland for asking anxiously, not how he shall fulfil pledges respecting the distribution of office, but how he shall fulfil pledges respecting legislation for the public good. Honest Flanagan stood up in the National Republican Convention of 1880 with his now historic inquiry, "What are we here for if not for the offices?" and unmasked the pretence that the Presidential contest of that year was anything more than a struggle for the spoils. The Democratic Administration will come into power next month, and will speedily find the country asking it, if it does not put the question to itself, "What are you there for if not to repeal the McKinley Bill and remove the silver peril?"

Yet it is precisely at this point of party responsibility for the passage of promised laws for the relief of the people that the old spoils argument is now directing its attack in a new form. The cry no longer is that all the minor offices must be filled at once with Democrats in order to "strengthen the party," build up an efficient machine, keep up the popular interest in elections, etc., but in order to repeal the McKinley Bill and the Sherman Silver Law. How can the country believe Mr. Cleveland to be sincerely for tariff reform, it is asked, if he leaves in office tens of thousands of postmasters and letter-carriers and clerks who are McKinleyites? How can Congressmen be expected to vote with any heartiness for a revised tariff or sound money if they find their recommendations for office coldly received by the President? It is intimated, even by such men as Congressman Harter, that Mr. Cleveland ought to force through the repeal of the silver purchases by the use of patronage. It is said if he would only agree to "take care of" some fifty or sixty Congressmen who failed of reëlection to the next Congress, that their devotion to the dollar of the fathers, and their deference to the wishes of their constituents, and even their grave constitutional scruples, could all be overcome in a twinkling. And then if he would promise to turn over to sound-money Democrats every office they took a fancy to, the repeal would go through speedily.

Now, we think the folly of all this can be shown by the briefest reference to experience and the nature of the case. There is no more reason to think that a lavish use of patronage will bring strength to a legislative measure than to a party machine or a party boss, and if the history of the past six years proves anything, it proves that patronage is the weakness of parties and bosses alike. What good did it do Harrison or his party to turn Virginia

over to Mahone, and Pennsylvania to Quay, and New York to Platt, to loot the railway-mail service and turn out postmasters by the thousand? To go back to the last year of President Cleveland's Administration, what did it profit him to give W. L. Scott full swing in Pennsylvania in order to down the Randall group? That was a case very like the present situation. Scott was given the offices to make sure that the Mills Bill should pass. It did pass, but the methods used to pass it argued such a falling off from the earlier professions and practices of the President that he lost the support of many civil-service reformers, and, by so much, directly played into the hands of the high-tariff men.

The method is essentially vicious and is bound to defeat its own ends. It will work in the case of a measure of legislation just as it does with a party machine —that is, where patronage wins you one supporter, it makes you ten enemies. If Mr. Cleveland were to buy the votes of a score of free-silver Congressmen by putting offices at their disposal, he would instantly discover that a score more, whom he had supposed safe for honest money, had become exceedingly dubious as to their duty, and would need to have their doubts solved by an extra allotment of berths in the Federal service. Moreover, among the rank and file of the "workers," there would be among those who failed to get appointments — and they must always vastly outnumber those who get them—a fearful loss of faith in the principles and measures which were said to have brought their rivals office, and the first election would see thousands of them either not voting, or working for the other party.

Then it is to be remembered that there could be no surer way to sink a tariff bill or a currency bill out of sight than to involve its passage in an old-fashioned fight over the spoils. Personal questions and controversies are always more spicy and interesting than impersonal statutes. Rival Senators kicking up a tremendous dust over the question which one should get "his man" into "the place," and opposing Congressmen deluging the President with petitions and swamping him with interceding "delegations," would soon fill the public eye and take up all the time; and the bills themselves, to pass which the row had been precipitated, would be forgotten.

No one knows all this from personal observation and practical experience better than Mr. Cleveland, and we can therefore well believe the report that he has determined on quite another course. Instead of trying to force through the repeal of the Sherman Law by means of patronage, he proposes, so we are informed and believe, to refuse to discuss any appointments whatever until after that law is repealed. Such a plan would be effective, there can be no doubt. When the crowds of office-seekers learned of this determination, all their "pressure" would be applied to the repeal of that law, and the development of sound-money sentiment in unexpected quarters would be something unexampled. We should hope that Mr. Cleveland would then apply the same policy, having found it to work so well, to the repeal of the McKinley Bill. A revised tariff would go through Congress with such ease and rapidity as even ex-Speaker Reed never dreamed of, if all questions of appointment to office were held in abeyance till after its passage. Then, perhaps, the discovery would be made that Congressmen were elected, after all, to legislate, not to squabble about the offices, and the relief to them and to the Administration would prove to be so great that they would agree on all hands to extend the civil service laws so as to put an end to the whole disagreeable and discreditable business.

BANK CREDITS.

THE address of Mr. James G. Cannon of the Fourth National Bank upon bank credits, delivered in Philadelphia, and now published in the *Banking Law Journal*, deals with a topic of importance not only to banks, but to the mercantile community. For while a bank strives to have good commercial assets behind its loans, manifestly its customers, the merchants, have a like interest in remaining solvent, and therefore also in discussions about such portions of their own accounts as are of debatable value.

The system of credits in trade is constantly changing. It was formerly the custom for every merchant to procure a note for goods sold. This note, bearing also the merchant's endorsement, would be discounted at the bank. Although the practice of asking notes is still kept up in a few lines of trade—Mr. Cannon mentions the tobacco, jewelry, and rubber trades and others which deal with staple products—yet in the majority of cases the merchant has only running accounts to show against his liabilities. This new system in turn has necessitated a change in mercantile loans, the greater part of a bank's purchases now consisting of single-name paper, not, as before, brought to the bank by the merchant himself, but negotiated through a note-broker. Mr. Cannon's estimate is that two-thirds of all the paper purchased by the New York banks is of this character; and of this large business he thinks fully three quarters is taken upon the simple recommendation of the note-broker. These few statements indicate very clearly the change in business methods. Under the specializing process the negotiator of mercantile paper has become an influential member of the financial community; and on the other hand, so fixed has this custom become in the eyes of business men generally that houses with large dealings do not dare withdraw their paper from the market, even though the money so obtained lies idle, for fear of being considered otherwise not in first-class credit. Many parties now dislike to sell to merchants who do not discount their bills, alleging that a concern if good can always float its single-name paper.

This change in the customs of the business world shifts the burden of note credits from the special to the general. It is no longer the question with the bank whether a three months' acceptance made by a country firm with excellent rating and endorsed by the city house is safe, but whether the city house, taking all its business together, is solvent. To come to a safe conclusion, therefore, the bank (or the note-broker for it) must know more particulars about the borrower's business and accounts than was formerly necessary. And hence it happens that statements of their condition are demanded from houses putting out their own single notes—demands which are just and which are usually freely complied with. After such statements are received comes the hard task of analysis, and upon this matter of the reliance to be put upon certain items in the accounts Mr. Cannon's hints are of great value to banks and to merchants who wish a true knowledge of their own affairs. Since the book accounts are the main assets of the borrowing firm, their character is of the first importance. Are the customers of the firm scattered throughout the United States, or does the firm sell its goods mainly in one section? And if so, is that section liable to suffer because dependent on one crop? How many of these accounts are overdue? If a large proportion is thus "carried," the commercial value is, of course, uncertain. In the same way, if the debt due the firm is large compared with the rating of the customer, it is cause for suspicion Then, again, the real estate is an item requiring examination. Some houses add to the value of their real estate each year all the cost of the successive improvements; in time such real estate will stand on the books at twice its real value.

Every firm putting out commercial paper relies somewhat upon its merchandise on hand as an offset to its liabilities. But manifestly in estimates as to real solvency we must take different kinds of merchandise at different values. Groceries, for example, if in unbroken packages, will sell for nearly their whole appraised value; but dry goods, boots and shoes, fancy articles, tobacco, and the like depend for their value at forced sale upon their condition or the fashion of the hour, and must be estimated accordingly. Here is a curious table, by trades, given by Mr. Cannon of the percentage of value which can safely be put upon book accounts and merchandise:

	Accts. rec. Per cent.	Mdse. Per cent.
Hardware	72	80
Dry goods	67	70
Boots and shoes	80	65
Furniture	70	68
Groceries	40	95

The comment of the *Banking Law Jour-*

nal is, that these percentages are all too high by 10 or 20 per cent. as determined by an experience of fifty years. Mr. Cannon also lays stress upon the ratio of expenses to volume of business, though one ought to move cautiously in drawing a conclusion from that ratio. Investigation showed percentages of expenses varying from 15 per cent. in the hardware and jewelry trades down to but 1½ per cent. in the case of a dry-goods commission house doing a very large business, the average for all trades being about 7 per cent. It ought to be borne in mind that "large sales and small profits" will give a very different ratio of expenses to business from what we should expect to find in lines where the volume of transactions is comparatively small and profits correspondingly high. One matter very properly insisted upon by Mr. Cannon, though not usually taken into account, is that business statements should show the amount of contingent liabilities outstanding—notes, that is, of other firms which have been negotiated with the endorsement of the firm in question. The general custom is to mark such notes off as neither assets nor liabilities; but since they are called for in bank statements made to the Comptroller, they ought to be included in private statements also.

Bagehot, in one of his treatises on banking, declares that a house which does not borrow a part of its capital will not in general be successful, so necessary a part does credit play in modern merchandising. This necessity it is the business of the banks to supply; but since it is admitted that the profits of banking in the future will not be as large as in the past, and since, as we have seen, the money of banks is loaned upon the general solvency of the business community rather than upon particular lots of goods, it is evident that the methods of sound accounting need analysis and discussion more than ever before. Mr. Cannon's article, therefore, is both important and timely.

THE GOETHE-SCHILLER CULT IN GERMANY.

PARIS, February 3, 1893.

LAST summer I had occasion to collect materials on the subject of the present influence in Germany of Goethe and Schiller, when I received from Friedrich Spielhagen, the eminent German novelist, an interesting letter, from which I make, of course with his permission, the following extract:

"I hold that the present condition of the Goethe-Schiller cult in Germany is far from being so flourishing as it seems and ought to be, when one takes into account the important means employed to broaden and deepen this worship. We have the well-executed *Goethe-Jahrbuch*, edited by Ludwig Geiger; the publications of the Goethe Society, which issues an annual volume; the superb critical edition of Goethe's Complete Works, begun and conducted under the supervision of this same society; and the Goethe-Schiller archives in Weimar, which are about to be provided with a home worthy of them. Then we have a new biography of Schiller, a fresh edition of his collected letters, etc. This already long enumeration might be continued almost indefinitely, even if I were to confine myself to the principal productions of the indefatigable Goethe-Schiller scholars.

"But the question may well be asked, What is accomplished by all this labor? Now I do not wish to underrate its efficiency. I am quite ready to grant that these workers perform the most eminent service in the form of learned researches, which are carried to such a point that, in the near future, there will be left no hidden nook in the outer or inner life of our two great poets, particularly in the case of Goethe, into which these researches will not have thrown all the light that can be obtained.

"But I consider as being two very different things learned inquiries about the acts of a hero of genius, and the noble, broadening influence and effect of these actions on the life and blood, so to speak, of his country. The most painstaking and ingenious commentaries on the 'Iliad' and 'Odyssey' were indited at Alexandria, a whole library was filled with them, and yet Homer's sun set, and not all this flattering learned art could start it on its course again.

"I fear that much the same thing might be said of our Goethe-Schiller cult. The old text holds good here: 'By their fruits ye shall know them.' Where, I ask, are the fruits in our art and literature which have ripened in the Goethe-Schiller sun? Where do we find in our poetry of to-day Goethe's delicate and sure feeling for the beautiful in form? where his really living in the things which he describes? where Schiller's flights of fancy which wafted him high above the mean and vulgar, 'which enslaves us all'?*

"Hence we have to-day novels, short stories, dramas, piece after piece, on which even the Weimar cab-drivers would have turned their backs with a shudder; and a school of criticism has sprung up which has laid aside the bow and feathered arrow, and now simply strikes at random with clubs. So if one attempts to walk in the footsteps of the heroes, one is sure to get hurt and be ridiculed.

"This sounds very pessimistic, does it not? But it is not meant to be so pessimistic as it sounds. A country from which could spring a Goethe, a Schiller, cannot be condemned for ever to the vulgar in poetry and art. I consider this whole movement, embraced under the general term of Naturalism, to be only a transition stage—simply a misty groping of the poetic-artistic spirit after the form which will best reflect the new character of the radically changed life of the nation.

"Now, there is a possibility that this new character may be unable to find, in every case, its fitting artistic poetic expression. This would entail the decline of poetry and art, and the possible absorption of their remaining elements by science. But possibilities are, thank God, far from being realities; and, in my opinion, this possibility is not probable. I entertain the highest respect for science. It can do very, very much; but it cannot do everything. Science cannot satisfy the impulses of the human breast aspiring towards regions lying beyond what man knows and can know, to which the flight of fantasy can alone bear the elect to whom God has granted the power to tell what they suffer, the foremen and spokesmen of the millions who can feel but not always voice their dolor, and whose state has been happily described by Jean Paul in the phrase 'heaven's mutes.'*

"For the present, at least, we seem to be very far removed from this view of the matter. But sooner or later the path will open in this direction. Then will the true Goethe-Schiller cult begin in Germany; then will it be understood that—always *mutatis mutandis*—one must do as Goethe and Schiller did. Till that day comes, let the disciples of Goethe and Schiller go on spreading wider and wider their silent influence. But, while they keep alive the sacred fire, let them have a care not to weaken their cause by crying, 'Lord, Lord.' For nothing is worse than publicly proclaiming one's self high-priest of the Father in Heaven and then sacrificing to Baal. Nor is Germany wanting in such false prophets."

Perhaps these lines from Walter Robert-tornow, Librarian of the Emperor of Germany, which are written from the Schloss in Berlin, may be added as a postscript to Spielhagen's letter:

"A Goethe and Schiller cult, properly speaking, exists among us only in Weimar and in the Goethe Society circle. The Bismarck and Wagner cult is far more extensive in the Germany of to-day; for cosmopolitanism has been replaced, in this country, by patriotism, since Germans became conscious of their strength."

THEODORE STANTON.

* "Und hinter ihm [Schiller], in wesenlosem Scheine, Lag, *was uns alle bändigt*, das Gemeine."

(From Goethe's poem, "Epilog zu Schiller's Glocke," "which," Spielhagen once wrote me, "is most famous in Germany, and is, indeed, one of the finest poems ever written in any language.")

* In another letter, referring to this expression, Spielhagen says: "'Die Stummen des Himmels' is a phrase of Jean Paul Richter's, and means those poor mortals in whose bosom is a heaven, or perhaps a hell, but who are mute and cannot tell their joys or give vent to their sufferings. This is the thought which I tried to express in the passage referred to."

WALISZEWSKI'S CATHARINE II.

PARIS, February 1, 1893.

'LE ROMAN D'UNE IMPÉRATRICE'—a catching title, not serious enough for a purely historical work. The Empress is Catharine II. of Russia, and the author, M. K. Waliszewski, can excuse himself by saying that the wildest novel can hardly be more extraordinary than the life of Catharine. The book is made out of the Memoirs of the Empress, written by herself, her correspondence published by the Historical Society of St. Petersburg, and some inedited documents in the Russian Archives.

A few hours after the death of Catharine, her son, the Emperor Paul, ordered his Chancellor, Count Rostoptchin, to place all her papers in the archives under the imperial seal. Among these papers was the famous letter in which Alexis Orloff announced to her the assassination of her husband, Peter III. There was also the manuscript of the Memoirs of Catharine, dedicated to the Tzesarevitch and the Grand Duke Paul. During the Crimean war the archives were transferred to Moscow, and, on their way, some copy of the Memoirs was taken, since, soon afterwards, two or three copies were circulating in Russian society. The Memoirs were published in England, with a preface by Hertzen, but have now become rather rare. They are the most valuable document that could be found for the history of Russia. What is there to be added to the account given of her early life by this extraordinary woman, who occupied the minds of all Europe, as Hertzen says, from Voltaire and Frederick the Great to the Khan of Crim-Tartary and the chiefs of the Kirghiz? To this invaluable document we can add now her correspondence. Of the seventy-two volumes forming the publications of the Russian Historical Society, nearly all have some rela-

tion to the Empress Catharine. I have myself been able to read only the two volumes of her French correspondence with Grimm, which extend from 1774 to 1796. The first volume contains the letters of the Empress, the second the letters of Grimm. The Empress died on November 16, 1796. Her last letter to Grimm is dated October 20 of the same year. I can affirm that whoever has read the Memoirs and the correspondence with Grimm has a perfect knowledge of the character of Catharine. Waliszewski's book adds, on the whole, but little to the portrait which the "Sémiramis du Nord" has made of herself. It is not strange that Catharine has not yet found a Russian historian. Though the Russian archives have been generously opened, it is doubtful if any Russian would be found disposed to speak of a Russian Empress with absolute independence. M. Bilbassoff began a work on Catharine, which, unfortunately, was interrupted.

I confess having been put at once on my guard against M. Waliszewski by his style, for, as Buffon said, "Le style c'est l'homme." A severe historian would not write in this vein: "The second half of the eighteenth century, dark and troublous as a stormy night, was crossed by a glittering vision. Far away, under the snow of the mysterious North, a light appeared, like a rising star. . . . Before the tottering old European monarchies, a throne with Byzantine forms was rising with an unknown majesty, and a woman was ascending its steps in a red light, a lurid and bloody red light," etc., etc. What bathos! What a *galimatias!* How different from the free-and-easy, the rapid style of Catharine! She wrote as she thought, with decision. It is difficult to find more *naturel* than occurs in her rambling confidences to Grimm. Though she writes French incorrectly, mixing it up in an odd way with German phrases or words, nevertheless her letters are read with great pleasure. She has often very happy expressions; she is unexpected, original, clever. She takes an extraordinary interest in art, in literature. Grimm is her literary and artistic adviser, but she can give as well as receive advice. It is certainly curious to see a person in possession of the most absolute power, obliged to pursue the most complicated diplomatic negotiations, to rule over an immense empire almost without any help, much given—too much given—to pleasure, and nevertheless constantly improving her own mind, and not only her own, but also the mind of her lover of the day.

Lovers she had, it may be said, by the dozen. She was called a Messalina by her political enemies. History gives us the names of as many as ten favorites, who were acknowledged favorites, treated as such by the ambassadors and mentioned in their despatches; there were besides many others, who reigned only for a short time. Catharine had passions, she had caprices. Her husband, Peter III., was a kind of monster in every respect; he was hateful and contemptible. As he had no child, the Empress Elizabeth did not hesitate to insinuate to Catharine, when she was still a Grand Duchess, that she had better choose between Soltikoff and Narishkin. They were her first lovers; the Emperor Paul's father was most probably Sergius Soltikoff. Then came Poniatowski, whom she afterwards made King of Poland; and Gregory Orloff, who had given her the crown. Her greatest passion was probably for Lanskoi, who died young. There were officially ten favorites during her long reign.

Gregory Orloff remained the favorite during the ten years from 1762 to 1772. His family and himself in that period received from the Empress from 40,000 to 50,000 peasants and 17,000,000 rubles in silver, palaces, jewelry. Castéra, in his 'History of Catharine II.,' published in the beginning of this century, estimates the presents made to the known favorites at 92,820,000 rubles—something like 400,000,000 francs, according to the value of exchange at that time. The favorites were all made generals, marshals, ministers; the Empress, while they were in favor, consulted them about everything, but she remained the sole ruler of her empire. Was it because her will and her intelligence were the strongest, or because her favorites had more avarice than ambition? They never had the sort of influence which Mme. de Maintenon had over Louis XIV., which Mme. de Pompadour and even Mme. Du Barry had over Louis XV. Catharine was more manly than all the men whom she admitted, one after the other, into the imperial palace as mere consorts.

She was the ideal sovereign of the French philosophers. The liberalism of the French philosophical school did not go beyond the "benevolent despot." Voltaire, who was Catharine's god, called for an "enlightened sovereign." Such an ideal found its place in Russia better than anywhere else: no constitution, no parliament, no habeas corpus; no law, in a sense—the will of the sovereign absolutely omnipotent. It seemed perfectly natural to Catharine to be an autocrat. She came to Russia so young that she identified herself rapidly and completely with the Russian people. She was like a medal with two faces: on one side, you see the correspondent of Grimm, the admirer of Voltaire, the unbeliever, the Epicurean; on the other, you see the Russian *matushka*, worshipped by millions of *muzhiks*, the Byzantine Empress, head of the Orthodox Church, the moving spirit of the Slavic world, the Great Catharine. This extraordinary contrast gives a great charm to her correspondence. Her intelligence lays hold on everything. She is not systematic, she is always ready to adapt a new means to new ends. Grimm writes of her:

"It is necessary to have seen, at such moments, that singular head, compound of genius and of grace, to have a conception of the flow of ideas, of the sallies which crowded upon each other like the waters of a natural cascade. Why was it not in my power to write down those conversations literally? The world would have had a precious fragment, perhaps unique for the history of the human mind. The imagination and the reason were equally struck by that eagle eye, so profound and swift, which illumined everything like lightning."

Catharine, though she worked every day at improving her mind, and was a constant reader of Montesquieu and Blackstone as well as of the lighter French literature, was nevertheless more remarkable for her character than for her intellect. She had an indomitable will; she had identified her own ambition with that of Russia, and she gave a national character to all her undertakings. She had in view the resurrection of Greece, the enfranchisement of the Slavic populations of the Balkan peninsula. She dreamt of replacing the crescent with the cross on Saint Sophia in Constantinople; she gave to the second son of Paul the name of Constantine. She got a footing on the Black Sea after the Crimea had been conquered by Potemkin. We see in her letters maps, coarsely drawn in her hand, of the Caucasus; she wished to take Baku and Derbent. Speaking of Constantine, she writes on October 7, 1789: "He has a fine future. In thirty years he may well go from Sebastopol to Constantinople."

We can agree with M. Waliszewski when he writes:

"She was an extraordinary woman and a great sovereign. As a woman she proved that her sex was capable of rising to the level of the highest destinies and duties; as a sovereign she did as much for the greatness of Russia as Peter I. himself. She did not, however, as has been said, introduce her adopted country into the domain of European civilization; Russia is no more European now than she was two hundred years ago. She is neither Europe nor Asia; she has been justly called a sixth part of the world. This Russia, which is and seems to be destined to remain a world apart; which, though it is in contact with the great European interest, seems to follow its own impulse and to obey its own special law of development; which, though it draws its inspiration from Occidental culture, betrays no tendency to allow itself to be absorbed by it—this Russia, which Peter I. created, received from Catharine the consciousness of its strength, of its genius, and of its historical rôle."

We will end by saying that we should have much preferred that M. Waliszewski had given his work an historical and chronological form. The titles of his chapters will show what method he has followed. When Catharine becomes Empress we are treated to these chapters: "Physical Portrait, Character, Temperament—Intellect, Education—Ideas and Principles—Art of Governing—Domestic Policy—Foreign Policy—The Friend of the Philosophers—Catherine as a Writer—Inner Life—Family Life—Favoritism." This classification may be convenient for some researches, but it seems to us that the details of these numerous chapters might have found their place in a biography, and a biography has more life than a systematic enumeration of separate traits.

Correspondence.

VÆ VICTIS.

To the Editor of The Nation:

Sir: There are some dimensions so enormous that we best obtain an adequate idea of them by comparison. Perhaps this method may be usefully employed to indicate the monstrous proportions of the United States pension expenditure.

When the Franco-Prussian war indemnity of five thousand millions of francs ($965,000,000) was exacted by Germany, the demand was considered a merciless exercise of the power of conquest. Will it be believed that by the close of the current fiscal year (June 30, 1893) the South will have paid for the support of Northern families *one hundred and eleven millions of dollars more* than an equivalent number of the French people were required to pay the conquering Germans as war indemnity?

By the close of next June the sum paid in pensions will amount in round numbers to fifteen hundred and seventy-five millions of dollars ($1,575,000,000). Now, the proportion of the Southern people to the whole population of the Union since the war has been remarkably constant at one-third, so that the South has contributed of that total one-third, or five hundred and twenty-five millions of dollars ($525,000,000). The average population of the South since the war has been fifteen millions, or three-sevenths of the population of France in 1871, so that the sum which the Southern people would have had to provide for the war indemnity to Germany, would have been three-sevenths of nine hundred and sixty-five millions of dollars, or four hundred and fourteen millions ($414,000,000), which is less

by $111,000,000 than the South has already paid to the North, and the beginning of the end "is not yet." A. M. KEILEY.

CAIRO, January 18, 1893.

FRANCE AGAIN.

TO THE EDITOR OF THE NATION:

SIR: A short time since I quoted from an article by the Comte de Vogüé to show that the problems of popular government are the same in France as in the United States, and may be summed up in the question how to arrive at a proper balance of executive and legislative power. I should like to clinch that quotation with some extracts from the *Chronique* of Charles de Mazade, also in the *Revue des Deux Mondes*. The details are different from ours, but the principle is the same:

"For more than ten years there has been formed on the surface of the country a class of impatient Republicans, greedy of domination, who have thrown themselves upon power as upon a prey, and have aimed at making the Republic the property of party, the monopoly of a sect. All their policy is to have a majority. They have created it, after a fashion, by the artifice of a concentration which is only an equivocal association of interest. They have maintained it as best they could by making a common stock of their passions and prejudices; by giving up to each other now moral peace and the security of religious faith, now the guarantees of financial order, one day the inviolability of the magistracy, the next social order itself, jeoparded by the agitations of workmen and Socialists. If by chance they felt themselves shaky, or about to split up, the great argument was always ready: they hinted at monarchical conspiracy or raised again the clerical question [the equivalent of the Democratic party]. They appealed to republican solidarity, and the ranks marched to the ballot-box without flinching. The main thing was to keep up the majority, to remain the masters. And thus has been formed by degrees a system in which all are deadened—moral sentiment as well as that of the law, of equity, of the rights of the State, of the authority of Government. And thus we have come to the point of relaxation in which public men, badly guarded against the temptations of power, have found it quite natural to lay the financiers under contribution for their cause and for themselves, to make a trade of their influence under the protection of republican solidarity.

"What is curious, without being new, is that those who never see any remedy for crises except in destruction and in new revolutions, now turn their weapons against the representative system and accuse it of all misfortunes and all mistakes. If the Panama affair happens, if the Government totters, if venality enters into public life, if the Chamber feels itself to be powerless and fallen in public esteem, if, in a word, confusion and suspicion are everywhere, it is the fault of representative government. Nonsense! Real representative government we have not got, and it is precisely because we have not got it, because we have only the fiction and the shadow of it, because it has been outrageously falsified, that everything goes by haphazard, without rule and without fixity.

"Is the chief of the State free to exercise the rights and powers which the Constitution gives him? The last President let those lose their edge and wither in his hands. The very honest President who is to-day at the Elysée has not been able or has not dared to renew them. If he undertook to have an opinion, an initiative, to demand new consideration for a law by Parliament, as he has a right to do, there would be an outcry about personal power. If he spoke of a dissolution, the cry would be of a *coup d'état*. He cannot, in his travels, use the elevated and moderate language of a chief magistrate without being accused of reaction, of conspiracy with the Pope. And thus one of the springs of the Constitution is broken. When the Chamber extends its sterile and jealous omnipotence over everything, when it contrives always to have an extra session by not voting the budget till the last moment, or not at all, is that representative government? When ministers are set up and pulled down by the freaks of an incoherent and precarious majority, without other result than taking another step forward, is that too representative government? When prime ministers degrade their functions till they become accomplices, direct or indirect, of the distribution of the funds of a company, or till they introduce shady financiers into State affairs, is that, forsooth, representative government?

"Is all that, in a word—a President who cannot exercise his rights, a Chamber which overrides its own, ministries which are formed by chance—is that representative government? It is the mockery of all government."

G. B.

BOSTON, February 4, 1893.

THE ENGLISH AND AMERICAN SABBATH.

TO THE EDITOR OF THE NATION:

SIR: In common with many other readers of the *Nation*, I have been much interested in the letters relating to the "American Sabbath" and the "Lord's Day in the Primitive Church" which you published on the 26th of January and the 2d of February. But I have been a little surprised that in neither letter is any mention made of the full discussion of this subject contained in the recently published work of Mr. Douglas Campbell, 'The Puritan in Holland, England, and America.' This author shows conclusively that the English and American Sabbath of to-day was not the outgrowth of the Reformation upon the Continent. The leading Continental reformers protested against the Jewish observance of Sunday, which was a festival and not a fast; Luther enjoyed his music on a Sunday afternoon, while John Calvin at Geneva went even further, permitting his young men to engage in military drill, while the old ones played at bowls. He himself often shared the amusements of the latter, and John Knox found him so engaged when he first made his acquaintance.

It has often been said by persons unacquainted with the subject that the introduction of the Jewish Sabbath into England was the work of the Puritans alone, and all sorts of errors have been made by historians in relation to the question when the word Sabbath-day, instead of Sunday, first appeared in official documents and acts of Parliament. Mr. Campbell shows that it was used in official documents as early as 1580, and in an act of Parliament in 1585. From that time on its use was very general.

Your correspondent "H." calls attention very justly to the remarkable influence exerted upon the English people by the treatise on the Sabbath published by Mr. Nicholas Bound in 1595, but he does not suggest any reasons for the exertion of this influence. Mr. Campbell shows that long before the appearance of this book the soil had been prepared for it through the conviction, which was taking possession of the whole English nation, that they were the chosen people of the Lord. Even before the destruction of the Armada this idea was widely entertained, and after that event it became universal. Hence it follows that the Old Testament, rather than the New, was looked upon as the rule of conduct for life. How strongly this idea had affected the English people for the last three centuries has been pointed out by Emerson, Hamerton, and many other writers.

But there are other conditions, also explained by Mr. Campbell, which account for the book's popularity among all sober-minded people. On the Continent the masses were sufficiently educated to understand that a part of Sunday could be given to social recreations, while the remainder was devoted to religious observances. But, as all the records show, the English Sunday was a day of wild riot, intemperance, and general profanation. Probably misconstruing some of the directions of Elizabeth, many of the working people saw no difference between Sunday and any other day. With those who abstained from toil, it was generally devoted to theatrical representations, rude sports, and drunkenness. Unless England was to be entirely debauched, and largely through its so-called day of rest, all this required a reformation. To work this reformation came the book of Dr. Bound, the importance and value of which can hardly be exaggerated. After the death of Elizabeth, the public theatres were closed on Sunday, Parliament refused to sit on that day, and, by a series of enactments extending down to the present time, Sunday servile work in England has been forbidden, and the masses have had a day of rest. Even after the Restoration in 1660, nothing could shake the devotion of the English people to the Jewish Sabbath.

This has been a great work, but the question is whether it is the best obtainable. The masses, shut off from innocent amusements, have resorted to the ale-house and tavern, and made the English Sunday a day of drunkenness. Persons sometimes point to a Parisian Sunday, and ask whether the superior morality of the English people does not prove that their mode of keeping Sunday is the better. As Mr. Campbell points out, the careful student will probably question the assumption of a superior morality in England. But, after all, the contrast is very misleading when made between peoples of different blood, different religions, and different habits of thought. A valuable comparison can, however, be instituted between England and Holland. In this case the two peoples are of the same blood and of the same religion. But the Hollanders have never adopted the Jewish Sabbath. Their libraries, museums, gardens, and public buildings have been open to the masses on Sunday, and certainly with no evil effects, since, in the matter of morality, they stand now and have always stood above the English. In England itself a new spirit seems to be at work. Years ago, Charles Kingsley encouraged the young men of his parish to play cricket on Sunday afternoon, in order to keep them from the ale-house. To-day a large body of English divines, headed by the Archbishop of Canterbury, favor the Sunday opening of British libraries and museums for the benefit of the masses. This cannot be long delayed. Whether the Fair at Chicago should be opened on Sunday, in whole or in part, is a matter about which there is naturally a marked difference of opinion. It is certainly, however, not in the interest of morality or religion to conceal or misrepresent the historical facts connected with the development of our present mode of keeping Sunday. G.

FEBRUARY 4, 1893.

"*MISTAKEN* SOULS."

TO THE EDITOR OF THE NATION:

SIR: As above, or, more fully, with the words "*Mistaken* souls, that dream of Heaven," begins, in a mouldy myth, the enlivening hymn which was given out for the solace of a couple undergoing matrimony. Not to speak of the apocryphal ninth beatitude, here are suggested pneumatology, oneirology, gamology, and much besides; but

"On all these points, and points obscure as these,
Think they who will, and think whate'er they please."

Such profundities waived, then, my present business is with the incidence of philology on

the humble vocable *mistaken*, in the acceptation of 'erring in judgment.'

Under the heading "To be *mistaken*," Dr. Johnson expounds in this wise: "*To mistake* has a kind of reciprocal sense; *I mistake*, 'je me trompe.' *I am mistaken* means *I misconceive*, *I am in an error*, more frequently than *I am ill understood;* but *my opinion is mistaken* means [sometimes] *my opinion is not rightly understood.*" When, however, did *mistake* signify 'deceive'? Of Dr. Johnson's principal editors, Archdeacon Todd and Dr. Latham, the first retains the comment which has been quoted, and the other omits it, though without substituting anything in its place. "The passive participle," alleges Bp. Lowth, "is often employed in an active sense in the word *mistaken*, used instead of *mistaking*." After citing Shakespeare's "You are too much *mistaken* in this king," he adds: "*I mistake* or *I am mistaking* means 'I misunderstand'; but *I am mistaken* means, properly, 'I am misunderstood.'" Meaning otherwise, it is improper, doubtless, if the ruling of an incogitant autocrat is to be preferred to the warrant of good usage. Farther, the Bishop ignores *mistake* as intransitive.

In the original edition of John Walker's *Critical Pronouncing Dictionary*, published in 1791, appears Dr. Johnson's "To be *mistaken*," his definition, 'To err,' and nothing more. But, in the second edition of that work, which came out in 1797, there is an ambitious note on Dr. Johnson's exposition of the phrase. Here is an extract from it: "The verb in question, *I am mistaken*, for *I am mistaking*, seems . . . to be what the Latins call a verb *Deponent*, an active verb with a passive form; an irregularity which is no recommendation to the Latin Language, and is a blemish to ours." "This irregularity," Walker maunders, "has long been an eyesore to our Grammarians, but has got such possession of the language as to render it almost incurable"; as if grammarians of English, for the most part, were not a beef-witted, self-confident, and opinionated crew, who, except for their being purblind, would less frequently fancy the existence of linguistic deformities. And Walker also tenders the following valuable information and sapient counsel: "Our old writers were ignorant of Grammar, and thought all phrases good that did not quarrel with the ear; but that is not the case since the labours of Johnson and Lowth. The best way, therefore, to remedy these abuses is, to avoid them in future"; a sort of consummation which will be feasible when a head that has been broken can be healed by not breaking it again.

The phrase *to be mistaken*, remarks Dr. Richardson, "has a two-fold application." Touching the second of its applications, the one with which I am concerned, he pronounces: "I am *mistaken—i. e., taken*, led, drawn the wrong course or path, astray; I am misled, misguided, betrayed; and, consequentially, I go wrong or astray, I err, I misapprehend." This, one cannot but acknowledge, is, as sophistry, excellent.

Mr. B. H. Smart, the lexicographer, bids us recognize, in the *I am mistaken* here considered, "an adjective," denoting 'wrong—erroneous in judgement, view, or opinion,' which "must be distinguished from the participle passive or past, as in . . . 'I am *mistaken* by my hearers,' . . . where the sense is different from that of the adjective." But, just as there, so, in *mistaken meaning*, 'misapprehended meaning,' is not *mistaken* the same part of speech that we have in *I am mistaken* and *mistaken souls?* Since, however, it is only in the latter phrases that Mr. Smart sees an adjective, can it be that he derives his "adjective" *mistaken* from the substantive *mistake*, as *wooden* is derived from *wood?* At any rate, he has repeatedly betrayed that he is quite capable of such an enormity of philologastry. To this effect indicate, for example, besides his *chrestomachy*, *curriculus*, etc., etc., his *dislogistic*, with the wonderful definitions of it: "'Illogical; undoing by argument what seemed to be previously established by it.' In the first sense, at least, if not in the second, the word is ill-formed." In spite of what I observed in *Modern English* (1873) respecting *dislogistic*, this cacograph, and also Mr. Smart's fatuity about it, are retained in the latest edition of Webster's *Dictionary* (1880), and in the latest edition of Worcester's (1881), to which I have access, with the addition, in both, of Jeremy Bentham's *dyslogistic*, as something different, which, forsooth, it is, with a witness.

The Rev. Mark Anthony Meilan, dogmatizing in 1803, classes *you are mistaken*, 'you err,' among "anomalous or uncouth phrases," and despatches it thus: "This means, really, *you are misunderstood;* because *mistaken*, as it follows the verb *are*, is an adjective, whereas the intended meaning is that you *mistake*." The author's whim in calling *mistaken* "an adjective" is founded on his rejection of a passive voice in English. With him, differing from Mr. Smart, equally with the *mistaken* after *are*, the *misunderstood* in *you are misunderstood* is, as he expressly teaches, an adjective. As to the Meilanite logic, it is quite beyond me.

Dean Alford lays it down that, in *I am mistaken*, 'I have made a mistake,' the verb is "in the passive, to carry what should be its active meaning." Mr. Edward S. Gould laments that such an expression is "one of the most widely disseminated of philological errors." According to Dr. William B. Hodgson, we have, in the litigated *I am mistaken*, a "quasi-middle usage"; he can discover "no true analogy to" it; and he scouts it as impure English. Once more, Mr. Alfred Ayres desiderates the emergence of "some theory upon which the locution *you are mistaken*," as ordinarily employed, "could be defended." But I may well have done transcribing effusions which, as will be evinced, determine nothing but their own emptiness. Their authors, one and all, were unfavored, in their gropings after the truth, with any the faintest glimpse of a glimmer of helpful enlightenment. Yet, to guide them aright, nothing more was requisite than a little circumspection.

In the same boat with the *mistaken souls* aforesaid, for which there are seventeenth-century precedents, are, in the contemplation of grammar, *advanced scholars*, *aged saints*, *apostatized churches*, *backslidden sinners*, *coalesced parties*, *decayed cheesemongers*, *departed joys*, *escaped convicts*, *expired leases*, *fallen angels*, *gone sinners*, *grown women*, *practised writers*, *relapsed heretics*, *retired statesmen*, *strayed sheep*, *vanished charms*, *waned moon*, *risen Lord*, and—in heaven above, in the earth beneath, and where good Presbyterians would send naughty Professor Briggs—a miscellany of other persons and things far too numerous to particularize. *Clamans in deserto*, and therefore unheard by the far-off world, I proclaimed all this, substantially, one and twenty years ago, in my *Recent Exemplifications of False Philology*, p. 37, where *mistaken eulogist*, 'eulogist who errs,' is adduced in the course of a discussion aiming to establish that *experienced*, in *experienced man*, is not based directly on a substantive. Curiously enough, the nicety on which I am dwelling was lately proposed afresh for consideration by Mr. Thomas Adolphus Trollope, immediately after he had read my book just named, as he informed me in a pleasant letter of eight pages written but five days before his sudden and lamented death. That what I there say has a distinct bearing on that nicety must have escaped his notice.

Expired leases affords one of the many instances of the adjectival use of the past participle of a verb intransitive; and, if the verb *mistake* had been intransitive only, who would not have perceived, at once, that *mistaken souls*, as here discoursed on, is precisely on all fours with it? And, as it is, who, unconfused by the thought of the transitive *mistake*, can help perceiving that *I am mistaken*, 'I have fallen into error,' has a perfect analogue in *the leases are expired?* Obviously, too, if, as we have no practical transitive *miscarry*, we had no transitive *mistake*, the employment of *I mistake*, 'I err,' *I have mistaken*, 'I have erred,' and the like, would be much more current than is now the case.

No one, assuredly, could have had any difficulty in justifying the phraseology under treatment, if he had reflected on the fact that, whereas the combination formed by *have* and a past participle is dynamic, that which is formed by *be* and such a participle is static. *Has expired* denotes action; *is expired*, as likewise *expired* qualifying *leases*, denotes state resulting from action. In the latter, *expired* is virtually, though not in scientific nomenclature, an adjective. Only in being derived from a verb does it partake of the characteristics of a participle.

It must, by this time, be clearly evident that *the mistaken man*, 'the erring man,' and *the man is mistaken*, 'in error,' are to be explained, in rigid strictness, as 'the man in the condition of having mistaken, or of having made a mistake,' and 'the man is in the condition,' and so forth. Practically, however, *the mistaken man*, or the man who *is mistaken*, 'in error,' is he of whom *mistaking*, 'making a mistake,' whether in the past, the present, or the future, may be predicated. Time is here indeterminate, as it is in *a running stream*.

Though *mistake*, intransitive, has so early authority as that of Robert Mannyng, about 1330, the transitive *mistake*, as I learn from Dr. Murray, of the *New English Dictionary*, has not been observed to have come up till some fifty years later. On the transitive use of the verb, on the substantive *mistake*, the participial adjective *mistaking*, the adverbs *mistakingly* and *mistakenly*, etc., there is no occasion that I should touch.

Mistaken souls, indeed, and mistaken from peculiarity in their gift of apprehension, must be those who, after patiently pondering what has been set forth above, refuse to accept the proffered rationale of the phrase by which they are to be designated. F. H.

MARLESFORD, ENGLAND, Jan. 15, 1893.

P. S.—In No. 1427, greatly disabling my argument, I have said, nodding, that the substantive *pervert* denotes 'a personal agent.' For this read "a person acted upon," or simply, if I may so put it, "a patient." It is, above all, in being passive that it differs from *cheat*, "cheater," which is active.

But to "a patient" I should prefer "a patiential" or "patiential," to match *an agential* and *agential*—technicalities which I proposed many years ago, and which have been, to some extent, taken up. *Perverter* is agential. One ought not to flout a scientific term, accepted or

candidate, for its ugliness, if it is usefully distinctive.

Notes.

D. Lothrop Co., Boston, have in press 'Seaward,' an elegy on the death of Thomas William Parsons, by Richard Hovey; 'In the Wake of Columbus,' by Frederick A. Ober, copiously illustrated; and 'Oliver Cromwell,' by Geo. H. Clark, D.D.

Ginn & Co., Boston, announce for next month an abridgment of Ormsby's translation of 'Don Quixote,' edited for children by M. F. Wheaton.

The Century Company is about to publish 'A Handbook of Invalid Cooking,' by Mary A. Boland, instructor in cooking at the Johns Hopkins Training School for Nurses. Besides recipes, some ideas are given in this book of nutrition, digestion, chemical changes in food, etc.

Macmillan & Co. announce as nearly ready the first volume of Henry Craik's "English Prose Writers," uniform with the companion series, T. H. Ward's "English Poets." The specimens from each writer's works are prefaced by brief notices of the life and surroundings of the author, the scope of his work, with a critical description of his style and methods, and of his place in the development of English prose. The part now ready covers the period from the fourteenth to the end of the sixteenth century. There will be two editions, corresponding to the Cabinet and Students' editions of Ward's "Poets."

Henry Holt & Co. will shortly publish 'Literary Criticism for Students,' by Prof. Edward T. McLaughlin of Yale, a book of selections on literary æsthetics by the great English critics from Sir Philip Sydney to Walter Pater; also, 'Representative English Literature,' by Henry S. Pancoast, University Extension Lecturer.

D. Appleton & Co. have nearly ready 'Andrew Jackson,' in their "Great Commanders" series, the last literary labor of the late James Parton.

The death of Cyrus W. Field has seemed a fitting occasion to furbish the monument to his greatest achievement, and the Scribners have accordingly brought out a new edition of Dr. Henry M. Field's 'History of the Atlantic Telegraph,' more handsomely set, and more or less revised by the author. Dr. Field has added a chapter or two personal to his brother, whose career is recorded to its sombre end, and whose portrait serves as a frontispiece. The memorial is justly due to one who was the cause of perhaps the greatest difference between the world into which he was born and that from which he departed. It will be Cyrus Field's triumph, too, when, as we may expect, the telephone service also shall be submarine, and when Emerson's metaphor of the Concord "shot heard round the world" shall be overtaken by practical acoustics.

To the reprint of the first edition of 'David Copperfield' (Macmillan) the younger Dickens prefixes but a few words. What passed as his father's masterpiece was written with the greatest ease and least draft upon his nervous system, and has, properly speaking, no history. Mr. Dickens intimates the bounds to its autobiographical and family portraiture, and censures Mr. Forster for not excising "the half-dozen or so lines, which cannot but have come as a shock to most people," in the novelist's posthumous confession of his bitter feelings towards his parents—his mother in particular.

All the improvements claimed for 'Hazell's Annual' for 1893 (London: Hazell, Watson & Viney; New York: Scribners) will be found to exist in fact. This valuable statistical handbook has always bestowed much attention on Labor, and now essays with good success to give a conspectus of the movement the world over—a "movement," of course, in which strikes play a conspicuous part. A new rubric, for which enlargement may be expected, pertains to matters Medical. The lists of Peers and Commons have been displayed to better advantage than formerly. New titles, like Paderewski, and old, like Blaine, Cleveland, Kossuth, Panama Canal, etc., show the editor's care in bringing the work down to date.

'The Horsewoman,' by Alice M. Hayes (W. Thacker & Co.), conveys the usual information in regard to side-saddle riding which women are supposed to be in search of, and is sufficiently well illustrated. It is by no means so clear or so attractive as "C. de Hurst's" manual, which we recently noticed, and too much space is given to advertising the author's remarkable success as a horsewoman, repeating all the flattering things the newspapers have said of her, and recommending the public to read her husband's books.

'Figure Skating, Simple and Combined' (Macmillan & Co.) will doubtless prove interesting to the young people who are taking advantage of the present season and the facilities offered by the various skating-clubs for indulging in their favorite pastime. Mr. Monier-Williams and his associates seem to have said all that it was possible to say on the subject, and they are duly impressed with the alleged superiority of English figure-skating over that practised in any other country. It is of course exceedingly difficult to make comparisons, but it is safe to say that this superiority cannot yet be regarded as a fixed fact.

'Old Sword Play' (B. Westermann & Co.) is a handsome volume, chiefly remarkable for the illustrations, which are reproduced from the works of Morozzo, Alfieri, Angelo, and others. These illustrations are accompanied by a somewhat slender account of the various systems of sword play, which cannot be said to add anything to previous treatises on the subject.

Columbia College announces two prizes, of $1,000 and $400, offered by Mr. Joseph F. Loubat, for the best works published in English on the (1) history, geography, numismatics, (2) archæology, ethnology, or philology of North America. The author need not be a citizen of the United States. The works in question must have been published since January 1, 1888, and must be based on original research. Copies must be sent, not later than June 1 of the present year, to the President of Columbia College, whose Secretary will furnish copies of the regulations adopted. Mr. Loubat's endowment will permit an award at least every five years alternately in the two groups of subjects shown above. After the present year, the foundation will be employed to stimulate research—*i. e.*, to reward works written expressly in view of the prizes.

The Calendar of the Imperial University of Tokio for 1891–'92, besides giving the detail of students and instructors, furnishes a complete list of the publications of the medical and scientific departments. While there are four volumes of monographs in science, most of them in English, and twenty-two medical papers in German, the college of literature is still represented by one essay, Prof. Chamberlain's "Aino Studies." The students number 1,346, and the graduates and alumni 1,589. The statistical tables show that the extremities of the empire and every prefecture in it are represented, the average age of students at graduation being twenty-four. Another interesting conspectus shows the occupations of graduates, the majority being in Government employ, and about fifty studying in special courses abroad. There is a map of the grounds of the University, one the superb city headquarters of the daimio of Kaga, the richest of the old feudal lords, in whose dominions the characteristic red and gold porcelain was made. One of the most interesting pages is that devoted to the scholarships founded by private munificence, one being in memory of Hatakéyama Yoshinari, one of the Japanese best known to Americans. Very appropriately, these scholarships are in law and chemistry, courses which were founded by this zealous scholar, who was so powerful an agent in the development of the old language-school into the university.

Apropos of the issue this month of the "enriched" or standard Book of Common Prayer in the United States, there is on the press, in Japan, a translation of the English parent book into the Ainu tongue. The Rev. John Batchelor, an English clergyman, of the Church Missionary Society, whose work on the Ainu of Japan we lately reviewed, is the competent translator.

A peep into the literary life of Old Japan, and especially of the scholars of Yedo, has been afforded readers of the Transactions of the Asiatic Society of Japan by the Rev. George W. Knox, American missionary of the Presbyterian Church. Dr. Knox has given, in condensed and readable form, the substance of the philosophy of Kyusō, the most orthodox and influential of the Confucian teachers in Yedo. His system being the prop of the Tokugawa militarism, or Tycoonism, it had the protection of the Yedo Government, and opposition to it was banned as heterodoxy. Other scholars who made the critical study of the Chinese sage a means of intellectual emancipation, and occasionally a motor of political loyalty to the Emperor in Kioto, were apt to continue their meditations in jail, with the confiscation of their writings. Dr. Knox is now engaged upon a translation of the autobiography of Arai Hakuséki, which is probably unique in the literature of Japan. This rationalistic scholar, the Ewald of Japan, who interpreted in the light of science the myths of the ancient books, lived between the years 1656-1725, and gives in his work a lively picture of literary life, opinions, and procedure in the Shogun's capital.

A *Privat-gymnasium* for girls will be opened at Easter at Weimar, with the object of preparing women for the universities. A similar gymnasium was opened last October at Vienna.

An introductory lecture of a course on Egyptology was delivered in London on January 14 by Mr. Flinders Petrie, the first holder of the professorship at University College founded by the late Miss Amelia B. Edwards. In it he referred to the fact that, while the Governments of Germany, France, and Italy had liberally assisted students, the English Government, notwithstanding its position in Egypt for the past ten years, "had done nothing, and even private enterprise had been hindered rather than helped by English diplomacy." It would be his aim to provide a library and museum for the use of students, and he hoped to have a series of annual loan exhibitions. In addition to courses of lectures, students would be prepared for practical work in Egypt, and Mr. Petrie stated that from $1,500 to $2,000 would cover all the expenses of an excavator

for one season. Some of the best recent works on Egyptian art and history were mentioned, but, "for the general outlines of the whole subject," Wilkinson was still the best. Mr. Petrie concluded with a rapid sketch of what still remained to be done in Egyptology.

The existence of a race of dwarfs on the Atlas range, about which there was an animated controversy last year, has received unexpected confirmation. Mr. Walter B. Harris, who has just returned from a journey in southern Morocco, communicates these facts to the London *Times*: While travelling along the foot of the mountains he saw thirteen or fourteen persons, none of whom were over four feet six inches in height, natives of the upper mountain regions. The Moors described them "as a wild people, living in built houses in the rocks and snow, hunting mouflon with extraordinary agility, and given to shooting any one penetrating to their domains." He attributes their small stature, not, as some have asserted, to the fact that they are the remnants of the troglodytes, but to the circumstances in which they live. He believes them to be "merely a certain collection of Shleh tribes, who, through the high altitudes at which they live, and the extremes of climate they are subject to, from their poverty and inability to grow crops, from the scarcity and bad quality of such food as they are able to collect, have, in the lapse of centuries, become of almost extraordinarily stunted growth." On his return journey to the coast Mr. Harris visited the artificial caves of Ain Tarsilt, which, from the height of the roofs and the size of the doors, windows, and alcoves for beds, were evidently the work of dwarfs. He does not venture an opinion, however, as to whether any descendants of this people are still living.

The pleasant villages of Vevay and Montreux, on the banks of Lake Geneva in Switzerland, favorite resorts of summer travellers, appear to be exposed to a peculiar danger from the tendency of their wharves to slip down into the waters of the lake. The villages are situated on small deltas, built by torrential streams that descend from the neighboring hills. The outer slope of the deltas, beneath the lake level, lies at as steep an angle as can be maintained by pebbles and sands. When an additional weight, such as that of masonry and wharf construction, is added to their edge, equilibrium is destroyed, and a catastrophe often follows. At Vevay a number of accidents of this kind are described by Dr. Schardt in a recent Bulletin of the Société Vaudoise. At Vevay a long wharf slipped into the lake on May 11, 1877, and at Montreux a wharf and some adjoining parts of the shore, occupying in all about ten thousand square feet, quietly sank on May 19, 1891. A heavy storm of wind and rain prevailed at the time, and no one was on the wharf when it disappeared.

The *American Anthropologist* for January contains an article on the distribution of stone implements in the tide-water country of Virginia and Maryland, by W. H. Holmes, in which he gives a novel and suggestive interpretation to the rough-chipped stones such as have been heretofore called palæolithic. Mr. Holmes shows very clearly that the rough-chipped stones found around Washington are simply "rejects," discarded for some unsatisfactory behavior in the hands of the Indians who worked them. Complete sequences of specimens illustrate the advance from the unworked cobble-stones of the old river beds, through the rougher or finer rejects, to the finely chipped or polished implements. The rejects are never taken far from the "workshops" where the original material was got out, but the finished implements are carried far and wide from these centres of distribution. Whatever date may finally be given to rough-chipped stones embedded in undisturbed river gravels, it is clear that the principles of interpretation announced by Mr. Holmes must be carefully introduced in a revision of much that has been published about so-called "palæolithic man" in America.

The age of the earth is discussed by Mr. Clarence King in the January number of the *American Journal of Science* on the basis of certain experiments made in the laboratory of the United States Geological Survey by Mr. Carl Barus on the behavior of rocks under high temperatures and pressures. Assuming certain initial distributions of temperature within the earth, it is found that an age of 24,000,000 years is the most probable measure of the time since a permanent crust was formed and geological processes were introduced; and this involves such a present distribution of internal temperatures as is consistent with essential solidity of the rock mass within, because downward increase of pressure more than counterbalances the effect of downward increase of heat. Mr. King finds evidence of the correctness of this time-measure first in the physical evidence of the behavior of the earth as a solid under tidal strains, and second in the limits set to the past supply of solar heat by the estimates of Helmholtz and Kelvin. In the February number of the same periodical Mr. George F. Becker makes a contribution to the history of the physical term "potential" (*subs.*) that will be serviceable to Dr. Murray and the 'New English Dictionary.'

Two articles extracted from the Bulletin of the United States Fish Commission—on the physical and biological characteristics of the natural oyster-grounds of South Carolina, and on the present methods of oyster-culture in France, both by Mr. Bashford Dean—possess an exceptional interest on account of the numerous accompanying photographic views. The phosphate industry in the beds of the Carolina rivers is, it appears, injurious to the oyster not by reason of any chemical pollution, but by the mere mechanical disturbance of the water with sediment.

The political vagaries of the present population of Kansas have induced much speculation as to the cause of them. That the lack of newspapers does not count is evident from the list published in the eighth annual report of the Kansas Historical Society. It fills twenty-nine pages, and with very few exceptions every paper thus recorded is sent as a free gift to the Society, which binds and cares for it. A like enlightened spirit governs the press of Wisconsin in reference to the library of the State Historical Society.

Mr. F. Gutekunst, Philadelphia, reissues, on a sad occasion, his panel photographic portrait of the late Phillips Brooks. No better has come under our observation. More generally acceptable may be Mr. Gutekunst's reduction of the same portrait to cabinet size, printed in permanent ink on plate paper by his exceptionally good process. A number of curious early portraits of the great preacher, his teachers and friends, with views of his churches and his haunts, accompany a paper on Bishop Brooks by the Rev. Julius H. Ward, reprinted from the Boston *New England Magazine*.

—The thirty-third volume of Sidney Lee's 'Dictionary of National Biography' (London: Smith, Elder & Co.; New York: Macmillan) carries the letter L along to Lluelyn. The explorer Livingstone is allowed twelve pages, and this is more, we think, than any other personage between these covers gets; nor, indeed, is there among them any whose influence on mankind and the course of history surpasses his, or whose fame will continue to grow like his as the vast "Dark Continent" undergoes the civilizing transformation due to his impulse. From this, though not from a literary, point of view, the ten pages given to Sir Robert L'Estrange seem disproportionate—L'Estrange, who, according to Dr. Johnson, was the first hireling partisan journalist. That odd protégé of Dr. Johnson's, Dr. Robert Levett, is the subject of a very bright and rather touching sketch. There is a charitable account of Charles Lever, whose strictly English pedigree is remarked upon. The notice of Mark Lemon recalls the extensive "theatre" of this playwright founder of *Punch*, which in its trying early years was maintained by his stage profits. Leslie Stephen's fine hand appears in the notices of "Monk" Lewis, as well as of G. H. Lewes, of whom it is recorded that in an article in the *British Quarterly* in 1847, upon "Browning and the Poetry of the Age," he held up Tennyson as the only true poet living. Of Lewes's conjugal infelicities, Mr. Stephen says incisively: "The views of marriage held by Lewes and his immediate circle were not more strict than those of Godwin and Shelley. When, however, the conduct of the persons concerned exemplified the theories which he had inculcated, complications arose which became practically trying." In this volume are also embraced John Leland, earliest of English antiquaries; Lemprière, whose Classical Dictionary had "the merit of being readable"; J. J. Lester, who worked out the principles of the modern microscope; Edward Lloyd, godfather of "Lloyd's"; that shifty statesman, William Lenthall, Speaker of the House of Commons, conveniently blind when Charles I. would arrest the five members; Sir G. Cornewall Lewis, whose *mot*, "Life would be tolerable but for its amusements," should not lose currency; and Jenny Lind. Nor must we omit to mention the sketches of theologians so recently among us as Bishop Lightfoot, Canon Liddon, and R. F. Littledale.

—The well-known Swiss Dante scholar, Dr. G. A. Scartazzini, has just published (Milan: Hoepli) an abridged edition of his larger commentary on the 'Divine Comedy,' which seems likely to meet with much favor and probably to supplant for general uses all the smaller Italian editions. It is, for instance, decidedly superior to Fraticelli's, for though the two volumes are of about the same size, the thin (but tough) paper on which Scartazzini's is printed gives him fully two hundred pages the advantage. The print, moreover, is beautifully clear, that of the notes as well as that of the text, and the various sizes and styles of type are so skilfully arranged that the eye finds readily and without fatigue what it seeks. The text is virtually that of the larger edition. The notes in most cases are abridged from the same; in not a few cases, however, the editor has taken advantage of later researches or of the commentaries—notably that of Benvenuto da Imola—which have been published since the appearance of the Leipzig edition. So far as a rapid examination can discover, there is a gratifying absence of the polemic writing which has at times marred Scartazzini's work. The price is only four *lire*. The preface announces that the editor has in hand a complete revision, under the title of 'Dantalogia,' of his 'Dante,' published in 1883 in the Hoepli series

of manuals, and translated into English in 1887 by Dr. Davidson.

—Three years ago our readers' attention was directed to the then recently concluded barometric observations of Prof. A. Heilprin among the giant volcanoes of Mexico, made with a view to redetermining the elevations of the four principal summits of the Republic, the Nevado de Toluca, Ixtaccihuatl, Popocatepetl, and Citlaltepetl (or Peak of Orizaba, as it is commonly called). The results obtained showed, contrary to common supposition, that the Peak of Orizaba (18,205 feet) exceeded Popocatepetl in elevation by nearly seven hundred feet, and that it was justly entitled to the first position among the Mexican mountains, if not among all the summits of the North American Continent. Much incredulity was at the time expressed regarding this determination of altitude, and it even appears that considerable feeling was aroused by it in the City of Mexico, so justly proud of the "smoky mountain," one of the "watch towers" of the Valley of Anahuac, are the inhabitants of the Mexican capital. More recent determinations of the two rival summits, made by J. T. Scovell of Terre Haute, Ind., in charge of a special commission of exploration, confirm Prof. Heilprin's measurements, and place them within an unusually narrow margin of error. The average of the barometric determinations of the Peak of Orizaba gives 18,179 feet, and of the triangulation, 18,314 feet—a mean of 18,246 feet. Assuming this altitude to be approximately correct (and it is so conceded by the editor of the Royal Geographical Society's Proceedings), the question as to the culminating point of the North American Continent resolves itself into a consideration of the claims of Orizaba and Mount St. Elias. The latter mountain, which the earlier determinations of Russell and Kerr had almost consigned to the level of the higher peaks of Colorado and California, has since been reconstituted by Russell into a mountain of the first order, with an elevation of approximately 18,100 feet. As such it confirms the position stated in the *Nation*, that while a close rival of the Mexican peak, its place is probably after, rather than before, that mountain.

—In his forty-seventh annual report, Prof. Pickering, Director of the Harvard College Observatory, makes fitting allusion to the death of a second member of the famous firm of Alvan Clark & Sons, Mr. George B. Clark, to whose genius for mechanical devices, indomitable perseverance, and devotion to the interests of the Observatory, the success of many of the most useful of the Harvard instruments is due. While, as noted in previous years, the work with the equatorials and the meridian instruments, circle and photometer, is systematically prosecuted, the research of the Henry Draper Memorial continues to absorb very largely the interests of the Observatory. Two eight-inch telescopes are constantly photographing the sky, about 2,800 plates having been taken with the Draper telescope at home, and nearly 2,000 with the Bache telescope of like pattern in Peru. A fruitful research with these plates has been the repeated discovery of variable stars, which are readily distinguished by having the hydrogen lines bright in their spectra. The valuable material continually accumulating with these instruments has frequently proved useful in studying the history of newly discovered objects, conspicuously so in the case of Nova Aurigæ, which was found to have been photographed more than twenty times antecedently to its discovery. The last plates of this now familiar object show its spectrum resembling that of a planetary nebula. With the eleven-inch Draper spectrograph nearly a thousand photographs were taken, about one-third of them being spectra of β Aurigæ, from which will be determined the law of that remarkable periodic doubling of the lines which is regarded as indicating actual duplicity of the star itself. In the lunar eclipse rather more than a year ago, attempt was made, both at Cambridge and in Peru, to photograph a possible satellite of the moon, but with only a further accumulation of negative evidence of the existence of such a body.

—By the establishment of the fund bearing his name, the wish of Mr. Boyden, who desired to secure an astronomical station where atmospheric hindrances would be greatly diminished, has been eminently fulfilled in the Harvard station at Arequipa, Peru. A quivering atmosphere is no longer, as heretofore, the chief obstacle to the progress of observations of the first order, and a limit would now seem to be enforced rather by the size of available telescopes. At 8,000 feet elevation, Prof. W. H. Pickering has employed a thirteen-inch telescope in a critical scrutiny of the planet Mars at its recent near approach to the earth, determining exact positions of nearly a hundred points on its surface, discovering forty minute black points (provisionally designated lakes), and measuring the oblateness of our neighboring planet, which, it is found, may possibly have an excess of equatorial cloud. Also, the reality of the so-called canals of Schiaparelli has been confirmed, various measurements of them secured, and the relative colors of different portions of the planetary disk made the matter of minute record. Nor have Mercury and Venus been neglected, the behavior of the markings on the surface of the former confirming Schiaparelli's view that axial rotation and orbital revolution of this planet are accomplished in the same time, while on Venus no permanent markings whatever were detectable. The Magellanic clouds, too, have come in for their share of attention, the result having been reached that their light is due partly to stars and in part to nebulous matter. Meteorology also is regularly attended to, with observations not only at Arequipa, but at the Chachani Ravine, elevation 16,650 feet, as yet the loftiest meteorological observatory in the world. Little space is left for mention of the Bruce photographic telescope, of twenty-four inches diameter, now about to be brought into operation at Cambridge, and which, if successful, will be in many respects the most powerful telescope in the world. After a period of use upon the northern sky, it will be sent to the Boyden station in Peru for a few years' study of the southern heavens, upon which only a very few telescopes of great capacity have yet been turned.

—Russian agriculture is the subject of a report recently issued by the British Foreign Office. From this it appears that in European Russia, as a whole, the spring crops of 1892 were again considerably below the average, while in three of the sixteen so-called "famine governments" the harvest hardly repaid the cost of ingathering; in ten more it was deficient in quality and in quantity; and in only three was it fairly abundant. The autumn harvest, on account of a long drought in April and May, the scorching winds of August and September, and an incursion of locusts, was believed to be still worse. In five provinces (Saratov, Riazan, Tula, Kursk, and Voronezh) the yield of the whole year has not been sufficient to feed their 10,000,000 inhabitants, and by this time, unless they have been relieved from other districts, they are reduced to starvation rations. But their ability to meet this scarcity is less than it was a year ago. Then they had cattle and a little money laid up. Now their cattle have been sold or eaten and their money has been spent. In some districts one may wander by the hour without seeing a horse or a cow. In the Government of Saratov, for instance, there were in May, 1891, 2,000,000 head of cattle; to-day there are probably not 100,000, while, in addition, the debts of the peasantry of the sixteen famine governments for unpaid taxes and borrowed money amount to more than $100,000,000. The direct cause of last year's failure in these provinces appears to have been the fact that the seed sent by the Government was poor in quality and deficient in quantity, and was not distributed until some three weeks after the time for sowing. The gradual deterioration of agriculture in this region—the famous black-soil country, the most fertile in Europe—is attributed in the report to three principal causes. The ruthless destruction of the great encircling forests, by which the moisture has been diminished and the protection from the scorching winds has been taken away, has changed the climate. The Mir system of land-tenure, by which the arable land is divided by lot every three years, tends to exhaust the soil, the temporary cultivator naturally desiring to get all he can from his land and being unwilling to enrich it for the benefit of his successor. The third cause is the oppressive taxation and the time of collecting the taxes, immediately at the close of harvest and before the crops are sold. From all these causes combined, and taking into consideration the ignorance of the Russian peasant and his tendency to fatalism, there is great reason to fear that the famine conditions are becoming chronic.

MAHAN'S SEA-POWER.—II.

The Influence of Sea-Power upon the French Revolution and Empire. 1793-1812. By Capt. A. T. Mahan, U.S.N. 2 vols. Boston: Little, Brown & Co.

CAPT. MAHAN'S second volume treats of the civil and administrative, as well as naval, warfare against commerce during the Napoleonic wars, and discusses in a critical and appreciative manner the career and Ministry of the younger Pitt. The struggle for existence between France (or rather Napoleon) and Great Britain, represented mainly by the two personalities of Pitt and the Emperor, enters into almost every page, and the strength of the sea-power of Great Britain is as clearly shown upon its commercial side as it is in the more familiar and vivid aspects in which the forces of war were employed. At the end of 1799, when Napoleon assumed the First Consulate and made overtures for peace to Great Britain which received an impossible answer, the power and prosperity of that country, notwithstanding the immense burdens of the war, had greatly increased. Her insular position and control of the sea gave her peace at home, while from the maritime and commercial paralysis of France and Holland, her great rivals, she had now become both the warehouse and factory of Europe. The foreign trade, which in the last year of peace had amounted to £44,500,000, in 1800 exceeded £73,000,000 in value, and thus Pitt was able so to

increase the revenue that the receipts above the great war taxes far exceeded anything known before. At this time, although Napoleon was almost supreme upon the Continent, his dominion upon the sea was limited to the range of his guns from shore, and, notwithstanding the abundance of French corsairs and attempts upon English commerce, the carrying trade was under the control of England, and not a single merchant-vessel was upon the sea carrying the French flag.

The armed neutrality of 1800 and the peace of Lunéville left Great Britain alone in 1801 in her war against France, who was aided for the moment directly or indirectly by the rest of Europe. The Baltic expedition, aimed against the Northern Powers, with Nelson as the fighting spirit, sailed in March to attack the Russian and Danish fleets. The latter, under the protection of the guns of Copenhagen, was committed to a stationary defence, and Nelson proposed to his superior to go direct to Revel and attack the Russian fleet and destroy it, suggesting, also, the alternative of a detachment of ten ships for that purpose and "with the remainder attempt the business at Copenhagen." Nelson's bold suggestion receives the strongest commendation from the author as a blow at the soul of the Confederation, or, as Nelson terms it, "a hewing of the trunk" which would carry the limbs in its fall. The author fails, however, to condemn, as we think he should, the alternative which would expose the English fleet to a defeat in detail, as the remainder left for the Danes would not have been sufficient to provide for the contingencies that might and did arise before Copenhagen. The battle of Copenhagen was never a popular one in England, and neither his country nor history has given Nelson credit for the courage, skill, and endurance displayed upon this occasion. Fighting from fixed defences, the courage and endurance of the Danes were most marked. Jurien de la Gravière, the first of French naval critics, says of the fight and Nelson's merits upon the occasion, that "they will always be, in the eyes of seamen, his fairest title to glory. He alone was capable of displaying such boldness and perseverance, he alone could confront the immense difficulties of that enterprise and overcome them."

Events in this notable year followed each other rapidly: the Russian fleet escaped from Revel, the armed neutrality was dissolved, Bonaparte's attempts to relieve Malta and Egypt failed, and, finally, his endeavors to collect a fleet of the allied forces at Cadiz upon the flank of the English communications with the Mediterranean resulted in the battle of Algesiras, with its varied fortunes but ultimately disastrous results for the allies. The advantages of the interior position were well exemplified here, and the strategic superiority of the fleet or squadron that closely masks an enemy's port. Soon after, peace was declared, leaving Great Britain with a naval force of 202 ships of the line, as against 135 with which she had commenced the war, while France, beginning with 80 ships, found herself with but 30 at the end.

In 1803 war again began, Cornwallis sailing the day after the declaration with ten ships to resume the watch off the great French port of Brest, while a day later Nelson hoisted his flag on board of the *Victory* on his way to assume the chief command in the Mediterranean. Pitt foresaw the methods by which Napoleon sought to subdue England—one by attempted invasion, the other by the destruction of her trade and consequent undermining of her financial stability. After the occupation of Hanover and the reoccupation of the lower part of the Italian peninsula, Napoleon turned his attention towards the invasion of Great Britain. The construction of the flotilla which, covered by the fleet, was to be the means of transport across the Channel, operated against the construction of the new vessels for the navy also desired by Napoleon. Not only did it absorb the scanty material on hand for ship-building, but the work of construction and constant repairs drained the dockyards of mechanics. Much doubt has been expressed of late years as to the sincerity of Napoleon's intentions to attempt the crossing of the Channel, but the author holds, with such careful historians as Thiers and Lanfrey, that it is not possible, after examining the voluminous correspondence of Napoleon during the thirty months of preparation, to avoid the conviction that so elaborate a deception as it would involve would be impossible even for the Italian nature of Bonaparte. The boldness of the undertaking and the rapid movement against Austria from Boulogne afterwards caused these doubts and strengthen Metternich's report of Napoleon's own declarations; but Boulogne, although admirably situated to disguise the movement against Austria, was not less so with respect to an invasion of England. Besides, it was, as Jomini testifies, customary for Napoleon to entertain an alternative project in case his combinations failed, as this did, when Villeneuve sailed for Cadiz instead of for Brest. The campaign of Trafalgar, in which Napoleon attempted the union of the naval strength of France and her ally, Spain, at or near Brest, followed, ending with Nelson's victory and death. The author thus vividly pictures the period of waiting preceding this victory:

"Meanwhile, that period of waiting from May, 1803, to August, 1805, when the tangled net of naval and military movements began to unravel, was a striking and wonderful pause in the world's history. On the heights above Boulogne and along the narrow strip of beach from Etaples to Wimereux, were encamped 130,000 of the most brilliant soldiery of all time. . . . Growing daily more vigorous in the bracing sea air and the hardy life laid out for them, they could on fine days, as they practised the varied manœuvres which were to perfect the vast host in embarking and disembarking with order and rapidity, see the white cliffs fringing the only country that to the last defied their arms. Far away, Cornwallis off Brest, Collingwood off Rochefort, Pellew off Ferrol, were battling the wild gales of the Bay of Biscay, in that tremendous and sustained vigilance which reached its utmost tension in the years preceding Trafalgar, concerning which Collingwood wrote that admirals need to be made of iron, but which was forced upon them by the unquestionable and imminent danger of the country. Farther distant still, severed apparently from all connection with the busy scene at Boulogne, Nelson before Toulon was wearing away the last two years of his glorious but suffering life, fighting the fierce northwesters of the Gulf of Lyons, and questioning, questioning continually, with feverish anxiety, whether Napoleon's object was Egypt again or Great Britain really.

"They were dull, weary, eventless months, those months of watching and waiting of the big ships before the French arsenals. Purposeless they surely seemed to many, but they saved England. The world has never seen a more impressive demonstration of the influence of sea-power upon its history. Those far-distant, storm-beaten ships, upon which the Grand Army never looked, stood between it and the dominion of the world. Holding the interior positions they did, before—and therefore between—the chief dockyards and detachments of the French Navy, the latter could unite only by a concurrence of successful evasions, of which the failure of any one nullified the result. Linked together as the various British fleets were by chains of smaller vessels, chance alone could secure Bonaparte's great combination, which depended upon the covert concentration of several detachments upon a point practically within the enemy's lines. Thus, while bodily present before Brest, Rochefort, and Toulon, strategically the British squadrons lay in the Straits of Dover, barring the way against the army of invasion."

With Trafalgar all attempts of the French to wage purely naval war against Great Britain ceased. The contest continued by Napoleon took the form of war against her commerce, carried on with a vigor almost savage, and with little heed, as we well know, to the rights and interests of weaker and neutral nations. The French made use of privateers and scattered cruisers, directed against both English shipping and neutral vessels with English goods. The rôle of the English in these times was one principally of commerce protection, in ways likely to be employed again under similar circumstances. It consisted in the assemblage of convoys, sometimes numbering a thousand vessels, under man-of-war protection, of patrol by vessels having defined cruising grounds along the commercial routes, and by the capture of the foreign colonial possessions of France and her allies in the West Indies and elsewhere that served as bases for predatory warfare.

The net results of Napoleon's policy were trifling. By various and mutually confirmatory modes of investigation, Capt. Mahan finds that the loss inflicted did not exceed two and a half per centum of the total value of British trade. This loss, as he well says, practically reduced itself to nothing more than a war tax, onerous, but, under the circumstances, far from being insupportable. The strain of the Napoleonic decrees upon the Continent, then virtually under the control of the great Emperor, was finally too great to be endured; the privations of all classes, the misery of the poor, made the Continental States ready for rebellion when the opportunity came. It came for Spain in 1808, for Russia in 1810, and the peninsular position of Spain and Portugal gave to England's sea-power another opportunity for direct warfare against the forces of the Empire, while the Czar's action led to the invasion of Russia. Napoleon, whose military career had emphasized the overwhelming effect of concentration, was obliged to divide his forces and separate them by the length of Europe. The retreat from Russia began the end of his empire.

WHITNEY'S LINCOLN.

Life on the Circuit with Lincoln; with sketches of Generals Grant, Sherman, and McClellan, Judge Davis, Leonard Swett, and other contemporaries. By Henry C. Whitney. Illustrated. Boston: Estes & Lauriat.

THIS is the bulkiest addition to our Lincoln literature that we have had since the voluminous biographical history of Nicolay and Hay, and in its general make it is coarser-grained than anything its subject has so far inspired, except the biography by W. H. Lamon. Its coarseness, however, is literary in the main, and not moral, like Lamon's, whose brutal frankness took a ghoulish pleasure in unearthing everything sordid in the circumstances of Lincoln's life and everything questionable in the methods of his political career. The hard and cruel facts of his narration nearly all remain in Herndon's Life, but so different is Herndon's temper, and so much warmer his appreciation of Lincoln's better parts, that the final impression left upon our minds is very different. Maj. Whitney's book, while reproducing, in less orderly arrangement and with much less of detail, the materials of Herndon's and Lamon's, is marred by an extravagance of laudation

further removed from Herndon's honest admiration than that is from the deliberate depreciation of Lamon. He never tires of the rhetorical flights by which he seeks each time some more extravagant expression of his conception of Lincoln's intellectual and moral greatness. His favorite comparisons will hardly be congenial to the orthodox mind, for they are all between Lincoln and the Second Person in the Trinity—*e. g.*, "His mental anguish" during Grant's battles in the Wilderness "was only exceeded in the way of vicarious suffering by the agony of Gethsemane"; and, consonantly with this kind of simile, Nancy Hanks, the mother of Lincoln, was "second only to the Virgin Mary, who gave to humanity the Saviour of mankind." After which we have the astonishing anti-climax, "The Hanks [*sic*] are an humble race, but an estimable lady who was the wife of one of the recent Governors of Kansas descended from that family on the maternal side."

This is one of many incidents that make Maj. Whitney's book the most amusing contribution to our Lincoln literature that we have had to date. There is a chapter called "Lincoln as a Merry Andrew," which, with much stale, flat, and unprofitable matter, has some fresh examples of Lincoln's overflowing drollery and wit. No one before has laid so much stress on this aspect of his character, his persistent predilection for the comic and absurd, in season and out of season, his fondness for Joe Miller and his kind. Maj. Whitney strenuously insists upon the utility of this predilection, which to Stanton was intolerable and to Chase deplorable. He thinks it was Lincoln's salvation from the besetting melancholy of his life. Probably it was to no slight degree the obverse side of that which was more hidden from the common view. In regard to the taste of Lincoln's jokes and stories, there is nothing here to qualify the force of Herndon's testimony, which is also that of Leonard Swett and others, that while no indelicacy hurt a joke or story that had in it the soul of wit, so no indelicacy, as such, ever attracted him. It was the wit or humor that he wanted, and the rest was for him as if it did not exist. But Maj. Whitney's account of Lincoln's humorous side furnishes only a small proportion of the amusing matter of his book. This is everywhere, and most where the writer is himself least conscious of it. It attaches to his literary crudity; to his ambitious rhetoric; to his astonishing punctuation; to his grammar, which is as strikingly original; to the magnificent propylæa, metaphysical, psychological, historical, through which, in chapter after chapter, he advances to the sacred precincts of his particular themes, which are often surprisingly contracted when we finally arrive; and to the aggregations of proper names with which Lincoln's is associated or compared. For the incongruity of these we must go for a parallel to Thackeray's "Jerusalem and Madagascar," and for their prodigality to Lowell's catalogue, in the 'Fable for Critics,' satirizing the habit of Theodore Parker.

His acquaintance with Lincoln began in October, 1854, and ended in October, 1861—why then does not appear. He saw much of Lincoln on the circuit, and he accompanied him on his famous debating tour in 1858, when, locking horns with Douglas, as he expressed it, in many a forensic battle, he established his superior strength, but lost the Senatorial prize. Maj. Whitney tells no more pathetic story than that of his finding Lincoln alone in his office on the evening of Douglas's election, while those who had supported him were debating whether they should not throw him over and take up with Douglas for the Presidency, as Horace Greeley vehemently advised. Of Maj. Whitney's contention that Lincoln's political ambition was purely secondary, like that of *Macbeth* taken on to please his wife, there is abundant evidence to the contrary in his own pages. It was that, together with his ability, which attracted Mary Todd to him, and, strangely in contrast with the judgment of his fellow-citizens generally for twenty years, won him her preference over Douglas, his rival in both politics and love.

The title of Maj. Whitney's book is an extremely modest one compared with the wide range of its topics. A single chapter, "Life on the Eighth Circuit," is all there is to make the title good, and even that includes much foreign matter in its thirty pages. More than half of it is devoted to the judge of the circuit, David Davis, for whom the writer has a dislike so venomous that it would imply some personal animus, were it not that McClellan is subsequently treated worse, and Grant with an alternation of superficial praise and deep contempt more hurtful than unqualified abuse. Of the life on the circuit, the social evening meetings of the lawyers with the judge furnish the greater part, but in a chapter on "Lincoln as a Lawyer" there is some amends for this. Lincoln was the life and soul of these meetings, enjoying his own humor and absurdity with the keenest zest, but equally "pricked with the cider of the judge's wit," or any that was good. If these records can be trusted, his speech was that of a backwoodsman of the time; but, even on the circuit, something of his essential dignity struck through the queer disguise. No one ever called him "Abe." On the other hand, he disliked having "Mr." or any other title added to his own surname, and would gladly have addressed others with the same simplicity. The more important the case on trial, the better he displayed his powers, stripping off verbiage and technicalities and going straight to the heart of the matter. As to his refusing cases that were not intrinsically just, that is a part of the legend that must be given up.

A chapter on "Lincoln as an Orator" is one of the most valuable in the book, for the simple reason that it contains an entire speech of Lincoln's heretofore unpublished, which was delivered at Urbana on October 24, 1854, in the old court-room, which "shone resplendent in the coruscation of eleven tallow candles glued on top of the nether sashes of the windows." It was his last Whig speech, and was little short of those with which he encountered Douglas in 1858. There is here nothing of the loose undress of his habitual walk and conversation, but it is as clear as possible—Dawes and Greeley were not more so—in its unqualified acceptance of the Fugitive Slave Law as a finality, "to be as fully and honestly obeyed as any other." Equally in denying any intention of seeking the abolition of slavery in the District of Columbia, the speech foreshadows the Republican platforms of 1856 and 1860, which the average assailant of Webster's speech of March 7, 1850, forgets (if he ever knew) were built with the materials of that speech. The same speech foreshadows Lincoln's attitude towards slavery in the civil war: "Much as I hate slavery, I would consent to the extension of it rather than see the Union dissolved." Chapter xiii., "Lincoln and Slavery," is one of the longest in the book, but the most of it is spent in a portentous history of slavery from the beginning of the world, and an argument for the inferiority of the negro and his inability to live as a freeman among white men, to which position Lincoln firmly held. Before and after emancipation he was a colonizationist. Emancipation was a "revolutionary alternative, which he abhorred," forced on him by "the Radical politicians and people of the North." If this rendering, for which Major Whitney has much show of truth, is wholly sound, it must be confessed that as the unwilling instrument of emancipation he shines with a less glorious light than in the popular imagination. But of his sincere hatred of slavery and his intense love for the Union there can be no doubt.

The chapter "Lincoln as a Christian" is one of the most worthless in the book. The writer confesses that Lincoln never spoke with him upon the subject of religion, and several of his hearsays and reported conversations are evidently not authentic. There is nothing here to impeach the position of Herndon that, from being "a Tom Paine infidel" in his earlier manhood, Lincoln came at length to find in the writings of Theodore Parker an expression of religious thought and feeling to which he could heartily respond. But without being orthodox, or approximately so, Lincoln was extremely superstitious. He had some ground for being so in his abnormal moods and the visionary experiences they brought. When he was in Washington as a Congressman, he would not be one of thirteen at table, and Robert Toombs, another of the company, told him he would rather die than be so superstitious.

What is here written of "Lincoln's loyalty to his friends" is creditable to him. The writer saw him very angry only on three occasions, and one of these was when he undertook to urge on the President some civil appointment. He has several personal reminiscences which are a real addition to our stock. The illustrations ought to have a word. They are numerous, and include some interesting photographs and facsimiles of Lincoln's letters and public documents, with others that are simply a device to tickle the eyes of the groundlings. The frontispiece Lincoln is valuable compared with the well-known photograph of 1860 (which is also given), as showing what an immense defacement was his beard. On page 317 the familiar representation of Charlotte Corday, in the Corcoran Gallery at Washington, does service as the picture of "a handsome and modest-appearing octoroon."

The Purgatory of Dante Alighieri (Purgatorio i—xxvii): An Experiment in Literal Verse Translation. By Charles Lancelot Shadwell, M.A., B.C.L., Fellow of Oriel College, Oxford, with an Introduction by Walter Pater, M.A., Fellow of Brasenose College, Oxford. Macmillan & Co.

THERE are some intellectual labors, like the squaring of the circle, which, although demonstrated again and again to be unachievable, have an irresistible and recurring fascination. Such is the translation of Dante into English verse that shall in any way reproduce the poetical qualities of the original. Last year, in reviewing Prof. Norton's prose translation, we took occasion to state why it is, in our opinion, that a prose version of Dante, or Homer, or Virgil is preferable to any metrical version that has been or is likely to be made; and it would not be worth while to return to the subject now did not Mr. Shadwell's "experiment" confirm most fully the opinions we then expressed. Mr. Shadwell, too, has the approval of no less dignified a scholar than Mr. Walter Pater, and with such a sponsor the assumption that any English metre can satis-

factorily reproduce Dante's metre is likely to lead other students astray.

A great poem like the 'Divine Comedy' is admired for both its form and its substance; its form is untranslatable, because in English we have no metrical equivalent for the *terza rima* of the Italian. It follows, therefore, that any attempt to put the 'Divine Comedy' into English verse must result not only in a loss of the charms of the original form, but also in that botching of the substance which is inevitable whenever prose is turned into poetry. We can get, in prose, an adequate statement of the substance of a poem; but the converse is not true, as any one can judge for himself by merely comparing the best metrical versions of the Psalms with the prose of the King James Bible. In languages as nearly allied as German and English, metrical forms are often interchangeable; in languages like Italian and English or Spanish and English, this is not true. What effect, for example, could be produced by an attempt to render in English the assonance of Calderon's verse?

Mr. Shadwell is conscious that he has set himself an impossible task, but this has not deterred him from persevering in it. Rejecting blank verse as little better than prose, and dismissing the English *terza rima*, he sought for some other English metre which might do justice to Dante's *terza rima;* and he finally chose the metrical form of Marvell's Horatian "Ode to Cromwell"! "This ode," as he says, "is composed in stanzas, each stanza consisting of one pair of iambic eight-syllabled lines and one pair of six-syllabled lines, thus:

"He nothing common did or mean
Upon that memorable scene,
But with his keener eye
The axe's edge did try;
Nor called the gods with vulgar spite
To vindicate his helpless right,
But bowed his comely head
Down as upon a bed."

We need not lavish criticism upon Marvell's ode, strong in thought, robust in form; but it is one thing for Marvell to have chosen this form for the expression of high criticism upon Cromwell, and quite another thing for Mr. Shadwell to choose it as a vehicle for the infinite variety of Dante's theme. Mr. Shadwell's first reason for making his selection is that Dante arranges his poem in stanzas of three lines each, and rarely overruns from *terzina* to *terzina*. This is only partly correct; the sentence is carried on in a third and sometimes in almost a half of the *terzine*, and it is often interrupted in a single *terzina*. Mr. Shadwell's second reason, "that the capacity of the two stanzas is nearly equal," Marvell's having twenty-eight and Dante's thirty-three syllables, has little cogency. If "equal capacity" in length be the desideratum, why not adopt a four-line stanza of eight syllables to the line? That would give thirty-two syllables in English for thirty-three in Italian. Mr. Shadwell states, in the third place, that the latter part of Dante's *terzina* is often filled by "a subordinate clause, a reflexion, a simile, an illustration, a parenthetic statement of any kind," and that the change from eight to six syllables in the second part of Marvell's stanza is particularly adapted for just such subordinate clauses. While we admit a certain pertinence in this argument, we believe that this claim could justly be made by an advocate of the four-line octosyllabic stanza. Mr. Shadwell's last reason is that "there is a resemblance between the language of the two poets. Marvell, like Dante, can produce great effects by the use of very simple and homely words. Compare the lines

"'But bowed his comely head
Down as upon a bed;'

or

"'While round the armèd bands
Did clap their bloody hands;'

with the following:

"'Ma noi sem peregrin come voi siete.'
'A guisa di leon quando si posa.'"

To this argument we reply that the "great effects" were not produced by the particular metrical form, but by the quality of the poet's thought. There is no metre in English in which great poets have not produced "great effects by the use of very simple and homely words." They abound in blank verse; you will find them in the running octosyllabic measure of Coleridge's "Christabel," in the varied iambics of Wordsworth's great Ode, in the fluent metre which Burns so much affected, in the Spenserian stanza as used by Byron, in the adaptation of the Italian *canzone* as used by Arnold in "The Buried Life." Have we not a right to infer, therefore, that the power "to produce great effects by the use of very simple and homely words" does not inhere in Marvell's stanza? A poor versifier could not produce them by using that or any other form; a poet can produce them by using any one of many forms.

So much for an *à-priori* examination of Mr. Shadwell's theory: let us glance for a moment at its application in his version. One of the best known passages of the "Purgatorio" is the opening of the eighth canto, which Mr. Shadwell gives thus:

"The hour was come that on the sea
Softens the heart with memory,
The day on voyage sped
Farewell to friends was said;
Then, if he hear the distant bell
That seems the dying day to knell,
Its sound hath power to move
The new-bound pilgrim's love."

Here is compactness, but of what sort? It is the compactness that may be attained by knocking off the hands and legs of a statuette in order to make it fit a given niche. Here, too, is frequency of rhyme, which Mr. Shadwell regards as a most important consideration; but what scheme of rhymes? Certainly one as nearly approaching a mere jingle as it would be possible to find in any serious work. That pair of short lines at the end of each stanza produces not a "great effect," but the effect of hurrying to be through, and of a dearth of thought sufficient to make the last couplet in the stanza of equal length with the first. All this, we need hardly remark, is not the impression produced by the original. We do not always find in Longfellow's translation melody, and, of course, we have not rhyme, and yet his version of this passage gives much more of the music of the original than Mr. Shadwell, with his jingle, could possibly give. Longfellow, moreover, is very literal, and Shadwell is not. That the reader may judge for himself we quote Longfellow:

"'Twas now the hour that turneth back desire
In those who sail the sea, and melts the heart,
The day they've said to their sweet friends farewell,
And the new pilgrim penetrates with love,
If he doth hear from far away a bell
That seemeth to deplore the dying day."

Whoever will read aloud a canto of the new translation will, we think, have little desire to read another. The monotony of the metre of 'Hiawatha' is tolerable compared with the aggressive rhymes and the sing-song of this. Mr. Shadwell's scholarliness, his skill in condensing, his occasional choice of a first-rate word, might all be commended, and we would gladly do so, but to what purpose? He seems to us to have misapplied his talents, because he set out from a false premise as to the possibilities of metrical translation. We cannot think it worth while to criticise him as an interpreter of Dante, because he can no more interpret Dante adequately by the vehicle he has chosen than a Beethoven symphony could be adequately interpreted by a single player with fife or ocarina.

Of Mr. Pater's introduction we need only say that it presents, in his usual whipped-cream style, a dilettantish "appreciation" of Dante. Its value may be inferred from a single quotation: "The true test of a work of imagination, and therefore of any veritable presentment of it in the way of translation, is that it should enfold one, so to speak, in its own atmosphere, that one should feel able to breathe in it. I have had such a feeling in reading what follows." If Mr. Pater is sincere in implying that he breathes, in Mr. Shadwell's translation, an atmosphere similar to that in Dante's original, we can only wonder at the quality of his lungs, and be silent.

Gothic Architecture. By Édouard Corroyer, Architect to the French Government and Inspector of Diocesan Edifices. Edited by Walter Armstrong, Director of the National Gallery of Ireland. With 236 illustrations. Macmillan & Co. 1893.

THIS is rather an essay than a treatise, and so is better suited for the reading of those who have some acquaintance with its subject than for a text-book, for which it is presumably intended. It is much too narrow in range for adequate discussion of the subject, for it not only insists, which is perfectly right, on the fact that the pointed style is essentially a French contribution to the development of architecture, but substantially ignores it among other people than the French, and gives no account of the important collateral development that it underwent in their hands. It gives, moreover, no complete and systematic picture, or even sketch, of what mediæval architecture was in France, but is confined to one or two lines of analysis, leaving unnoticed much that is essential to the great and complex growth which we call Gothic architecture. It puts first, as do other recent treatises on the subject, the constructive origin and purpose of the style, the development of the ribbed vault and buttress, and the constructive system that grew out of them, and it gives scant attention to any other phenomena. This, to be sure, is the central stem out of which the rest of the style was developed; but it was not the whole, any more than the spine and the brain are the whole of a vertebrate animal. Analysis of plan, of tracery, of roofs, of forms of vaulting, of mouldings, of decorative features and detail, which are too essential to be overlooked in even an elementary view of this architecture as an art, are all left out.

This defect is aggravated by a curiously arbitrary division of religious architecture and monastic architecture, whose separate discussion prevents M. Corroyer from tracing consecutively the development of the Gothic of the thirteenth century out of the Romanesque of the twelfth, and from fully illustrating the too much forgotten fact, which he is careful to recognize, that the monastic system was the school in which the architecture of the Middle Ages was nurtured. It is singular that, having before written a book on Romanesque architecture, and following it now with one on Gothic, he really says nothing in either about the transition between the two styles. In fact, the book blinks style altogether, being written from the constructor's point of view, and not the artist's, and, while it is intelligent, animated, and interesting, it suffers from the lack both of breadth and of logical cohesion.

But it has a more serious defect in that it is given over to the support of a theory of M. Corroyer, viz., that Gothic architecture, being simply the development of an effort to apply a system of vaulting on groin-ribs to varying areas, is derived not from the Roman and Romanesque groined vault, but from the dome and pendentive. The Church of St. Front at Périgueux, he declares, is the mother of it all, and it was first developed in the churches of Aquitaine and Anjou and imitated in the Isle of France. This paradox is maintained not by documents and dates, but by simply denying out of hand the received chronology, and arranging the buildings in the order which is required by his thesis. Dates and documents show, if the researches of historians and archæologists are worth anything, that the Angevine churches are some half century later than those which M. Corroyer derives from them; but with this he does not concern himself.

Miss Simmonds's nonchalant translation may fitly be called flighty. It is her pleasure to recast M. Corroyer's thought into a paraphrase, in which, if he reads it, he must often search with anxiety for his ideas. It is droll, though not here misleading, to see *produit d'une génération spontanée* rendered by "product of a single generation." *Faut connaître cette vérité* becomes "cannot be insisted on too strongly." *C'est ainsi que la coupole, d'origine orientale, traduite en pierre par nos ancêtres aquitains, vers la fin du XI. siècle*, is condensed into "thus our Aquitanian forbears, by their successful translation into stone of the eastern cupola." This happy-go-lucky way of translating makes one wonder how the technical parts will fare; and on examination we find *voûte d'arrête*, which should mean simply groined vault, persistently translated "ribbed vault." This makes M. Corroyer talk about the Roman ribbed vault, a thing which is not known, nor believed to have existed. The charge, or load, transmitted by an arch is persistently called its "thrust," which is a very different thing; *appareillé*, which means bonded, is uniformly translated "dressed"; an *arc-doubleau* is a "subordinate" arch, instead of a cross-rib or transverse arch; *voûtes sur croisée d'ogives* (that is, groined vaults with diagonal ribs) are simply "intersecting vaults"—all this in the first twenty pages. We forbear to look farther, but find ourselves wondering in what consists the supervision of Mr. Armstrong, who has heretofore been known, we believe, as a writer on painting rather than on architecture. So far as we see, it appears only in a very brief preface, which finds nothing to criticise in M. Corroyer except a certain "Chauvinistic tone," and in a note or two repeating the complaint.

We have hardly room left to say that the book contains chapters on Gothic sculpture and painting, as adjunct to architecture; that the illustrations are abundant, excellent, and fresh; and that the make-up of the English edition is better than that of the French.

The Ruined Cities of Mashonaland: Being a Record of Excavation and Exploration in 1891. By J. Theodore Bent. With a chapter on the orientation and mensuration of the temples by R. M. W. Swan. Longmans, Green & Co. 1892. Map and illustrations. Pp. xi, 376. 8vo.

The existence of extensive ruins in southeastern Africa was known to the first Portuguese settlers on the coast. It does not appear, however, that they were actually seen by a European until 1871. Since that time they have been not infrequently visited by sportsmen and pioneers, but the first scientific examination of them by persons qualified for the task was that described in this volume. The head of the mission, for which grants were made by the British Association, the Royal Geographical Society, and the British Chartered Company of South Africa, was Mr. J. Theodore Bent, well known for his archæological researches in Persia and Asia Minor. He was accompanied by his wife and by Mr. R. M. W. Swan, who contributes a chapter of scientific details, as well as notes upon the geography and meteorology of Mashonaland.

The remains of ancient buildings are to be found scattered over the whole of the high plain and hill-region lying between the Zambesi and Limpopo Rivers. The most extensive and best preserved are at Zimbabwe, near the southeastern edge of the plateau, and it was here that the chief explorations were made. They consist of a fortified hilltop, or acropolis, and a circular building about 280 feet in diameter on the plain below. The masonry is of small granite stones, laid without mortar, but "with such evenness of courses and symmetry that, as a specimen of the dry builder's art, it is without a parallel." As there are pavements and steps of a concrete, made out of powdered granite, it is evident that this method of building was used, not from necessity, but from choice. The circular ruin is a temple, and contains an altar and two round towers, one thirty-two feet high, which, both from their shape and from finds in other parts of the ruins of a phallic nature, were undoubtedly of the same religious character as those constructed by the Phœnicians. Closer investigation showed conclusively that this temple and one in the hill-fortress were not for nature-worship alone, but they provided also a simple means for observing the passage of the seasons, of fixing the limits of a tropical year, and thus furnishing the elements of a calendar. This is shown by the careful ornamentation of the outside wall exactly where the rays of the rising sun—in one instance the setting sun—would fall at the summer solstice, by the shadows of towers and monoliths, and by the arrangement of passage-ways, holes in the wall, and upright stones to permit of the noting the transit of certain stars. The unit of measurement, it may be added, was apparently a cubit of 20.62 inches, almost exactly the length of the royal Egyptian cubit. Among the finds were soapstone birds, the tallest five feet four inches high, mounted on pedestals, probably representing the female element in creation; phalli; and fragments of bowls decorated mostly with representations of animals and with geometric patterns. On one of these fragments is what appears to be an inscription, of which the straight characters compare "curiously with the proto-Arabian type of lettering used in the earlier Sabæan inscriptions." This, unfortunately, was the only trace of writing found, notwithstanding the most careful search. Nor was a tomb discovered, nor any indication of the manner in which this ancient people disposed of its dead.

Considering this want of written testimony, Mr. Bent has done wisely, we think, in leaving the question of the origin of these builders a matter of conjecture. From the number and strength of their fortresses, it is probable that they were strangers surrounded by a hostile native population. The fact that their altars were so placed as to permit the observation of certain northern stars only would seem to indicate that they were from the north. Their object was undoubtedly gold-mining, for the ruins are always near ancient mines. In the acropolis of Zimbabwe were found the remains of a smelting furnace, crucibles, burnishers, and an ingot mould of soapstone. "The cumulative evidence," Mr. Bent concludes, "is greatly in favor of the gold-diggers being of Arabian origin, before the Sabæo-Himyaritic period, in all probability, who did work for and were brought closely into contact with both Egypt and Phœnicia." He declines to express any opinion as to whether or not this region was the land of Ophir or the Punt of the Egyptian chroniclers. He refers to the fact, however, that "in the reign of Queen Hatasou, of the eighteenth dynasty, in the seventeenth century B. C., the land of Punt was conquered by an Egyptian expedition, and on the monuments of Deir el-Bahari the conquered people of Punt are depicted as sending tribute, which included ebony, ostrich feathers, leopard skins, giraffes, lions, living leopards, cynocephalous apes, elephants' tusks, and ingots of gold, all products of southeastern Africa."

Though the description of the ruins and the references to what would seem to throw any light upon their origin are Mr. Bent's main object, he does not confine himself to these topics. At least half of his volume is devoted to an account of his journey which will compare favorably with the best books of African travel. Few, indeed, have given more graphic pictures of the natives, their customs, dwellings, ornaments, and household utensils. His journey into the interior was by rail from Cape Town to Mafeking, and thence to Zimbabwe by wagon, a three-months' "trek." This led him through the territory of Khama, the famous Bechuana chief, of whom he declares himself "one of his most fervent admirers," from the vigor and absolute justice of his rule. "Not only has Khama himself established his reputation for honesty, but he is supposed to have inoculated all his people with the same virtue." Perhaps it was this early experience which led Mr. Bent to take a more hopeful view than most travellers of all the natives whom he met.

Of Mashonaland and its material prospects he writes very guardedly. At the time of his visit, a year after the settlement of Fort Salisbury, there was much discontent and suffering among the pioneers from the lack of provisions and medicines through the breaking down of the transport service. There were abundant indications of the presence of gold, but whether it was in paying quantities was still doubtful. The numerous ancient workings, the long rows of crushing-stones, and the vast extent of the débris from the mines were evidence that a great amount of gold had been obtained in those early days. The question is, however, whether the prehistoric miners were driven away by the ancestors of the Zulus and Kaffirs, or whether they voluntarily abandoned the country because of the practical exhaustion of the gold. On the other hand, there is no doubt of the great value of Mashonaland from an agricultural point of view. Much of the soil is extraordinarily fertile and well watered, while its elevation insures a healthy and bracing climate.

On his return journey to the coast Mr. Bent was intrusted with a mission to make treaties with certain chiefs on the unexplored eastern border of the country. His account of these natives, as yet uninjured by intercourse with Europeans, forms one of the most interesting chapters in his book. So also is the description of the rapid march through a region swarming with lions and other large game to the Portuguese port of Beira, now being connected with Mashonaland by railway. There is an

excellent map and a large number of very interesting illustrations, together with a good index.

Elementary Text-Book of Entomology. By W. F. Kirby, F.L.S., F.E.S. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1892. 8vo, pp. 250, plates 87.

AIDED by illustrations of more than six hundred of the species, Mr. Kirby is able to compress into about two hundred and fifty pages a very good elementary text-book of entomology. His aim is to give accurate general instruction on the higher divisions of insects, orders, and families, with their principal or typical genera, in regard to which authorities are most in accord. The work is well adapted to its purpose. Its tendency is rather conservative. This, though less likely to bring it closely up to date in connection with discovery, goes farther towards insuring its reliability. References to the plates are lacking among the descriptions, yet special illustrations are readily found by means of the lists. The references from the figures to the text, on the other hand, are very convenient. Should attention be attracted to a particular drawing, the arrangement is such that its classification and name are before the eye with a direct reference to descriptive and other data. These features commend the book to persons who do not study the subject systematically, but who are interested for the moment in learning something about a certain form. The great number of the pictures alone, aside from the good character of the text, would make the work a treasure for the beginner. Our author estimates the known insects of the world to be near 270,000, Sharp and Walsingham count them nearer 2,000,000, and the United States Entomologist thinks 10,000,000 nearest the truth.

The Romances of Dumas.

A New Edition, Superbly Illustrated.

LITTLE, BROWN & CO., Boston, are now publishing a LIMITED SUBSCRIPTION EDITION of the world-famous romances of ALEXANDRE DUMAS, with nearly 250 SUPERB FULL-PAGE PLATES, including etchings and photogravures from original designs by gifted French and American artists, including Van Muyden, Abot, Corboin, Félix Oudart, Garrett, Merrill, etc., etc., and engraved portraits of kings and queens, royal favorites, ministers of state, and famous men and women of the court.

The set will comprise 48 vols., small 8vo, cloth, gilt top, price $2.50 per volume, sold by subscription only. The edition will be strictly limited to 1,000 sets, and every set will be numbered.

The volumes will be printed upon Enfield hand-made paper, in clear and beautiful type, and the illustrations will all be unlettered proofs, printed in the finest manner upon imperial Japan paper.

This magnificent series of historical pictures, which the famous French novelist painted in the form of romances, spans French history from the reign of Henri II. down to that of Louis Philippe, including more than three centuries, filled with adventure and with intrigue of the most fascinating description. Among the reigns included by this great period are those of HENRI II., CHARLES IX., HENRI III., HENRY OF NAVARRE, LOUIS XIII., THE REGENCY OF ANNE OF AUSTRIA, LOUIS XIV., LOUIS XV., THE REGENCY OF PHILIPPE D'ORLEANS, LOUIS XVI., AND MARIE ANTOINETTE AND THE FRENCH REVOLUTION. In addition to the works comprised in the above, together with the masterpiece of Monte Cristo,

This superb edition will contain eight volumes never before translated, and will be the most complete ever issued, as well as the most beautiful.

Early subscription is advisable.

The first five vols. ('The Two Dianas' and 'The Page of the Duke of Savoy') are now ready.

BRASS WORKS,
PHILADELPHIA, PA.

An Educational Directory.

I. THE NATION has a larger circulation than any literary-political journal published in this country. The 10,000 copies printed every week represent but a small part of the actual circulation, as THE NATION goes to all the principal libraries and reading-rooms, and into thousands of families.

II. The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III. The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on eight insertions, 12 1-2 per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

SCOTT'S
Waverley Novels

Edited by ANDREW LANG.

New Limited Edition of 1,000 Copies.

Scott has stamped his genius on an entire country and language, and the Waverley Novels are read by millions, and in every civilized country in the world. These great novels have never before been properly illustrated.

This edition is enriched, at a cost of over forty thousand dollars, with proof impressions on Imperial Japanese paper of three hundred original etchings from paintings by celebrated artists of France and England, among whom are **Sir J. E. Millais, R.A., R. W. Macbeth, Gordon [illegible]ne, Pettie, Lefort, Lalauze, Teyss[illegible]** *etc.*

Andrew Lang, *the [illegible] English critic as editor, will furnish [illegible] introductions, glossaries, and notes to each [illegible] supplementing Scott's own notes.*

This is the most magnificent [illegible] ever made of the works of any novel[illegible].

The type will be large and new, set in a fine, open page, the margins ample, and the paper a beautiful natural tint, the volume a small 8vo, easy to handle, and the binding vellum cloth, gilt tops, slightly trimmed. Complete in 48 vols., issued 2 vols. per month, at **$2.50 per volume.** *Also 500 copies printed on Holland hand-made paper, with fifty additional illustrations, and bound in half leather, at $5.00 per volume.*

Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

CHARLES SCRIBNER'S SONS' *NEW BOOKS.*

The French War and the Revolution

By Prof. W. M. SLOANE. American History Series. With maps, 12mo, $1.25.

Prof. Sloane's book is a compact, popular narrative of the events of the period which succeeded that described in Prof. Fisher's "Colonial Era," the first volume in the American History Series. It is a thoroughly philosophical account of political causes and effects and a graphic picture of the times as well.

The Duchess of Berry

AND THE REVOLUTION OF 1830. From the French of I. de Saint Amand. With portrait. 12mo, $1.25.

The dramatic revolution which brought about the July monarchy of Louis Philippe has never been more vividly and intelligently described than in this the last of three volumes devoted to the Duchess of Berry, in the Famous Women of the French Court.

New Edgewood Edition.

REVERIES OF A BACHELOR, AND DREAM LIFE.

By DONALD G. MITCHELL. Each 16mo, 75 cents.

This edition, printed from new plates and tastefully bound, of these two American classics will extend their popularity to fresh fields where the charm of the author's genial and sympathetic philosophy will make thousands of new friends for him.

Manual of Natural Theology.

By Prof. G. P. FISHER, D.D. 12mo, 75 cents.

Prof. Fisher's new book, dealing with the doctrines and proofs of religion which rest on reason rather than on special revelation, is compact, scholarly, and abreast of the latest thought.

Calvinism, Pure and Mixed.

A Defence. By W. G. T. SHEDD, D.D. 12mo, $1.00.

The aim of the author is twofold: First, to explain some of the more difficult points in Calvinism and thereby promote the reaffirmation of the Westminster Standards, instead of the revision of them as now proposed; and, secondly, to justify and defend that system of theology which had its origin in the Biblical studies and personal experience of the two most comprehensive and scientific theologians of Christendom, Aurelius Augustine and John Calvin.

The Case against Prof. Briggs, Part II.

Crown 8vo, paper, 50 cents net.

This volume contains the amended charges, evidence, arguments, etc., submitted in the recent trial of Prof. Briggs, with the final judgments of the Presbytery.

Rise of the British Dominion in India.

By Sir ALFRED LYALL. With colored maps, 12mo, $1.50 net.

Sir Alfred Lyall's book not only gives a concise account of the adventurous rise of British dominion in India, but explains also the causes and convergent influences that brought about this result.

The Campaign of Waterloo.

A Military History. By JOHN C. ROPES. 8vo, $2.50 *net.*

"He describes the campaign in all its details, taking up all the disputed points and examining them in the light of newer documentary and historical evidence. It is difficult to see what more could be added, or what could be omitted to make it a more authoritative work."—*Boston Transcript.*

ATLAS OF THE CAMPAIGN OF WATERLOO.

14 maps. 16x22 inches. 4to, $5.00 *net.*

Adzuma: or, The Japanese Wife.

A Play in Four Acts. By Sir EDWIN ARNOLD. 12mo, $1.50.

"Sir Edwin's treatment of his theme is marked by the same qualities which have made his reputation. The poetry is characteristic. It is always graceful, pleasing, and melodious."—*Chicago Tribune.*

Froebel:

And Education by Self-Activity. By H. COURTHOPE BOWEN, of Cambridge. *Great Educators Series.* 12mo, $1.00 *net.*

The lively interest at present taken in the kindergarten movement gives to this book a special value. It is both biographical and descriptive, giving a full account of the life and work of Froebel and tracing the development of the kindergarten movement from its origin.

MT. DESERT.
For rent ($200 for the season of 1893—$100 on execution of lease)—a Swiss cottage, just completed, at Seal Harbor, on southern shore of Island, nine miles from Bar, and four from N. E. Harbor. House has 2½ stories, with balcony on three sides of second. It contains living-room (with fireplace), kitchen (with large store-room), dining-room, two chambers, and bath-room (with hot and cold water). Drains to sea; water from village water-works. Fronts west, with view of water and Sargent's Mt. No other building within 200 feet. Fine trees on high ground (belonging to lot) back of house. If occupants board out (hotel and boarding-house at $8 and $6 per week at 200 yards distance), kitchen and dining-room would serve as chambers. If desired, house would be furnished for boarders for $50 additional. Address W: M. Griswold, Cambridge, Mass.

EUROPEAN WINTER AND SUMMER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

OFFICE OF THE
Atlantic Mutual
INSURANCE COMPANY,
NEW YORK, January 24, 1893.

The Trustees, in conformity with the Charter of the Company, submit the following Statement of its affairs on the 31st of December, 1892.

Premiums on Marine Risks from 1st January, 1892, to 31st December, 1892.	$3,690,250 88
Premiums on Policies not marked off 1st January, 1892	1,472,142 48
Total Marine Premiums	$5,162,393 36
Premiums marked off from 1st January, 1892, to 31st December, 1892	$3,759,193 05
Losses paid during the same period	$1,466,178 06
Returns of Premiums and Expenses	$738,617 09

The Company has the following assets, viz.:

United States and State of New York Stock, City, Bank, and other Stocks	$7,816,455 00
Loans secured by Stocks and otherwise	2,027,000 00
Real Estate and Claims due the Company, estimated at	1,029,345 26
Premium Notes and Bills Receivable	1,336,622 46
Cash in Bank	276,262 99
Amount	$12,485,685 71

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof or their legal representatives, on and after Tuesday, the seventh of February next.

The outstanding certificates of the issue of 1888 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the seventh of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment, and cancelled.

A dividend of FORTY PER CENT. is declared on the net earned premiums of the Company for the year ending 31st December, 1892, for which certificates will be issued on and after Tuesday, the second of May next.

By order of the Board,
J. H. CHAPMAN, Secretary.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 23, 1893.

The Week.

THE slight opposition made to the passage in the Senate of the Sherman amendment to the Sundry Civil Appropriation Bill proves that the large majority of Congress is ready to checkmate the silver craze at any time when it can do so by indirect means. This is not the first time that such a disposition has been manifested. Indeed, the Silver Bill of 1878 was itself such a measure, substituting a limited purchase and coining of silver on Government account for the Free-Coinage Bill which first passed the House. This was a concession to a supposed popular demand, but was a concession in form rather than in substance. Opinions may differ now as to the wisdom of the Allison amendment. Perhaps it would have been better, on the whole, if we had gone to the silver basis at that time, the depreciation of silver being then slight. A very little experience with the silver standard would have cured us, and we should have come out of it with a financial training and an equipment of ideas that would have lasted us through several generations. Moreover, we should not now have on hand four hundred millions of silver dollars that we do not want, and whose dead weight will be a bother until we can find some commercial use for it. The Sherman Act of 1890 was another insidious measure. Apparently it gave the silverites double the quantity that the Bland Bill gave them, but it made the silver redeemable in gold at par, and thus put off the coming of the silver *standard* as long as the Government should be able financially to carry the load. Now, as the time seems to be approaching when the Government cannot carry the load, the Senate passes, with little opposition, a bill to authorize the Secretary of the Treasury to borrow money for the purpose of maintaining gold payments. Undoubtedly this power existed before, but the exercise of it would be much easier if Congress should now by any form of words give new sanction to it. This sanction has been given by the Senate, and there is little doubt that it will be done by the House also.

Nothing more cavalier than Mr. Harrison's treatment of the deposed Queen of Hawaii could well be imagined. An Indian chief in difficulties has never been treated by our Government with such scant courtesy; he could always be sure of a hearing at Washington before having his lands taken from him. But, says Secretary Foster, the Queen has made a "formal submission." The Secretary must have breathed in a faculty for making disingenuous statements from the atmosphere left in the State Department by his predecessor. What the Queen really did was to issue a proclamation on January 17, in which she yielded her authority to force and under protest, *pending an appeal of her case to the United States.* This Mr. Foster and the President knew, as they also knew that representatives of the Queen were on their way to Washington. Yet they hasten to close the case without hearing the evidence, the President saying in his message to Congress that "the restoration of Queen Liliuokalani to her throne is undesirable, if not impossible." No wonder that the Queen's envoys, en route to Washington, could not credit such an indecent proceeding, and said: "The President is bound by every law of courtesy to wait until he hears the other side of the case."

Equally improper has been the President's scramble for a little Jingo glory, through his lack of consideration for the wishes of the country on so grave a matter. Whatever those wishes are, they have not been declared and cannot be declared on demand. There should be time for deliberation. We have no colonial policy or colonial laws. The Alaska experiment is not a relevant precedent, and the Alaska treaty was marked by no such unseemly haste in preparation, and was ratified, as is well known, only after much debate, and largely on the ground that not to ratify it would be an affront to the Emperor of Russia, who had shown us marked friendship during the civil war. The case calls imperatively for a referendum to the people, and the only form of referendum we have is deliberation and discussion sufficiently prolonged to determine what the popular opinion really is. To thrust the country on to so radical a departure from our established policy as the annexation of a group of islands 2,000 miles from our nearest port, and to give absolutely no reason for this hot haste, simply because there is no reason to give, marks an indifference to public opinion and to our traditional methods of procedure which is poorly excused by the plea that it would greatly "gratify" the President to have the treaty ratified in his term.

"The king's business required haste" is an explanation offered in the Scriptures for a certain case of precipitancy, and it is an explanation peculiarly appropriate to the quick work of a sugar king with his eye on a bounty of two cents a pound. Under the McKinley Law, the producer of sugar who is to get his bounty from the United States Treasury must have gone through all the red tape of application and licensing and inspection before July 1 of any year, in order to get his money for the product of that year. Now, the Hawaiian sugar-planters are grinding their cane at the present time, and it is perfectly easy to see that some "tall hustling" has got to be done if the treaty is to be ratified and all the official machinery set in motion in time for them to get their bounty on this year's crop. With hard cash thus joined to Presidential glory, it is no wonder that the Hawaiian Treaty has beaten the world's record for off-hand negotiation. The same combination seems also to have led to a departure, in the last article of the treaty, from the usual stipulations regarding the exchange of ratifications. The treaty with France for the cession of Louisiana provided that ratifications should be exchanged within six months; the treaty of Guadalupe Hidalgo made the period four months, and that with Russia for the cession of Alaska, three months. The Hawaiian Treaty says the ratifications are to be "exchanged at Honolulu *as soon as possible.*" Evidently the planters do not propose to let the sugar-cane grow under their feet.

Out of the 50,000 Chinese in the district of the United States Collector at San Francisco, just sixty-one have registered up to date. Now, the Geary Law provides that all who are not registered by the 5th of next May shall be summarily shipped out of the country, and the Collector announces that he has made all his preparations to do the shipping. In fact, he is going to have "the biggest round-up of Chinese on that May morning ever seen in this country." They are to be simultaneously arrested and deported to Goat Island on tugs "provided with an armed guard," and held there to await the sailing of China steamers. The Collector estimates that he can keep 20,000 on the island "at small expense," and as a "tug filled with crack rifle-shots will patrol the island," every emergency seems to be provided for. If worst comes to worst, "our war-ships can be brought into requisition," and this shows another of the blessings of a powerful navy. The best of it is, the Collector says, that, even if the Chinese should now take fright and set about complying with the law, only a small proportion of them could complete the formalities, so that "a large majority of them will have to go" in any case. It is clear that these benevolent and civilized methods need only to be extended to the Hawaiians to make them bless the day they became a part of this glorious land of liberty.

The objection to Mr. Carlisle's appointment as Secretary of the Treasury in the new Administration that will occur to many minds is, that it takes the foremost Democrat out of the Senate. Mr. Carlisle

has been in public life at Washington continuously for fifteen years, and has been a growing man during that time, and is so still. He has been Speaker of the House and Senator, and has secured such a hold on the confidence of his State that he might remain Senator for an indefinite period if the call of duty did not take him elsewhere. A constitutional lawyer of high order by training and inclination, he has, by study and debate, gained high rank as well in the science of finance, so that he now holds, without dispute, the first place among his Democratic colleagues. It is much to be regretted that he cannot be in the Cabinet and in the legislative body at the same time, as party leaders are in the parliamentary governments of the Old World. The motive which led Mr. Cleveland to the choice of Mr. Carlisle for the Treasury was probably the need of having somebody in that position who not only was well versed in the principles of finance, but who also had great influence and authority as a party leader. In the latter respect Mr. Carlisle is second only to Mr. Cleveland himself. Mr. Carlisle is earnestly in favor of the repeal of the Silver-Purchase Law. His antecedents, his character, and his locality are such that nobody, not even the watchful Governor of Oregon, will take him for a "tool of Wall Street." Whatever course Mr. Carlisle shall follow, as regards both currency and tariff, will, we may all rest assured, be the one which a statesman of intelligence and experience honestly deems best for the whole country.

The selection of Hoke Smith of Georgia as Secretary of the Interior in Mr. Cleveland's Cabinet will surprise the general public, which has not become familiar with even his name, but it is safe to say that its wisdom will be vindicated long before the close of the Administration. Mr. Smith is a native of Georgia, the son of a New England educator who had drifted South and married a woman of the prominent Hoke family in North Carolina, and he himself married a member of the Cobb family, which was long so conspicuous in Georgia affairs. He began the practice of law in Atlanta twenty years ago, and has become the leading lawyer of the State. From the first he took an active interest in public affairs, but he has never been a spoils-seeker, and has refused many opportunities of securing office. The only public position which he has accepted is that of President of the Atlanta Board of Education, in which capacity he has done a great deal to secure the best possible treatment for colored pupils and teachers. In politics he has always been on the progressive side, and he has won many a fight over the reactionaries and Bourbons of his city and State. In 1888, and again in 1892, he carried Georgia for the Cleveland policy of tariff reform, as against first Randallism and afterwards Hillism. As a means to such ends, he bought a few years ago the struggling *Evening Journal* of his city, and has built it up into a most prosperous and influential newspaper.

Mr. Smith's appointment will be especially significant as the first appointment to high official position by either party of a Southern man who has no connection with the ante-bellum period. He was not born until 1855, and so was not ten years old when the war ended. The slavery era is one of which he has no recollection, and which, as he told an audience of Alabama negroes during the recent campaign, he finds it hard to believe that intelligent men should have sought to perpetuate. He considers the abolition of slavery the greatest benefit that could have been conferred upon the South, and he is in hearty sympathy with all the progressive impulses of his section. Indeed, a better representative of the New South could not be found. Mr. Smith's selection is a striking indication of the revivification of the Democratic party. It was a connection of his by marriage, Howell Cobb, who was the last Georgian to occupy a Cabinet seat under a Democratic President, being appointed by Mr. Buchanan Secretary of the Treasury in 1857, and having resigned towards the close of 1860 to help on the secession of his State. Now another Georgian, who rejoices that secession failed and slavery was abolished, is appointed to a Cabinet place by a Democratic President. It is a sign of the times only second to the selection of Judge Gresham as Secretary of State, and equally full of promise for the future.

The selection of J. Sterling Morton as Secretary of Agriculture is in every way commendable. Mr. Morton belongs to the best class of Democratic partisans. A partisan he has always been, but one who has aimed to make the party worthy of success by adherence to sound principles and by the nomination of honorable candidates. Although a citizen of a State where the Democrats have had no chance, until very recently, of political promotion, he has kept up the fight for tariff reform, without wavering, for twenty years, and at times when he seemed to be the only man in Nebraska who understood the subject or cared anything about it. It is an occasion for rejoicing among the friends of that cause that Mr. Morton's unflagging zeal and personal worth have been recognized by the President-elect. It should be added that Mr. Morton is admirably fitted for the duties of the Department of Agriculture.

The situation in Kansas is a disgrace to an American commonwealth. The accounts from Topeka read more like the stories which used to come from Mexico before Mexico made her recent progress, than like statements of what could happen in a State of the Union. The blame for the scandal belongs to the Populists, who have for weeks been trying to usurp power which did not belong to them, and who have refused all the appeals of the Republicans to submit the controversy to the courts. The only hope for the State is that the people will make their disgust so manifest that the Anarchists—for that is what the Populists have become—will be frightened into a backdown.

The election of a Democrat to the United States Senate from North Dakota is a most notable event, not only in itself, but also for its bearings upon the future of politics in the Northwest. Moreover, it follows immediately upon the adjournment of the Wyoming Legislature, by constitutional limitation, without the election of a Senator, leaving a Democratic Governor to make an appointment; which shows that similar agencies are at work in another of the new States. During the period when the Republicans were drunk with their victory in the Presidential election of 1888 the party managers devised a scheme which was expected to intrench the party in at least one branch of the Government beyond the possibility of dislodgment for many years. There were a number of Territories in the Northwest which had been in the habit of electing Republican Delegates, and which it was taken for granted could be depended upon to send Republican Senators and Representatives to Washington if they should be admitted as States. Each of these Territories, no matter how small, would have two Senators—two Republican Senators, it was confidently expected; and even if the party should lose its hold in the East and in the States of the interior, these new States of the Northwest, it was thought, could be relied upon through thick and thin. So no fewer than six such States were admitted between the beginning of 1889 and the summer of 1890, and many Republican organs declared that their party was now sure of the Senate until 1900.

There is every reason to suppose that North Dakota may become a Democratic State from this time. These new States are made up of men upon whom party ties rest lightly. They are largely young men who have grown up since the war (hardly one in ten past forty years of age), and who neither know nor care about the "rebels" of a generation ago, about whom the Clarkson type of Bourbons are always talking. They are interested only in good government, and they have no prejudice against men who give good government because those men are called Democrats. Nor is North Dakota likely to be singular. Wyoming too would have chosen a Democrat to the Senate if the majority of members who were opposed to the return of a Republican could have united on any-

body. Montana has an anti-Republican majority in her Legislature, although it has not yet found a candidate satisfactory to all of its elements. South Dakota is already represented in the Senate by one Populist Senator, and his colleague, although nominally a Republican, has not yet ceased rejoicing that he had sense enough in 1890 to vote against his party on the only real issue between parties—the McKinley Bill. Idaho went against Harrison last fall, and a majority of her Legislature is anti-Republican. Five of the six new States are thus already in revolt against the Republicans, and even Washington must not be counted upon too confidently to stand by the party. It is one of the most extraordinary transformation scenes ever wrought upon the stage of politics in this country. It shows again, and most strikingly, how futile are the schemes of politicians to control the people.

Some progress was made last week in finding out what disposition was made of the $2,400,000 of Panama Canal money placed in the hands of the American Committee. Mr. Seligman accounted satisfactorily for one-half of this sum, saying that it was awarded to the three banking firms who constituted the Committee, viz: the Seligmans, Drexel, Morgan & Co., and Winslow, Lanier & Co.—$400,000 to each. This shows that the firms in question, like Mr. Belden of Syracuse (in the words of the late Jacob Sharp), "do not stir around for nothing." What they stirred around for, or whether they really stirred at all, is not by any means clear. One of these firms stipulated in advance that it was not to do any lobbying—a very wise precaution. This stipulation, it would seem, left nothing for the firm to do except to lend its name, and as it did not negotiate any Panama bonds or take any on its own account, it would seem that lending one's name for $400,000, without assuming any risk, is a good stroke of business. It seems to explain Mr. Seligman's confident assertion that the Panama Canal enterprise was a good thing for America, because it brought a lot of money into the country. There is, however, a serious and sombre side to this matter. Every cent of this $1,200,000 was obtained from poor people in France who could not afford to lose it—the rich Frenchmen generally kept out of Panama. Ruin, despair, insanity, and suicide on a wide scale were the results of the bursting of the bubble. These results were not brought about by anybody on this side of the water, but no right-thinking persons will envy the gains that come from such a source.

The "Plea for Peace and Work" put forth last Saturday by some two hundred Presbyterian ministers in various parts of the country is really a plea for dropping the Briggs case right where it is. A glance at the list of signers is sufficient to show that a large majority of the names are of those who have already ranged themselves on the liberal side of the controversy, and hence there is a show of reason for the view of anti-Briggs men, which is already beginning to find expression, that the appeal is really that of a small minority of the church urging the majority not to exercise their power to do what they believe to be their duty at the next General Assembly, on the threat, if they do, of seceding from the denomination. That the "Plea" is on the Briggs side of the case is clear on its face. It exalts the preaching of "the simple Gospel" over theological controversies, and deprecates disputing over "doctrines which are not essential." But that is precisely the point in dispute. What is the simple Gospel, and what are the essential doctrines? Is Presbyterianism to teach that all men are saved, or is it, with the old Scotch divine, "persuaded of better things" than such a doctrine? What is the General Assembly for if not to decide whether preterition and Biblical inerrancy and all the rest of the doctrines now in dispute are or are not necessary parts of the simple Gospel? These are the questions which the anti-Briggs men are asking, and we confess we do not see how the signers of the "Plea" can answer them. To yield to their appeal would be to yield the whole case, all that the conservatives have been working for for three years. They cannot be expected to falter now that their goal is at hand. It must be remembered that there are five thousand Presbyterian ministers, and two hundred can hardly be said to speak for the church at large.

The case of Isaac K. Funk against the *Evening Post* Publishing Co., which was tried last week in the Supreme Court before Judge Lawrence, was the first case, as well as our memory serves, in which the question of the morality of taking other people's literary compositions, selling them, and appropriating the proceeds, has been submitted to an American jury. There have been several trials of the legal right of publishers to seize on the works of foreign authors and sell them for their own benefit, but the naked morality of such transactions has not until now been passed on by an American court of justice. The verdict of the jury in the Funk case, therefore, supplies a most clarifying conclusion to a long controversy. It expresses the popular, as distinguished from the judicial, opinion of what the friends of international copyright have been so long stigmatizing as "theft" and "piracy." These champions of national honesty may well treat Dr. Funk's defeat as the crowning of their labors. They could not have desired a better issue for their purpose than Dr. Funk made up. To him they are really more indebted than even to the *Evening Post*, which, in view of the fact that the legal controversy was at an end, and that foreign authors are now secure against the depredations of Dr. Funk and his kind, was quite willing to drop the discussion and let him run; but he was not. He insisted on ascertaining in legal fashion what the world, as well as the *Evening Post*, thought of his works and ways, and he has ascertained it. The trial had one other excellent result. We think it will help to discredit, and it may be to extirpate from the walks of American industry, the very dangerous type known as the "business divine" or the "divine in business." The objections to this species of trader are obvious.

The greatest misfortune of "Organized Labor" is the ease with which it is imposed upon by clever adventurers. James Hughes, Master Workman of the Clothing-Cutters, was recently sentenced to a year's imprisonment for extortion upon some Rochester manufacturers who would not comply with his demands. An appeal having been made for his pardon, Gov. Flower very sensibly acted upon a suggestion to look up his early record, and learned from Inspector Byrnes that Hughes was convicted and sentenced to prison at the age of sixteen, and that since that time he has served in the Elmira Reformatory, on Blackwell's Island, in Sing Sing, and other places, under conviction for burglary and other lesser crimes. The petitioners for his pardon urged that this terrible record ought to be overlooked, in view of the fact that of late years he has "made a very strong effort to reform," but it speaks badly for any cause that it picks out its leaders from among even reformed convicts.

The news of a treaty of close alliance between Chili and Bolivia, by the terms of which the latter gets the long-coveted port on the Pacific and casts in her fortunes with the former, is one of the inevitable results of the late civil war in Chili. Bolivia recognized the revolutionists at a critical moment in their struggle with Balmaceda, and it was pretty well understood at the time that she would get something handsome if they proved successful. The Bolivians showed better judgment in "picking the winner" than Egan, Blaine, Harrison, and the other seekers after glory and nitrates, and it would seem as if their example, being on the spot, ought to have somewhat shaken the confidence of the Washington Administration in the triumph of Egan's and Blaine's good friend Balmaceda. This new alliance will add much to Chili's power and prestige on the west coast. It was one of the jokes of the Pan-American Congress that a double meaning was seen in Chili's protest that, though opposed to forced arbitration, all she wanted was peace (*la paz*). La Paz is the capital of Bolivia, and it was at once said jestingly that Chili was after that city. She now seems to have got it, for all practical purposes.

HAIL, COLUMBIA!

THE filibustering message and treaty submitted to the Senate on Thursday by the President in the Hawaiian matter deserve to be framed and exhibited at the World's Fair. They will find a place beside the Silver-Purchase Act, the swindling pension legislation, Porter's bogus Census, the Geary Chinese Registration Act, and the broken Treasury, as our national centennial display for the admiration of mankind, and by way of comparison with the similar exhibit in 1876, which included Babcock and the Whiskey Ring, Blaine and the Mulligan letters, Schenck and the Emma Mine, Belknap's impeachment, Butler's readoption by the Republican party, and the perversion of the *Alabama* award for the benefit of claimants ruled out at Geneva. It was in 1876, too, that the Executive and Senate fastened upon a reluctant country the indefensible treaty with Hawaii, which, in the name of reciprocity, gave a munificent bounty to a handful of sugar-planters; that, in the name of bimetallism, the first move was made by Senator Jones for a bounty on silver-mining; and that Congress began its endeavors to rival the unconstitutional and abominable laws of California directed against the Chinese, both resident and immigrant.

On what theory of democracy, self-government, or home rule has the tender of the Hawaiian Islands been made to this country and entertained and recommended by the Executive? Notoriously, the "plenipotentiaries" represent the merest fraction of the inhabitants, whose wishes have not been manifested by a plébiscite or even consulted. The natives, whose hereditary dynasty has just been overthrown; the great mass of the laboring population, Chinese and Japanese; the large Portuguese contingent, and the rest of the European colony, are to be taken over without an opportunity to be heard in their own behalf, and without one word in the treaty to guarantee them (if they wanted it) "the enjoyment of all the rights, advantages, and immunities of citizens of the United States," and "the free enjoyment of their liberty, property, and religion," as was done in the case of Russia's subjects in Alaska, "the uncivilized tribes" excepted. Was there anything in the partition of Poland, or the successive annexations of Alsace Lorraine to France and to Germany, more un-American than this? We all know that the Declaration of Independence and the Constitution contemplated white men alone in their glittering generalities, and that it cost us a civil war to incorporate black Americans among "the people." But that was a hundred years ago, and are we now to shut our eyes on all but a little group of self-exiled Americans who have effected a *coup d'état*, and to see no other "people" in the archipelago?

Are we to do more, and worse, by stigmatizing, in the very terms of the treaty, one large and indispensable part of the Hawaiian population—the Chinese, namely—and, through no act of theirs, upon no consultation, subjecting them to an oppressive statute which cannot be maintained in our courts, and which is in flagrant disregard of our treaty stipulations with China? It is actually true that the United States has been commited by its Executive, with the approval of the Foreign Affairs Committee of the Senate, to the forcible seizure of a kingdom, with the express intention to make more intolerable the condition of one specific class of the inhabitants, and that a toiling class introduced by the planters. This is one of the tender mercies of the wicked; and if it is to be carried out in the spirit of our un-Christian attitude towards the Chinese on this continent, the coolies of Hawaii must be marched up before the camera, as if for the Rogues' Gallery, registered and docketed, or, failing that, or on loss of their "passports,' be liable to be kidnapped and deported to China.

Yet the Chinese are not an "uncivilized tribe," like the Aleuts, and they are superior, in hereditary civilization and in all that goes to make the stuff of empires, to the Hawaiian aborigines, whom evangelizing has but helped on to extinction. Nevertheless, they will not be allowed to become Americans; and in the most liberal measure of self-government accorded to the Islands by any Congress we are likely soon to have, they will be denied the suffrage—the badge and defence of freemen. Life, liberty, and the pursuit of happiness will, for them, be wholly at the mercy of despots seated either at Washington or at Honolulu. They have merited all this by their extraordinary pains to settle at 2,000 miles' distance from our western coast and 5,000 miles from our Capitol, not knowing, poor heathen! that the sphere of our influence "naturally" extends to them by reason of their "geographical proximity," while their brethren in Cuba—an island which is to the United States continent what Long Island is to New York—are secure from any such high-handed oppression, thanks to Spanish gunboats and similar aids to reflection and deliberation.

The President's precipitancy here, as in the case of Chili, has its spring in that spirit of caste which ought to find no refuge in the bosom of a Presbyterian elder, much less of the head of the Grand Old Party which enfranchised the degraded products of American slavery. Contempt for Spanish Americans as "dagos" led him to play the bully to a small South American State just rid, after a fearful struggle, of a tyrant and usurper; contempt for Orientals repressed every natural scruple in him against making an exception of the Chinese Hawaiians in the treatment to be accorded to the population generally, on bringing it under the protection of the American flag. Add to this a personal deficiency not only in the judicial spirit, but in common justice, which now for the second time, to our national disgrace, hurries him into decisive action before the other side has had a chance to be heard. Such experiences can but induce devout thankfulness that the days of this President are numbered, and that indecent haste, claptrap, bad faith, and pseudo-Americanism will be wanting in the conduct of foreign relations by his successor.

"AMERICANISM."

THE extraordinary manner in which it is proposed to carry out the annexation of Hawaii was fully foreshadowed by the boisterous acclaim with which the New York *Tribune*, as the custodian of the Blaine tradition, received the news of the revolution in that country. The reason why the Republican organ was excited over the matter was, it said, that the annexation in hot haste, and with a good deal of contemporaneous defiance of foreign critics and rivals, would be a striking manifestation of a state of mind, or rather of feeling, known as "Americanism," for which Mr. Blaine in his lifetime was very remarkable, and which all Americans should cultivate, and, so to speak, keep on tap for emergencies. No exact definition of "Americanism," so far as we know, has ever been attempted by anybody. It is, as we have said, evidently a state of feeling, but its nature is ascertainable only by observing the things which are done or proposed by persons who declare themselves animated by it, and seek to communicate it to others within reach of their influence. That is to say, "Americanism," or "intense Americanism," has to be diagnosed, like any abnormal bodily condition, by simple observation. Examination by experiment is impossible. All the inquirer can do is to sit down before the subject and watch and listen and make notes. For the purposes of such diagnosis nothing could be better than the Hawaiian annexation scheme. Much assistance was, it is true, afforded by Mr. Blaine's proposed quarrel with Chili about Peru, and subsequently by the Barrundia affair, and the second Chilian row about Balmaceda, and the Valparaiso outrage. But the Hawaiian incident is the most complete exemplification of "Americanistic" methods which has ever been furnished to the world.

We say "Americanistic," and not "American," because the American mode of dealing with foreign nations, whether weak or strong, and the American view of national dignity, national greatness, international rights and duties, are almost as luminously recorded and as well known as the Decalogue and the Golden Rule. The literature of American international morality is large enough to fill a library. The American attitude towards the non-American world, both in peace and in war, is set out in the Farewell Address, in the *Federalist*, in the voluminous writings of the founders of

the Government, Washington, Franklin, Jefferson, Madison, Hamilton, Marshall, and Kent; in a huge body of decisions of the Supreme Court, and in a great mass of diplomatic correspondence carried on by the State Department, through a long line of Secretaries more or less wise and learned. What is this American attitude towards the non American world, as thus defined? Simply that of a peaceable, industrious, self-respecting, and honorable man towards his neighbors. One of the very first things the new Republic did was to proclaim a solemn repudiation of the duellist's code of honor as a rule of national policy, and, as a necessary consequence or accompaniment of this, the avoidance of that state of constant preparation for war, as the chief national business, in which all nations down to 1789 had lived. Quarrels were to be avoided. Differences were to be settled by negotiation, or arbitration if possible. Conquest of territory, for the mere purpose of showing strength or of making rivals feel badly, was to be sedulously eschewed, and adhesions to the Republic were to be the result of the effect on the foreign imagination of the spectacle of domestic peace, liberty, and prosperity. Though last, not least, foreign negotiations were to be conducted with a solemn desire for peace on earth and good-will towards men, and, above all, with the circumspection and deliberation which would characterize a prudent and honorable business man seeking to take no unfair advantage of others, or to prevent any unfair advantage being taken of him. Is not this, as far as is possible in brief compass, an accurate account of the original and genuine American national policy and morality? Its most marked peculiarity was its novelty. It was something new in the world, something different from what the world had ever seen, for it was the first real attempt to apply Christianity to international relations.

"Americanism," it is safely to be inferred from its recent manifestation, is a distinct reversion to archaic and barbarous forms of feeling and action. It calls for passionate and sudden action. It contemns and distrusts and impedes deliberation. It associates consideration for the feelings or interests of others with cowardice and want of patriotism. It makes national happiness and prosperity dependent on foreign misery and calamity. It tries to excite envy by exhibitions of brute strength. It covers weakness with ridicule. It minimizes and ignores domestic evils and abuses. It discourages any extension of the domain of international law, and seeks to spread the jurisdiction of the judge who judges in his own cause. It pleads all the bad examples of history in its own justification. In short, it would, if unchecked, land us in the moral world in which Louis XIV. and Frederick were leading forces. Is there a single feature of either matter or manner in this Hawaiian annexation which does not find a parallel in the great historic robberies and usurpations? One has to go back to the earlier conquests in British India to match the *modus in quo*.

There is one course, and one only, which might reconcile patriotic Americans to "Americanism," and that is—considering it as an agency capable of direction—its conversion to the uses of peace and the development of the original American idea. It appears to be, as well as an observer can understand it, a sort of mental inflammation, capable, like all febrile states, when set in motion, of developing great force for brief periods. There is a great deal of it, all over the country, which is in ordinary times running completely to waste. The fierce Americanistic energy which shows itself when we get, or are likely to get, into a quarrel with some foreigner, or when some scheme is on foot which is likely to make the foreigner unhappy, would, if stored and properly directed, work wonders in the field of domestic reform. It is hardly possible to overestimate what Americanists might do if they brought the consuming fire of their patriotism to bear on home problems. Suppose one-quarter of the determination to make Guatemala and Chili knuckle under, and Great Britain sigh vainly for a small island, and to bring a few thousand more brown, black, and yellow men under the stars and stripes, were put into the work of mending the civil service, of hunting the rock-ribbed corruptionists out of public life, of rescuing our great cities from the rule of ignorance and crime, of restoring financial sanity to the agricultural population, of reforming our systems of taxation, of taking our schools out of politics, of discovering and administering a cure for the scourge of drink, of purifying the suffrage, of bringing State legislation under the influence of knowledge and rationality—how much might be done for genuine national glory, how much for the salvation of democracy and the elevation of the human race. As it is, this fine frenzy profits us nothing, or, rather, makes us seem the great failure of modern civilization.

MEANING OF MR. CLEVELAND'S CABINET.

THE full significance of Mr. Cleveland's Cabinet selections is slowly but surely making its way into the minds of all observers. As usual, the professional politicians are the last to perceive the truth. They have never been able to understand Mr. Cleveland's politics, or to comprehend the reasons of his strength with the people, and consequently they are always late in grasping the meaning of any new move that he makes. If they had not been thus blinded, they would have had no expectation of any other kind of Cabinet than the one which he has now nearly completed. Its construction is in entire harmony with his political methods in the past, and is in the fullest sense representative of the influences which compelled his nomination and secured his election. From first to last he was the choice of the people against the Machine or spoils element of his party, and he will enter upon his duties of President as the representative of the people.

In choosing his Cabinet he was bound to consider what the influences were which brought about his nomination and election. The returns leave no doubt as to what these were. He not only carried the State of New York, in spite of the covert hostility of the party Machine exerted wherever it was safe to exert it with least fear of detection, but he carried two great Western States which had not been carried by his party since the Republican party had been in existence, and would have carried a third except for a misunderstanding of the details of the working of a new ballot law. These Western victories amounted to a political revolution. They shifted the balance of Democratic power from the East to the West, and made it possible for the Democratic party to effect an exchange which would immensely benefit its character. It could say to the degrading Machine combination in New York: "You can go your ways now without giving us further trouble. Whether you become better or worse, matters not to us henceforth. We have new allies in the West who are respectable, and with whom we can associate without being ashamed of their company." It was Mr. Cleveland's highest duty to his party to recognize these new allies, and to so recognize them in organizing his Administration as to attach them permanently to his party.

Who were these new allies? They were entirely composed of men who had for years been members of the Republican party, but who had been driven out of it by its extreme position on the tariff question. That is to say, they were men who had left their party on the highest question of principle which has divided parties in this country since the question of slavery. Not only did thousands of Republicans in the West leave their party on this issue, but thousands of others in all parts of the country wished in their hearts to leave it on the same issue, but were restrained by partisan distrust of the Democratic party. A leading and worthy representative of the Republicans who did step out was Judge Gresham. He not only represented those who left on the tariff issue, but he represented in scarcely less degree those who believed as he did, but could not make up their minds to go out with him. He has for many years been the first choice for the Presidency of thousands of Republicans who have been growing more and more dissatisfied with their party's policy and conduct. They had faith in him as an honest man who represented the principles and purposes of their party at its best estate.

Could there be any wiser politics than Mr. Cleveland has shown in choosing this man as the chief of his Cabinet? In all the land could he have found a man whose selection would have drawn to him, to his Administration, and to his party the good will of more citizens who had either entered the party temporarily or were hesitating about entering it? If the function of wise political leadership be to enlarge and strengthen a party by getting more and better people into it, in what way could Mr. Cleveland have shown greater sagacity than in his choice of Judge Gresham? Any man who talks with his Republican friends knows that by that choice Mr. Cleveland has given thousands of Republicans new confidence in his courage, independence, and patriotism, and has thereby inclined them to think better of Mr. Cleveland's party.

If Mr. Cleveland was bound to recognize and encourage the "honorable allies" who had not only aided his election and the triumph of the principles for which he stood, but had enabled him to be elected without the assistance of the bitterest opponents of his nomination, he was none the less bound to construct his Administration in unrelenting hostility to those elements of his party which had done their utmost to degrade and ruin it by defeating the popular wish for his nomination and election. He would not be the champion of genuine popular government if he were not to fight to the death the Machine which these elements constitute. Anything more directly opposed to popular government than the Hill-Murphy Machine in New York State could not be devised. It is an engine of evil, which, instead of carrying out the people's will, defeats and thwarts it at every point. To crush out such a hateful enemy of popular government as this is a distinct public service, and Mr. Cleveland is as surely pledged to that as he is to the other reforms for which he stands.

The flurry which is now in progress in the Machine ranks at Albany, and which Senators Hill and Murphy are making frantic efforts to quell, shows that the meaning of Mr. Cleveland's Cabinet selections is grasped by some of the Machine followers, if not by all. The Machine leaders are, however, blind to the last. What has caused the revolt in the Legislature is a desperate attempt to enforce Machine rule in a new and most offensive form. The Machine leaders find themselves unable to control the mayors of no less than eleven cities of the State, including Albany, Rochester, and Buffalo. They have told the mayors of those cities that they wished them to appoint certain men to office, and the mayors have refused to appoint them. So the Machine leaders have prepared amendments to the charters of the cities by which appointing powers are removed from the mayors and either lodged in the Governor of the State or in some other quarter which the Machine believes itself competent to control. All this is an outrageous interference with the rights of local self-government, but it is a thoroughgoing Machine performance. It might have been accepted meekly by the Machine majority in the Legislature had not the complexion of the Cleveland Cabinet set many of those members to looking into the future with more or less anxiety. They may well be cautious and inclined to wariness before following the Machine much further, for the signs of the times are many and unmistakable that the lease of that detestable perversion of political power is drawing to an end.

WHAT IS BEHIND HOME RULE.

BEHIND the Home-Rule Bill in England, and, in fact, waiting for it to get out of the way, there is a full line of measures for the benefit of the laboring-classes. Each party professes to be equally anxious about these. The Tories say that one of their chief reasons for opposing the Home-Rule Bill is that it prevents them from reaching various schemes for shortening the hours of labor, for diminishing its risks, for making a provision for the laborers' old age, for better supervision of factories, and for making work for the unemployed. The Liberals say the same thing, but turn the home-rule argument round, so to speak, so as to be able to say that the one reason for wishing to pass the Home-Rule Bill is to get it out of the way of similar measures. Both parties have, in fact, during the past seven years, filled English politics with almost limitless expectation as to the possibilities of a great, radical, and permanent improvement in the condition of the working classes through legislation. That the diminution of the Liberal majority at the last election was largely due to this cause is generally admitted. The Tories in a great many parts of the country had outbid them for the labor vote, and in other parts—Scotland more especially—Labor ran its own candidates, and drew off a sensible proportion of the Liberal forces. Some of the leading Liberal politicians were astounded last year by the hold which visions of elevation by act of Parliament had taken of the popular imagination.

It is significant, too, that the County Councils are apparently not disposed to wait for the sanction or initiative of Parliament before entering on the new era of high pay and plenty of leisure. These bodies are in truth assuming, in the eyes of the laboring class, the place assigned to the "State" by our Bellamyites here and by the Socialists in Germany and France—that is, the place of dispensers of an inexhaustible body of wealth, coming no one knows whence, for the general purpose of alleviating the lot of the poor or unfortunate. The London Council is naturally leading the way as a special providence. It has already begun the good work by directing its contractors for the great public improvements which it is undertaking, to pay union rates of wages, thus enabling its own employees to decide what these various public improvements shall cost. In truth, it has put it in the power of the unions to vote the public money into the pockets of their members, almost without a check. There is probably not a County Council in England, which sits in a large town, that will not follow the example of London. The effect of this in drawing population away from the agricultural districts can hardly be overestimated. The man who stays on a farm to labor in solitude, when bodies like the Councils are, in all the large cities, trying to provide him with light work, steady employment, and high wages, besides parks, museums, baths, and free concerts, will soon be looked on, and, in fact, is now looked on, as a foolish and unenterprising person.

It is true that the Liberal programme, also, contains large provision for improving the condition of the agricultural laborer, such as compulsory allotments of land to be made to him by the County, and the creation of "parish councils," through which he will have a share in the local government, and be able to assert and maintain his manhood in the presence of the squire and the parson, before whom he has so long cowered in submission. These councils will be an attempt to revive the ancient Anglo-Saxon town meetings which the Puritans carried with them across the water, and which were so long the glory of the New England democracy. But there is much reason to fear that it will be found, when they are revived, that the old spirit of equality of obligations as well as of rights—that is to say, the old business spirit which in earlier days gave them their value—has fled irrevocably. In the early Germanic local assemblies, as still in Switzerland, the theory that the people support the Government, and not the Government the people—to use Mr. Cleveland's phrase—was steadily kept in view. Every man felt that the public revenues, whatever they might be, came out of his own pocket, and he voted the taxes with this saving thought before his mind. We doubt if there is much of it left, or if the parish councils will not have a strong tendency to become politico-relief associations of the Tammany order, for making poor people comfortable at the expense of those who have most money to spare. In fact, political men in combination with philanthropists have for some years back been laboring hard, and with a good deal of success, to drive the partnership idea of the State out of Englishmen's heads, and yet the maintenance of that idea is the sheet-anchor of modern democracy. If it should ever disappear or become seriously obscured, that fine old craft, the "ship of State," will drift before the wind in a way that will soon send crew and passengers to their prayers.

There would, in short, be nothing extravagant in the assertion that if the Home-Rule Bill could be kept in Parlia-

ment for the simple purpose of blocking the way, it would still serve a useful purpose, if not so useful as the complete extrusion, by its passage, of Irish affairs from English politics. For there is very little doubt that, ten or twenty years hence, Englishmen will look back on the failure to let the Irish go sooner as one of the tremendous mistakes of the national history. Nothing has done so much to stimulate Radicalism in England, since the enlargement of the franchise in 1867, as the maintenance in English politics of the Irish question as a question between rich and poor, between the landlord and the tenant, and between the unfortunate and unsuccessful and the rich and prosperous. There is, in fact, something fantastic in the notion that the possession of Ireland as a down-trodden and despised province adds to the strength of England. The fight of the combined landed gentry of both England and Ireland against the Irish peasantry, which has been going on for the last fifty years, with the forces of democracy rising steadily behind the latter, has, in truth, had a seriously disintegrating effect on English society. When the Tories talk of the danger of Gladstone's Irish home rule to the "ancient constitution of the Empire," without noticing what is in store for them when the Home-Rule Bill gets out of the way, they seem like men talking in their sleep.

Correspondence.

AFTER US THE DELUGE.

To the Editor of The Nation:

Sir: I am not a little surprised and disappointed to find the *Nation* an advocate for the issue of a new loan for gold to recoup the fallen fortunes of the Treasury. Do you believe that it will be a remedy? Will it not be but a plaister to a flowing wound? *Can* there be any remedy except the stoppage of silver purchases and silver coinage? Why not let the logical conclusion of all this business come now—for come it must, sooner or later? Bring us face to face with a silver panic, and let us get down on our marrowbones of humiliation and penitence for the most incredible folly that ever seized upon an intelligent people.

Had the *coin* been put in circulation instead of the insidious certificates, the very weight of metal would probably have brought us to our senses. J. S. N.

Philadelphia, February 17, 1893.

[Suspension of gold payments and a general smash might be better in the long run than further dilly-dallying with silver, but nobody wants a general smash if it can be avoided. It can be avoided by bond issues because the whole world will be glad to turn gold into the Treasury in exchange for the interest bearing obligations of the United States. But even bond issues are only temporary relief. They cannot continue long. The only real and permanent relief must come from the cessation of silver purchases. This ought to be accompanied with such bank legislation as will afford the country an automatic and safe currency—a desideratum which the country has not had since the national bonds began to grow scarce.—Ed. Nation.]

THE HAYES-TILDEN VOTE IN SOUTH CAROLINA.

To the Editor of The Nation:

Sir: The death of ex-President Hayes has revived interest in one of the most tangled and unfortunate periods in our country's history. Around him cluster the memories of 1876-77, and some of the mysteries attendant upon that Presidential election will be buried in his grave. Essentially a good and honorable man in his personal relations, he will ever suffer from the imputation of bargains and corrupt political methods. As to what extent he was blameworthy, men will always differ. But it is due to him to correct at least one charge that has been often made and has recently been repeated: I refer to the statement that the divided vote of South Carolina was the result of a bargain by which the returns were so forced as to give the State to Hayes and Hampton.

No one has charged that there was a bargain between the Republicans and Democrats prior to the election. While a divided result may ordinarily be viewed with suspicion, there may be a perfectly honest division when the result is as close as it was in South Carolina, and as it was more recently in California and Ohio in the Electoral College. Now in South Carolina, as nearly as can be ascertained, the face of the returns, as they came from the precinct managers in 1876 and before the State Board had anything to do with them, gave a majority for Hampton of 1,134 votes in a poll of over 183,000, and a majority for his Lieutenant-Governor of 139, while the result as to the other State officers was mixed, apparently showing the selection of several Republicans by majorities ranging from 7 to 250, and several Democrats by majorities ranging from 200 to 400. So close was all this that the Democratic unofficial returns elected Conner as Attorney-General by 13 votes, while the Republicans claimed for his opponent a majority of 7. The county returns showed that the lowest Republican elector had received on the face of the returns 91,156 votes, and the highest Democrat, 90,906, while the average Republican majority was 816. There was a mistake in the name of one of the Republican electors, and this reduced him to a very small plurality, but he was clearly entitled to the votes in question.

I was the clerk of the State Democratic Committee during the campaign of 1876, and not only was almost continuously at headquarters from morning till midnight, from the 1st of October to the 1st of January, but did most of the tabulation of the returns, and was consulted by members of the Committee and newspaper reporters and by dozens of interested callers. I therefore became pretty familiar with the figures given, and scarcely need to refer to the files of the papers now. I recall vividly to mind how a distinguished visiting Senator would say to me: "Get your pencil, and let us see if we can't find that one elector somewhere," and how he would cipher always in vain.

At first, from the general returns throughout the Union, it seemed that Tilden was elected without the aid of South Carolina, and the chief interest here centred in the State election. But when Chandler's despatch went flashing over the wires, and the returning-boards of Louisiana and Florida began to get in their work, it was seen how important the electoral vote of this State would be. Visiting statesmen of both parties came down to direct the fight, and both parties claimed everything. The State Board endeavored to throw out the entire vote of two counties, and thus to elect the whole Republican ticket, while the Democrats fought in the courts to make them correct certain irregularities, which would give all to the Democrats. During this time Judges Denny and Settle, Republicans, called on Gov. Hampton and said to him, in the presence of Gen. Bradley T. Johnson and Senator Gordon, that "if he would say to the crowd that came to his headquarters every night that he believed that Hayes had carried the State, then the State Government would be turned over to him." Gen. Johnson, in a letter published in the Columbia *State* on the 7th of February, 1893, writes to Hampton: "You promptly replied that Gordon and Johnson should go over the returns with an expert, Denny and Settle being along, and that you would announce the result as certified by all of us. To this Settle replied laughing, 'Oh, we have had our game with that pack, and have thrown them away.' You then said, 'I will not make such a declaration to be the President of the United States.'"

I myself did not hear this conversation, but it was published at the time and was well known everywhere. There is a serious question in my mind whether Settle and Denny were empowered to make any offer at that time. Certainly it was not accepted, though a good many Democrats here, who either felt that State matters were of the gravest importance or that Hayes had really carried the State, thought the fight on the Presidential vote ought to be abandoned. Others thought that Tilden had shown a great coolness towards South Carolina till the magnificent campaign of peace inaugurated by Hampton had produced a favorable effect on the canvass, and that this State owed him nothing. There is no doubt that if Hampton had acceded to the wishes of Judge Denny, the suspense might have been sooner ended in this State. But Hampton always firmly believed that the State had fairly gone Democratic all through, and that the majority both for himself and Tilden ought to be several thousand, and would be such if all fraud were eliminated.

Besides the positive assertion of Gov. Hampton and Gens. Gordon and Johnson that no bargain was ever made as charged, I am able to adduce strong corroborative proof from the concurrent events themselves. First, during the campaign, Judge T. J. Mackey, who had been on all sides of politics, but was very eloquent, went about the State advising the negroes to vote for the national Republican ticket, but to support Hampton as their best friend. It may be added that most of the native Republicans deserted Chamberlain for Hampton. Again, attempts were made to get the negroes to vote the whole State ticket, but if a negro was willing to vote for Hampton only, his aid was gladly accepted. Thus, as shown already, Hampton ran about a thousand votes ahead of his State ticket and about fifteen hundred ahead of Tilden. While there was not much mixed voting, there was enough to put Hampton several hundred ahead and Tilden several hundred behind the average result.

The election was held on the 7th of November. On the 10th the *News and Courier* said: "In the following table will be shown the number of votes that Hampton runs ahead of the electoral ticket in the counties named: Charleston 25, Williamsburg 8, Fairfield 187,

Chester 22, Horry 8, Union 41, York 15, Marlboro 13, Lancaster 32, Orangeburg 170, Georgetown 1, Anderson 221, Marion 17; total 750. From this deduct Tilden's gain of 21 in Oconee, and Tilden's net loss is 729." Returns published on the 17th showed a net loss for Tilden of 790 votes in 17 counties out of 33 in the State. This average indicates that Hampton's lead was about 1,500 in the whole State, and also explains how it was possible for the result to be a divided one without any forcing of returns. It is true that both sides, by alleging fraud on the part of their opponents, claimed everything; but, after all, the result accorded with the returns as tabulated by the precinct managers on the night of the election.

The seating of all the Democratic State officers came about in this way. The Democratic claimants instituted quo-warranto proceedings against the Republican claimants who had been sworn in under Chamberlain. Before the case came on in the State Supreme Court, the troops were removed from the State-house corridors, whereupon Chamberlain abandoned his office, and his followers also retired. By an amicable arrangement the Democrats agreed to pay the costs, and the Republicans failed to respond, and judgment was awarded to the plaintiffs by default. Hampton's title came through the decision of the House of Representatives (which has the duty of counting the vote for Governor and Lieutenant-Governor) and the confirmation of the State Supreme Court.

I have been somewhat tedious in entering into minute details of the election returns; but, in view of the seriousness of the charge, it is best to publish the materials to form the basis of future history. I do not pretend to say anything as to alleged bargains in other States, nor assume to judge what might have been done in South Carolina had the Democratic majority been as large as in Louisiana. But I think every candid mind will be convinced, from the facts here adduced, that there was no forcing of the count in South Carolina.

R. Means Davis.

South Carolina College, February 17, 1893.

EDUCATION IN THE ORDINANCE OF 1787.

To the Editor of The Nation:

Sir: There seems to be a somewhat general misapprehension on one point in our educational history that it may be worth while to correct. For example, Dr. Schurman says in the able address that he delivered on his installation as President of Cornell University:

"The famous Ordinance of 1787 for the government of the Northwest Territory had declared it to be the duty of the nation to support education, and it reserved public lands for the maintenance of schools and colleges. Speaking generally, there were set aside in each new State thereafter one or more townships for higher education, and in each township one section for common-school education."

Article III. of the Compacts contains the well-known declaration, "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall for ever be encouraged"; and this is all that the Ordinance of 1787 says upon the subject.

"An Ordinance for ascertaining the mode of disposing of land in the Western Territory," enacted May 20, 1785, contains this provision: "There shall be reserved the lot No. 16 of every township for the maintenance of public schools within the said township." This ordinance related only to lands that had already been ceded by individual States to the United States, and also been purchased by the United States of the Indians.

The "Powers to the Board of Treasury to contract for the sale of the Western Territory," voted by Congress July 23, 1787, contains these provisions:

"The lot No. 16 in each township, or fractional part of a township, to be given perpetually for the purposes contained in the said Ordinance [of May 20, 1785]. The lot No. 29 in each township, or fractional part of a township, to be given perpetually for the purposes of religion. . . . Not more than two complete townships to be given perpetually for the purposes of an university, to be laid off by the purchaser, or purchasers, as near the centre as may be, so that the same shall be good land, and to be applied to the intended object by the Legislature of the State."

Under these powers, the Board of Treasury made the famous sale of lands to the Ohio Company of Associates that led to the founding of the Marietta Colony.

Both of these acts of legislation were purely specific, but they foreshadowed the policy that Congress has consistently pursued since that time. Accordingly, the Land Ordinance of 1785 and the Powers to the Board of Treasury in 1787 were the head-springs of our educational land-grant policy. It is no doubt true that the Ordinance of 1787 and the Powers to the Board of Treasury were parts of one whole transaction, but it is not the fact that the Ordinance itself contains a dedication of public lands for educational purposes.

Respectfully yours, B. A. Hinsdale,

Ann Arbor, Mich., February 11, 1893.

THE NUMBER OF INSECTS IN THE WORLD.

To the Editor of The Nation:

Sir: In the notice of W. F. Kirby's 'Elementary Text-Book of Entomology,' the United States Entomologist is said to think that there are ten million *known* insects in the world. The expression is doubtless based on a statement made in my 'Directions for Collecting and Preserving Insects,' published last year by the Smithsonian Institution, where I have assumed that the species in our collections, whether described or undescribed, did not represent more than one-fifth of the whole. I thus make a distinction between the insects of the world that are known and those existing. Perhaps, as the passage mentioned has been variously misconstrued in other publications, you may find it of sufficient interest to reproduce. It occurs on page 7 of the publication referred to.

C. V. Riley.

Washington, D. C., February 18, 1893.

"If we endeavor to get some estimate of the number of insects that occur in the whole world, the most satisfactory estimates will be found in the address just alluded to, and in that of Dr. David Sharp before the same society. Linnæus knew nearly 3,000 species, of which more than 2,000 were European and over 800 exotic. The estimate of Dr. John Day, in 1853, of the number of species on the globe was 250,000. Dr. Sharp's estimate thirty years later was between 500,000 and 1,000,000. Sharp's and Walsingham's estimates in 1889 reached nearly 2,000,000, and the average number of insects annually described since the publication of the Zoölogical Record, deducting 8 per cent. for synonyms, is 6,500 species. I think the estimate of 2,000,000 species in the world is extremely low, and if we take into consideration the fact that species have been best worked up in the more temperate portions of the globe, and that in the more tropical portions a vast number of species still remain to be characterized and named; and if we take further into consideration the fact that many portions of the globe are yet unexplored, entomologically, that even in the best worked-up regions by far the larger portion of the Micro-Hymenoptera and Micro-Diptera remain absolutely undescribed in our collections, and have been but very partially collected, it will be safe to estimate that not one-fifth of the species extant have yet been characterized or enumerated. In this view of the case the species in our collections, whether described or undescribed, do not represent perhaps more than one-fifth of the whole. In other words, to say that there are 10,000,000 species of insects in the world would be, in my judgment, a moderate estimate."

COLLEGE SETTLEMENTS.

To the Editor of The Nation:

Sir: Will you allow me a few words of comment on your friendly notice of the College Settlements Association in your issue of February 9?

Your reviewer criticises the shortness of average residence in a Settlement. In this criticism he has indeed suggested one of the great difficulties, perhaps the greatest weakness, of the Settlements movement. More continuity in the work is one of our chief desires. Yet the continuity is greater than at first appears, as will be evident from a comparison of the report for '91–'92 with that for '90–'91. True, the average length of residence last year was only four months; but of the twenty residents, ten had been in the family during part of the preceding year. Now any one who has ever lived at a Settlement is joyfully welcomed "home" by the neighbors, especially the children, when she returns even for a day. Ten of the twenty residents thus came to the Settlement, not as strangers, but as friends, with countless ties already established between themselves and their neighbors.

The Philadelphia Settlement was opened in the spring, and the force of workers was of necessity small and shifting during the summer. But of the six women now in residence, four came early in the autumn and are to spend the entire winter, while three will remain till July.

At no Settlement is a worker usually considered as a full resident unless she stays two months. Those coming for a shorter time are visitors; and, unless they are former residents returned, they come rather for their own sake than for the sake of service. They receive, in a very short time, much suggestion and stimulus; they are often very helpful in incidental ways; but their attitude must be, in the main, that of the observer.

"The College Settlement in the United States up to date is a station of observation, a sociological picket-post." With this statement of your reviewer I think that few of those who have shared the active life of a Settlement would fully agree. Sociological study should indeed be carried on at every Settlement. As more fellowships are given to the Association, it is hoped that this aspect of the work may be emphasized. But sociological study is not the chief end. Some of us, though by no means all, feel that the chief use of Settlements, in final analysis, is to serve as pioneers of the social democracy of the future. But this use is, as yet, latent. The chief immediate end of a Settlement is undoubtedly found in its relation to its own immediate neighborhood. In regions where friendship is a power, and a power not too frequently found, Settlements aim to establish centres of honest friendliness and of help in immaterial ways. That this aim is attained no one can doubt who has been,

even for a short time, a resident in one of our Women's College Settlements.

Sincerely yours, VIDA D. SCUDDER.

BOSTON, February 18, 1893.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In a review of D. C. Thomson's 'Corot' printed in the *Nation* of February 9, your critic cites the following passage as among the author's "errors":

"The 'Orpheus Greeting the Morn' he calls 'Orpheus and Eurydice,' and says: 'The *figures* occupy the right in the foreground, and the *Elysian Fields*, which fill the background, are painted in a silvery tone very subtle and wonderful.'"

The "Orpheus Saluting the Morn," so long in the collection of the late Daniel Cottier, and the "Orpheus and Eurydice" are two quite different pictures. The latter was at one time in John Saulnier's collection, and was sold by auction in Paris some six or seven years ago. It is now owned by Mrs. S. D. Warren of this city. Mr. Thomson's description of the picture is correct.—Yours truly,

J. EASTMAN CHASE.

BOSTON, MASS., February 11, 1893.

[Mr. Chase is undoubtedly right, and we have, in this instance, done Mr. Thomson an injustice. We were led into it in this way. Mr. Thomson says that the "Orpheus and Eurydice" was in the Salon of 1861. Mrs. Van Rensselaer says that the "Orpheus Greeting the Morn" was painted in 1861. The lists of pictures exhibited in the Salon by Corot give, for 1861, "Orphée" simply. As Mr. Thomson had blundered in describing other pictures, we assumed that he had done so in this case. We find, however, on further search, that the "Orpheus Rescuing Eurydice," as it is given in the appendix to the volume of "The Great Artists" series devoted to the Barbizon painters, was the picture of 1861, and that Mrs. Van Rensselaer was misled by the entry in the Salon list and supposed it to be the Cottier picture.—ED. NATION.]

A HUGUENOT SETTLEMENT IN MAINE.

TO THE EDITOR OF THE NATION:

SIR: A friend in Boston has recently sent me a copy of your issue of June 23, 1892, in which is a notice of the 'History of the Town of Oxford, Mass.,' containing the statement that Oxford was the site of the only Huguenot colony in New England, barring the Narragansett failure. In making that statement you only said that which is commonly believed to be the fact, and which the writer, up to a very recent period, would not have questioned himself.

It may be matter of interest to you and to some of your readers if I present, briefly, a few of the facts which prove that a Huguenot colony was planted on the bank of the Kennebec River, in Maine, in the year 1752, under the auspices of the Proprietors of the Kennebec Purchase. The settlement was made within the limits of the present town of Dresden, and was a permanent one. I was surprised to find the proofs while searching for material for a town history, for it has been hitherto recorded that the town (then Frankfort plantation) was settled by Germans. Of the original colony reported as fifty-four Germans, who came here when Fort Shirley was built in 1752, more than half were French refugees, who came via Germany and the Dutch port of Rotterdam in 1751, to Boston, on the ship *Priscilla*, and their descendants still live here and preserve the old names, such as Houdelette, Pochard, Goud, Ridall, Stilffin, Cavalier, Jaquin, and others, while other names have been lost or completely Anglicized. Many of their descendants still live on the lots of land granted to the wanderers of 1751 by the Kennebec Proprietors.

In proof of the truth of my statement, I have, first, the baptismal register of the Pochard family, written in French in France 142 years ago and sent to John Pochard in Germany. It gives the name of the little village in the department of Haute-Saône (Franche-Comté) where he and his family and his father dwelt, and it is signed, attested, and sealed in due form by the pastor of the church and his assistant, and by the "anciens," or "elders." There are traditions of other such registers, which have become lost. My second proof is found in letters sent in French by these Kennebec settlers to Peter Chardon of Boston, translations of which are in possession of the Maine Historical Society, in Plymouth Company papers. In these letters they express a wish to be settled together, that they may "settle a minister for divine service and a schoolmaster for the instruction of their children." I have other evidence, which I will not take space to present, only mentioning, among relics preserved by their descendants, Lutheran prayer-books and books of psalms and other works in French which they brought with them to their Maine wilderness.

By the aid of papers in the Massachusetts Archives I have traced these settlers until the chain of evidence is quite complete. Their minister left them in Holland and went to Carolina, where some of these settlers wished to go. Here on the Kennebec they were each granted 100 acres of land. Indeed, the circumstances of these colonists, even to the plan of their settlement, were much like those of the people who settled in Rhode Island, as related by Dr. Baird, except that our Kennebec people never abandoned their settlement, although they suffered at times from Indian depredations. Not being able to employ a minister of their own, they asked the Society for the Propagation of the Gospel for a missionary, and the Rev. Jacob Bailey (Harvard, 1755) came in 1760. He caused to be erected the first Episcopal church in Maine, in 1770, but, being a Loyalist, fled to Nova Scotia in 1779. His church overlooked Kennebec River, although one would infer from the sketch in Sabine's 'American Loyalists,' and also in 'Appletons' Cyclopædia of American Biography,' that it was in the present town of Wiscasset. Mr. Bailey speaks of his parishioners as French, and of himself as studying the French language.

CHARLES E. ALLEN.

DRESDEN, ME.

EARLY ENGLISH CONFUSION OF SUNDAY AND SABBATH.

TO THE EDITOR OF THE NATION:

SIR: The instances of the official misuse of "Sabbath" for "Sunday" before the publication of Bownde's book in 1595, which your correspondent "G." cites from Mr. Campbell's 'Puritan in Holland, England, and America,' are by no means the earliest examples of this confusion which he might have given. The admonition issued after the earthquake of 1580 must yield to another ecclesiastical "official document," namely, the bill concerning the observance of "the Sabbath," drawn up by the Synod of 1562 (Strype, 'Annals,' i., 355). It appears, however, that the intention of presenting this draft bill in Parliament was never executed. Whether the bill which, after much opposition, did pass both houses in 1585 and was disallowed by Elizabeth as an infringement of the royal prerogative in ecclesiastical matters, actually called Sunday "the Sabbath," is at best doubtful. Strype, whom Mr. Campbell quotes, and the 'Parliamentary History' both depend for this statement on Sir Simonds D'Ewes's 'Journals of All the Parliaments during the Reign of Queen Elizabeth.' Now D'Ewes, who was not born until 1602, and was himself a Puritan, sought in vain for the original paper of this bill on the 8th of October, 1629. Is it impossible that, following the custom of that time, he himself, or some previous transcriber, or his nephew and editor, Bowes—for the 'Journals' were not printed until 1682, thirty-two years after D'Ewes's death—may unconsciously have written "Sabbath" where the bill, which is not recorded at all in the printed Journals of the House of Commons published by authority, actually had "Sunday"?

This conjecture could not, of course, stand for an instant against D'Ewes's text, were the conjecture not supported by contemporary evidence. But just such evidence exists. William Fleetwood, the Puritan Recorder of London, was a member of the House of Commons at the time the bill was introduced. He regularly sent an account of the proceedings of the House to Lord Burghley. And, although he had written concerning the accident at the bear-baiting on Sunday, January 13, 1582-83, that "upon the same daie the violaters of the Sabothe were punished by God's providence at Paris Garden," nevertheless he says that the bill of 1585 was "for the due observation of Sundays" (MS. quoted by Collier, 'History of Dramatic Poetry,' 1831 ed., i., 252). This contemporary testimony may not establish my conjecture, but it is not to be lightly set aside in favor of an author writing half a century later, and confessedly without the original bill before him.

However, there is no doubt that Sabbath was used for Sunday in "official" documents before the bill of 1585, whichever word may have stood in that bill itself. The Privy Council sent letters to the Lord Mayor of London on December 3, 1581, and on April 25, 1582, concerning plays on "the Sabbath-day," which, as is known from other sources, meant Sunday. Extracts from these letters are printed in Robert Chalmers's 'Apology,' pp. 379-383. When Dasent's publication of the 'Acts of the Privy Council' shall be brought down to these dates, as it soon will be, we shall probably find more evidence of the same kind. Meanwhile, it is also known that as early as 1564 the Town Council of Arbroath, Scotland, ordered that "thair be na merchāts upon the Sabouith day before aucht hours, noder flesh nur uder merchandeis on pain of viij^{s}."

But all this does not change the fact that, as I previously said, Bownde's book "*formally* advocated for the first time the doctrine of substantial identity between Sunday and the Sabbath, *which had begun to make itself felt* among the Puritans." The earlier instances of this confusion were but preparatory blasts. They heated the doctrinal forge. Bownde's strong and skilful blows shaped the fetters that trammel us to-day. And his credit is no more diminished because in 1585 the Rev. Mr. Smith

offered to prove before the Vice-Chancellor of the University of Cambridge "that the Christian Sabbath ought to be observed by an abstinence from all worldly business," than is Darwin's credit diminished by the previous work of Lamarck. H.

BOOKS ON THE SHELF.

To the Editor of The Nation:

Sir: The remark of your correspondent about 'Books in Chains,' in your issue of February 2, that books facing outwards on the shelf are more conveniently opened, leads me to mention that a still more convenient method is to have the lettering on the back of the book reversed, so that the book stands upside down on the shelf, back outwards. This is used in the case of books that are large and frequently consulted, such as records of deeds.

Yours truly, W. H. Shockley.

Candelaria, Nev., February 8, 1893.

Notes.

By private subscription, Mr. Henry N. Stevens, 39 Great Russell Street, London, W. C., will shortly issue in a small folio 'The New Laws of the Indias for the Good Treatment and Preservation of the Indians Promulgated by the Emperor Charles the Fifth, 1542–1543.' This is a facsimile reprint of the original Spanish edition, together with a literal English translation, and an historical introduction by our countryman, the late Henry Stevens of Vermont, and Fred. W. Lucas. It will be quaintly illustrated with Indian views and with contemporary portraits, and will be elegantly published in an edition of less than one hundred copies.

G. P. Putnam's Sons announce 'The Making of a Newspaper,' as related by American journalists and edited by Melville Philips; 'Voodoo Tales, Told by the "Aunties,"' edited by Mary A. Owen; 'The Genesis of Art Form,' by Prof. George L. Raymond; 'Ruminations,' essays by Albert Mathews; 'The Philosophy of Individuality,' by Antoinette Brown Blackwell; 'The Meaning and the Method of Life: A Search for Religion in Biology,' by George M. Gould, M.D.; 'The Gospel and its Earliest Interpretations,' by Orello Cone, D.D.; 'The Origin and Growth of the Bible,' by Jabez Thomas Sunderland; 'Dogmatic Christianity,' by William Dearing Harden; 'Outlines of Roman History,' by Prof. Henry F. Pelham, Oxford; 'Venice: An Historical Sketch of the Republic,' by Horatio F. Brown; 'Studies of Travel in Greece and Italy,' by Edward A. Freeman, in two volumes with portrait; and a translation of Leroy-Beaulieu's 'Empire of the Tsars and the Russians,' by Z. A. Ragozin—Part I., The Country and Its Inhabitants.

Mr. Augustin Birrell is a clever and homely writer, with sound sense, strong prejudices, and a style that smacks of the newspaper; he is bluff and cheerful, he has prepossessions of the John Bull variety, and he is not averse to vulgar diction. In his last volume of essays, 'Res Judicatæ' (Scribners), he is as entertaining as in the previous collections of smart papers which were well received by the public: he struck sparks out of the dulness of inert volumes, and the shades of their authors, still lingering on Lethe for their century's delay, felt something that is called "breeziness" sweep through them; but it cannot be said that anything resulted from the casual disturbance. In this new set of pleas and judgments, that in Richardson's favor is the most thoroughgoing, those on Gibbon and Cowper have interest, that on Borrow has most enthusiasm; for those on Newman, Arnold, and other topics only readers much in need of information will care. A strong dash of non-conformity, a touch of politics, a shadow of on-coming social change in Church and State, are notable traits in this every-day writer. Some personal characteristics, varied enough to include sympathy with "the bruisers of England" and with Cowper's tea-table humor, give the sense of individuality; but as a literary critic we fear Mr. Birrell does not rise out of Mr. Saintsbury's class, though he is cleverer with his wits.

Mr. J. A. Symonds has collected from his miscellaneous papers in periodicals and from his unpublished manuscripts a thick volume, under the title 'In the Key of Blue, and other Prose Essays' (Macmillan). The interest of these essays is very uneven, as was perhaps to be expected in view of the fact that they cover more than thirty years of literary activity. Some are merely youthful, no more than notes and experiments; others are impressions of travel or translations of verse, of the sort that their author has been fertile in; a few are of critical value. The opening paper is a succession of copies of verses, on the catch-phrase of a "symphony in blue" and some other color, relieved by intervening passages explaining the origin of each in some Venetian scene. The artificiality and trifling nature of the study make it merely an example of how curiously wise a man can be in wasting time. The two main topics of the better part of the volume are Ideals of Love, and the Lyrical Element in the Elizabethan Drama. Under the first, Mr. Symonds attempts to show the analogy between Platonic love, with its philosophical quality, and chivalric love with its mystical quality, both representing in Plato and Dante the way to the highest truth; under the second, he develops and illustrates the part of lyrical poetry in determining the special form of the English romantic drama. The book, as a whole, reminds the reader, as it was meant to do, of the versatility of Mr. Symonds's literary work, and bears the individual stamp of its author in both its sentiment and its style.

The tenth volume of the new edition of 'Chambers's Encyclopædia' (Philadelphia: J. B. Lippincott Co.) falls within the fifth year since the inception of publication, and completes the work. Among the principal articles are those on Tennyson and Wordsworth, by Prof. F. T. Palgrave, to whom Tennyson was still in the flesh; Turner, by Mr. Hamerton; and Women's Rights, by Mrs. Fawcett. Turner, by the way, is referred to on p. 140 by Prof. Palgrave as Wordsworth's great contemporary in nature painting; and it is an illustration of the fatality which attends the most careful editing and proof-reading (as described in the case of this work by the editor, Mr. David Patrick), that the artist should here be designated "W. M. Turner" instead of "J. M. W.," as in the article devoted to him on p. 338. There is a sane and not unsympathetic notice of Whittier by a writer who gives more space to Walt Whitman, though this is disproportionate treatment, whatever may be thought of the respective merit of these two poets. Thackeray's biography is by his son-in-law, Mr. Richmond Thackeray Ritchie. A map of the Yosemite Valley accompanies several maps of the States of the Union, Sweden and Norway, Turkey, the West Indies, the World, etc., in a series nearly or quite a hundred strong. A great part of the cuts in the text are new and of good quality. While this work is neither extensive enough nor even enough in quality to occupy a place in the front rank of its class, it fills a certain demand for something at once compact and of moderate cost, and, like all "last" publications of the sort, it has the merit of freshness.

The second volume of select obituaries from the London *Times*, 'Eminent Persons' (Macmillan), extends from 1876 to 1881. It begins with Harriet Martineau and ends with President Garfield, and deals with celebrities like Thiers, Victor Emanuel, Pope Pius IX., Earl Russell, Dupanloup, Espartero, Lord Lawrence, Sir Rowland Hill, Michel Chevalier, Jules Favre, George Eliot, Carlyle, Beaconsfield, Dean Stanley, and Alexander II.

Burdett's 'Hospital Annual and Year Book of Philanthropy' for 1893 is the fourth issue of this useful work (London: Scientific Press). Its index to hospitals and institutions fills twenty-seven pages of small type in triple columns, and these institutions are American as well as British. Each, in its proper place, is succinctly described as to its age, government, staff, accommodation for patients, charges, income, visiting days, etc. The second part of the title relates to missionary and religious societies, orphanages and homes, institutions for the blind and the deaf and dumb, homes for inebriates, and (in mockery of the anti-vaccination agitators) vaccine lymph establishments. All this is prefaced by a survey of the past year, and of the charitable status generally, with special stress on the economic side, such as the cost of hospital management, hospital expenditures, hospital bookkeeping and accounts, savings of nurses and hospital officials, financial position of the great metropolitan hospitals, etc.

Nevill Geary's 'Law of Marriage and Family Relations' (London: Adam & Charles Black; New York: Macmillan) is one of a series of "Manuals of Practical Law" announced by the Messrs. Black, with the daring and disinterested advice to the public that it is "better for a layman to go to a law book than to go to law." The author accordingly sets forth in his preface that the volume is intended "as well for laymen as for the profession," and that, "having a dual aim in view," his method, in respect of the citation of authorities and the arrangement of matter, has been that of "using a double-barrelled gun" rather than "endeavoring to kill two birds with one stone." Should the reader be led by this declaration to fear that the result of the effort will be somewhat scattering, he will, nevertheless, be agreeably disappointed. It appears, on the contrary, to be a concise and well-arranged exposition of the present law of Great Britain (the main scope of the book is limited to this, though there is some citation of American cases) on the subject of marriage and divorce, with only those defects which are unavoidable in the attempt to treat an important branch of the law in a form at once condensed and popular. Among other things is an interesting chapter on "Modern Roman Catholic Canon Law," and what seem excellent practical suggestions as to needed legislation. The author does not generally go beyond a statement of the decisions to comment upon and criticise them; but his remarks on the celebrated Jackson case of two years ago leave one to surmise that he shared in the surprise which so many of his countrymen seemed to feel at the judicial announcement that a husband's rights stopped short of holding his wife in physical captivity.

A new and enlarged edition, in two volumes, of Foster's 'Federal Practice' (Boston

Book Company), the merits of which, as a practical guide to the subject, were already well known, is the result of the Judiciary Act of 1891, creating the United States Circuit Courts of Appeal. Its publication, early in 1892, came too soon for any extended judicial discussion of that act, which seems to have its full share of the dark places too often connected with the "ominous date" of March 3. But what law was available on the subject is fully and clearly stated; new chapters are added on Practice in Admiralty, in the Court of Claims, and in the Court of Private Land Claims; old chapters have been rewritten; and the whole book has been carefully revised and brought down to date.

Prof. F. P. Nash of Hobart College has edited the first two satires of Juvenal, and they are published as a specimen of a larger work which he has in contemplation (Boston: Houghton, Mifflin & Co.). The little book, which is perhaps the handsomest copy of a classic ever published in this country, is not intended for college students, and contains not much in the way of grammatical explanation. The full commentary rather directs the mind to the fields of higher criticism and to the study of ancient life and archæology. The editor has made good use of the best sources, and his work may be highly commended, not only to professed students, but to all who wish to renew their acquaintance with the great satirist.

Wholesome reading at the present time is to be found in W. D. Alexander's 'Brief History of the Hawaiian People' (American Book Co.), authorized as a text-book by the Board of Education of the Hawaiian Kingdom. A more delicate task than the compilation of such a work could hardly be set, so much had to be discreetly omitted. Yet more would have to be left unsaid in case of annexation to the United States, for the new American citizens would hardly enjoy reading the paragraph on page 194, with the caption, "Outrage of the *Dolphin*, Lieut. Percival," this officer of our navy having compelled the chiefs (January 23, 1826) to abrogate the law restricting prostitution, whereupon "the *Dolphin* remained in port two months longer, and the pernicious influence exerted by its crew during that time cannot be described." The history is well illustrated with portraits, views, and maps. In 1890 appeared Mr. Henry M. Whitney's illustrated 'Tourist's Guide through the Hawaiian Islands' (American News Co.). In a fantastic sketch called "Looking Forward," written in 1856, but copied here, it is assumed that the population in 1960 will be "a mixture between European and Chinese."

The number of new publications in Great Britain in 1892 was greater by about five hundred works than in the previous year. The largest numerical increase was in the novels, but the largest proportional increase was in works on the arts and sciences and political economy. After these came novels, voyages, and poetry, each of which gained about twenty-five per cent. Theology and medicine show a slight increase, education a proportionally slight decrease, while there was a considerable falling off in history and belles-lettres and a large decrease in juveniles and legal works. Speculation as to the causes of these perturbations would be more curious than useful, especially as the figures are only approximately correct. But as far as they indicate the subjects which have especially interested the reading public from year to year, they have their value. While there can be no question that the publishing business is prosperous or depressed just as the conditions are favorable or unfavorable to business in general, it may not necessarily follow that a prosperous year in trade and manufacture is marked by correspondingly great intellectual activity. This may depend upon entirely independent causes. The number of contributions voluntarily sent to one of our great weeklies last year, for instance, was considerably less than that for 1891. There was no apparent reason for the large number in that year—no special inducements to contributors, no sudden or extraordinary popularity—but the year was simply one in which there was an unusual degree of that peculiar mental activity which leads to authorship.

The identification of the spot where Shelley's body was burned on the beach at Via Reggio, which was successfully made by Guido Biagi, gave occasion for a small volume by him, 'Gli Ultimi Giorni di P. B. Shelley' (Florence: G. Civelli, 1892), in which the author tells the well-known story of the last months of Shelley's life, and includes all that was material in the article previously published by him in *Harper's*. The entire set of official documents relating to the drowning and burning are given, with the evidence of the surviving spectators of the last rites; and the narrative portion is written with feeling and poetic sentiment. The publication is one of several Italian incidents occasioned by the poet's centenary, of which the most notable in literature was the issue of a translation of the 'Prometheus Unbound,' 'Prometeo Liberato,' by Mario Rapisardi (Palermo: Pedone, 1892). Besides the memorial erected at Via Reggio, we learn from the *Rivista Italiana*, a stone will be set up in Rome on the Verospi Palace in the Corso, commemorating Shelley's residence there. This is done at the instance of Signor Ettore Ferrari, the Duke of Sermoneta, and other citizens of Rome. Italy, it may be remarked, has honored Shelley almost from his death; the first translation from his works into Italian, that of the 'Adonais,' dating in 1830.

The proposal to exhibit the MS. of the 'Flatejarbok' at the World's Fair has aroused so much adverse criticism in Denmark that the librarian of the Royal Library in Copenhagen, in which the codex is now lodged, recently saw fit to give a public explanation of his position in the matter. While discreetly avoiding a detailed account of the negotiations, he states that the library officials have no authority to take such a step, and that the loan of the MS. will be made by order of the Government. Unless this order be rescinded, therefore, visitors to Chicago will be able to read of Leif's voyage in one of the earliest known sources.

American friends of Prof. Heinrich Brunn of Munich, headed by Profs. Norton, Gildersleeve, Hoppin, Merriam, Seymour, Sterrett, and others, have recently issued a call for contributions towards a testimonial in his honor in this the fiftieth year of his doctorate. A Latin congratulatory address, bearing the names of all the contributors, will be forwarded in season to reach Brunn about March 20, the anniversary day. Later in the year an original medal, or some other similar memorial, will be presented to him in the name of his American admirers. All friends of the great archæologist and all debtors to his work, whether reached by the circular or not, are cordially invited to take part in the testimonial. Contributions and names should be sent in without delay—if possible before March 5—to Prof. M. H. Morgan, Cambridge, Mass.

—A correspondent writes:

"It will be of interest to transatlantic admirers of Mr. Burne-Jones's work to learn that two new pictures of his have recently been placed where they will be permanently accessible to visitors to London upon application on the proper day to Messrs. Elliott, Boyton & Co., Vere Street. These two pictures, which are but the separate parts of a single subject and composition, are painted in memory of a well-known London clergyman, Dr. Radcliffe, and are to be seen in St. Peter's Church, Vere Street. They represent the Annunciation, and form the wings to a central picture, itself another memorial—to F. D. Maurice—from the prolific brush of the same indefatigable artist. The subject of this central picture, which occupies the space above the Communion table and below the beautiful east window executed by the firm of William Morris (of poetic and socialistic fame), from a design of Mr. Burne-Jones, is Mary Magdalen at the Sepulchre. In the newly painted wing on the left, the angel of the Annunciation stands with uplifted hand at the threshold of the Virgin's chamber, while in the right wing the Virgin, clad in white, receives his mysterious message; the accessories, a bank of lilies, a glimpse of the everlasting hills in the distance, are of the mystical and suggestive type which the artist knows how to employ with such consummately decorative effect. As Rossetti's picture of the Annunciation is also permanently accessible to public view in the National Gallery, an interesting comparison may be made between the treatment of this subject by the master whose influence is so apparent in the earlier work of his friend, and the treatment of the same theme by the latter at the period of his full artistic development. In this connection it may also be noted that Mr. Burne-Jones has quite lately had conferred on him by the French the rare distinction of an election to the Académie des Beaux-Arts."

—From London another correspondent writes:

"A very notable, but scarcely noticed, event in London just now is the show of Mr. Whistler's Venetian etchings at the Fine Art Society's in Bond Street. Of course, to all collectors, as well as to all admirers of Mr. Whistler's work, these prints are perfectly well known: they were made some ten years ago. That which gives special importance to the present exhibition is the fact that these plates have been destroyed. But it seems as if Mr. Whistler could do nothing in a commonplace way. Instead of defacing them with meaningless scratches and scrawlings in the usual fashion, he has covered them with butterflies, and the result is delightfully decorative. Lacquered and framed, they hang beneath the prints—an assurance, to the doubting amateur, that never again can they be printed from. In many cases an early trial proof and the final state have been placed side by side, thus adding immensely to the interest of the present series, Mr. Whistler having worked on the plates during the last ten years. Indeed, the value of this arrangement to the student and the artist can scarcely be exaggerated. It affords an almost unparalleled chance of studying the actual lines of the master and the condition of the copper when the hundred proofs had been pulled from it. The plates are somewhat worn, but not so much that they cannot still serve as incomparable models for all who care for or practise the art of etching. In speaking of Mr. Whistler, it will not be amiss to call attention to the limited edition of a portfolio of photographs of his pictures exhibited in London last spring, soon to be issued by Messrs. Boussod & Valadon. Whistlers of any kind, nowadays, are quickly bought up. The lithographs, published in the *Whirlwind*, a paper which sold for a penny, now fetch five or ten shillings apiece. It is not easy to say what will soon be asked for his portrait of Mallarmé, also a lithograph, printed as frontispiece to the latter's 'Vers et Prose,' the first edition of which was speedily exhausted. If ten shillings for a lithograph already rare seems little enough, one can cite, for Mr. Whistler's benefit, the £800 lately paid for the 'Rocket,' which Mr. Ruskin thought so absurdly and insolently dear at £200. The turn of the tide in Mr. Whistler's favor, as shown by the prices his pictures now command, is the more marked by contrast with the depreciation of the average Royal Academician's work, as exemplified in recent sales, especially that of the Murrietta collection."

—M. F. Lhomme, a caustic but serious critic of deplorable tendencies in French literature,

opens the current volume of *L'Art* with a prayer for the New Year to Phoebus Apollo. Let Jules Claretie stick to his directorship of the Théâtre-Français and give up writing prefaces and worthless novels; preserve us from Paul Bourget's psychology, and let Zola have done with the Rougon-Macquarts and move on to oblivion attended by his pornographic brethren of the quill and crayon. Let the crop of hellebore be abundant for our mad bards, for never did the tribe more need the sacred plant. Cool their blood at least—calm their brains, and mitigate their folly. "Gag the unhappy Mallarmé, and wither his right hand, but spare his lustrous eye in which is the light of genius. We would bless thee if the poet Coppée should renounce prose—the rich rhymer of 'Le Petit Épicier.' And again, make M. Leconte de Lisle less emphatic (*solennel*), and don't allow M. Sully-Prudhomme to write a poem more wearisome than 'Le Bonheur.' For our good name, let nobody wrong himself to such an extent as to regard M. Déroulède as a poet." This passage is complementary to the recent observations of our Paris correspondent on the present state of French poetry. In the same number of *L'Art* is an engraving after J. MacLure Hamilton's portrait of Gladstone in the Luxembourg.

—M. Gaston Paris's recent 'Les Origines de la Poésie lyrique en France au moyen âge' is not, as one might suppose, an independent and complete treatise, such as all students of the Romance literatures would welcome from him, but a reprint of his careful review (some sixty large pages in length, in four numbers of the *Journal des Savants*) of the important work of Jeanroy bearing the same name. It is none the less interesting and important, for M. Paris takes up in detail Jeanroy's endeavor, in the first part of his notable book, to prove that the French lyric *genres* of the twelfth and the thirteenth centuries are neither native nor popular, as they have been generally considered, but courtly imitations of forms in vogue in Provence. The second part of the book, the attempt to reconstruct, by a critical study of French popular poetry, and especially of foreign imitations of it, the really spontaneous and native lyric poetry of the north of France, M. Paris passes for the most part modestly over, on the plea that inferences based largely on researches made in other literatures must be first tried before tribunals composed of the experts in each respective literature. What results he reaches we have not room here to state, except to say that he favors in the main Jeanroy's opinions. From this author's further work, he adds—and who could speak with greater authority?—and that of other young French scholars, "imbus des meilleures méthodes, et joignant à la passion de leur sujet le sang-froid de la critique la plus prudente," we may hope before long for an entire reconstruction of the history of French literature in the middle ages.

—There is no social fact more widely known among English-speaking people than the sad truth that the wretched French have no homes. As we all have been told, they have not even the word, and have to use as a substitute for it a miserable cold *chez nous*, which nobody could call sweet. The French are an adulterous generation, and they notoriously seek the sign of a café to avoid the dulness of the hearthstone. Of course they habitually neglect their families. Holders of these current opinions are likely to receive a rude shock if they chance to come upon an article upon M. Alphonse Daudet's *chez nous* which appeared in the *Temps* of January 27. The French novelist is depicted as sitting in his study, with his friends and family around a blazing fire, recalling tender and happy memories of his early home at Nîmes, and of his childhood there. From these he passed in talk to the subject of his new book, 'Soutien de Famille,' which is to come out this spring, and thence to a discussion of the younger generation and their rearing and education.

"I study the young men in my book," he said, "the young fellows of twenty-five or so, the generation that is just embarking, not for Cythera—it is too serious for that—but for the petty traffic of life. There's no gayety in it; its heart is dry and its soul shut against generous ideas, and tenderness, and the illusions which are charming, but which don't pay interest on their cost. Yet, while I judge this generation I pity it. Are these young men responsible, after all? Is it not rather the fathers who have ill known their duties towards them, and brought them up so carelessly, that are the guilty ones? Merely to transmit life is not enough, for, when children are left to come up alone, they come up ill. They say that children were never loved so much as now. Whether that is true or not depends upon the fashion of loving. It is very pretty for a mother to be always kissing her children and spoiling them. It is very convenient for a father to let them do whatever they like so long as they don't annoy him; but to bring them up seriously—that is a hard task and one that often lacks gayety. To work for them! that's nothing: but to make them work—what a business that is!"

—Daudet then went on to explain his own methods and experiences. His oldest son is about twenty-five years old and married, yet he never fails to spend an hour every day with his father, "une heure d'abandon complet, de confidence, d'ouverture d'âme absolue." The association of his life with his father's is kept up because it is of long standing. Up to the age of ten the children have been under their mother's wing. She has taught them to read and write and cipher. They never have been sent away from home. As soon as the eldest entered the lycée, Daudet himself took up the work of following every day his studies with the boy, and so accompanied him through his school-days. He is doing the same thing now with the younger, while his little daughter is still under her mother's care. At this point some one asked if the children had had religious training. Daudet replied: "I have given them a religious education. My wife and I were born Catholics, and we have brought our children up in the Catholic religion. They are free to keep these early beliefs, or to reject them, after they are grown up. That's a question of temperament, of personal judgment, of the ambient air. My eldest son, like most medical men, is not a believer, but his negations rest on a comparison of beliefs. I like that way better." Perhaps this is a makeshift for our wiser methods of education, even as a *chez nous* must always be a makeshift for a home—but it certainly appears to be a very tolerable makeshift.

—The question as to the most elevated point which it is possible for man to attain on the earth's surface has been frequently discussed, and with a general understanding that a limitation is set long before the outermost projections of our planetary crust are reached. The experiences of the "old masters" in mountain-climbing have probably conduced to this belief more than the results of actual experiments made to determine this point—if, indeed, it can be said that any such experiments ever have been made. Glaisher's memorable balloon ascent to 37,000 feet, although it carried the aeronaut a mile and a half above the loftiest pinnacle of the Himalaya, only helped by its hardships to confirm the general belief in limitation, which was based primarily upon the narrow possibilities for muscular exercise in a highly attenuated atmosphere. The steady advance in mountaineering, however, due in part to improvements in the appliances which the profession has called forth, but more particularly to determined individual effort, fostered principally by the various Alpine associations of Europe, has put a new face on the matter, and the opinion is now freely entertained by the more experienced mountaineers that before long even the apex of the Gaurisankar (Mt. Everest) will be reached—in fact, that its attainment is merely a matter of time and money. Humboldt's and Boussingault's remarkable ascents, made in the early part of the present century, have long since been eclipsed by the Schlagintweits on the Ibi Gamin (1855), but even their credit of 22,300 feet has in recent years been obscured by the achievements of at least three climbers of the Central Asian mountains.

—If the determinations of altitude made by Graham are correct, this traveller must have attained an altitude of nearly 24,000 feet, or within a mile of the crest of Everest. But the special glory of high mountaineering belongs to Mr. W. M. Conway, who during the past summer made a vigorous assault upon the peaks, passes, and glaciers of the Karakorum, and carried on a long line of exploration at elevations of from 17,000 to 23,000 feet. His most successful effort was on the (newly named) Pioneer Peak, to which an elevation of approximately 23,000 feet is given. Although so exhausted when the summit was reached that "no more difficult climbing" could have been done, and that the faithful Swiss guide, Zurbriggen, "could have cut no more steps," it is claimed that, with a proper amount of rest and the assistance of a goodly supply of warm covering, another 3,000 feet might have been added on the following day. Mr. Conway appears not to have suffered any ill effects, beyond heart-fatigue, from his mountain experiences, and even at his most elevated points "felt no insufficiency in the supply of oxygen"—an experience that is directly opposed to the conclusion reached by Prof. Bert, that "mountain sickness" is due to a deficiency of oxygen at great heights. The most serious obstacles to Mr. Conway's efforts appear to have been the great variations between "biting cold and grilling heat," the sun's rays being described as frightfully hot, while the cold ground sucked the warmth out of the feet of the travellers. Mr. Clinton Dent, himself a mountaineer of long experience, in a recent paper discussing the "Physiological Effects of High Altitudes" (*Geographical Journal*, January, 1893), states his conviction that

"Neither on mountaineering nor on physiological grounds does the possibility of ascending Gaurisankar appear hopeless. To some extent a question of men, it is largely a question of money. Selected men will have to work for a year or more with the one definite object before them if they desire to ascend 6,000 or 7,000 feet higher than has yet been reached on foot. The attempt would be costly, long, laborious, and not free from risk; but it is possible. The cold due to the diminished circulation through the lower limbs appears to be a more serious factor than has hitherto been imagined."

A suggestion as to the adoption of Eskimo foot-gear, or of arctic clothing generally, such as was used by Mr. Peary in his recent traverse of the Greenland ice-cap, and which, by its combined triple qualities of lightness, warmth,

and impenetrability to wind, rendered attainable what would otherwise in all probability have been impossible, might help to the solution of the problem.

THE PRE-RAPHAELITE BROTHERHOOD.

Autobiographical Notes of the Life of William Bell Scott, R.S.A., LL.D., and Notices of his Artistic and Poetic Circle of Friends, 1830 to 1882. Edited by W. Minto. Illustrated by etchings by himself, and reproductions of sketches by himself and friends. 2 vols., 8vo. Harper & Bros. 1892.

William Bell Scott was, as he says of himself, "a *Pictor ignotus*, a poet without recognition," yet his autobiography is a vastly entertaining and a really valuable book, and is likely to rescue his name from the oblivion which would have been pretty sure to overtake it if he had left nothing but his painting and his poetry. Such a fate is not uncommon. Many men have been interesting to the world mainly for their reminiscences of those greater than themselves whom they had known, and Mr. Scott managed during his long life to know almost every one who was prominent in art or letters in England and Scotland, from Sir Walter and Wilson to Dobson and Lang. His most intimate friends, however, were the little group of original Pre-Raphaelites, and the permanent value of his book will be found in the light it throws on that curious movement in art called Pre-Raphaelitism—all of which he saw and part of which he was. We shall confine this review, therefore, to those parts of his reminiscences which bear more or less directly on the history of the P. R. B., and leave to one side the mass of characteristic anecdotes of other greater or lesser lights in art and literature, only warning the reader that there are a great many of them and that they are worth reading.

Mr. Scott's own nature, as well as his position, singularly fitted him for the writing of such a record of Pre-Raphaelitism. He was a strange mixture of the poetic dreamer and the shrewd, hard-headed Scotchman; at once full of sympathy with the aims and ideals of his friends, yet with eyes wide open to their faults; a writer and projector of long mystical poems, yet a sort of Calvinistic free-thinker, who could not believe in a God because he accepted so fully the definitions of the Shorter Catechism; an ineffectual artistic temperament on the verge of despair, kept sane by a firm morality and a cheerful interest in the small affairs and small duties of life. His position was that of an older man who had felt to the full the awful deadness of art in England, and had practically given up the struggle against it before his younger friends came upon the stage; who influenced them as much as they did him, and who welcomed their advent and gloried in their triumphs while remaining himself an onlooker—with them in spirit, but not of them, and content not to share in their success.

What the state of English art then was, Mr. Scott shows very clearly. When, in the spring of 1837, at the age of twenty-five, he broke away from his father's engraving business in Edinburgh and went up to London, "a shy youth with poetry in his pocket and little knowledge of the world and himself," the younger men who were kept out of the Academy and were constantly attempting to start an opposition exhibition were such as Frith, Egg, and others whose names are less known. Eastlake was President of the Royal Academy. Turner was "the joke of the public," Constable "near his end and never a favorite," and Etty and Maclise were about the best of the artists. There was little chance to exhibit, little patronage, and less interest in art. Landscape-painting was "below zero," and figure-painting was largely confined to the illustration in paint of popular novels, such as 'Don Quixote' and 'Gil Blas.' It was the period of the Annuals, and the Book of Beauty style of work was all that was wanted. Kenny Meadows had done two drawings for one of Heath's Annuals, representing *Anne Page* and her mother, and Heath insisted that *Mrs. Page* should be as young as her daughter: "I don't care about her maternity, or Shakspere, or anything else. You must not make her more than twenty, or nobody will buy! If you won't, I must get Frank Stone to do her instead. All Frank Stone's beauties are nineteen exactly, and that's the age for me."

It was in this atmosphere that Scott found himself. He tried to introduce free etching in place of the elaborate engraving then in vogue, but failed. He tried to get pictures into the exhibitions, and failed there also. He went into the competition for the decoration of the Houses of Parliament, and failed again. He did not find the society of the younger artists, who were his natural companions, "exhilarating or even amusing." They were unable to talk anything but "shop," and constrained even on that subject. It was "a society of rivals," united in only one thing—their desire to do something to increase the power of exhibiting their pictures. When some of them got into the Academy, their only reason for revolt was gone, and they painted bad pictures and made money and were happy. Scott's literary friends of that date were a better set, Leigh Hunt and Lewes being among them; and Hunt published Scott's "Rosabell" in the 'Repository.' After seven or eight years, Scott gave up the struggle, accepted the position of a mastership in the Schools of Design under the Board of Trade, and buried himself in Newcastle.

Here begins another chapter of the condition of British art, that of governmental ideas of artistic education for the masses; and parts of it are well-nigh incredible. These "Schools of Design" were intended to teach workingmen how to *design* for manufactures. Mr. Scott maintains that the name was a mistranslation of the French *Écoles de Dessein*, and that the trouble began with that blunder. At any rate, "immediate results were demanded." "We were to teach, not drawing, modelling, color. . . . We were directly to teach the working classes, who could not hold a pencil, to create new decorative designs and even begin new trades. One of the first things suggested to me was to inaugurate a class for the manufacture of artificial flowers." With this end in view, the printed rules provided that "no one intending to follow any of the Fine Arts professionally was admissible as a student," and "drawing the human figure was interdicted." "On the other hand, geometry, perspective, and mechanical drawing were also interdicted." After this, one is left in amazement as to what can have been contemplated as a proper course of study, and one is gratified to learn that Mr. Scott "hung up the rules" and proceeded at once to break them, although he had to keep the students of the interdicted branches out of his monthly returns, much to the detriment of his apparent success. While the Board of Trade forbade his educating artists, he found that the local magnates equally disliked the education of their workingmen. They did not want art in their manufactures, and education made the men too independent. The local landscape-painter and old-fashioned drawing-master (a man of real talent, Mr. Scott informs us) complained that the school was taking the bread out of his mouth. "His teaching, like that of all the craft throughout the provinces of England at the time, was exclusively landscape, exclusively coloring at once with the brush, and exclusively by successive tints: first lesson, sketching the picture in, and laying on a wash of bistre or Paine's gray; second lesson, doing the sky, and so on." With all its limitations, the School of Design system was surely an improvement on this. Out of it finally grew the South Kensington system, but those days were not yet. There is much that is interesting in Mr. Scott's description of Newcastle ways and people, but all that is important to our present purpose is this brief glimpse of art education in England in 1845–'50.

And now we are prepared for the entrance upon the scene of the P. R. B.'s themselves. Scott had published his poem in five books, 'The Year of the World,' in which he attempted to trace the great forms of religious thought "from the period of instinct and innocence to the end of the race," when he received an enthusiastic letter from an absolute stranger. It was dated from 50 Charlotte Street, Portland Place, November 25, 1847, and signed "Gabriel Chas. Rossetti" (the prænomen Dante was adopted later). A little more than a month afterwards, "about Christmas, 1847–48," Scott went up to London on business connected with the Schools of Design and met his new admirer in the flesh. It was in Holman Hunt's first studio in Cleveland Street, where these two were working at their first Pre-Raphaelite pictures—those which, with Millais's "Supper at the House of Isabella," were to make known the new doctrine and familiarize the public with the three mystic letters. The scene is most characteristic. Rossetti's picture was "The Girlhood of Mary Virgin," and he was painting it "in oils with water-color brushes, as thinly as in water-color, on canvas which he had primed with white till the surface was as smooth as cardboard, and every tint remained transparent." Hunt was working at his "Rienzi," and Scott "was made to observe that the chain mail in his picture was articulated perfectly, and as an armorer would construct it, every ring holding four other rings in its grasp—a miracle of elaboration." He had even "introduced a fly, as we see done in some early Flemish portraits, to show how minute the artist's hand could go."

From this one glimpse into the Cleveland Street studio almost the whole history of the Brotherhood may be divined. Millais, the third of the original trio of Pre-Raphaelites, Scott did not meet till later, but it is of the less importance as his intellectual influence seems to have been nil, and his rôle was that of the clever executant and popularizer of the movement. Rossetti plus Hunt is the formula of Pre-Raphaelitism. The four other "brothers" may be neglected altogether. The only one of them who ever did anything in art was Woolner the sculptor, and it is difficult to see *que diable allait-il faire dans cette galère*. It is doubtful if the real originators of the movement ever had any such clearly formulated body of doctrine as Ruskin afterwards attributed to them; but the tendencies of their work are clearly attributable to the two personalities of Rossetti and Hunt working upon each other and upon Millais. Three men more fundamentally unlike it would be difficult to imagine. Hunt was the man of iron will and

indomitable perseverance, with little natural talent, making his way against all sorts of difficulties by dint of determination and unremitting labor; religious and somewhat sombre of temper, a realist by nature, and too narrow of vision and limited of education to find realization in anything but the minute pursuit of actual fact without regard to visual truth of aspect. Rossetti was the brilliant, flighty, poetic nature, utterly intolerant of continuous effort, unable to acquire any serious training, and to the end an amateur of genius; thoroughly egotistic, but possessed of great personal fascination and influence over others, a spoiled child; without deep religious feeling, but fascinated by mediævalism and "the Art Catholic" from the purely picturesque and æsthetic point of view. Millais was the brilliant executant, the "crack student" of the Royal Academy, handsome, easy, good-natured, destined from the beginning to worldly success, only temporarily influenced by the other two and sure to break away from that influence very soon.

From Hunt's uncompromising realism, added to Rossetti's choice of subject, sprang Pre-Raphaelitism as we know it. It is not by accident that, in illustrating the doctrine, it is to Hunt's pictures that Ruskin constantly recurs, for he was the real exemplar of the doctrine, and remains to-day the one true Pre-Raphaelite painter. Absolute fidelity to fact, plain literalness of conception, scorn of prettiness and composition, endless painstaking and thorough realization of detail—these things, which constituted Pre-Raphaelitism as Ruskin understood it, were Hunt's natural language. For a year or two Rossetti niggled and stippled, but with him his stippling was sheer inability to paint otherwise, and he felt it to be so. He worked for months on the calf in "Found" (the subject was suggested by Scott's poem of "Rosabell"), and succumbed in despair: the picture was never finished. Then he gave up exhibiting, gave up painting in oil, gave up painting from nature, and did little water-color drawings, mediæval in subject, brightly colored like illuminations, and done entirely out of his head and without models. By 1859 we find him taking up oils again and painting life-size, with the distinct purpose of avoiding "the niggling process" and of "learning to paint." He never did quite learn to paint, and his work always remained amateurish and feeble; but it is no longer Pre-Raphaelite in anything but name. Such a picture as the "Lady Lilith" differs from any other painting only by virtue of the personal and temperamental characteristics of its author and by the feeblenesses and mannerisms of imperfect training. It shows the influence of Titian much more than that of any primitive painter, in its technical aim. As for Millais, his Pre-Raphaelitism was, as we have intimated, a temporary phase of his development, corresponding to the period of intense study of detail through which most painters have passed. He was the only one of the three possessed of *talent*, and the pictures painted under the influence of the other two were those which gave the school its éclat and what popularity it had. How soon he began to outgrow the primitive methods of his school is shown by Scott's record of a conversation with him, "a year, or perhaps two," after the first visit to Hunt's studio:

"I was in Millais's studio," says Scott, "when I observed a print hanging there framed. It was an Italian engraving, inscribed 'From Nature,' by Agostino Lauro at Turin, dated 1845, and called 'Meditazione,' representing a girl seated among shrubs and trees. Every leaf of every plant, nay, the two halves of every leaf, radiating from the centre fibre even of those in shade, were elaborated, and the pattern on the dress of the girl was in every part exactly made out. I was arrested by this print when Millais quitted his easel and approached. 'Ha! you've observed that, have you? that's P.R.B. enough, is it not? We haven't come up to that yet. But,' he went on, 'I for one won't try; it's all nonsense; of course nature's nature, and art's art, isn't it? One could not live doing that!'"

"One could not live doing that," and Millais was to live and to live well. Imagination and earnestness and high finish all fell off while technical ability increased, and Millais became the somewhat Philistine and vulgar but undeniably able and clever painter we all know, R.A. and Baronet, and beloved of the British public, yet with painter quality enough in his work to insure the respect of artists for the best of it.

Though Hunt was the true Pre-Raphaelite, he has had little influence and has raised up no followers. It is not difficult to see now that the movement was a false one, and based on the denial of art. In trying to "go back to nature" from the false and feeble art of that time, Hunt went so far that no art was left at all. His hardness, rigidity, ungainliness, painful elaboration, shocking crudity of color can have an attraction for few mortals; and Pre-Raphaelitism as he and Ruskin understood it was predestined to sterility. The pseudo-mediævalism of Rossetti had a different fate. He, at least, was an artist if not a painter, and his personal fascination and a certain charm in his mannered and faulty work exercised a great influence on Burne-Jones, William Morris, and others. And so it happens that the only school founded by the brotherhood of painters who preached absolute fidelity to nature as their cardinal doctrine, is precisely the most artificial and anti-natural school of art to-day existing, and that the Neo-Pre-Raphaelites, sprang directly from the only genius in the old brotherhood, practise the very reverse of what that brotherhood preached. Their art is languorously affected, determinedly archaistic, wonderfully elaborated, but never true to fact.

There is a great deal more of interest in these volumes about Rossetti's moods, his dabbling in spiritualism, his belief that the soul of his wife came to him in the form of a chaffinch, the state, approaching insanity, into which he sank at last (it is worthy of note how many of Scott's friends, of one time or another, went mad); about Hunt's religious feelings and suspiciousness, and his belief in a diabolical interference with his work; about Swinburne and the prize copy of Hugo he got at school and its influence on himself and English literature; about Carlyle and his formula for squelching literary aspirants, and much else. But our review would grow long beyond measure were we to take up all the topics of interest in the book, and we must refer the reader to the volumes themselves, with the assurance that he is likely to find much enjoyable matter there.

A good deal of Scott's poetry is included in the book, and, though two or three sonnets on Burns and a few other bits show poetic feeling, we should think little of it likely to live. Of his painting we have no other means of judging than what is furnished by a few portrait etchings here printed. The only ones that have any merit are two of himself, and these show the curious limitation of the power to draw to the face alone which was characteristic of Rossetti also. All character and form stops at the jawbone, the ears even being bad, and the body and hands quite childish. Rossetti did achieve something in spite of his technical weakness, but we have no evidence that Scott did or could. There would seem to be a kind of graceful prettiness about his "King's Quair" subjects in Penkill Castle, but the reproduction is too imperfect to give much idea of the work. The book is well printed and pleasant to look at, and has an index.

RECENT FICTION.

Jane Field. By Mary E. Wilkins. Harper & Bros.

"*Perchance to Dream*," and Other Stories. By Margaret Sutton Briscoe. Dodd, Mead & Co.

Iola Leroy; or, Shadows Uplifted. By Frances E. W. Harper. Philadelphia: Garrigues Bros.

Hanging Moss. By Paul Lindau. Translated from the German by Winchester Ayer and Helen Folger. D. Appleton & Co.

THE admirer of Miss Wilkins's stories opens with some misgiving her novel. If a writer can make a supremely good short story in a wholly new field, is it not a pity to depart and join the congested ranks of novel-writers? Moreover, is not Miss Wilkins's genius essentially that of the episode-teller? Situations but not plot, impressions but not analysis, would seem to be her strong points, as well as detail to an extent which, while perfect within narrow limits, would run the risk of becoming petty if multiplied to the requirements of the novel's size. Such misgivings assail the mind of one about to read 'Jane Field,' and assail it in proportion as one already cherishes the unique genius of Miss Wilkins. Great, therefore, is the reader's gratification to find that the new work is no less interesting than the old, while being, strange to say, of the same quality. That it is a conventional novel is hardly true; what is surprising is to find that the miniature-painting expands so well into scene-painting. The story, to which brevity, one would have said, was vital, pulsates with intensity through nearly three hundred pages; the grim, hard-shell, soft-hearted old women move with entire appropriateness through their larger field of action; the pathos which never was wanting from the little tales becomes here a touch of tragedy, still homespun but terrible. In the unexpected pleasure of finding that the dainty has borne enlarging into a feast, we may, perhaps, ask whether we shall be satisfied with small portions again, and whether Miss Wilkins has not established an inconvenient claim upon her own pen.

"Perchance to Dream," the opening story in Miss Briscoe's book, is a poor one in the exaggerated, tropical strain which recalls the psychologic tales of the early American magazine. It is a product which seems to have moved south, and which we may hope will yield existence to a survival more fit in literature. Some of the stories which accompany it are much better and of a quite original freshness. The Southern negro appears on various pages, excellently drawn, and scenes of wartime in the South are made very real, as if from an intimate knowledge. Again, there are clever little sketches of the humanities in varying phases, frivolous, pathetic, tragic, cynical, which show a faculty at once naïve and observant.

The present generation can hardly be reminded too often of what slavery was, that they may better understand what emancipation is, and what reconstruction should be. 'Iola Leroy' tells again the shameful story, and brings the scene through the war days in-

to the times of higher education and professional callings for the colored people. The book derives added interest from being written from an inside point of view by one of the race, long known as an ardent worker in the cause of her people.

'Hanging Moss' is the history of a woman who, having married for money, falls in love with a young Berlin author and accepts his devotion, until, one evening, a celebrated tenor sings high C at her house and looks at her with such hypnotizing eyes that she is "at home" next day, not to the author, but to the tenor. The author's fiancée dies of grief at his defection, and he assists at her deathbed with a suggestion that they go travelling together for her health, he having decided (too late) to forsake his married love. He buries the young girl and goes to Florida, where in later years he is unearthed by the writer of 'Hanging Moss,' who says he was travelling upon the invitation of his friend, Mr. Henry Villard, in a private car. He discovers his old Berlin acquaintance living in a hut amid trees draped with moss, and tells him that his former love, the married lady, has been disporting herself with many lovers, and has now married the hero of the high C and the hypnotic glance, who beats her. Her former husband has lost his money and is wandering in the Orient. The book is not especially clever, and, taking one consideration with another, seems hardly worth while.

Student and Singer: The Reminiscences of Charles Santley. Macmillan & Co. Pp. 358.

It is said that there are still hundreds of young Americans in Italian cities preparing themselves for an operatic career. If all of them had read Mr. Santley's Reminiscences, it is likely that the majority of them would not have gone there. A large part of Mr. Santley's book is given up to a description of his studies in Milan, his persistent attempts to get a stage position that would give him, not the comforts, but the necessaries of life, and the trials and hardships he endured in trying to live on a pound a week or less. Some of the glimpses he gives of life in Milan are pleasant, but almost everything relating to music, on the stage or in the church, is discouraging. That was some decades ago, and to-day the conditions are a great deal worse.

In attending an opera or ballet in Italy, a tourist may often find atonement for the shortcomings on the stage by observing the extraordinary antics of the audience. Mr. Santley describes various scenes, showing how Italian audiences in the best theatres behave in a way which we should look for only in a Bowery theatre. On one occasion, he says, "from beginning to end, with very slight cessation, . . . the audience hissed, screamed, yelled, hooted, and shouted, *Basta! basta!*—in fact, they behaved like so many demons in torment." Beauty alone seems to be able to soften their manners. "Occasionally Italian audiences indulge in little eccentricities. A young, handsome prima donna, whose talent is too meagre to meet their approval, in place of applause will receive a shower of kisses (in the air) mingled with exclamations of '*Bella! bella!*'"

It was not till he went back to England that Mr. Santley succeeded in getting engagements and emoluments proportionate to his deserts. He relates his adventures as a member of various opera companies in England, Ireland, Spain, and America, with numerous anecdotes, some of which are amusing, while others will interest only those to whom all theatrical gossip is dear. Almost pathetic is the tale (p. 312) of the agonies he endured when the first Wagner performance ever given in England (he being the *Dutchman*) came near being wrecked by a cat on the stage. During his long theatrical career Mr. Santley came in contact with many eminent teachers, critics, singers, and composers (including Rossini, Gounod, and Meyerbeer), of whom he has something to tell. Incidentally he imparts many valuable hints as to the use and preservation of the voice; and students who are impatient to appear in public as finished singers after two or three years' study would do well to heed Mr. Santley's confession at the age of fifty-nine: "I find I have still a great deal to learn." He explains why great singers are rare: "Vanity and laziness step in and say, 'The public is content, the money rolls in; why study more?' Conscience is thrust aside. How many promising young artists have come to an untimely end in consequence!"

The cruelty of Italian audiences (and of many critics elsewhere) in condemning a singer, especially on a first appearance, for getting off the pitch, is brought out by these remarks (p. 200): "At the general rehearsal I was so nervous I sang 'Il balen' nearly half a note sharp throughout. I was perfectly aware of it myself, but could not come down." On p. 283 he discourses on the fact that florid music "for male singers" is now considered old-fashioned—to which he might have safely added, "for female singers, too." A curious difference in the estimate of singers is noted by him in the second chapter. In England he often "heard the remark, 'You don't call that a bass! Why, he is *only* a baritone!' In Italy I found the *only* was applied to basses, and that baritones were held in much greater esteem, inasmuch as every bass who could ascend by any means to the high F called himself baritone."

Morocco As It Is. With an account of Sir Charles Euan-Smith's recent mission to Fez. By Stephen Bonsal, jr. Illustrated. Harper & Bros. 1893. Map. 8vo, pp. viii, 349.

The interest in the fortunes of the new English Mission to Morocco will attract more attention to Mr. Bonsal's book than its merits deserve. The first chapters contain some brief general information about the country, its political relations with the European Powers, and its ruler and his court. These are followed by a lively account of Sir Charles Euan-Smith's unsuccessful attempt to negotiate a commercial treaty with the Sultan, and of his own adventures in Fez and during his ride from that city to Tangier. There is also a very superficial and gossipy description of the University of Carubin and of the late Shereef of Wazan and his family. The book closes with an entertaining narrative of a visit to Tetuan, and some reference to the condition of the Jews in Morocco and the burning question of the protégé system.

In what Mr. Bonsal says of the country and the people in general, there is nothing new, and nothing that has not been better said by other writers. If we have our grave doubts as to the trustworthiness of his record of current events, he has only himself to blame. When he bluntly confesses (p. 216) that on a pressing occasion he lied to his Moorish servants, it is perfectly justifiable to believe that he could highly color an account of some ordinary event for the benefit of the readers of the newspaper of which he was the correspondent. He describes, for instance, with great vivacity and evident satisfaction how one night, on the refusal of the guard to open the gate of Fez, he rode his pony into the guard-house. "Two beautiful little tiled tables, upon which the Caid was taking his midnight tea, were kicked into smithereens," while he, seizing the officer—an old man—by the ear, enforced his demand for the keys by placing his "pistol very near to his temple." Now either this is a very imaginative account of a trivial disturbance, or Mr. Bonsal acted like a foolish boy, and should have been severely punished for his indecent behavior.

Lying and rowdyism, however, are not the only proofs which he gives of his smartness. The University of Carubin contains a valuable collection of ancient manuscripts and books, among which may be some of the lost classics. "These volumes—a creditable thing for the lazy and indolent Moors—are certainly the object of very great care," "a regular staff of custodians chosen from the university professors and teachers" being charged with their safe keeping. Christians are not admitted into the University precincts, but Mr. Bonsal

"succeeded in getting hold of some of the manuscripts. I suppose I ought to blush at the recital, but I was forced to bribe my friends, the Tholba (students), to steal the volumes for me. During the last ten days of my stay in Fez they purloined from the shelves of the library some thirty manuscripts, and brought them to me hidden away in the capacious folds of their *jelaabs*. Unfortunately, however, they had neither time nor the knowledge to steal with discrimination; so the books they brought me were of comparatively small value, and I had them all replaced, with four or five exceptions. I kept a very beautifully illuminated edition of the Bokhari, bound at Seville, several volumes of amatory poetry, etc."

The Moors, certainly, have ample reason for their hatred and contempt of Christians, so far as they are represented by travellers of the stamp of this young man.

It only remains to say that there are some unnecessarily coarse passages in the book, which appears to have been hastily issued without proper revision or correction. Several of the proper names are spelled in two or three different ways, the Sultan's, for instance, being given Moulai, Mulai, and Mulei. There is an excellent map, but the illustrations, with one or two exceptions, are poor.

Select Historical Documents of the Middle Ages. Translated and edited by Ernest F. Henderson. London: G. Bell & Sons; New York: Macmillan. 1892.

The principal difficulty in the way of teaching, by any scientific method, the history of the European Middle Ages, has been the lack of collections of documents, moderate in size and inexpensive, but at the same time containing a careful selection, suited to the wants of scholars. This lack is gradually being supplied, and the present volume is heartily to be welcomed as the most considerable contribution yet made by an English-speaking writer to this kind of literature. The author is an American, who began his studies under the impulse of the historical school at Harvard and continued them in Germany. His plan in selecting has been not to attempt an exhaustive illustration of any one subject, but to include documents which have an especial significance in themselves. These are then grouped under the four headings: England, the Empire, the Church, and Church and State. In size they vary from the 115 pages of the English 'Dialogue concerning the Exchequer' to the page or two occupied by a single letter or decree.

Whether this principle of selection and ar-

rangement be the best, is certainly matter for discussion. Its effect is to make the book more useful for general teaching purposes and less useful for the thorough study of a period or a certain series of events. The question of translation of documents is a vexed one. The language is so peculiar that the translation is certain to be more or less doubtful, and, in the case of documents bearing upon controverted points, is invariably questioned. The process of translation is distinctly an educating one, and every student should be encouraged to become familiar with his material at first hand. On the other side it may be said that, after all, the content of the document is the thing, and the more easily the student gets at this the better.

From this latter point of view the ability of the translator is the most important consideration, and here the standard set is, in the main, a high one. The snare of all translators, the dodging of difficulties, has not always been escaped, as, for instance, in the 'Dictatus' of Hildebrand, where "hoc unicum est nomen in mundo" is rendered, "this is the only name in the world," and "sententia illius a nullo debeat retractari," by "a sentence passed by him may be retracted by no one." Slips of this kind are not infrequent, but are perhaps inevitable. Every translator would make them, and the only way to secure himself would be to add a note whenever he felt himself in doubt.

The introductory paragraphs at the head of the groups are meagre and of little value to the scholar. The same space devoted to some careful description of the documents in question, their history, the place where they are to be found, etc., would have done better service. It is to be hoped that the author will make use of his exceptional opportunities to carry on this kind of work still further, and thus deserve in a still greater degree the gratitude of historical students everywhere.

The Great War of 189–: A Forecast. By Rear-Admiral P. Colomb, Colonel J. F. Maurice, R.A., Captain F. N. Maude, Archibald Forbes, Charles Lowe, D. Christie Murray, and F. Scudamore. With illustrations by F. Villiers. London: Wm. Heinemann. 8vo, pp. x, 308.

THIS handsome reprint of the "Forecast" published in *Black and White* proves the hold it took on the public. The writers threw themselves so thoroughly into the spirit of the work, they studied the supposed theatre of operations so carefully, and used so artistically their familiarity with European armies and the men who command them, that the result, if we view it only as a military novel, is as exciting as Zola's 'Débâcle' or Tolstoi's 'War and Peace.'

Viewed as a military study by experts in military science and by experienced observers of actual war, it is full of suggestion and instruction, and may be studied with profit by all who are interested in the modern development of armies. That such conjectures have a preponderating element of uncertainty, the publishers have frankly shown in the appendix, by giving us an interview with Sir Charles Dilke, in which that able critic points out other forms of a great European campaign which might occur, and dissents from some of the predictions of the authors. In fact, when we really come to the point, we might as well forecast the gambit or opening which Lasker will use in his next match game of chess, and the several moves by which he will mate his adversary, as those which Germany and France and their allies will make in the next great European struggle. The opening move may be made in Bulgaria, as the "Forecast" has it, but it may be on the Franco-German frontier, as Dilke suggests. Assume a particular first move, and there is a reasonable probability of the next; but at each stage of the contest there will be plenty of room for choice, and this choice will be the opportunity for genius, if either side shall prove to be led by a Moltke. The attempt to predict the steps to be taken is none the less fascinating and none the less a legitimate exercise for the professional military student.

The salient points in the "Forecast" are the bold assumption of a secret convention between Germany, England, and Belgium, by which the first shall be allowed to march through neutral territory to turn the fortified line of the Moselle; and, secondly, the termination of the war with no change in territory except the re-establishment of Poland as a "buffer State" between Russia and central Europe. The first is only a polite way of saying that the neutrality of Belgium will probably be violated by both parties in the struggle. As to the last, Sir Charles Dilke treats it as an impossible result, for, as he argues, a Polish nation no longer exists. The debate is a very pretty one for a disinterested audience, but too serious for much pleasure to those chiefly interested. The "Forecast" fixed 1892 as the period of the outbreak, with Salisbury and Balfour still at the head of English affairs. One element of the game is therefore changed already. Another will have changed when Russia's army is equipped with magazine rifles, and the chances of kings' lives and political revolutions may at any moment change the whole situation.

Road, Track, and Stable: Chapters about Horses and their Treatment. By C. H. Merwin. Boston: Little, Brown & Co.

MR. MERWIN treats of the ethics of horse-keeping; trotting families, trotting races; saddle, carriage, fire, and Arabian horses; and concludes with a very useful chapter on the care of horses. The first is really a plea, from the standpoint of humanity and expediency, for greater uniform kindness in the treatment of the animal to which we owe so much. Much as this is needed, we believe that the Anglo-Saxon race is far ahead of any other in consideration and affection for the lower animals, and that in this country the horse, on the whole, suffers less from the cruelty of his master than anywhere else in the world. This is proved by the greater docility of our horses, especially those of the better breeds, which is a subject of remark by foreigners as well as by Americans who have opportunities for comparison.

In the part devoted to trotting families Mr. Merwin is not so happy. His description of Rysdyck's Hambletonian, the ancestor of 95 per cent. of our best trotters, does that horse great injustice by ascribing to him "a neck short and straight and a big ugly head." On the contrary, he had an excellent neck, of good length and well carried when in action. His head was clean and bony, and his eyes were remarkable for their size, lustre, and animation. In placing Alexander's Abdallah ahead of Electioneer, and George Wilkes among the sons of Hambletonian, Mr. Merwin will find very few to agree with him. His views as to the relative merits of the Hambletonian and Mambrino Chief families may also be criticised. Mambrino Chief was a coarse horse, as were most of his immediate descendants, even from the highly bred mares he was mated with in Kentucky. It was owing to the influence of this thoroughbred blood crossed with Mambrino Chief and his sons that many of the animals generations distant from him show the "elegance and spirit" spoken of by Mr. Merwin. Considering the result now reached in this country by the careful breeding up in trotting horses, we agree with Mr. Merwin that it seems absurd that we should now be importing from England hackneys for driving which do not surpass in looks and action the horses of many of our trotting families, and are far inferior to them in speed and road qualities. The Clay family of trotting-horses perhaps receives less notice than its merits deserve, especially if we admit the claim that the dams of both Electioneer and George Wilkes were of this blood. The Morgan blood, especially that represented by the descendants of Ethan Allen, has not been slighted by Mr. Merwin, who has the true New England fondness for this useful and handsome family.

The chapter on trotting-races recounts some of the great struggles of the turf, and has frequent allusions to the hero immortalized by Holmes in "How the Minister's Horse Won the Race"—

> "Budd Doble, whose catarrhal name
> So fills the nasal trump of fame."

That on road horses is one of the best in the book, and gives much useful information as to the treatment and handling of this admirable and thoroughly American type of horse.

On the whole, the book is a very desirable one for any horse-owner to have, in spite of its superficiality on questions of pedigree and breeding. These, however, are of importance to but very few of those who keep horses and wish to know sensible and humane methods of caring for and using them.

Thoughts of Busy Girls. Edited by Grace H. Dodge. Cassell Publishing Co.

NOT every one can be a member of a working-girls' club, but every one must look with interest and approval upon the large addition such clubs have made to the sum total of human happiness. From time to time opportunities of measuring the progress they have made have been given to those who have not had the pleasure and privilege of watching that progress for themselves. Such an opportunity is again offered in the small but significant volume just edited by Miss Dodge. Four or five years ago Miss Dodge published a similar small volume, consisting of a series of letters addressed by their title to busy girls. Since that time some of these girls have so far learned to think for themselves and to express intelligibly what they think, that their leader is now able to publish, for the benefit of other girls, their thoughts and words, accompanied by only a brief introduction from herself.

Within the compass of some hundred and thirty pages more than fifty writers are represented. The papers are therefore necessarily brief, and in many instances a writer has contented herself with a single condensed sentence or paragraph. As the papers have grown out of the "Practical Talks" from which the club was itself in the first place developed, the subjects either are of a practical nature themselves, or are treated from a practical point of view. The trait that most distinguishes them as a whole is the breadth of their outlook upon life. Coming as the club members do from a great variety of trades and industries, as well as from homes of leisure and cultivation, they have acquired a largeness of understanding and liberality of view that may well put to the blush many a woman whose op-

portunities have been a thousandfold greater. Hitherto the solitary lives of the women who have had to earn their bread have been against the acquirement of such intelligent outlook. In their case it can be arrived at only by the aid of organization, and by means for personal communication such as have, until quite lately, been monopolized by their relatives of the other sex.

Another of the characteristics common to the papers that the reader will mark with pleasure is the natural and matter-of-course recognition of the necessity of labor. One girl writes of her shop and another of her factory life with seemingly as high a sense of the worthiness of her subject as still another feels in writing of "Ideal Womanhood" or of "The Influence of Art upon Life." One only standard of measure is recognized by the Working-girls' Club, the only one possible to all its members without exception—that of character. It is not the occupation of the hand, but the worth of heart and mind, that stamps the individual as great or small. This, or its substance, has been expressed, directly or indirectly, by these papers in a way that proves that those busy girls who find, as their editor puts it, little time for study but much for thinking, are learning to think justly, and some of them even to write vividly.

Experimental Evolution. Lectures delivered in the "Summer School of Art and Science," University Hall, Edinburgh (August, 1891). By Henry De Varigny, D.Sc. [Nature Series.] Macmillan & Co. 1892. 8vo, pp. 271.

THE first of these five lectures contains a statement of the problem of the living world, of the three hypotheses that have been offered in explanation of it, and, in a general way, of the theory of evolution, with an account of its growth as traced especially from French sources. In the account of the development of the evolutionary hypothesis the name of Lamarck necessarily occupies the most prominent place. The names of Buffon, Geoffroy St. Hilaire, and others also are familiar to us in the same connection. Among less well-known thinkers Naudin receives particular attention, because of a publication, in 1852, in which he anticipated Darwin with the theory of selection. Having stated the method of producing a new variety from some zoölogical or botanical species by artificial selection, Naudin added: "Such is, in our opinion, the method followed by Nature as well as by ourselves; she has wished to create races conformable to her needs, and, with a comparatively small number of primitive types, she has successively and at different periods given birth to all the animal and vegetable species which people the earth" (*Revue Horticole*, 1852, p. 102).

Nearly or quite all of the evidence favoring evolution presented in this book has already been published elsewhere. For additional proofs, the author relies on experimental transformism, wherein, he says, lies the only method we can use. His second lecture enters upon an exposition of three groups of facts on which experimental evolution is based, (1) facts of natural or spontaneous variability, (2) facts of variation under domestication and culture, and (3) facts illustrating the direct influence of environment as a factor of modification and transformation. There are indications of some confusion regarding these groups, for in the fourth lecture the second group is said to be facts of domestication of animals, the third those relating to cultivation of plants, and a fourth is made of the influence of environment on structure. This last is called the last of the three groups on page 179, yet on page 226 the groups are again referred to as the four preceding groups of facts. The fifth lecture relates to the factors of evolution and the methods of research suggested by their different characters, and to the establishment of an experimental plant, a farm and laboratory where experiments may be continued for long periods—twenty years to a century, or more if need be.

The factors enumerated are environment, use and disuse, natural selection, sexual selection, and physiological selection. His fundamental and more important agents being Lamarckian, the author's position will not be satisfactory to strict Darwinians, while there is no doubt that most of his readers in this country will consider it safer than one based more completely on selection. Numerous references are made, most of them well selected; many are drawn from works not easy of access. Attempts at verification will be likely to discredit some of the authorities. Though with future experimentation we may expect the abandonment of various assumptions, modification of particular conclusions, and clearer distinctions between effect, real factor, and occasion of action, the book is much to be commended as one that cannot fail to exert an influence for good. Besides being an enthusiastic student, M. de Varigny is a brilliant lecturer and an animated and entertaining writer.

Echoes of Old County Life. By J. K. Fowler. Macmillan & Co. 1892.

THERE has been such a flood of reminiscences in the last twenty years that one would suppose the last word had been said about English life during the first half of the century from the literary, artistic, social, political, and every other conceivable point of view. The historian of the future, when he comes to deal with this period, will be literally overwhelmed by the vast mass of material. It is true that at all well-regulated schools young people are taught to believe that the period in question possesses a unique and peculiar interest for the student of sociology, and it is also apparently true that there is no limit to the demand for books which treat of English manners and customs. But it may be safely asserted that the present supply of such books is ample for all practical purposes, and that any further additions must be justified, if at all, by exceptional qualities.

Mr. Fowler claims that he differs from all previous writers in this category in that he is a "fair representative of middle-class life," and this claim seems to be based on the fact that his father kept the White Hart Inn at Aylesbury. This circumstance explains the importance which he attaches to the doings of the fashionable people who found their way to the paternal inn, and throws light on an undefined air of snobbishness which makes itself manifest throughout the volume. He gives much space, for instance, to Count D'Orsay, who stayed at the White Hart while attending the meets of the Royal Staghounds, and he inserts, "with pardonable pride," a note which he once received from "Benjamin Disraeli, Earl of Beaconsfield, K.G." It is unfortunate that this note, which Mr. Fowler informs us had to do with an election at Aylesbury in 1880, is dated 1876, but a trifling discrepancy of this kind will not impair its value in the eyes of so enthusiastic a Tory as Mr. Fowler. He has also much to say about elections of an earlier period, and about the wholesale bribery that prevailed before the passage of the first Reform Bill. But, being a good Tory, he is bound to find extenuating circumstances for the demoralized condition of things which he describes so vividly, and he therefore tells the story of Arkwright (who began life as a barber) having received £50 for his vote at a contested election in 1784, and having been thereby enabled to complete his spinning-machine.

Perhaps the best part of the book is that which deals with matters agricultural, and particularly with coöperative stock-raising as a means of helping the British farmer out of his present unfortunate position. Here Mr. Fowler is quite at home and therefore appears to advantage. He describes the excitement caused in the Vale of Aylesbury by the appearance of the first mowing-machine made by Walter A. Wood of Hoosick Falls, "a really good machine, although it would be laughed at now, so great since that time have been the improvements in agricultural implements." Mr. Fowler gives no date for this occurrence.

The White Hart at Aylesbury was the centre of a sporting neighborhood, and Mr. Fowler's recollections naturally run largely on horses and hounds. He tells of many a famous steeple-chase in the beautiful Vale, and of that celebrated gray horse that walked up the stairs at the inn and jumped several times over the dinner table in the "Rochester room"; a feat which suggested to Leech one of the events in the career of that eminent sportsman, Mr. Briggs. As a matter of course, Mr. Fowler is enthusiastic over the perfection of the old coaching system; he evidently sympathizes with the early opponents of railroads and other improvements, and, like many of his countrymen, he doubtless looks back with regretful admiration to the good old days before the peaceful revolution of 1832. He is the kind of fossil Englishman, represented in political life by Mr. Chaplin, who is for ever harking back to protection and the other exploded theories of his younger days, and secretly regretting the real gains of the past fifty years. The local color in Mr. Fowler's book is hardly vivid enough to compensate for a mental attitude which may be charitably described as antediluvian.

BOOKS OF THE WEEK.

Argyll, Duke of. The Unseen Foundations of Society: An Examination of the Fallacies and Failures of Economic Science due to Neglected Elements. London: John Murray; New York: Scribners. $5.

Bates, Arlo. In the Bundle of Time. Boston: Roberts Bros. $1.

Berlitz, M. D. French with or without a Master. Boston: Schoenhof.

Biographies of Eminent Persons. Reprinted from the London *Times*. Vol. II. Macmillan. $1.25.

Bolles, Frank. At the North of Bearcamp Water. Boston: Houghton, Mifflin & Co. $1.25.

JUST PUBLISHED.

Pancoast's Representative English Literature.

From Chaucer to Tennyson; Selections with Historical Connections, by HENRY S. PANCOAST, University Extension Lecturer. 12mo, 514 pp. To teachers, $1.60. By mail, $1.75.

The selections (on the principle that it is better to know a few things well than many vaguely) are each complete in itself; they are from Chaucer, Spenser, Shakespeare, Bacon, Marlowe, Heywood, Ben Jonson, Herrick, Herbert, Lovelace, Vaughn, Milton, Dryden, Addison, Pope, Burns, Wordsworth, Coleridge, Scott, Lamb, Byron, Shelley, Keats, Carlyle, Macaulay, Browning, and Tennyson.

Considerable attention is given to biography and the influence of historical events, and of other literatures. The book is suitable for secondary schools.

McLaughlin's Literary Criticism

For Students. With introduction and notes, by Prof. EDWARD T. MCLAUGHLIN of Yale. 12mo, 256 pp. To teachers, $1.00. By mail, $1.10.

Selections from the masters of English criticism, chosen for their general suggestiveness in matters of literary taste from Sir Philip Sidney, Ben Jonson, Dryden, Addison, Swift, Dr. Johnson, Wordsworth, Coleridge, Lamb, De Quincey, Carlyle, Matthew Arnold, Lowell, Ruskin, R. H. Hutton, and Pater.

Ten Brink's English Literature. Vol. II.

(Wyclif, Chaucer, Earliest Drama, Renaissance). Translation by WM. CLARKE ROBINSON, Ph.D., revised by the author. 12mo, 351 pp. Vol. I., ENGLISH LITERATURE TO WYCLIF. 12mo, 409 pp. Each volume to teachers, $1.60. By mail, $1.73.

Clark's The Art of Reading Aloud.

By Prof. J. SCOTT CLARK of Northwestern University. 16mo, 159 pp. Teachers' price, 60 cents. By mail, 65c.

The most useful principles of elocution, formulated in a way to facilitate easy application, with material for drill.

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of

Horsford's Acid Phosphate,

"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other Medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

CASSELL PUBLISHING CO.

HAVE JUST ISSUED:

BY W. CLARK RUSSELL.

LIST, YE LANDSMEN!

A Romance of Incident. By W. CLARK RUSSELL, author of "The Wreck of the Grosvenor," etc., etc. 1 vol., 12mo, cloth, nautical cover design, $1.00.

W. Clark Russell's sea stories need no "*bush*"—the present one least of all; for here we certainly have him at his very best.

CASSELL'S COMPLETE POCKET GUIDE TO EUROPE FOR 1893.

Planned and edited by EDMUND CLARENCE STEDMAN. Compiled by EDWARD KING. Full morocco, flexible, $1.50.

This highly popular work has been for more than ten years before the public and is thoroughly tested by increasing use among travellers. For the present season a special revision has been made, with much care and outlay, bringing the book up to the latest possible date.

BY ELSA D'ESTERRE-KEELING.

ORCHARDSCROFT.

The Story of an Artist. By ELSA D'ESTERRE-KEELING, author of "Three Sisters," "In Thoughtland and in Dreamland," etc. 1 vol., 12mo, extra cloth, $1.00.

BY WM. C. HUDSON.

THE DUGDALE MILLIONS.

A Novel. By WM. C. HUDSON ("Barclay North"), author of "The Diamond Button," "Jack Gordon, Knight Errant, Gotham, 1883," "On the Rack," etc., etc. 1 vol., 12mo, cloth, 75 cents; paper, 50 cents. *Cassell's Sunshine Library.*

As with Mr. Hudson's other stories, the scene of this one is laid in and around New York. That it is fresh, breezy, and fascinating his host of appreciative readers will correctly surmise.

BY "AN IDLE EXILE."

HER HEART WAS TRUE.

A Story of the Peninsula War, founded on Fact. By "AN IDLE EXILE," author of "By a Himalayan Lake," "Indian Idyls," "In Tent and Bungalow," etc. 1 vol., 16mo, unique cloth binding, 50 cents. *The "Unknown" Library.*

BY JULES MICHELET.

ON THE HIGHWAYS OF EUROPE.

By JULES MICHELET. Translated from the French by Mary J. Serrano. 1 vol., 12mo, cloth, gilt top, $1.50.

To any one who is acquainted with the writings of M. Michelet, it is unnecessary to say that the present volume is most captivating in style and matter. It is a book that every traveller will read to refresh his memory, and every stay-at-home will read because it is the next best thing to a tour abroad.

BY G. MANVILLE FENN.

NURSE ELISIA.

A Novel. By G. MANVILLE FENN, author of "Commodore Junk," etc., etc. 1 vol., 12mo, extra cloth, $1.00.

In this story Mr. Fenn makes a trained nurse his heroine and a young doctor his hero. The author's well-deserved reputation is amply sustained in this new and thoroughly original production of his pen.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Company,

104 and 106 Fourth Ave., N. Y.

EPOCHS OF AMERICAN HISTORY.

NEW VOLUME.

III. DIVISION AND REUNION, 1829-1889.

By WOODROW WILSON, Ph.D., LL.D., Professor of Jurisprudence in Princeton University, Author of 'Congressional Government,' etc. With five colored maps. Cloth. $1.25. [*Ready February 25.*]

OTHER VOLUMES IN THE SERIES.

I. THE COLONIES, 1492-1750. 4th Edition.

By REUBEN GOLD THWAITES, Secretary of the State Historical Society of Wisconsin, Author of 'Historic Waterways,' etc. With four colored maps; pp. xviii.-301. Cloth. $1.25.

"The object of the writer has been to produce a good text-book for schools, or a brief *résumé* for the use of the general reader. He has succeeded; the work is well done. The style is clear and agreeable. . . . The most important facts in the history of the period have been correctly stated. . . . Much information has been compressed within a limited space."—*Political Science Quarterly.*

II. FORMATION OF THE UNION, 1750-1829.

By ALBERT BUSHNELL HART, Ph.D., Assistant Professor of History in Harvard University, Member of the Massachusetts Historical Society. Author of 'Introduction to the Study of Federal Government,' 'Epoch Maps,' etc. With five colored maps; pp. xx.-278. Cloth, $1.25. [*Just Published.*]

"The formation period of our nation is treated with much care and with great precision. Each chapter is prefaced with copious references to authorities, which are valuable to the student who desires to pursue his reading more extensively. There are five valuable maps showing the growth of our country by successive stages and repeated acquisition of territory."—*Boston Advertiser.*

"It is a careful and conscientious study of the period and its events, and should find a place among the text-books of our public schools."—*Boston Transcript.*

*** *Messrs. Longmans will be happy to send a prospectus, showing contents and scope of each volume; also their School Catalogue to any address on application.*

A STITCH IN TIME SAVES NINE.

The Hygiene of the Sick Room.

By Wm. B. Canfield, M.D., Lecturer in the University of Maryland, Baltimore. A book for all those engaged in caring for the sick. 12mo. Handsome cloth, $1.50.

Being a plain, practical exposition of infection and disinfection, bacteriology, ventilation, heating, diet, the care of patients with fever, diphtheria, cholera, small-pox, consumption, measles, malaria, pneumonia, etc.

"It emphasizes as nothing can, except contagion, the importance of cleanliness of all things that may come in contact with the sick. This is insisted upon, not only to bring about a more rapid recovery, but to prevent the spread of those diseases which are infectious."—*Public Opinion.*

Accidents and Emergencies.

By Charles W. Dulles, M.D., Physician to the Rush Hospital, Philadelphia, late Asst. Surgeon N. G. P. Fourth Edition Just Ready. Cloth, $1.00.

"This is the fourth edition, thoroughly revised and enlarged, of a manual on the treatment of surgical and medical emergencies in the absence of a physician. It is full of valuable matter that every one ought to know, and an index renders the information quickly accessible."—*The Boston Herald, December 8th,* 1892.

The Hygiene of the Nursery.

By Louis Starr, M.D., Clinical Professor of Diseases of Children in the Hospital of the University of Pennsylvania; Physician to the Children's Hospital, Phila. Third edition, enlarged and improved, with 25 illustrations. 12mo. 293 pages. Cloth, $1.00.

Including the General Regimen and Feeding of Infants and Children and the Domestic Management of the Ordinary Emergencies of Early Life, Massage, etc.

These books may be ordered through any bookseller or news agent, or upon receipt of price we will send, postpaid, to any address. Remit by postal note or postage stamps. Catalogues of Books on Medicine, Hygiene, Nursing, Chemistry, etc., free.

A FEW OF

A. C. McClurg & Co.'s New Books.

Sound and Music.

By the Rev. J. A. Zahm, C.S.C., Professor of Physics in the University of Notre Dame. With 195 Illustrations. $3.50.

"I was much pleased, as you know, with the work when I read it in MS., but its worth has impressed me more in its present garb. To my mind it is by far the most accurate and complete of books on modern acoustics and on the acoustic bases of harmony. I feel sure that a work so full of information, given in such pleasing style, must have a success comporting with its merits and the conscientious work expended on it."—*Prof. Alfred M. Mayer, of Stevens Institute of Technology, in a letter to the Author.*

"It is an extraordinary book by one of our foremost workers in science. . . . The volume is one which on a cursory glance appears like a popular work on the subject, but a more intimate acquaintance with its contents reveals the fact that it is a thoroughly scientific treatise, one which will give to the student a practical and theoretical knowledge of the subject. . . . In no single volume can one find the same amount of valuable information as is to be found in Prof. Zahm's new book."—*Scientific American.*

References for Literary Workers.

By Henry Matson. Crown 8vo, $3.00.

"Writers who have spent hours in public libraries seeking for just the book needed to complete their knowledge of a certain subject, or who have waded disconsolately through volumes in pursuit of a single much-needed bit of information, will be glad to welcome this work. A more complete reference book it would be hard to find. . . . With such a volume at hand, preparatory reading loses half its terrors. The comprehensiveness of the scope of such a work is vast and its value tremendous."—*The Boston Times.*

France in the Nineteenth Century, 1830-1890.

By Elizabeth W. Latimer. Handsomely Illustrated with 22 Portraits. Crown 8vo, $2.50.

"Current events give emphasis to the history of France in the Nineteenth Century. . . . Throughout it is intensely readable, it affords trustworthy and vivid pictures of momentous events, and it depicts the personality of the men and women who have been the chief actors in modern French history with singular force and effectiveness."—*The Beacon, Boston.*

"As a whole the book is a rather unusual commingling of history and biography, combining the liveliness and personal flavor of the latter with the breadth and view of the former."—*Commercial Advertiser, New York.*

A History of Modern Philosophy.

(From the Renaissance to the Present.) By B. C. Burt, A.M., 2 vols. $4.00.

"It is a thoughtful book for students and thinking men. The general characteristics of our philosophy from the time of its awakening from the 'dogmatic slumber' of the Middle Ages are first noted in a few brief paragraphs, following which comes an exhaustive consideration of the ancient doctrines, which were then revived. This is admirably done, and gives at once a standing to the work, the care and conscientiousness of the author being everywhere apparent."—*The Boston Times.*

"The accidental necessity of examining with more or less care a number of current systems of philosophy has made it convenient to compare Mr. Burt's synoptical abstracts with original works. The test resulted very creditably for his book. . . . Wherever the test was applied his method was found commendably accurate."—*New York Tribune.*

The Last Voyages of the Admiral of the Ocean Sea.

As related by Himself and His Companions. By Charles Paul MacKie, author of "With the Admiral of the Ocean Sea." Crown 8vo, $1.75.

"Mr. MacKie has made a masterly presentation of the established facts in the later life of Columbus and enabled every one to see the gross absurdity of the deprecatory views advanced anew during the last few years regarding the character of one who was indeed no saint, but who of his own will and motive opened the way for the conquest and civilization of the western hemisphere."—*Beacon, Boston.*

Our Cycling Tour in England.

By Reuben G. Thwaites. Illustrated. 12mo, $1.50.

"It is a volume of travel that will take the reader out of the beaten path and carry him amid rural scenes and surroundings that have the freshness and variety of nature, untouched by the smoke and noise of the snorting steam engine. . . . The descriptions are graphic, and show the close and loving observer of nature and man in every page."—*Saturday Evening Gazette, Boston.*

THE
EQUITABLE LIFE ASSURANCE SOCIETY
OF THE UNITED STATES.

JANUARY 1, 1893.

Assets.....$153,060,052 01

Reserve on all existing Policies (4% Standard), and all other liabilities....	**$121,870,236 52**
Total Undivided Surplus (4% Standard), including Special Reserve of $2,500,000 towards establishment of a 3½% valuation....	**31,189,815 49**
	$153,060,052 01
Income....	**$40,286,237 49**
Disbursements....	**$24,161,947 34**
New Assurance in 1892.....	**$200,490,316 00**
Outstanding Assurance.....	**850,962,245 00**

The Society has about double the Surplus of any other life assurance company, a larger Income, a larger number and amount of policies in force, and transacts a larger annual new business than any other life assurance company in the world.

But the Directors of the Society deem the quality of its risks and the economy of its management more important than the volume of new business obtained.

While the expenses of management of the Society have for a number of years been less than those of other prominent companies, they show a further improvement in 1892, indicated by a reduction of 2 per cent. in the ratio of expenses to total income, which represents a saving to policyholders of $800,000 during the year.

The chief end and aim of the management of the Society is to conduct its affairs with more judicious economy, if possible, than ever before, with special regard to the earning of SURPLUS, out of which *dividends* are made for policy-holders.

HENRY B. HYDE, President.
JAMES W. ALEXANDER, V.-P.

Important Periodical Publications.

POLITICAL SCIENCE QUARTERLY

A Review devoted to the Historical, Statistical, and Comparative Study of Politics, Economics, and Public Law.

Edited by the Faculty of Political Science of Columbia College. Crown 8vo. About 180 pages in each number. Annual subscription, $3.00; single number, 75 cents.

It is the purpose of the QUARTERLY to furnish a field where topics of real public interest may be discussed by scientific men from the scientific point of view.

"I know of no periodical of its kind which maintains a higher standard of excellence. The longer articles are generally models of clear and adequate discussion. . . ."—E. L. GODKIN.

THE YALE REVIEW.

(*Successor to the New Englander and Yale Review.*)

A Quarterly Journal of History and Political Science.

Edited by Professors GEORGE P. FISHER, GEORGE B. ADAMS, HENRY W. FARNAM, ARTHUR T. HADLEY, and Dr. JOHN C. SCHWAB of Yale University, New Haven, Conn. Crown 8vo. About 100 pages in each number. Annual subscription, $3.00; single number, 75 cents.

THE YALE REVIEW does not aim to be an organ of the University. It proposes to devote itself to the publication of articles reflecting the most advanced and scholarly thought and the most recent investigations bearing upon the topics treated.

THE PHILOSOPHICAL REVIEW.

Edited by J. G. SCHURMAN, Dean of the Sage School of Philosophy in Cornell University. Crown 8vo. About 128 pages in each number. Annual subscription (six numbers), $3.00; single number, 75 cents.

The domain of this journal is the field of General Philosophy; that whole which includes along with the older subjects of Logic, Metaphysics, and Ethics, the newer subjects of Psychology, Æsthetics, Pedagogy, and Epistomology, both in their systematic form and in their historical development.

THE CLASSICAL REVIEW.

Edited by Rev. JOSEPH B. MAYOR, assisted by Prof. A. G. CHURCH, Mr. A. M. COOK and Mr. CECIL SMITH, with the co-operation of Professors SEYMOUR of Yale, WRIGHT of Harvard, and HALE of Cornell, as an American Editorial Committee. Crown 8vo. Ten numbers a year of 48 pages each. Subscription price, $3.00; single number, 35 cents.

Devoted to Greek and Latin literature, art, science, philosophy, law, religion, etc. An international journal of the highest classical scholarship.

Send for Specimen Copies.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

The cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries. The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by THE AMERICAN ANNEXE OF MR. HALFORD L. MILLS,
Cambridge Place, Paddington, London.

Rousseau's "Emile," Dobson's "Poems," Mabie's "Essays," Dana's "Volcanoes," "Corals," Landor's "Citation of Shakespeare," "Journal of M. de Guérin." PRATT, 155 6th Ave, N. Y.

THE NEW

Chambers's Encyclopædia.

NOW COMPLETE.

AS a work of ready reference for the student, as a handy book of facts and statistics in a business office or schoolroom, as a guide in the home library,

Chambers's Encyclopædia surpasses all others.

It is twenty years later than any of its competitors, and is really **a new work.** All the articles have been entirely rewritten or revised, and thousands of new ones incorporated. The type is clear and of a beautiful cut, the numerous illustrations are remarkably fine, and the maps show not only all the countries of the globe, but also all the States and Territories of the United States.

"A model Encyclopædia, which no intelligent person will make a mistake in purchasing."—*Chicago Inter-Ocean.*

"Chambers's Encyclopædia is now the best and most authoritative book of reference on all varieties of subjects that exists in the English language. All the big and costlier ones are out of date."—*Phila. Eve. Bulletin.*

"A library of literature, the scope of which is as broad as knowledge."—*Cincinnati Commercial Gazette.*

"One may say at once, without reservation, that none of the low-priced Encyclopædias can compare with Chambers's either in scholarship, range of subject, readableness, or effective condensation. In mechanical details, too, it is admirable."—*Boston Beacon.*

"Those who wish an Encyclopædia of the general character of Chambers's may take our word for it they can find nothing better. It is admirable in every respect."—*N. Y. Examiner.*

"One of the most useful and trustworthy works of reference in the world."—*Phila. Eve. Telegraph.*

In ten volumes. A valuable and extremely cheap set of books.

Price, per set, in cloth binding, $30.00; sheep, $40.00; half morocco, $45.00.

Twenty-four page illustrated circular sent to any address on application.

*** For sale by all Booksellers, or will be sent by the Publishers, free of expense, on receipt of the price.

715-717 Market St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, MARCH 2, 1893.

The Week.

THE financial situation grows visibly worse from day to day. The $100,000,000 gold reserve that has remained intact from the 1st of January, 1879, has been really reduced, for although there is an apparent balance of free gold in the Treasury, it is due to a loan made by the city banks a short time since. This was a call loan. The lending banks have the power to take this gold back at any time, and, if they should exercise the power, the $100,000,000 of greenback reserve would drop to $98,000,000 or less. Moreover, the export of gold goes on, and is likely to continue until the Silver-Purchase Act is repealed. The London *Economist* of February 11 has a correct diagnosis of our ailment. "The exports of gold from the States," it says, "are the result of the currency inflation produced by the compulsory issue of notes by the Treasury in payment for the 4,500,000 ounces of silver it has to purchase each month under the Sherman Law." The *Economist* predicts that the Sherman Act will be repealed before long *because it must be.* Then, it adds, "not only will the gold shipments from the States cease, but a strong effort will be made to get back a portion of what has been lost."

The scornful comment of the London *Standard* on President Harrison's nerveless attitude regarding the financial situation is not without some justification. For a man who, a year ago, was doing so much by his public utterances to strengthen the sound-money element in his party and in the country, his failure to make any move at all in the face of an actual crisis is a great falling-off. Why did he not improve such an opportunity as he had in laying before Congress the report of the delegates to the Monetary Conference, to send in a vigorous message urging prompt action to avert impending financial disaster? But the *Standard* does him great injustice in comparing him to Nero fiddling while Rome was burning. There is nothing hilarious about the President. He and Secretary Foster are watching the dollars in the Treasury with unconcealed anxiety, and hoping against hope that March 4 will come without an actual crash. Then they propose to go out of power with their heads in the air and say: "There was no difficulty as long as *we* were in power. What could you expect from an incompetent Democratic Administration!"

Evidence accumulates that the Hawaiian revolution was a revolution of sugar by sugar and for sugar. We are credibly informed of one little circumstance which shows how it was long ago planned for. The Western Sugar Refining Company of San Francisco has a contract with all the leading Hawaiian planters, under the terms of which their sugar product is taken. This contract is very minute, and one of its careful details is an agreement that, in case any arrangement should be made whereby the United States should pay a bounty to the Hawaiian planters, the latter would not greedily take the whole of it, but give the Refining Company a share. Thus, if, as estimated, the annexation of Hawaii were to involve the payment of some $5,000,000 a year in sugar bounties, the far-seeing San Francisco gentlemen might come in for $2,500,000. Under these circumstances, their vehement patriotism is not difficult to account for.

In fact, one has only to turn to the official despatches of Minister Stevens to see that the revolution was carefully prepared, and prepared with an eye single to the money there was in it for the sugarmen. In the extracts given out from his despatches at the time the treaty was made public, the Minister refers to the terms of a foregoing despatch of his, numbered 74. This appears to have been sent to Washington before the overturn in Hawaii, and is thus doubly significant as showing that the sugar details of the annexation were under discussion before there was any revolution at all. Mr. Stevens says: "I still adhere firmly to the opinion expressed in my despatch 74, that the sugar bounty to be paid to the Hawaiian sugar-planters should be limited to six mills per pound, $12 per ton." The reason for this discrimination is that the Hawaiian planters get about twice the product to the acre that the Louisianians obtain; but how instructive it is to see the mercenary element thus put in the forefront of the whole business. The Islands contain thousands of Chinese and Kanakas, whose personal rights and the methods of governing whom present problems of the greatest difficulty. Never mind about them, say Minister Stevens and the Administration—we can trust to luck in all such respects; but there is the sugar bounty in question, and to that we must "adhere firmly."

Mr. Crammond Kennedy, in the columns of the Washington *Post*, draws attention to the situation of the Chinese inhabitants of the Hawaiian Islands under Mr. Harrison's proposed treaty of annexation. Many of these people are natives of the Islands and are subjects of that sovereignty, and hence are entitled to all the rights guaranteed to them by our treaties with the Islands. The treaty of 1850, now in force, gives to all Hawaiian subjects and to the citizens of the United States "the free and undoubted right to travel and to reside in the States of the two high contracting parties, subject to the same precautions of police which are practised towards the subjects or citizens of the most favored nation." But the new treaty of annexation provides:

> "The further immigration of Chinese laborers into the Hawaiian Islands is hereby prohibited until Congress shall otherwise provide. Furthermore, Chinese persons of the classes now or hereafter [*sic*] excluded by law from entering the United States will not be permitted to come from the Hawaiian Islands to other parts of the United States, and if so coming shall be subject to the same penalties as if entering from a foreign country."

This is a most extraordinary provision. "We propose," says Mr. Kennedy, "to annex the country in which those persons are now living as free people, and by the very treaty of annexation we prohibit them, on pain of imprisonment or deportation, or both, to enter the country that annexes them; and as to them in the very act of annexation we declare Hawaii to be a foreign country, although they were domiciled there and treated as human beings prior to annexation; and we thus visit upon people who have done us no harm the most grievous of pains and penalties."

If one is to judge of the Democratic situation by the news which the *Tribune* contains of the attitude of leading Democrats towards Mr. Cleveland, the latter will enter the White House on Saturday next almost without a political friend. He has, according to the exclusive information of the *Tribune*, hopelessly alienated both the Snapper and the Anti-Snapper wings of his party in this State; has thrown the Isaac Pusey Gray wing of the Democratic party in Indiana into a condition of profane wrath which is simply volcanic; has alienated the entire South, Southwest, Northwest, and Pacific Slope Democrats by his choice of Judge Gresham, and has even chilled the Mugwumps by refusing to take any of them into his Cabinet. Added to this, he has taken seven lawyers and only one business man as members of his Cabinet, though the *Tribune* itself manufactured a statement for him, entirely without his knowledge, that he intended to select only business men for office. The outlook is full of gloom, but we venture the opinion that, in spite of all these quarrels in the party, there will be a considerable number of Democrats in and about Washington on Saturday next.

The selection of Congressman Herbert of Alabama as Secretary of the Navy in the new Cabinet not only is an excellent thing in itself, but has an especial significance for its bearing upon the sectional issue. Mr. Herbert entered the Confederate ser-

vice at the opening of the civil war, and served until he was disabled by a wound received in the battle of the Wilderness. He is now placed at the head of the department which controls the navy of the United States, and he is the first ex-Confederate to receive an appointment which places him in authority over either the military or naval branch of the Federal service. Grant admitted that the reunion of the States entitled Southern men to a share in the service of the Government which they had sought to overthrow when, in 1870, he appointed a Georgia ex-Confederate, Amos T. Akerman, Attorney-General. Seven years later, Hayes gave the Post-office Department to another ex-Confederate, David M. Key of Tennessee. Grant and Hayes appointed ex-Confederates Judges of United States District Courts, and Harrison has recently given a place on the Supreme bench to a Tennesseean who supported the Confederate side during the war. No ex-Confederate, however, has hitherto been given charge of either the War or Navy Department. Mr. Cleveland's selection of Mr. Herbert having received the hearty approval of Senator Chandler, the old bogey may be considered laid.

Concerning Mr. Olney, too, the new Attorney-General, there is nothing to be said which is not commendatory. He is a lawyer whom his own State has sought on two occasions to place upon its Supreme Court bench, regarding him as one of its sons most worthy of that honor. He declined the offer on both occasions, preferring to remain in private practice. It is said of him politically, that while he has never held public office, he is an old-time Democrat who has voted his party ticket in every election save when Gen. Butler was its candidate for Governor—an exception which of itself is a certificate of character. If any one wishes to realize the full strength of Mr. Cleveland's Cabinet, he has only to place its names side by side with those of the outgoing Cabinet. There is not a man in the new Cabinet who is suspected of having bought his portfolio by raising a campaign fund, as Wanamaker was known to have bought his, and there is not a man in it who has been selected from any other motive than the new President's belief that he would be useful to the country.

The decision of the Supreme Court of Kansas in favor of the Republican House apparently insures an early end of the long and bitter controversy which has been raging at the capital of that State, for it seems to be admitted that the Populists cannot hold their forces against the acceptance of this judgment. The weakness of the Populist side all along has been the unwillingness of the party to submit the issue to the courts. There is no other peaceable way of settling any controversy, and all good citizens have been educated to seek and to accept such a settlement. The extraordinary feature of the Topeka proceedings during the past two months has been the readiness of so many of the Populists to reject all the teachings of experience and the traditions of history, and to substitute the rule of brute force. They have found at last that the heaviest battalions, to say nothing of justice and the courts, are on the other side, and they are only making a virtue of necessity in surrendering.

The veto of the Winter Racing Bill by Gov. Werts of New Jersey, and its prompt passage over his veto, by a corrupt Legislature, draws attention to a branch of gambling and social demoralization which menaces American civilization. The extraordinary effort put forth by the gamblers to pass this bill shows that betting on horses has become a regular trade, and not a mere incident to the racing season. Hence the desire to keep it up all the year round. Hence the necessity of finding some State which will allow brutes in human form to flog horses through snow and slush and over frozen ground, in order to furnish a basis for pool-rooms and betting in all the States of the Union. It is a fact, we believe, that such pool-rooms are now in full blast in all the States except California, being supplied with material for their operation by telegraph from Guttenberg. It is a fact, also, that multitudes of young men are enticed from the paths of honesty by the existence of these notorious dens in their neighborhoods, and that every day or two we read of some new case of pilfering, where the culprit has taken his employer's money in order to bet on the races, hoping to win by and by and pay it back. Of course the stoppage of winter racing, if it can be effected, is so much "to the good," but we can hardly expect to control the evil merely on the ground of humanity to horses. Pool-rooms ought to be suppressed by the exercise of every power in the State, and all the paraphernalia of public betting with them. The transmission of telegrams for gambling purposes should be suppressed in like manner. It would be Quixotic, perhaps, to seek to suppress racing for money; but it is very certain that whenever pool-rooms and public miscellaneous gambling on races are suppressed, the other evil will be reduced to its minimum.

Mr. Charles Dudley Warner took part in a hearing which occurred, a few days ago, before the Judiciary Committee of the Connecticut General Assembly, on the proposed Corrupt-Practices Act, and in the course of his remarks sustaining the bill he made some interesting and just observations on the moral side of the subject. Corruption, he said, does not lower politics alone; it lowers the entire community. He had heard of $30 being paid for a vote, which seemed to him rather a high figure, but the man who had paid it justified it by saying that the other side had offered the same voter $60, but he "felt sure of his man because he was such an honorable person." Mr. Warner said also that a friend had written him that the efforts of the South to prevent negro domination by the use of money had so demoralized society that, as a result, it was difficult to find young men who could be trusted. The truthfulness of this view of the case cannot be questioned. The free use of money in elections demoralizes not merely the men who use it, but the whole population. In Presidential campaigns, practically the entire membership of both great parties become so wrought up over the conflict that they are willing, and even eager, that their managers should have great sums of money with which to buy votes in order to win. The only way by which this dangerous infatuation or disease can be cured is by limiting the amounts which can be expended, and by forcing the publication of every dollar received and spent. When neither party can expend money save for legitimate purposes, explicitly defined, the sums spent by both will be very small.

There was a palpable lack of spirit in the Presidential hoisting of the American flag on a foreign steamer in this harbor on Washington's Birthday. The general air of dismalness pervading the exercises was not due to the depressing effects of the weather alone, but to a lurking sense on the part of the public and the performers that the whole thing was essentially a schoolboy affair. Mr. Harrison went through his part perfunctorily, was said to be "unusually grave," and was dumb before the repeated calls upon him for a speech. He may have been depressed by reflecting how different the occasion was from what it had been intended to make it—a celebration of a renewed lease of power to his party, with himself at its head, and the opening gun in a new campaign for subsidies. As things are, all that is left to be said to those who point to the event as a great day of triumph and glory for the country, is that they can have a similar day every week in the year by getting Congress to do for other steamship-owners what it did for the owners of the *New York* and the *Paris*—that is, repeal the Republican legislation which forbids them to hoist their own flag over their own property.

The *Tribune* objects to calling the shipping laws which prevent Americans from flying their flag over their own vessels, if built abroad, "Republican legislation." In its new-born zeal for emasculating and getting around those laws, it prefers to speak of them as "antiquated" statutes for which the Republican party is not "directly responsible," and out of

which it stands ready to take the life at any time by further "statesmanlike compromises"—the elegant name it now gives to what it was denouncing as little short of treason a few years ago. But this excuse is not admissible. The Republican party is directly responsible for our obsolete shipping laws because it has withstood all attempts to repeal them. More than once within the past ten years we should have had free ships but for Republican opposition. As for the *Tribune* itself, in what a strange new world it has got itself by its rejoicing over American flags on foreign ships, may be seen by going no further back than September 7, 1889, when it had a powerful article condemning the very policy it now approves. To excuse its present awkwardness we quote what it then said:

"If the commercial marine is to be restored, it should be American-built. . . . It would be a short-sighted policy for Congress to facilitate the purchase of third-rate steamships and worn-out hulks owned in foreign countries and thereby to crush the ship-building interests now struggling for existence. The free-registry demand is a delusion and a snare. *The American flag must float over American bottoms.*"

The same day that the nation was supposed to have gained new glory by raising the American flag on a foreign-built steamer, came the announcement that that flag had been bankrupted on a line of steamers where it had long proudly floated. For the light it throws upon the subsidy plan, the failure of the United States and Brazil Steamship Company is far more significant than the admission to American registry of the steamers of the Inman Line. The Brazil Line has been established for many years, has long had a subsidy of $100,000 a year from the Brazilian Government, has recently got a subsidy from the Argentine Government also for an extension of its route to the River Plate, and was coming in for certain payments out of the United States Treasury under the Postal Subsidy Act. Then, too, it was supposed to be doing an immense freight business with Brazil as a result of the reciprocity arrangement with that country. But now comes its President and says the business has been a losing one for years, mainly on account of the simple fact that American-built ships, even with their subsidies, could not compete with foreign ships. In fact, the company has been laying up its American ships and chartering foreign vessels for some time, though even that step has not saved it. If the Brazil Company is thus driven to the wall, the subsidy argument needs no other refutation.

The recent proclamations of President Harrison announcing important additions to the forest reserves on the Pacific Slope complete a series of notable public services in this direction, for which both the President and Secretary Noble deserve the heartiest commendation. Secretary Noble especially should be thanked by the whole country, for he has, from the beginning to the close of his official term, been the cordial friend and zealous promoter of every worthy scheme of forest preservation which it was in his power to aid. By his latest acts, made into law through the proclamations of the President, in accordance with powers conferred upon him by Congress in 1891, the Yosemite National Park has been enlarged by the addition of over 4,000,000 acres, or more than 6,000 square miles, lying south of and adjoining the present Park, and containing that portion of the Sierra Nevada Mountains which is pronounced by all authorities to be the most grandly beautiful in the United States. It has an elevation ranging from 3,000 to 15,000 feet, contains the highest point in the Union outside of Alaska, and includes the wonderful King's River Cañon and vast forests of the celebrated big trees, and of sugar-pine, cedar, and other valuable woods. All this has been made into a public park for all time, and, what is of great importance to California, the water supply of the San Joaquin Valley has been secured from destruction, and the new wealth which irrigation has brought to its arid lands is thus made permanent. This great reservation is only a part of Secretary Noble's achievements. He has secured three others, in the States of California and Washington, which comprise 2,500,000 acres, and still another of the Grand Cañon of the Colorado, comprising 1,900,000, making a grand total of all lands reserved in the forest uplands of the Pacific Slope of no less than 8,500,000 acres.

A remarkable case of distress, growing out of the demonetization of silver, was mentioned by Senator Jones in his address before the Bimetallic League in Washington on Thursday. As reported in the *Herald*, the Senator said that "16 per cent. of the population of London was living upon charity, and yet the English Commissioners asked the United States delegates to agree in their estimation of the value of silver, and adopt the policy that brought about this wretched condition." If 16 per cent. of the population of London are living upon charity, of course they ought to have a little silver mixed with their porridge. But why has nobody discovered the true cause of the poverty of London before? The demonetization of silver in England took place in 1816. It is a fact susceptible of easy proof that the proportion of Londoners supported by charity was greater before 1816 than it is to-day. But why does not Mr. Jones cast his eyes in the direction of India? There, if anywhere, the greatest prosperity and freedom from poverty ought to exist, because there the people have silver in the greatest abundance. It is the same way in Mexico, but in that country the people seem to be not over-fond of it.

The new London Chamber of Arbitration has many commendable features. Leading members of the various trades and professions have lent their names and services to it, so that any dispute between employers and workingmen, or controversies over the proper interpretation or fulfilment of contracts, can at once be submitted, at very small cost, to men who are experts in the matter. The parties may themselves select from one to three arbitrators on the list, or leave the choice to the Chamber itself. Evidence can be taken on oath, and the decision arrived at is as binding as a verdict in court. Every precaution is taken to avoid delay. The length of time to be given to each case is fixed in advance and is rigidly adhered to. Counsel may be present, but all "making the coort ring" is discouraged by the fact that all hearings are private, and by the disinclination of business men, anxious to get at the essential facts, to waste time listening to windy oratory. Resort to the Chamber is, of course, voluntary, although the law courts have power to refer some cases to it; but its operations begin so favorably that it is hoped that the custom will grow of putting a clause in all contracts agreeing to submit to the Chamber any differences which may arise.

A good part of the French soreness over English influence and activity in Egypt comes from the feeling that the statesmen of France let slip a golden opportunity in the early eighties. A writer in the last *Revue Bleue* recalls the interpellations made in Parliament in 1882, when the Minister for Foreign Affairs distinctly declined to station French soldiers in Egypt. That means of protecting French interests in Egypt, he declared, the Government would never employ. This called out a vigorous protest from Gambetta, who said he did not know whether Parliament would sanction such a policy, but one thing he did know, that it was a fatal revelation of French weakness and indecision. "All the English will have to do now is to bluster at you to make you agree to anything." The same writer, M. Gabriel Bonvalot, recalls with much chagrin the fact that when the Khedive, about 1875, offered to sell to France 177,000 shares of Suez Canal stock, the Ministry of the day refused to buy, leaving to the English Government the rare chance of getting the shares for $20,000,000. What a bargain the investment turned out was shown in a speech by Mr. Goschen in 1891: the Government had got 5 per cent. on its money every year, and meanwhile the value of the stock had so increased that, if the rate of advance kept on till 1894, the whole could be sold for $95,000,000. This clear profit of $75,000,000 on the operation was more than enough, as Mr. Goschen pointed out, to meet all the loans made for the establishment of all of England's coaling stations.

THE HAWAIIAN FIASCO.

MR. HARRISON'S Administration has entered upon its last week with the certainty that failure will overtake its final effort to divert attention from the general gloom and feebleness of its expiring hours. It is agreed on all hands that there will be no snap annexation of the Hawaiian Islands. Every day's delay has weakened the treaty before the people and the Senate, until now, according to Senator Pettigrew, not more than one-third of the Senate is in favor of annexation. This was inevitable after the original failure to put the treaty through under the Jingo whip and spur. The only semblance of arguments originally advanced in favor of annexation consisted of vague appeals to national glory and hostility to England. But England has shown a most provoking indifference to the whole affair, and as the glory was mostly to be won from vexing and triumphing over her, her calm unconcern has robbed the enterprise of all its glamour. The assured failure of the precipitate treaty is accepted with perfect satisfaction by the country at large.

Some belated reasons have, indeed, been brought forward, as the glory and England-hating argument has fallen into evident collapse, but they will not bear examination. Senator Morgan, for example, left behind him as he sailed for Europe on Saturday the opinion that annexation meant the immediate doubling or quadrupling of our trade in the Pacific. He did not attempt to show how such a result was to come about, and unfortunately he is now on the high seas, beyond the reach of curious questions. If he were only at hand, we should press him to explain how annexation would enable us to sell a single dollar's worth to any country on earth which we cannot now sell, or buy a dollar's worth which we cannot now buy. Certainly the doubling of trade would not take place in the Islands themselves, as we now have a practical monopoly of their commerce and are certain to retain it in the future. And we do not believe that the American flag in the middle of the Pacific will make American goods either any cheaper or any more desirable to the inhabitants of Australia or China and Japan, or will lower freight charges or do any of the other things that create a foreign market. Charles Lever has a character in one of his novels who is said to be very "'cute in thrade," but he could not have been a circumstance to the man who could quadruple our trade by annexing some islands that would prove a serious drain on our Treasury, as well as furnish us problems of government which we have no experience to enable us to solve.

What may be called the politico-naval argument receives endorsement in the March *Forum* from the pen of so weighty an authority as Capt. A. T. Mahan. He writes almost purely as a naval tactician, and makes out the Hawaiian Islands to be of great strategical importance, supposing a naval war of tremendous proportions were to break out. All this may freely be admitted without allowing it to be a reason of any force whatever in favor of annexation. In the first place, it would be a departure from all that is traditional, and all that is best or necessary, in the policy of this country to make any plans whatever for such a contingency as Capt. Mahan contemplates. If the question were fairly to be put before the people whether they desired to embark upon the vast expenditures and cultivation of a warlike spirit involved in making the United States a naval Power of the first rank, it would be answered in a negative like the voice of many waters. Then, as a matter of fact, whatever privileges we may desire in the way of a coaling station or naval stores on the Sandwich Islands, we either have now at our disposal or can have for the asking.

The truth is, that Capt. Mahan's argument, like so many others, is advanced in favor of annexation when all the real advantages it aims at can be as fully and more safely obtained in other ways. Everything that can be said of the importance of our having a predominating influence on the Hawaiian Islands is urged as if it were conclusive for annexation; in fact, it is wholly certain that we shall have a predominating influence there if things go on as they are, or if we assume a simple protectorate. If, by the latter method, we can get all the advantages, with few or none of the tremendous drawbacks of annexation, why rush headlong into so grave an experiment? Happily, the good sense of the country has made itself felt in the Senate, and it is now settled that the Hawaiian question will receive the deliberate consideration which its gravity merits.

President Harrison should have foreseen all this and spared himself and his party the popular rebuke which his undignified haste has called out. If Gen. Grant was not able, at the height of his power, to put the San Domingo treaty through the Senate, it was more than audacious for Mr. Harrison to try to annex off-hand a group of islands which are not nearly so valuable as San Domingo in either population or area or resources or proximity to this country. It was idle for him to think to bend the bow of Ulysses. What he might have given his mind and his time to was the financial condition of the country, which his Administration has made so critical. He might have listened to those Republican papers which have been urging him to send in a forcible message on the finances calling for prompt action. In that way he would have made it possible to say of him that nothing in his Administration became him like the leaving of it. But to let the Treasury drift into bankruptcy, and spend his last week of office in an attempt to put through a treaty which was discredited from the first by the manner of its negotiation, is far from being fitted to strike the popular imagination. Whatever of mock-heroic there might have been in President Harrison's attitude if he had succeeded, becomes petty enough with his flat failure.

NAVAL ADMINISTRATION.

NEARLY every maritime Power finds from time to time that the administration of its navy is a task fraught with difficulties, and our experience has formed no exception to the rule. There is no department of the Government in which bad administration is so likely to be perpetuated as in that of the navy, because there is none about which the public at large is so unqualified to judge. If the mail service is inefficient; if officers of the Treasury Department fail in their duty; if the customs are not collected; if the affairs of the interior are conducted without any definable policy, the public soon finds it out, and demands a remedy in tones which are sure to be heard. But nearly all the operations of the Navy Department can be conducted in the most extravagant way, year after year, without the public knowing much about it. Again, if a new Secretary, on his advent into office, looks at the Navy Register, he will find that there are twelve hundred or more commissioned officers on the navy list, all highly educated men, whose duties and qualifications are of so technical a character that he must find it difficult to pass an independent judgment upon them. Going into details, he will soon find that these officers have no permanent field of duty prescribed by law or regulations, and that it therefore devolves upon him to determine what each shall do. About half of the line officers of the navy, in fact, are constantly engaged in one of a hundred fields of duty, too varied to be enumerated, determined wholly by the will of the Secretary for the time being. Hence it is impossible to frame any general code of regulations which shall govern the officer in all these varied fields. In the War Department, the army regulations have been growing generation after generation, and an officer is so habituated to them that his first thought on taking any new command is to see that proper regulations are devised and enforced. But should a naval commanding officer contract any such habit, except on board ship, his efforts would result in failure.

It is needless to say that a Secretary of the Navy, especially a new one, must depend very largely upon the opinions of others in judging of the duty which his Department should undertake and the functions it should perform. If naval officers in general have a bias, we may expect to see it reflected in the opinions and policy of their head. It does not require very profound study to see that at least a strong tendency towards such a bias must grow out of our modern system of naval education. In former times, a young man became an officer of the navy because of a strong taste for a sea life; even a taste for a rov-

ing life was not a disqualification. The case is now very different. When a boy is nominated to the Naval Academy by a member of Congress, it is without any respect to his love for the sea; in a large majority of cases it would be impossible to apply any such test, for most of the nominees have never been on the ocean long enough to know whether they would like it or not. To an educated man, accustomed to the refinements of a home, the quarters of a man-of-war can have but few attractions. We must not, therefore, be surprised if sea duty is looked upon by a naval officer as the most unpleasant to which he can be assigned, and from which he would gladly escape were it not for the exigencies of the service to which he belongs. There is no regulation requiring sea service, except in some of the lower grades; nothing to prevent a man passing from lieutenant to admiral without ever seeing a ship, except the prejudice of an examining board, which would not, in such a case, be satisfied of the professional qualifications of the seeker for promotion. Thus arises a tendency on the part of the navy to make as many shore places as possible for its officers; and this again leads to an exertion of political influence very liable to endanger the integrity of the service.

Here we find a feature which is, we believe, peculiar to the American Navy. Its officers are organized into two associations, each having its paid attorney, to promote its interests before Congress and the Department. The operations of these associations are, of course, secret. It is a matter of rumor, having a more or less probable foundation, that they have more than once sought even to influence the appointment of a Secretary of the Navy. Of the two, that of the line is the stronger, the more compact, and the more influential. But the very existence of either is an anomaly which, it is safe to say, would not be tolerated in a military arm of any government but our own.

It will be interesting to compare this state of things with the well-known facts of history. The peculiar ideas of administration entertained by Gen. Grant would naturally be seen in their worst aspect in any imperfectly organized department of the Government. His first Secretary, now remembered only by the stroke of humor with which his selection was made, not only knew nothing of naval affairs, but was incapacitated by age and infirmity from learning anything about them. A distinguished admiral was therefore detailed to show him what to do. Admiral Porter's remarkable ability as a naval commander was rivalled only by his incapacity for civil administration; and the evils of power without responsibility were never more strikingly shown than during the brief term in which Mr. Secretary Borie officiated as his chief clerk.

The Robeson administration, the longest since the civil war, is too fresh in our memories to need description. It will suffice to say that Mr. Robeson left the Department a collection of eight nearly independent bureaus, without any adequate control by the central power. The control of employment in the navy-yards by political bosses, and the repairing of ships without any one knowing exactly why, were among the familiar results of this absence of system, which itself naturally grew out of the theory that the Department needed no other than a nominal head, and might therefore be managed by the politician of the Cabinet.

Mr. Whitney was the first Secretary to propose a serious remedy. His plan had the fundamental defect that, instead of strengthening the central power, it divided it up in such a way that the head of the Department would speedily have become the simple executive of a board of naval officers. The principal change would have been a reduction of the number of bureaus from eight to five or three, and a wider recognition of the responsibility of each. More profound consideration would probably have led Mr. Whitney to the conclusion that a system which stood the severest of all tests in proving efficient during a protracted naval war, could not be so defective as it seemed, and that the administration was more at fault than the system itself.

His successor never devised or laid down any comprehensive plan of reorganization, so that his views can be inferred only from his acts. His policy seems to have been a very simple one of strengthening the central authority. He has corrected one feature which must have seemed an anomaly when compared with other departments of the Government. Since 1867 the Department had had no Assistant Secretary. When the Secretary went out to lunch, he left nobody authorized to speak for him or to conduct any but purely routine business. Neither political influence nor personal favoritism could have had anything to do with the promotion of Mr. Soley from the post of Librarian to that of Assistant Secretary. As former Professor of English Studies and International Law at the Naval Academy, and the author of numerous works on naval education, history, and policy, as well as by practical experience in a subordinate position, he was exceptionally qualified for a place which required an intimate personal knowledge of the details of administration in the Department. Altogether, Mr. Tracy has done everything that was possible in the term of four years to raise the administration of his department from the low estate into which it had fallen; and we can wish for his successor nothing better than that his efforts shall meet with an equal measure of success.

THE AFFAIRS OF READING.

THE history of the Reading Railroad is one long story of managers who have been unwilling to face the actual situation. The reports of the company under the Presidency of Mr. Gowen form a series of pleadings that the future would yield profits though the years reviewed by him showed only losses. The reorganization of 1886 was followed by the discharge of the receivers, the property reverting to the stockholders in January, 1888. Weighed down by the theory that the reorganization must be shown to be successful, the new managers paid income interest, though no such contingent money ought to have been distributed. Mr. McLeod was made President in January, 1891. During that year, through newspapers and pamphlets, the company reiterated the story of its unfortunate position in owning nearly one-half of all the anthracite lands, while it mined less than one-quarter of the output. Mr. Gowen's policy had forced upon Reading the ownership of unused coal lands, while the company's financial troubles had kept the market for its coal restricted, its rivals meanwhile building extensions into new consuming territory. Under these circumstances the lease of the Lehigh Valley in January, 1892, was certainly commendable.

Having thus arrived at a point where the future revealed possibilities, the managers of Reading ought to have used their acquired strength to put before the public, or at least before themselves, the truth about the company's situation. But, instead of entering upon a policy which would have saved the company from bankruptcy, though at the expense of immediate returns to bond and stockholders, these gentlemen misled the public, and possibly themselves also, into the belief that a permanency of net earnings, which could be won only after years of effort, was achieved by virtue of the leases; whereas the value of the leases lay only in the fact that they opened the easy door to reform.

It is known in the coal trade that for many years the condition of the Reading mines has been below the limit of profitable working. The chronic lack of money has always prevented needed improvements. It was possible a year ago for Reading to have stopped its more costly and wasteful collieries, and to have made up that amount of coal or increased it by allowing individual operators to open new mines on its idle lands at a royalty to the Coal and Iron Company. This would have given a net income to that company at a saving in expense, while tiding affairs over till such time as capital could be found for necessary work on its own collieries. Mr. McLeod acknowledges now that a good part of his engine and car equipment is almost worthless. He ought to have made it his first care that his road should be in a position to do business and to do it economically. Of course, no contingent interest ought to have been paid till the company was in first-class condition throughout. Yet a year ago, when the annual report announced with a flourish a surplus of $1,864,000 applicable to pay-

ments on first and second-preference bonds, partly because of an alleged saving in operating expenses of $724,000 brought about by improvements, the balance sheet showed an increase in debt of $3,400,000, contracted for new equipment which went in part to replace old and worn-out cars and engines, and which was rightly chargeable to operating expenses. Last year, as well as this, the income interest declared due was purely a paper profit and had to be borrowed. To pay such fictitious profits was suicidal.

The defenders of the McLeod policy—if any such there be—may bring against this view the clause in the preference mortgage which, it is supposed, compels a division of the surplus. This somewhat famous clause is bad as a matter of policy, and was doubtless inserted to please English holders. The language is as follows: "The words 'net earnings' shall be held to signify the sum remaining . . . after deducting therefrom all the expenses of maintaining, operating, renewing, replacing, and repairing its said property and premises, including such reasonable improvements thereof and additions thereto as shall be necessary for the safe, proper, and economical operation of the same."

It is clear enough that the Reading managers would have been within their legal right in charging against earnings all the sums necessary to replace their worn-out equipment and to put the whole property in reasonably good condition, even had such replacements required all the contingent income dividends for years. It was not this clause in the preference bonds, but the desire to keep up prices in the Street for further operations, which wrecked the Reading. The reaching out of the Reading group of men into New England could never, for commercial reasons alone, be successful. It seems incredible that any one having business capacity should have fixed his eyes on Boston and Maine and have overlooked the deplorable condition of affairs at home. There is the best authority for saying that the departmental management of the Reading is in great confusion, and that the long-continued blocking of traffic on the road reflects severely upon the operating officers, upon the system or lack of system employed, and upon the neglect of the high officials to spend the necessary money and devise a remedy. Yet money was seemingly plenty for expensive terminals and other large projects. The public may never know the real condition of Reading affairs, just as the managers are reported not to have known the extent of their own floating liabilities; but one thing is clear—the policy actually pursued could end only in disaster. The sole possible explanation of this unfortunate bankruptcy, which it is to be feared may cause investors at home and abroad for a time to regard all railroad companies with suspicion, is the determination of a set of Philadelphia speculators to enrich themselves by grasping everything. A confiding public, blind to warning facts, once more suffers for the folly or sins of others.

THE GLADSTONIAN PROSPECTS.

THE debate in the English House of Commons about the release of the dynamiters brought to a very lame and impotent conclusion one of the most damaging of all the charges made against the Gladstone Ministry after it came into office. This charge was—and it was made in the most open and truculent manner—that the Gladstonians had come into office under a solemn treaty with the Irish Home-Rulers, by which all the Irish dynamiters and outrage men, fourteen in number, were to be released as the price of Irish support in the House of Commons. This excited the utmost horror at Tory dinner-tables and in Tory smoking-rooms. Nobody was surprised that such a wicked old man as Mr. Gladstone should enter into such an arrangement, but how, people asked themselves, could such an austere person as John Morley and such a rising statesman as Mr. Asquith be a party to it? The *Spectator* mourned over it bitterly, and Mr. Chamberlain was at a loss for words to stigmatize it fitly.

When, therefore, Mr. Morley liberated some of the men who had been concerned in a riot caused by an attempt to arrest a priest when leaving his church-door, in the midst of his congregation, and in which a police officer was killed, the Conservatives declared that the execution of the treaty had begun. The provocation in that case was great, for the priest was much beloved, and his arrest on Sunday at his church was simply a bit of the unnecessary violence and brutality infused into criminal proceedings in Ireland for purposes of intimidation, as part and parcel of Mr. Balfour's policy. The liberated men, therefore, had undoubtedly been sufficiently punished; it was not to their liberation *per se* that objection was taken, but to their liberation as part and parcel of something far worse. When, a little later, Mr. Asquith liberated Callan and Daly, two outrage men, Conservative indignation reached its climax. It was awful, they said; something unparalleled in its wickedness. No British Minister had ever done such a thing before. But what else could we expect from such an old man as the Grand Old Man?

At last the time came to explain, and Mr. Asquith has used his opportunity mercilessly. It turns out that Callan was liberated under a decision of Mr. Mathews, his Tory predecessor, and that there was no proof whatever connecting Daly with dynamite, nor proof of any offence against him which everybody connected with his case did not consider amply punished by the eight and a half years' imprisonment he had undergone. As regards the rest of the fourteen, the dynamiters proper, Mr. Asquith explained in a lucid speech that there was no intention, and never had been any intention, of liberating them, and that so long as he was in office no mercy would ever be shown to offenders of this kind. Mr. Balfour thereupon loaded him with compliments, and, in behalf of himself and his party, withdrew and apologized for the injurious suspicions to which they had given expression touching "the treaty," and the Ministry were enabled to resist a motion of Mr. Redmond, the Parnellite, in favor of amnesty, by a very large majority, while nothing whatever has been heard of a long-threatened motion of Mr. Chamberlain's about the Gweedore offenders.

In this and other successes of a similar character, due to overhasty onslaughts of the various shades of opposition, the Ministry have had majorities considerably above the legitimate forty with which they took office, and which was to melt away, the Opposition said, as soon as Parliament met. It has not melted away, and has apparently increased, owing partly, the Opposition says, to the inefficiency of their "whips," who do not display sufficient activity in bringing up their men. Another explanation is that too much of the work of the whips has been left to Mr. Chamberlain and his son; and though the wandering Tories are very willing to accept the support of the Chamberlain family in the House, they are not willing to be led against the enemy by them, and consequently do not respond readily. The division on the Church Disestablishment Bill for Wales showed a Government majority of nearly sixty. Moreover, the two latest bye-elections prove that what the *Spectator* calls "the customary reaction against the party in power," has already been checked. The general result has been a considerable revival of Liberal confidence, and a very great abatement of Tory exaltation, and a much greater disposition to rely on the House of Lords for the defence of the Empire against Gladstone. The prospects now appear to be that the Home-Rule Bill will pass in the Commons without much difficulty, for the closure makes the old-fashioned obstruction impossible, and Gladstone is exhibiting a youthful strength and vivacity amazing to both friends and foes.

THE HOME-RULE BILL.

LONDON, February 18, 1893.

ALL but seven years of political turmoil, coercion, and imprisonments have passed since Mr. Gladstone introduced his first home-rule scheme. On its defeat by the combined forces of Conservatism, Liberal-Unionism, and Irish Ascendancy, many confidently predicted that the question was finally disposed of. Lord Salisbury's Government would, by wise concessions to the necessities of Irish local administration, remove all excuse for the demand of home rule, and, in any case, his advanced age precluded the likelihood of Mr. Gladstone being again in a position to introduce a second such measure. Home rule, in fact, was dead.

All these anticipations have been belied. The years have somehow passed, and Mr. Gladstone's intellect remains unimpaired; his grasp of affairs is as vigorous, his exposition of great

principles as luminous as ever. Nay, home rule has escaped worse dangers seven years ago unforeseen. Mr. Parnell and his lieutenants have in the interval been tried on a charge of complicity with murder. The acquittal was by the upper classes of these countries accepted with reluctance. Mr. Parnell was esteemed as dangerous as ever until involved in the disgrace of the divorce case. His former maligners then suddenly awoke to the fact that he was the man to bet their money on, and that, after all, he was a gentleman compared to those who abjured his leadership owing to his guilt and subsequent conduct. Now, "Parnellism and Crime" are forgotten. Mr. Pigott and Mr. Walter, Mr. Smith and Mr. Parnell are no more. The Irish Nationalist party have come victorious out of a contest with their former associates, who, in revenge for Mr. Parnell having destroyed himself, desired also the destruction of the hopes of Ireland. Home-Rulers, after a fiercely contested election in Ireland, still form 78 per cent. of the total representation. In Scotland and Wales home rule continues to hold its advanced position, while in England its position has improved. Thus, on every account, was the scene in the House of Commons last Monday among the most striking ever there presented. In this assembly, the oldest and greatest deliberative body in the world, the mother of so many Parliaments, ennobled and strengthened by recent reforms, Christian, Jew, and Buddhist sat together; labor representatives, fresh from the mine, the plough, and the forecastle, occupied positions of perfect equality with millionaire princes; and men who, for participation in revolutionary movements, had suffered long terms of penal servitude, sat near some who had initiated their indictment. Moreover, not one member could really be suspected of complicity in practices such as within the past few months have disgraced other deliberative bodies abroad.

You will have been already deluged with minute descriptions of the occasion and particulars of the bill. Mr. Gladstone based his claim for its acceptance upon great principles, the necessity for real union, the impossibility of continuing to govern by coercion. In 1886 we appeared at the parting of the ways, when it was necessary to decide between conceding local government to Ireland and maintaining a coercive system. At present we were in an advanced position on the same lines—a Conservative Government with an overwhelming majority having meanwhile proved itself unable to concede a tithe of local self-government, and having, moreover, for the first time in the unhappy relations of the countries, riveted upon Ireland a perpetual Coercion Act, a perpetual badge of her political inferiority and subjection. These were not the terms on which the so-called Union was accomplished. More than ninety years' experience had proved the impossibility of maintaining a real union on the present foundation. We must review the work of 1800, retaining and strengthening essentials, altering or discarding what has proved undesirable. If imperial unity be inviolate, so must the nationality of Ireland be respected. Never before have I heard a peroration of greater force and feeling:

"If this is to end the matter, I think dispassionate men would say the sooner it is ended the better. The sooner should we stamp and seal the deed which is to efface all former animosities, and open an era, as we believe, of peace and good-will. The sooner it is done the better, but there are matters which human vision—at least my human vision—is hardly equal to penetrate. But for all this, I must say, on my own part, I never will and I never can be a party to bequeathing to my country a continuance of this heritage of discord which has been handed down from generation to generation, with hardly a momentary interruption through seven centuries—this heritage of discord and all the evils that have followed in its train. Sir, I wish to have no part or lot in that process. It would be a misery to me if I had foregone or omitted in these closing years any measure possible for me to take towards upholding and promoting the cause which I believe to be the cause not of one party or one nation or another, but of all parties and of all nations inhabiting these islands. And to these nations, viewing them as I do, with all their vast opportunities under a living union for power and happiness—to these nations, I say: 'Let me entreat you—if it were with my latest breath I would entreat you—to let the dead bury the dead, to cast behind you every recollection of bygone evils, and to cherish, to love, to sustain one another through all vicissitudes of human affairs in the times that are to come.'"

Here, indeed, was statesmanship of the highest order. Propositions regarding the integrity of the Empire and the supremacy of the Imperial Parliament were listened to with enthusiastic approval by men who had long struggled against such integrity and such supremacy, believing them to be inconsistent with the recognition of Irish nationality. Tears were in the eyes of some present who for years had suffered the severest forms of penal servitude in the attempt to establish an independent Irish republic.

The bill will, I confidently anticipate, satisfy the sober judgment of the Irish people and meet the support of their representatives. True, it means not separation, but closer, more living union; and yet the United Irishmen, the Young Irelanders, and the Fenians sought separation, because to them appeared impossible the attainment of Irish self-government on any other terms. True, it means no repeal of the Union, no restoration of that Constitution which Grattan and the patriots of 1782 declared essential to the dignity of Ireland, and to whose reëstablishment alone O'Connell's efforts, during the memorable Repeal struggle, were directed. Yet the measure satisfies the aspirations of men who look back with pride on their own and their forerunners' stand for separation and repeal. Modern greater enlightenment, with Mr. Gladstone as its exponent, enables the Irish people to accept such a settlement without in any way dissociating themselves in sentiment from past struggles. "The thoughts of men have widened with the process of the suns." A constitution better than that of 1782, and a wider nationality than that striven for by Tone and Emmet, opens before us. Actual participation in the affairs of Parliament has had two apparently conflicting effects on the Irish members, and through them on the people they represent. We have come to realize the extent to which the highest dignity and happiness of Ireland are bound up with and form a part of those of the Empire, and the possibilities of influence and usefulness in world-wide affairs from which we should be excluded under a narrower form of nationality. Many of us have learned even to take a certain pride in the traditions and institutions of the Imperial Parliament. On the other hand, we are by hourly and daily experience more fully convinced than ever that this Parliament is incapable of legislating for the internal affairs of our own country. Mr. Gladstone, in his bill, strikes chords bringing these apparently conflicting tendencies of thought into unison.

The opposition, so far as it has developed, is being put forth on the narrowest lines and without any great guiding principles. Arguments based upon the measure leading to the disintegration of the Empire are not likely to prevail, since the bill centres more firmly than ever all that holds the Empire together in the Imperial Parliament. Arguments based on its meaning repeal of the Union are not likely to prevail, when all the dangers of double sovereignty which rendered the Union insecure before 1800 are specially provided against. As to fears of the oppression of minorities in Ireland, it is provided against by a proposed upper chamber to be elected by those minorities; moreover, a veto upon Irish legislation would rest with the British Ministry. Mr. Balfour's speech was essentially poor and narrow. He showed the spirit that animated himself and his party when, in introducing his scheme of local government for Ireland, he declared it was often wiser to do a stupid thing that had been done before than a wise one that had not been done before. His bearing regarding this proposal for reconciliation between nations which have never been really united, is illustrated by his statement that the present relations between the countries leave nothing to be desired, and by the astounding assertion that great States are in these days built up, not by the conciliation, but by the destruction, of smaller ones. Mr. Chamberlain's was the only really formidable speech on the opposition side in the four days' debate which followed Mr. Gladstone's introduction and Mr. Balfour's denunciation of the bill. Mr. Bryce, Mr. Sexton, Mr. Blake, and Mr. Morley contributed the weightiest utterances in support. There was singular force in the almost weird summing up of the Irish Chief Secretary's speech:

"But in all these arguments as to the effect of Irish legislation upon the power of this country, honorable gentlemen seem to forget that there is no reason why the safety and greatness of the Empire are incompatible with the happiness of all those who live in it. All the arguments against this bill, except those, perhaps, used by the right honorable gentleman, Mr. Courtney, have dwelt upon the assumption that Ireland is a constant, perpetual, and irreconcilable enemy. We accept no such proposition. I for one will never accept it. When I last stood at this box to speak on a Home-Rule Bill, I warned the House that if they rejected that bill, as they did, they must not think that the Irish sphinx would gather up her rags and immediately depart from our midst. That prophecy has come true. It is as true to-night as it was seven years ago. It is because I believe as firmly now as I believed then, that we shall thus only exorcise this evil spirit in Ireland and between Ireland and England, that I ask this House to allow us to introduce this bill."

D. B.

A NEW GALLERY FOR LONDON.

LONDON, February 18, 1893.

I THOUGHT, when the opening of a new gallery in London was announced, that it would prove an event best passed over in silence. London already has too many galleries and far too little to show in them. But now that the Grafton, as it is called, has, after many delays, prepared its first exhibition, it promises to exert such a healthy influence in the English art world that it refuses to be altogether ignored.

It is not only that it seems to offer a refuge to men whose individuality bars the gates of the Royal Academy against them—it is worth noting that only two Academicians, Mr. Watts and Mr. Orchardson, are among its contributors; this, after all, was nominally the object of both the Grosvenor and the New Galleries, and, really, of the New English Art Club. But the Grafton presents two special features which distinguish it from all other galleries, and which, if the directors persevere as they

have begun, will make it a powerful factor for good. These features are the prominence given to modern Continental painters who are recognized as masters by all true artists, and the large space reserved for the younger Scotchmen, or the Glasgow school, who are honored and praised whenever they exhibit abroad, but who are practically unknown at home.

To discuss, or describe, the canvases exhibited by foreign artists would here be more than useless. In the first place, many—as, for instance, the pastels by Degas, the studies of a girl by Louis Picard, which were the glory of last year's Champ-de-Mars, the mystical flights and tiny landscapes by Khnopff, the technical wonders by Segantini—have either been seen elsewhere too recently or would require a chapter to themselves; while, on the other hand, the examples selected hardly do justice to men like Alfred Stevens and Besnard, Roll and Gervex, Uhde and Liebermann, Thaulow and Zorn. And, in the second place, it is not so much the merit of individual works which is now notable, as the collective presence of these men in a London gallery—an English understudy, as it were, of the Palais des Beaux-Arts. Indeed, so closely has the Champ-de-Mars been followed that Americans, like Dannat and Melchers, hitherto unrepresented in London, have been included among the foreign contributors. It is true that an occasional Degas, an occasional Khnopff, an occasional Von Uhde has been seen in other London shows; but never hitherto have such a number of the men who have revolutionized art on the Continent been gathered together in a large and fashionable English gallery. The bewilderment of the older generation of critics on press day, the hopeless inadequacy of the majority of criticisms published in the big London dailies the next morning, were proofs, if proofs were needed, of the startling revelation their methods seem to the average Englishman. Now that the much-hated, much-dreaded French art—for in England all Continental work belongs under this heading—has appeared in an English stronghold, one waits curiously to see what effect, if any, it may have on the English artist.

I have no intention to enter more into detail about the many paintings that come from Glasgow; I want rather to record the fact that, at last, the painters have received in London the recognition which is their due. They represent all that is best and healthiest and strongest in contemporary British art, but it has been well-nigh impossible for them to find a London gallery in which to show their work. In America I fancy even their names are not known. Strange as it may seem, Glasgow, of all towns, has produced by far the most artistic modern school in Great Britain. Probably it was because of the absence of artistic atmosphere in that commercial city, until the coming of these younger men, that they, in their student days, went to Paris. When they returned, their work was distinguished, not only by the influence of French art, but by an unmistakable character of its own. The few who saw their pictures could not fail to appreciate their importance. But the great thing was to get them seen by the many. At the last exhibition, given at the Grosvenor, when some novelty was needed to take the places of Burne-Jones and his followers, who had just seceded to the New Gallery, the Glasgow men were introduced, but not by any means adequately, to the English public. The next year the Grosvenor was closed, and they were adrift again. Several of them had exhibited with the New English Art Club, but the growing determination of a little inner group to run that Club for their own benefit gradually alienated the Scotchmen. Once Guthrie's pastels were hung at Dowdeswell's; later, Lavery had a one-man show at Goupil's. But it was not until I went to the International Exhibition at Munich, in the summer of 1891, that I had a chance to see a fairly representative collection of their work. There was then no possibility of ignoring or underrating its force and originality. Thanks to them, the British rooms were much the most striking and the most interesting in a show to which many of the leading Frenchmen and Germans, Americans and Scandinavians contributed. Their pictures were characterized by a technical vigor, an individuality and freshness of observation, and a glory of color not often rivalled in modern times, and seldom surpassed. And these are the qualities which now give distinction to the canvases hung in the Grafton, which are to be found in the portraits of Guthrie (unfortunately not in the most ambitious) and Lavery and Melville; in the landscapes of Paterson and Walton, and again of Melville; in the more frankly decorative arrangements of Roche and Hornel and Henry. None of them seems to lose sight of the fact that the chief end of picture-making is decoration, but, of all, the three last named are those who most excel as decorators. I can never see the daring, dexterous experiments in brilliant scarlets and golds by Hornel and Henry, the more refined and subtle harmonies in pale blues and greens and grays by Roche, without wishing that, like Veronese in Venice of old, like Puvis in Paris to-day, they were given the chance to carry out their designs on large wall spaces, in palace or cathedral, in town hall or museum. I do not know if the Glasgow men are sending to Chicago, but if they are, I am certain that they will make a sensation there, as they did in Munich.

It is only to point out these two novel and promising features at the Grafton Gallery that I have written. Otherwise, I must have mentioned at once the stately, beautiful Lady Meux, an arrangement in black and silver, by Whistler, the lovely little harmony in yellow and white by Albert Moore, and a dozen and more sketches and studies and landscapes by some of the younger Englishmen. But even to refer merely to the good would be misleading. To give a fair idea of the new gallery, it must be admitted that its first exhibition has its drawbacks as well as its merits. Despite the prominence allowed to Scotchmen and foreigners of note, plenty of room has been made for mediocrities. Beside a Whistler is placed a Shannon; beneath an exquisite little Khnopff, a David Murray; an Orrock hangs unabashed between two Picards. Clearly, the directors can still sympathize with conventional commonplace as fully as with artistic originality. It looks almost as if they wished to test the public and see which will pay, before committing themselves to a definite policy. It is for this reason that already one begins to look forward anxiously to their second exhibition. N. N.

Correspondence.

"SLATES," BUT NO VACANCIES.

To the Editor of The Nation:

Sir: Nothing could better prove Mr. Cleveland's evident intention to disregard the old "war-horse," and to appeal to the people at large, in the hope of drawing to his party fresh strength, than his Cabinet and the manner of its announcement. It leaves no doubt that he feels no longer the need of compromising with the politicians. He never did compromise on the silver question; he never did compromise on the pension question; he soon ceased to compromise on the tariff question; may we not hope that he can now cease to do so on the question of the "offices," and that he may treat both incumbent and applicant on a simple business basis? Senator Pugh mournfully, yet strongly, suspects that such is to be the case; let us hope that time may justify the wisdom of his prediction by the confirmation of his worst fears. Certain it is that, if the President fails to maintain consistently the spirit of civil-service reform, many terms must elapse before we can hope to have another Executive so favorably situated to resist party pressure.

One can imagine how, in the event that vacancies occur only where adequate cause is found, the lower jaws of sundry Kentucky patriots will drop. From the Commissionership of the Internal Revenue down to the Louisville and probably other post-offices, newspapers and applicants have saved Mr. Cleveland the trouble of consideration. Taking it for granted that, sooner or later, wholesale changes will be made, "slates" have been arranged in which all conflicting "claims" have been nicely adjusted. We know who is to be Marshal, District Attorney, Collector, Postmaster. The wires are evidently being laid with scrupulous care. But it occurs to me that Mr. Cleveland has manifested some impatience with those who have tried to do his thinking for him. Perhaps he may see no reason to make any changes at all. It pains me to think how, in that case, all these "original Cleveland men" may feel the sting of a President's and a republic's ingratitude! A. F.

Louisville, February 25, 1893.

MAY THE PRESIDENT SUSPEND THE OPERATION OF THE SILVER-PURCHASE ACT?

To the Editor of The Nation:

Sir: It is generally believed that no relief to the monetary situation can be expected from the present Congress. Can any benefit be derived by calling an extra session of the new Congress? If an extra session be called, a mongrel crowd of Democrats, Republicans, and Populists will assemble in Washington. The House will be without a Speaker, and with a large number of new members lacking legislative experience, each one ready to air his own new-fangled notions on the finances and the tariff. Among the Democrats there would be a number of old members who have feelings antagonistic to the incoming Administration, and these sentiments would possibly be shared by some of the new members. It would be bedlam let loose, from which the people might well pray to be delivered.

In the meantime, if an extra session is not called, what is to be done in the long interval between March 4 and the first Monday in December? Can there be any question that the President, through the Secretary of the Treasury, has the power to suspend the monthly purchases of silver if the public welfare demands it? As the crisis is not as serious, so the assumption of power would not be as great, as when Lincoln, at the beginning of the civil war, called out 75,000 militia for the defence of the capital, or when, as a war measure, he issued his emancipation proclamation. Such

an assumption of power would not be as great as that of Jefferson when he negotiated the purchase of Louisiana, or when Jackson removed the Government deposits from the Bank of the United States. All these extra-constitutional acts on the part of the Executive were not only commended by the people, but afterwards approved by Congress.

But it seems to me that it would not be necessary for the President-elect to assume such responsibility as in the instances mentioned. The so-called Sherman Law entails upon the Executive Department the necessity of maintaining the parity between silver and gold. What if this parity cannot be maintained? In this event, which is bound to happen if silver inflation is continued, would it not be lawful and right, and therefore the duty of the Executive, to suspend the operation of the act, to prevent a financial crash? Would not such suspension meet the approval not only of the capitalist, but of every man, woman, and child who had a penny in a savings bank or an interest in a life-insurance policy? If the so-called Sherman Law be construed with the Resumption Act of 1875, the Executive is required not only to maintain the parity of gold and silver, but specie payments; and a depreciated note circulation based on silver bullion does not meet the requirements of these two acts.

Yours respectfully,

TALBOT J. ALBERT.

BALTIMORE, February 23, 1893.

[Without considering now the President's power to suspend the Silver Law, it is manifestly his duty to exhaust all his certain powers before exercising doubtful ones. In the former category is the power to issue bonds under the Act of 1875 if necessary, in order to continue specie payments, which under the Act of 1890 are gold payments.—ED. NATION]

A PROBLEM IN STATISTICS.

TO THE EDITOR OF THE NATION:

SIR: The census of 1880 returned 6,679,943 persons of foreign birth resident in the United States. From 1880 to 1890 there arrived 5,246,613 immigrants. The two together make 11,926,556. The number of foreign-born persons returned at the eleventh census was 9,249,547, showing a deficiency of 2,677,009 compared with the foreign-born of 1880 plus the immigration of the decade. How shall we account for this apparent deficiency?

There was, in the first place, some emigration of foreign-born persons. The Bureau of Statistics of the Treasury Department gives, in its annual report, a return of the total number of departures from the seaports of the United States, without distinguishing, however, between United States citizens going abroad, foreigners (travellers) going home, and bona-fide emigrants. All we can do, therefore, is to subtract from the total number of passengers arrived the total number of passengers departed and regard this as the net immigration. Under the consideration that the United States citizens going abroad and the foreigners travelling here will sooner or later figure in both the arrivals and departures, the excess would represent the net gain to the population of the United States for a series of years, although the figures for any single year might not be correct. By this method the net immigration for the decade would be reduced to 4,414,337 and the deficiency to 1,844,733.

In the second place, we must allow for the deaths among the foreign-born of 1880 during the decade and among the immigrants from the time of their arrival to 1890. I have taken a death-rate of fifteen per one thousand, which, considering the large number of adults among the foreign-born and especially among the immigrants, is greater than the death-rate assigned in 1880 to the whole population. Using this death-rate, we find that the foreign-born of 1880 and the immigrants should have been represented in 1890 by 9,825,727 survivors, showing a deficit of only 576,180. It is necessary to add to this the immigration from Canada, which is not included in the Treasury tables after July 1, 1885. The Report (1892, p. 862) quotes from Canadian sources the number of immigrants passing through Canada en route for the United States for each year since 1885. During the five years from July 1, 1885, to July 1, 1890, they numbered 379,942, and, allowing the same mortality as before, in 1890 there should have been 368,186 survivors. Adding these to the deficit of 576,180, we have 944,366 unaccounted for.

Now, there are four ways of accounting for this deficit: (1) the emigration is larger than we have allowed for; (2) our assumed death-rate is too low; (3) foreign-born persons may have returned themselves as native-born in the census; (4) the enumeration of the people at the eleventh census may have been defective. The establishment of any or all of these four causes would give rise to reflections of considerable sociological interest and not without political importance. Hoping to receive some suggestions from the readers of the *Nation* on these points, I have the honor to be, your obedient servant,

RICHMOND MAYO-SMITH.

COLUMBIA COLLEGE, NEW YORK, February 23, 1893.

MR. BONSAL IN MOROCCO.

TO THE EDITOR OF THE NATION:

SIR: In a criticism of a book entitled 'Morocco As It Is,' of which I am the author, your reviewer feels called upon to make two or three charges of an entirely personal nature which, as they are quite beyond the pale of legitimate criticism, I feel called upon to answer.

First, your reviewer expresses grave doubts as to my trustworthiness, and says that I have no one but myself to blame for this impression, because on page 216 I unblushingly admit having deceived and mystified my Moorish servants. The insinuation of your reviewer would seem to be that a man who deceives his own servants, even when they are reliable and "trustworthy" Moors, cannot expect to inspire confidence in the great American public, or in the breast of such a very superior person as your reviewer undoubtedly is.

The facts are these, and they are fully explained on page 216 of the volume to which your reviewer refers. Mr. Chanler and myself left Fez July last for Tangier. We had had difficulties with the Bashaw and with the Berbers of the Ait-Atta tribe, and they had stated in the bazaars that they would not permit us to reach the sea-coast alive. When, one day out from Fez, our muleteers and servants mutinied, refusing to continue the journey, riding twenty hours a day, merely to save our lives, for which they naturally cared very little, it was only by making these men believe that their own precious skins were in danger that we succeeded in inducing them to continue the journey at a pace which secured us from pursuit, and brought us safely to the sea-coast some four days later. If this is the only thing your reviewer can advance to support this charge of untrustworthiness, I am sure that you will accord me that reparation and retraction which I now ask.

On another very trivial incident your reviewer hangs the heavy indictment of "rowdyism" and "boyish, foolish action," etc., etc. The facts are as follows: The guards of the Akbet Sba gate in Fez, who had on several occasions during the preceding weeks been most insolent in their behavior to Christians, refused one night to open the gates and allow me to return to my camp. It was not yet midnight, and the hour by law for closing the inner gates of the city, of which the Akbet Sba is one, was one A. M. Now it is true, as your reviewer states, that when these men or guards refused to open the gates to me and made use of language insulting to my race and to my religion, I compelled them to open the gates by somewhat forcible measures. It is true that in doing so I caught hold of the Caid in command of the gate by the ear, and even held my pistol to his temple, and your reviewer cites correctly that "the Caid was an old man"; but the insinuation of cowardice which he makes is rather mitigated by the facts, which must have been to his knowledge, if he read the paragraph from which he made the citation: the Caid in command, though an old man, was fully armed and surrounded by some dozen soldiers, all armed with Winchester rifles, and I had with me only a negro boy. It was only because these gentlemen kept pointing their guns at me in a most alarming manner that I finally took the somewhat energetic steps above described, which finally resulted in the gates being opened.

Your reviewer, who of course would not have been guilty of anything so unladylike, characterizes my behavior indifferently as that of a "foolish boy" or of a "rowdy." The Sultan of Morocco, however, when he heard of the action of these soldiers and their perfectly unjustifiable attempt to keep me out of the city, offered me, as a compensation for the danger to which I had been exposed and the indignities which I had suffered, the sum of five thousand dollars Spanish. This offer was made by the Grand Vizier through the British Minister, and is a matter of public record. When this offer was refused, the Sultan sent Mr. Chanler and myself a letter of apology, and offered to inflict any punishment we might devise upon the gate-keepers. On the receipt of this letter of apology, we expressed our willingness to let the incident drop, and the Sultan, pleased at what he chose to call our generosity, presented Mr. Chanler and myself with Shereefian swords, an honor rarely accorded to any but ambassadors of the first rank with whom his Saintly Majesty is well pleased. At the presentation of these swords by the Sultan's Vizier, Sir Charles Euan Smith, the British Minister, stated that our action in refusing the monetary compensation which is unhappily so usual in Morocco, and yet in insisting upon and obtaining every right and privilege guaranteed us by treaty, had done more to heighten the respect of the Moors for Christians than anything that had happened in Morocco during the past ten years; and a despatch in this appreciative sense was sent by him to Lord Salisbury and by the latter forwarded to our State Department, where it is now on file. Furthermore, the United States Consul at Tangier was authorized to convey to Mr. Chanler and myself the compliments of the Secretary of State, and his congratulations upon our attitude throughout our troubles in Fez, and upon the

honorable terms upon which the incident was closed. I imagine, also, that this despatch is a matter of public record, as our Consul-General was kind enough to forward me to London a copy of the original.

The incident at the gate and my encounter with the Ait-Atta Berbers were matters of such little importance that I would not have mentioned them in my book had not the newspaper correspondents in Tangier, especially Reuter's agent there, telegraphed all over the world various and varied accounts of the incident, all agreeing, however, upon one main feature, namely, that Mr. Chanler and I had been killed.

In regard to "purloining books" from the Kairouin Library, your reviewer does not actually misrepresent; he merely places the matter in a false and unfair light. It is quite true that Sir Charles Euan Smith, Col. Hallam Parr, as well as I myself, purchased books from the Tholba (or students) which had undoubtedly been stolen from the library. Our reasons for so doing—or at least mine—were a wish to save, if possible, one or two of these valuable volumes from the destruction which inevitably awaits them in the troublous times that are coming for Morocco. Perhaps, also, we were all desirous of showing that M. Tissot and M. de la Martinière (and it is to these gentlemen I suppose your critic refers when he speaks of the "more competent writers on Morocco") were mistaken in saying that there is not left a single volume in the crypt of the sacred mosque. The members of the British mission intended to present their volumes they had obtained in this manner to the British Museum, and during the few weeks I have been back in America, I have endeavored to find out where the volumes that I brought back with me from Morocco would be most appreciated.

The question is not merely one of the loss or the preservation of a few rubbishy Arabic chronicles—not at all. In the older books of travel it is clearly stated that many valuable classics which were saved from the burning of the Alexandrian Library were taken to Seville and from there to Fez. It has been thought that among these volumes would be found some of the missing classics, such as the lost books of Livy and of Euclid. Every Christian mission that has gone to Fez during the last century has been charged with the task of sifting these stories out. The Sultan, however, has always refused to allow any investigation, and has always said pointblank that there was not a single book left in the library. In view of the volumes that we brought back from Fez this summer, there is now on foot a movement among scientific men interested in Oriental research to induce the greater Powers to present an identical note to the Sultan requesting him to permit a committee of savants to visit the Kairouin Library and to catalogue it. This request the Sultan will hardly be in a position to refuse, and should the investigation result in the discovery of some rare treasure, I think we will be pardoned for the somewhat indelicate manner in which the first volumes were obtained.—Your obedient servant,

STEPHEN BONSAL, JR.

WASHINGTON, D. C., February 25, 1893.

Notes.

THE *Library Journal* announces that the 'Co-operative Index to Periodicals' will be replaced by an 'Annual Literary Index,' in continuation at once of 'Poole's Index' and of Fletcher's newly published 'A. L. A. Index to General Literature,' of which more hereafter.

Harper & Bros. will publish immediately the Rev. John W. Chadwick's Address on George William Curtis before the Brooklyn Institute on February 22. It will be uniform with Mr. Curtis's Address on Lowell given just a year before.

It is hoped that the new volumes of Mr. Edward L. Pierce's Life of Sumner will appear in the course of a month or two.

'The Principles of History,' from the German of Droysen, by President Andrews of Brown University, with a biography of the author, is about to be issued by Ginn & Co.

Richmond, Croscup & Co., of East Seventeenth Street, New York, have in press 'Personal Reminiscences 1840–1890,' by L. E. Chittenden, former Registrar of the United States Treasury.

Mr. Henry B. Wheatley, editor of "The Book-Lover's Library," will himself contribute the next number of the series, entitled 'Literary Blunders: A Chapter in the History of Human Error.' A. C. Armstrong & Son will be the American publishers.

Mr. G. Thorn Drury edits, for the pretty and popular series called "The Muses' Library," the 'Poems of Edmund Waller' (Scribners), with an introductory memoir. Waller, who lives only by a few lyrics, has not been reprinted of late years and had indeed passed out of the market of current literature; and, as his name is of historical interest in English letters and his works must therefore be consulted by the curious, this was a sufficient reason for the reissue. The text followed is practically that of 1686, and the memoir is an admirable and just account of the poet's checkered and doubtful career. We observe that the editor disagrees with the absurd statements of Gosse in respect to Waller's importance in the development of English verse. Two portraits, one of the poet and one of Lady Dorothy Sidney, serve as frontispieces, and at the end of the volume is a goodly body of explanatory notes.

The "modern" and partly socialistic propagandism that has made use of "The Dilettante Library" as a means of reaching the public is markedly present in the latest volume of the series, 'Browning and Whitman,' by Oscar L. Triggs (Macmillan). Its sub-title is "A Study in Democracy," and the matter of the book is a disconnected and declamatory eulogy of the spirit of democracy as a social force of regeneration. Possibly some part of this impression is due to the frequent quotation of Whitman's pronunciamientos, and of Carpenter's 'Toward Democracy'—the latter being a poetical man-Friday to the solitary Crusoe-genius in our American wilds. There is a considerable portion of the little book which is excellent, both in thought and in temper; but truth in it is so mixed with fantasy, and enthusiasm with rhodomontade, as to make its reading a trial to critical patience. The striking and original part consists in the fresh illustration it gives of the place assigned to Thoreau by the group of English Socialists, its true perception of the nature of Lowell's democracy, and its attempt to associate Browning, Whitman, Wagner and Ibsen as independent but related expressions of a world-wide spirit. The author dispenses with form more frankly than any other critic of Whitman that we have observed, and the result is apparent in the lack of logical sequence and relation in his ideas. A better illustration of the fact that form in literature is essential and not accidental, that it is inherent in the thought which it rationalizes and clarifies, could not be asked for; but the author excuses vagueness and inconsecutiveness in himself and his hero by naming the literature "prophetical," and claiming the license of the tripod as his right. To read him and get at his ideas is a literary game of jackstraws.

A new and revised edition of Mrs. Abby Sage Richardson's 'Familiar Talks in English Literature' (Chicago: A. C. McClurg & Co.) proves the usefulness of this already frequently reprinted manual of literature, which aims mainly to interest young readers in the greater authors of the past so as to lead them to read their works from natural curiosity and pleasure. The entire field is covered to the year 1830, and though the volume is superficial to the point of tenuity, so far as its facts and statements are concerned, its quotations are well selected, and it is mainly by these that the author means to accomplish her purpose. The volume belongs to the literature of the "select school" rather than of the college, and it is useful both for such education and for the home reading of young ladies.

Prof. Corson's 'Primer of English Verse, chiefly in its Æsthetic and Organic Character' (Boston: Ginn & Co.), seems adapted rather to the needs of teachers than of students, and is most valuable for the long lists of examples given of the refinements of verse melody in the great English poets. The reference of verse to feeling, as its point of origin, is made with too little justification and without limitation; such a position requires fuller explanation, and involves an exclusion of the intellectual element in art that certainly will not be universally admitted without argument. In the body of the book, too, the reader feels that analysis of particular forms and of their combinations stops short of completeness; and, in particular, that the element of mere style is not sufficiently attended to. The verse of all forms is made to appear too exclusively an affair of pause and accent, and such a theory will not explain why Akenside and Thomson failed. The most profitable analysis, altogether, is that of the value of rhyme and its conditioning of structure through emphasis. The volume is, in fact, less a "primer," in the sense of being a brief statement of an entire subject, than a preliminary and suggestive study that prepares the student for some more exhaustive and important work.

Prof. George R. Carpenter has furnished a valuable aid for class-work in English composition by revising and editing Strang's 'Exercises in English, Selected and Classified for Criticism or Correction' (Boston: D. C. Heath & Co.). It contains a large number of examples of errors in common writing, and puts into brief space excellent material for practical work by young classes. Several examination papers are given at the end. A text-book so directly adapted to its purposes, with less waste of energy, is rarely to be met with in educational publications.

Readers of *Harper's* who recall Mrs. Anne Thackeray Ritchie's papers in that magazine upon her father's friends, will need no prompting to renew their acquaintance with them in the volume, 'Records of Tennyson, Ruskin, Browning,' in which they have been collected, with the illustrations, facsimiles, etc. (Harpers). These reminiscences, partly the author's own, partly obtained from her private friends, are models of what such revelations of intimate life and acquaintanceship should be; they have simplicity and discretion, and they succeed especially in giving the atmosphere and sensible presence of the little scenes and incidents they depict. The paper on the Ten-

nysons has most charm, but those on Browning and Ruskin are also distinguished by strokes of the familiarity that does not breed contempt. Those who have become attached to these three masters of literary influence will especially be grateful to Mrs. Ritchie for acting as the intermediary of this more private introduction.

Dean Swift has been much before the public since Forster's Life of him was begun, and he holds attention seemingly without suffering from being too much written about. His career in the time of Anne makes him an excellent subject for the half-literary, half-social series of biographies in which he is now included by G. P. Moriarty—'Dean Swift and His Writings, with Portraits' (Scribners)—in a volume uniform with those on Horace Walpole, Mrs. Thrale, etc. The author does not undertake to furnish anything new, either in fact or in criticism; he uses the old materials, selects and arranges with discretion and taste, and leaves the man to make his own impression. There is a noticeable lack of any attempt to render Swift more attractive or to excuse his faults; it is plain that the author is not disposed to extenuate anything in the career of the correspondent of women who was neither husband nor lover, or of the place-hunter who was disappointed; his silence is significant, as is also his frank admission that he will not "whitewash." At the same time he is a conscientious investigator, he knows his rather intricate subject, and he sets down nothing in malice. Altogether, this is, perhaps, the most human and direct story of Swift's life that we have, the most useful for readers who require entertainment in the knowledge they get, and, though lacking in the condensing qualities and the judgments of a book like Leslie Stephen's, is a very serviceable volume for those who do not care to make a curious problem of the Dean's inverted intellect and heart.

Prof. Edward Caird has collected from magazines and reprinted from the 'Encyclopædia Britannica' two volumes of essays, 'Literature and Philosophy' (Macmillan), of unusual interest. The papers on "Cartesianism" and "Metaphysics" are from the 'Encyclopædia,' and have the qualities that should be shown in essays written for so special and strictly confined a purpose. They do not submit themselves to criticism in the sense in which the literary essays on Dante, Goethe, Rousseau, Wordsworth, and Carlyle do, though the same philosophical spirit is to be discerned in both branches of his subject. These latter essays consider literature from the standpoint of philosophy very much as Brother Azarias's 'Phases of Thought and Culture' considers it from the standpoint of theology. The prepossession of Prof. Caird is with the dualities, the oppositions, which he finds, and for which he seeks a unification in a synthesis of philosophy. He regards the 'Divine Comedy' as the "euthanasia" of the dualities of the mediæval age; he examines Goethe with respect to his attitude to the philosophical opposition (for example, of nature and spirit) which he encountered; he likens Wordsworth to Rousseau, and in dealing with both he endeavors to define "the return to nature," and finally to set it forth as an impulse of the world-spirit to find its self-renunciations through differences. Throughout, the goal of the "synthesis" is never far off, the place of Christianity is always near to the point of interrogation, the social destiny of man and the philosophical scheme which may attend it are present in thought, if not in the discussion. The interest, in other words, is philosophical, not literary; is of the matter, not of the form; is of the tendency, not of the immediate issue. The volume, consequently, is for readers of philosophy, and to them will prove a thoughtful and valuable criticism of literature as a form of the expression of man's spirit in progress to knowledge of itself and of the universe.

'Three Generations of English Women: Memoirs and Correspondence of Susannah Taylor, Sarah Austin, and Lady Duff Gordon,' by Janet Ross, appears in a new revised and enlarged edition (London: T. Fisher Unwin; New York: Putnams), making a bulky volume, but one in which the leisurely reader will find little to spare. Of the three remarkable women whose lives are here told, the second, Sarah Austin, the wife of the writer on jurisprudence, had the most intellectual force, and the appreciation of her by men of learning and genius is an eloquent testimonial to the strength of her mind as well as to her personal influence. Her career is a lesson in the possibility of the union of domestic fidelity and practical service in ordinary life with keen public interest and the soundest mental acquirements. She was, it should be said, a person of extraordinary energy and vivacity, of physical resources in her vitality which made her exceptional; but masculine genius is often dependent on a similar fund of vital force. She apparently derived her ability from her mother, whose daily life, with the nearness of household duties to mental employments, reminds one of old Puritan homes; and she passed on the inheritance to her daughter, Lady Duff Gordon, whose biography, if not of equal interest, is that of a live woman. The grouping of these three lives in one volume makes a family history of a very instructive sort, especially as the other collateral members of the stock were talented and successful to an unusual degree. The author of the book, it should be added, is fourth in this line of gifted women.

A work which will prove most alluring to the lover of beautiful books, and which cannot offend the most ascetic and fastidious scholar, is Mr. Bullen's 'Anacreon' (London: Lawrence & Bullen; New York: Scribners). It is a sumptuous offering, laid by Mr. Bullen, as he confesses, on the shrine of old memories of Ronsard and Herrick and Stanley and Cowley, as well as of those tripping Anacreontics which many of us found so taking and so haunting in the days of our youth. The margins are very wide, the paper heavy, the printing faultless (we notice only one misplaced accent, on page 54), the illustrations charming, with a classicism which distils through French sources. The text mostly agrees with that of Bergk, and, in the ode to the Grasshopper, would have been made clearer by adopting his emendation for the unintelligible φιλία, line 8th. Stanley's versions have the merit often of surpassing the original—a victory which is quite possible in this competition of prettiness and "cunning carelessness." The edition is limited to 1,000 numbered copies. Now that the grim fiat has gone forth which is to "put an end," as President Schurman of Cornell University says, "to this miserable masquerading in the habiliments of the ancient world, and see that our youth are clothed upon with the native fabrics of our own civilization," some of us, with a blush for our folly, may like to lay away this youthful toy upon our shelves, and may feel consoled that Anacreon and his imitators have found such decent and congenial burial.

Dr. Schliemann's volumes remind one, in their bulk and formlessness, of the piles of débris which he raised by his labors about Hissarlik and Mycenæ. The reader, wandering bewildered up and down his pages, longs for a guide and for an avenue that leads somewhere. Such a guide he will find in M. Charles Diehl, lecturer on archæology at Nancy, and former member of the French Classical Schools in Rome and Athens, who has written the best condensed popular account that has yet appeared of the discoveries of the last twenty years in Greek archæology. In a work of less than 400 pages he sums up with clearness, precision, and readableness the results of Dr. Schliemann's excavations at Mycenæ and Tiryns, as well as the important labors of French, German, and Greek archæologists at Delos, Olympia, Athens, Eleusis, Epidaurus, Dodona, and Tanagra. Each chapter sketches for the reader the necessary background of geographical and historical facts, describes the most important "finds," and sets forth with judgment the outcome, for art or history, of the discoveries. M. Diehl is neither a dilettante nor a dogmatist; he is at home in his facts, he is a sound critic in matters of art, and he refrains judiciously from being positive when he reaches debatable ground. Each chapter is furnished with an excellent bibliography that will assist the ambitious reader or student.

All the above merits are repeated, on the whole, in the translation entitled 'Excursions in Greece' (London: H. Grevel & Co.; New York: B. Westermann & Co.). The plans are nearly as clear as those of the original, and some well-chosen illustrations are added. Miss Perkins shows painstaking intelligence in her translation, and has taken the trouble to verify quotations and to amplify occasionally the bibliography in a manner which will serve English readers. Once or twice her painstaking runs to an amusing length. When, for example, M. Diehl says that every one knows of Agamemnon, if not from his Homer, at any rate from his Racine or his Offenbach, Miss Perkins, with malice prepense, transmutes these Frenchmen into Browning and Lewis Morris! The parallel between "La Belle Hélène" and "The Epic of Hades" might tickle Offenbach's fancy. The plain reader would have thanked Miss Perkins if she had constrained her printer to give warning, by italics, of transliterated Greek words, *e. g.*, *halteres*, *theoriai*.

Under the title 'The City and the Land' (Macmillan), the Palestine Exploration Fund publishes an excellent series of lectures delivered last year on Palestinian matters. The lectures are: Ancient Jerusalem, by Sir C. W. Wilson; The Future of Palestine, by Maj. Conder; The Natural History of Palestine, by Canon Tristram; The General Work of the Society, by Walter Besant; The Hittites, by W. Wright; The Story of a "Tell," by Mr. Petrie; The Modern Traveller in Palestine, by Canon Dalton. The results of recent researches are here given in brief and easily accessible form, and by men of acknowledged authority. The only unpleasantness of tone is in Dr. Wright's paper.

Dr. J. F. Hurst's 'Short History of the Christian Church' (Harpers) is a collection into one volume of the material already published by the author in five separate works, with important additions and revisions. It adds one more to the already long list of short church histories written from the half-historical, half-theological point of view, which do little towards advancing our real understanding of the true nature and progress of the church institution. Its most useful part is the last third, in which the history of the churches in the United States is treated with considerable detail and with notable fairness.

The seventh volume of Dr. Schaff's extended 'History of the Christian Church,' 'The Swiss Reformation' (Scribners), brings the work down to the close of the Reformation period. It is now complete to that point with the exception of volume v. reserved for the treatment of the later mediæval Church from Hildebrand to the Reformation. The peculiar excellences of the former volumes are present here as well. A wide range of bibliographical reference, an encyclopædic command of the whole subject, familiarity with the treatment of controverted points, and a catholic spirit of fairness in presentation, have already marked this work as by far the most useful to the student who wishes to go below the surface of events. That the author should emancipate himself wholly from the German Protestant point of view, not to say from the limitations of a theological notion of historical writing, was not to be expected. The world of scholarship has reason to congratulate itself that he has been spared to finish this, plainly the part of his work most attractive to himself, and will wish him continued health to fill in the one gap now remaining in his great plan.

The volume of Dr. R. S. Storrs upon the life and times of St. Bernard (Scribners) was not made to increase our knowledge. It contains eight popular lectures, resting upon no profound original study and not inspiring to further inquiry. The point of view is conventional; there is no analysis of sources and no critical examination of evidence. The main current of the narrative rests upon Bernard's own writings, taken with a naïve confidence and without any of the caution so specially needed in dealing with all mediæval literature. The presentation is of the kind known as "brilliant," securing its effects by a profuse display of the author's well-known oratorical methods. It is extremely readable, and will doubtless do more to fix upon the general reading public of our day a picture of the typical man of the Middle Ages than a worthier treatment could possibly effect.

Vol. ii., No. 2, of Delitzsch and Haupt's 'Beiträge zur Assyriologie' (Leipzig: Hinrichs) contains, among other papers: The Babylonian Legends of Etana, Zu, etc., by E. J. Harper; The Relationship between Old Egyptian and Semitic, by F. Hommel; The Works of Jules Oppert (a bibliography of 366 numbers), by W. Muss-Arnolt; The Relation between Verbal and Nominal Formations in Semitic, by F. Philippi; The Hamitic Languages of East Africa, by F. Prætorius. The number fully maintains the high character of the 'Beiträge.'

A valuable contribution to our knowledge of ancient law is furnished by Bruno Meissner, in his 'Beiträge zum Altbabylonischen Privatrecht,' which forms Vol. xi. of Delitzsch and Haupt's "Assyriologische Bibliothek" (Leipzig: Hinrichs). Over a hundred cases, dealing with land, houses, slaves, money, adoption of children, and marriage-relations, are given in the original texts, with transcription, translation, and commentary. The old-Babylonian contract-tablets so far deciphered belong near 2,000 B. C., and cover a period of about 250 years. They exhibit a relatively high degree of civilization, and push the Babylonian beginnings back to a much earlier time.
